of $193,545.00, certain properties which had been acquired by Penn Water in 1905, including those known as the Witmer and Willson properties, and a portion of the Harlow-McGaw properties.[63] The Witmer properties had been acquired at a cost of $38,985.00, Willson properties at a cost of $5,537.00 and Penn Water has calculated that the value of the transferred Harlow-McGaw properties, as of the date of the beginning of commercial operations as contended [80] for by Respondents (October 1, 1911) was approximately $29,082.80. Accordingly, Penn Water contends that the cost of all three groups of property to McCall Company should now be found to be $73,604.80 and the difference of $119,940.20, between price and cost, restored to Penn Water's plant account.

For the purpose of this proceeding, it is only necessary to inquire whether the amount of the credit reflected in Penn Water's plant accounts at the time of the foregoing sale to Safe Harbor was proper.

By this 1930 transaction, Harlow-McGaw properties, which until then remained in Penn Water's plant accounts at a calculated original cost of $379,824,[64] were divided so that 11.68 miles of canal and 117 acres were transferred to Safe Harbor and 8.32 miles of canal and 28 acres were retained by Penn Water. In the absence of direct evidence to the contrary, this establishes that considerably more than a half of the rights and interests retained up to 1930 by Penn Water, out of the original Harlow-McGaw properties, were transferred to Safe Harbor. One-half of the $379,824 (above) more than equals the amount of the total price of $193,545 less the admitted cost of $44,522 for both the Witmer and Willson properties, and, accordingly, this adjustment contended for by Respondents should not be made in determining cost or the rate base.

---

63. The properties had never been used in the McCall project. The contract to sell was dated August 21, 1929, the transfer taking place June 19, 1930 (T. 7863).

64. Additional interest for the 6 months from January 1, 1911, the Staff's recommended date of commercial operations, to July 1, 1911, the date found herein as the date of the commencement of commercial operations, would increase the $379,824 to $388,549.

[81] *Flashboard Development and Roller Dam Investigation Expense (1913-1921).*

Respondents contend that an amount of $49,754.97, representing experimental costs incurred from 1913-1921, inclusive, in connection with the perfecting of a system of flashboards to be used on the crest of the dam to provide additional head for the generation of additional electricity, should be included in cost of plant and in the rate base.

The foregoing amount is composed of items relating to the erection, renewal and testing of flashboards, and items charged to the general hydraulic and main dam account (1914-1916) in connection with an investigation of the possibility of using a roller dam in place of flashboards.

As of September 1912, Penn Water had gotten very satisfactory results from the use of flashboards installed along the crest of the dam to provide additional water storage. The installation of these flashboards had been carefully designed to avoid flooding out certain properties upstream, particularly as an injunction and law suit for such flooding had already been brought against Penn Water. Even as of February 1912, the installation had been ready for use—in fact as early as the last of August 1911, the assistant chief engineer reported on the operation during high water of what he referred to as "weir boards all along the dam".[65]

[82] Penn Water, however, was not satisfied with the original installation, both because of the difficulties of installation and the unsatisfactory manner of operation, the latter being due to the irregular bending of pins which were designed to fail at a certain height of water. Thereupon, Penn Water experimented with the use of sills, panel handles, and panels of various lengths. The substitution of a roller dam in lieu of flashboards was studied from 1914 to 1916, and, because of the expense it would have entailed, was abandoned. The result is that, except for the change

65. Installation started with the drilling of holes for the supporting pins, July 26, 1911.

from solid supporting pins to seamless tube supporting pins, the flashboard system now in use is, in general, the same system in use in 1912.[66]

On the basis of the evidence of record in this proceeding it is found that the flashboard expense incurred during the period 1911-1912 covered the original cost of installation of a system adequate to provide for the additional storage of water required; that all of the other related expenditures Respondents contend should be included in plant relate to either improvements in operation or to experimental improvements tried and abandoned without having been put to permanent use. It is therefore found that the expenditures here in issue, in the amount of $49,754.97, are not a cost of plant and are not includible in the rate base.

[83] *Charges to Flowage Basin Account (1910-1936).*

Respondents contend that certain acquisition expenses and certain expenses relating to legal and engineering services should be included in the rate base in the amount of $177,630.24. These expenses were incurred as follows: *1910-1924:*[67]

Lancaster Office			
Salary (Bushong)	$50,423.24		
Other Expense	27,127.82		
Legal Fees	21,920.00	$99,471.06	
Office Engineering		45,325.71	
Misc. Office Expense		561.65	
River Observations		4,988.45	$150,346.87

66. A wicket gate experiment lasted from 1916 through 1919, flashboards not being used during a part of the time because of an injunction proceeding which was not settled until March, 1916. Flashboards were in use from July 1917 on.

67. The account started in 1910 but the amounts in dispute represent charges that commence with 1911 or later years.

1925-1936:			
Lancaster Office			
Expense (1926-1930)		20,787.41	
Triangulation System			
Extension	3,338.25		
Property Ties	3,157.71	6,495.96	27,283.37
			$177,630.24

The $50,423.24 of Bushong's salary charged to Penn Water's Lancaster office relates only to that part of the 1910-1924 period that follows the opening of the office at Lancaster (Pa.) in March 1916. Respondents state that Bushong was hired in 1912 to devote his full time to the purchase of property required as a result of the use of flashboards on the dam and the consequent flooding of additional lands. From 1912 to March 1916, the date when the Lancaster office was opened, Bushong took a number of options [84] on land and completed a number of purchases;[68] but thereafter, to and including 1924, fewer options were taken and fewer acquisitions made. Of the latter acquisitions only a part was concerned with flowage rights and a significant number of those arose out of previous litigation. It is obvious that the establishment of the Lancaster office in March 1916 was not due solely to the needs of such an office for acquisitions necessary for operations with flashboards. Indeed, Respondents state that after 1915 Bushong's duties included other matters not directly associated with property purchases or plant additions and imply that a reasonably complete identification of expenses connected with such other matters could not be made and could not be segregated. Many of these other duties (1916 et seq.) clearly related to operations and expenses relating thereto are improper items to capitalize.

68. The rate base will include Bushong's salary as charged to subaccount F of Penn Water's "Flowage Basin Account" for the period 1912—March 1916.

With respect to both the amount of Bushong's salary and the other office expense[69] which Respondents propose to capitalize, there is insufficient evidence upon which to make a segregation of allowable items of expense after March 16, 1916.

With respect to Respondent's claim for legal fees as an item of Lancaster office expense, these include fees paid to an [85] attorney, J. E. Malone (1916-1923) in various amounts, totalling $20,750, and fees paid the New York firm of Simpson, Thacher & Bartlett (1915, 1920) in amounts totalling $1,170. Respondents state that Malone was active in all local property matters and litigation from the time of his employment in 1912. The amounts charged to the flowage basin account with respect to Malone's services were apportioned amounts for the years 1916, 1917, 1920, 1922, and 1923, while for the years between the fees were either those paid for full services (1918, 1919) or for additional services (1919, 1921). The amounts for the services of Simpson, Thacher & Bartlett were apportioned for both the years in which they were incurred (1913, 1920). None of the services can be identified with any particular property, and further no properties were acquired from April 1916 to July 1920, except for a foreclosure in 1919 with respect to a single property.

Respondents are unable to state the basis used for the determination or apportionment of fees and the inclusion thereof in plant is unjustified on the record in this proceeding.

Penn Water charged the amounts of $45,325.71 and $561.65, relating to the engineering office, to the Flowage Basin sub-accounts entitled Engineering Salaries and Expenses and Miscellaneous Office Expenses from 1911 to 1924 without explanation of the work done. In support of its contention that the charges related to plant investment and not to operating expenses, Respondents [86] submitted a

69. Direct expenses in connection with the acquisition of properties in the period following 1915, including legal fees and miscellaneous expenses are being included in the rate base.

memorandum prepared by the Assistant Secretary of the Company, giving his opinion as to the nature of the charges based upon an inspection of engineering field notebooks and drawings, the history of the flashboard suits and the recollections of an engineering department employee. Respondents now describe these charges as representing the expenditures for (1) river observations (collecting original data regarding flow characteristics, rates of run-off under varying rainfall conditions, etc.); (2) back-water observations and surveys required for the defense of lawsuits; and (3) property surveys required for information prior to purchase of property and for marking boundaries after acquisition. But Respondents did not relate the engineering work set forth in the field notes and drawings to any specific charges in the Flowage Basin accounts and, in fact, the witness stated he did not know where the cost of the work represented by the engineering data he examined had been charged.

The various items of cost, as described by Respondents, are ordinary operating expenses, except for the cost of the first survey of properties in connection with their acquisition which would be a capital investment. The costs of such surveys have been segregated in another Flowage Basin sub-account entitled "Surveying Property" which we have allowed in full. There is no evidence that the costs of property surveys were improperly classified at the time of the cost distribution. The unsupported reclassification, made many years later, does not justify the [87] inclusion of any portion of the amounts of $45,325.71 and $561.65 in investment in plant.[70]

The item claimed in the amount of $4,988.45 for river observations is subject to the same general conclusions

70. It cannot pass without comment that Penn Water did not call as a witness the one member of its organization (Bortner) more able than any other to testify to the details and nature of the items here involved. This individual was offered as a witness as to the fair value of land and rights-of-way, which testimony was excluded, but not for any other purpose. He was referred to frequently in the testimony of Respondents' witness Gunn and was available in the hearing room but never testified.

applicable to the consideration of similar functions set forth in connection with Respondents' contentions relating to office engineering expense, *supra*.

Lancaster office expense in the amount of $20,787.41 is claimed for the period 1926-1930, consisting of office expense proper, a part of the salary of Bushong, services of sundry persons, liability insurance and distribution of expense accounts.[71] These charges were made under a job order (M-387) which provided for salaries, office expenses, and regular current expenses in connection with the Lancaster office, expressly excepting specific jobs such as the purchasing of real estate. Nevertheless, there is being included in the rate base herein, as plant cost, items [88] relating to title searches, recording, and sundry expenses for the period, which were charged to this work order.[72]

Because of the character of the Lancaster office after 1925, as an office having an exceedingly minor relation to any sort of project cost work, and as Respondents have failed to present any evidence enabling determination of any item of Lancaster office expense as proper for capitalization, none of the amount of $20,787.41 can be included in plant.

Respondents contend that the cost of work done with respect to the extension of its triangulation system (Job order C-791, 1929-1932) and the making of property ties thereto (Job order C-970, 1932-1934) should be included in the rate base.

Items for the triangulation survey and property ties in the total amount of $6,495.96 represent proper plant costs, which should be included in Respondents' rate base.

Survey of Storage Reservoir Sites (1910-1911).

Respondents contend that an expenditure of $12,420.77 for the establishment of gauges for the determination of

71. Beginning January 1926, a fixed percentage of the expense of this office was charged to operations; after 1929, a further change was made in this respect.

72. During this time only one new property was acquired (1927) and there was only one flooding or "flashboard" suit.

river flow should be included in the rate base. However, there is no evidence that the charges represented by this amount were incurred for the purpose. Respondents attempted to get in evidence a statement as to the character of the charges included in this account by offering Schedule F-3 of Exhibit 320, but failing to produce any witness who [89] could testify to the descriptive part of the schedule that much thereof was rejected by the Hearing Examiner.[73]

The Staff's exhibit disclosed that the amount of $12,420.77 is composed of charges to an account entitled "Reservoir Surveys Account" made during the years 1910 and 1911, and which cover survey work, general office charges, automobile expenses, superintendence, Harrisburg office expenses, instruments, salary of W. E. Bennett, and interest. The Staff's witness Newlands testified that he found nothing in his investigation of Respondents' accounts and records to support its claim that the amount represented "the cost of establishing and rating of new gauges, rating of existing gauges and determination of time relation data between gauges".

The Staff has treated this amount as related to surveys made under the supervision of W. E. Bennett, whose name appears in this survey account in connection with a salary item. Contemporary letters between Bennett and Aldred (Receiver), Aldred (President) and Walls (Chief Engineer), Walls and Bennett, and Clarke (Vice President) and Bennett, all show that from 1909 into 1911 Bennett was engaged in a continuing investigation of probable sites for the storage of water on the tributaries of the Susquehanna and in obtaining data for use before the state legislature. He also investigated the branches of the Susquehanna in the vicinity of Harrisburg for similar purposes, and later studied the matter of locating a series of low storage dams on the Susquehanna proper.[74]

---

73. Again Respondents could have saved trouble by calling as a witness Penn Water's employee Bortner, who was frequently in the hearing room during the proceedings.

74. Such work continued at least late into 1911.

[90] It further appears that Bennett distributed salaries and expenses of himself and his assistants among classes of work, distinguishing, for example, between the reservoir survey account and the gauges account, as well as various other accounts.

It is found that Respondents have not established the propriety of the inclusion of the amount in question in the rate base.

Cost of Land Acquired from Affiliate (1931).

Respondents contend for recognition as cost of plant an amount of $24,151.83, which the Staff contends was a write-up. The item arose out of a transaction between Transmission Company and The Baltimore Electro Alloys Company.

The Baltimore Electro Alloys Company was organized by Penn Water as a non-utility affiliate in 1915 for metal manufacturing purposes, with a plant in Baltimore adjacent to Transmission Company's Highlandtown substation, in connection with which four tracts of real property were bought in 1915-1918 at a book cost of $30,949.60. After a sale of a portion of this property in 1919, the remainder was carried on the books of the Alloys Company at $24,805.42. The Alloys Company discontinued operations in 1919 or 1920, and later (1931) sold its real property and appurtenances to Transmission Company. On the basis of an appraisal by an employee of Penn Water, Transmission Company entered this acquisition in its plant account at $50,000, or $25,194.58 in excess of its cost to the Alloys Company. After a sale of a small portion of the tract by Transmission Company in 1937, the excess of recorded cost ($25,194.58) was adjusted to $24,151.83, the amount here in issue.

[91] Respondents take the position that under the Uniform System of Accounts of the Commission it is proper to enter the $50,000 as representing cost, contending that the prop-

erty was first devoted to utility service by Transmission Company.

It is found that this transaction is one involving a profit between affiliates, that the amount in question consists of a write-up not properly includible in plant and, therefore, in the rate base.

Cost of Defending Title to Land (Mill Tract, 1932).

Respondents contend that the amount of $1,427.42, representing salaries and expenses of witnesses, legal fees and court costs incurred as a result of defending an ejectment proceeding brought against Penn Water (1932) in a boundary dispute should be included in the rate base. The court held, in the ejectment proceeding, that Penn Water did not have title to the land and thereafter the latter purchased the land. The cost of purchasing the tract was entered in plant account and is not here in issue, but the cost of the legal action was originally charged as an operating expense.

The action at law added nothing to the value of the property as subsequently acquired, and the original accounting with respect to the cost of defending title was correct. The amount of $1,427.42 will not be included as a part of Respondents' rate base.

Conowingo Backwater Litigation or Agreement Expense (1923-1928).

Respondents contend that the sum of $39,301.46 should be included as a part of the rate base, since it is identified with an [92] agreement relating to the adjustment of interests in connection with the construction of a downstream hydro plant (Conowingo, Maryland) and embraces the cost of a study made (1925-1928) as to the anticipated effect of the downstream development on Penn Water's hydro operations, as well as a fee for legal services (1923) and certain travel expenses (1926) with respect thereto.[75]

75. Embraced in: legal expenses, $21,053.30; consulting engineers' services, $2,272.94; distribution of salaries and wages, $12,223.36; miscellaneous, $3,751.86; total, $39,301.46.

In 1925 Penn Water brought suit in equity for an injunction against The Susquehanna Power Company to enjoin the construction by the latter of a dam at Conowingo (Maryland) with a crest exceeding 100 feet, on the ground that a dam of greater height than 100 feet would cause a back flow upon Penn Water's tailrace, which then extended some 7,000 feet below the Holtwood dam to the foot of Cully's Falls. The Susquehanna Power Company, by answer, put in issue rights which allegedly had accrued prior to certain improvements made by McCall Company to the tailrace, consisting, largely, of the excavation of Cully's Falls and the lowering of the foot thereof.

In February 1926 the parties to the suit entered into a 50-year renewable agreement, and the suit was stayed.

The above study was used to establish: (1) that the river fall between Penn Water's forebay and the Conowingo tailrace would be most economically developed by permitting the lower (Conowingo) dam to be built to a height of approximately 108 feet; (2) that in such event Penn Water's average annual loss in energy output and demand value under then existing conditions would be $72,000, exclusive of [93] other losses not evaluated; and (3) that the average annual gain in energy output alone from the Conowingo project would be $195,500. It was thereupon agreed that Penn Water would consent to the construction of such a dam and would receive as compensation for its losses in energy output and demand value $72,000 a year plus $61,750 as its share in the Conowingo project's estimated annual gain of $195,500.[76]

The Staff's contention is that the expenses of $39,301.46 were incurred in the negotiation of an agreement that resulted in no addition to Penn Water's land, rights, or property, but only provided compensation for loss in revenues, and that these expenses are therefore chargeable to operations or surplus. Respondents take the position that the expenses were incurred in connection with a suit to defend

76. For each year after the fourth year from February 20, 1926.

title to its land and water rights and, therefore, should be included in the rate base.

The facts are that this agreement does not settle title claims, as both parties thereto explicitly save their contentions and the proceeding is merely stayed. The sum here in issue is an expense relating to operations. Even if it were originally proper to defer the charge over a period of years, such a long time has elapsed since it was incurred that it should not now be included in the rate base.

[94] *Expense Incurred on Transmission Line Built by Others (1910-1913).*

The Staff proposes that there be excluded from the rate base the amount of $12,459.23 capitalized by Penn Water in connection with the construction of a transmission line from Holtwood to Lancaster (Pa.) which is the property of its customer company, Pennsylvania Power & Light Company (PP&L).

Approximately $9,000 of the amount represents costs connected with surveys made by Penn Water (1910-1911) with respect to its own construction of the line. The latter, however, abandoned the project and allowed options to expire. Later, the then customer, Edison Electric Company (predecessor of Pennsylvania Power & Light Company) built the line. The remainder of the $12,459.23 represents, for the most part, expenditures made during 1912-1913 by Penn Water in assisting the customer company to build the line, for which the customer was never charged.

As a result of this transaction Penn Water acquired no property or facilities and accordingly this expense is not a proper one for inclusion in plant or in the rate base.

Expense Incurred on Substation Built by Others.

The Staff also proposes that there be excluded the amount of $5,668.48 capitalized in connection with the construction of the PEPCO substation at Takoma Park (Md.) resulting in property used and useful to PEPCO.

[95] This expense represents engineering advice relating particularly to the design and selection of 220-kv equipment for the substation, with which the engineers of Respondents had had considerable experience, the latter being anxious that such equipment should be of the same standard as their own as it was to become connected with their transmission system. Respondents have never charged the customer company with the cost of these services.

As in the instance of the preceding "Expense Incurred on Transmission Line Built by Others", Respondents acquired no property by this transaction and possesses nothing with which "cost" can be associated. The amount will not be included in the rate base.

Loss on Materials and Supplies.

Respondents contend that a sum of $13,033.04 representing the difference between the balance in the Material and Supplies Account of McCall Company on July 17, 1909 and the McCall Company materials later inventoried by J. E. Aldred, Receiver, and Penn Water, represents (1) a loss of $8,970.34 because of the spoilage of 7852 barrels of cement written down by the Receiver to a value which was $1.1425 per barrel less than cost, and (2) a further net loss of undetermined material and supplies totaling $4,062.70. Respondents have no supporting detail other than the testified to possibility that most of the spoilage in cement occurred during the cessation period.

The staff's position is that the entire indicated inventory loss of $13,033.04 represents cement which deteriorated during the period of cessation and after December 31, 1908 when all construction activities had ceased.

[96] In support of its contention a staff witness testified that a physical inventory taken by the McCall Company at December 31, 1908 showed a total of 35,736 barrels of good cement on hand which at cost price amounted to $51,653, and that of this old cement the Receiver used only 7852

barrels and Penn Water a further 8626 barrels, leaving a balance of 19,258 barrels unaccounted for.

There is no evidence that the remaining barrels of this old cement were ever used in construction, but contemporary correspondence and staff testimony indicates that it was on hand but had spoiled.

The record supports the conclusion that the entire $13,033.04 here in question represents a loss due to spoilage of cement during the period of cessation and after construction had ceased and, in fact, that the loss probably was much larger. The amount here in dispute was never charged to construction on the books and the Respondents' proposal to now include it in such costs is not approved.

Cash Not Accounted for.

Respondents contend that $130.99 should be included in the rate base as cash lost from the petty cash fund during the period of construction.

This amount represents the difference between the petty cash funds reported on the books of McCall Company as of July 16, 1909, and the amount turned over to the receiver as of July 15, 1909.

This loss, never charged to plant on the books, possibly occurred during the cessation period and cannot, on the evidence in [97] this proceeding, be associated with the cost of constructing the project. It is found that no justification has been shown for including this amount in the rate base.

Susquehanna Contracting Company Expense.

Respondents contend there should be included in the rate base an item of $6,621.85, made up of miscellaneous administrative expenses, including legal fees, New York City and state taxes, referee's services, salaries, and printing and stationery, incurred in the formation, functioning, and dissolution of the Susquehanna Contracting Company, which company is described in the evidence as a "paper"

company incorporated to facilitate the development and financing of the McCall project and also as a corporation organized to provide for the mechanics of legally issuing the McCall Company securities and relieving Harvey Fisk & Sons from any possible future liability which might have resulted from the financing. Respondents have used both descriptions.

The administrative expenses of the Contracting Company could at best only be regarded as financing costs, and therefore [98] not allowable as a separate part of the rate base in view of the 6% interest allowance hereinbefore made.

Construction Fee Charged Holtwood Power Company (Affiliate).

Respondents contend for the retention in the rate base of an item of $50,194.73 which allegedly represents the cost of supervisory engineering services furnished by Penn Water, 1922 to 1924, in the construction of a steam power plant by the latter's affiliate, Holtwood Power Company. The amount of this fee is now in the plant account of Penn Water.[77]

The Staff takes the position that the fee represents a profit on an intercompany transaction.

Respondents' witness Gunn thought that the fee covered supervisory services rendered with respect to matters of preliminary development, design and construction for two and a half years prior to December 31, 1924, such services including those of Penn Water's then [99] assistant chief engineer, four other supervisors or engineers, the purchasing agent, and the accounting department, as well as other employees of Penn Water. This witness did not know how the fee had been determined as to amount. No records of the time, services, or salaries allocated to the steam plant were available to him. Respondents had no details in work-

77. Penn Water purchased the assets of Holtwood Power Company and merged the latter with itself in 1927.

ing papers or other records, and accordingly, he relied on information obtained by consulting Respondents' purchasing agent.[78] Gunn testified that Baltimore Company prepared some of the drawings and was consulted in the selection of equipment.[79] Another of Respondents' witnesses (Gisiger), however, testified that Baltimore Company did the main designing of the steam plant, Respondents' engineers making only minor modifications with respect thereto. The former witness (Gunn) was not in Respondents' employ at the time of this activity, but the latter (Gisiger) was.

There is no indication that this fee represents a distribution of the time of the supervisory employees named by Respondents' witness Gunn as being those whose services were involved in connection with the fee. In its tax return for the year 1924 Penn Water reported the fee as the profit in an intercompany transaction, and on that basis it was not included in taxable income.

It is clear from the evidence that the fee was nothing more than a flat 5% charge, that it constituted a profit between affiliates, and that the amount thereof should not be included in investment in electric plant.

[100] *Organization Expense of Holtwood Power Company (Affiliate)*

Respondents contend that an amount of $17,875.34 should be included in the rate base as the cost of organizing a corporation in 1924 with appropriate powers for the building and operating of a steam plant at the Holtwood site to be an integral part of Respondents' electrical system.[80] This amount is composed of the following items:

78. The agent died before the giving of the testimony with respect to this item.

79. Baltimore Company was paid $82,828.21 for direct expenses plus an amount of $16,565.78 for indirect expenses.

80. Respondent, Penn Water, had received legal advice that probably it did not possess this authority in its own corporate person.

Lancaster office expense (June 1924-August 16, 1925)		
Salary (Bushong)	$9,124.96	
Office salaries and expenses	5,760.53	
		$14,885.49
Legal services		
Fees	2,500.00	
Salaries and travelling (February 1925)	489.85	
		2,989.85
		$17,875.34

The Staff, in recommending that this contention be denied shows that Holtwood Power Company was in fact organized by Penn Water's lawyers (chiefly J. E. Malone and Simpson, Thacher & Bartlett), that the activities of Bushong and the Lancaster office constituted incidental part-time work of a clerical nature, that the claimed cost covered a period for a full year after the Company was organized, and that uncontested expenses contain ample provision for organization.[81]

[101] It has been pointed out in connection with other claims that Bushong was engaged in performing a variety of services during 1924-1925 and these were not limited to

81. The Staff here refers to the following Holtwood Power Company organization expenses which will be included in the rate base:

Promotion		
Record books, stationery and printing	$312.51	
Advertising, recording deeds, etc.	196.71	$ 509.22
Incorporation fees		6,201.12
Counsel fees		
J. E. Malone (Jan. 1, 1924—July 1, 1925)	12,500.00	
W. E. Haskell	310.00	
Stewart & Gerber	300.00	
Simpson, Thacher & Bartlett	3,070.59	
Notary Fee	.75	16,181.34
		$22,891.68

his land acquisition activity or his services in connection with the organization of Holtwood Power Company. He assisted in the organization of Holtwood Power Company and probably on a level higher than a merely clerical one, but such incidental service of operating employees should not be capitalized.

Respondents also fail to identify or explain either the items for office salaries and expenses or those for salaries and travelling as related to the organization of Holtwood Power Company.

The item for legal fees relates to services rendered by an attorney (Zimmerman) in the absence of Penn Water's regular counsel, J. E. Malone. Respondents' witness Gunn did not know the nature of Zimmerman's services, and the Staff's witness testified that the voucher covering these services did not describe them. Compensation for legal services performed in connection with organization are ordinarily allowable, but Respondents have made no showing that all of this attorney's services were rendered in connection with the organization of Holtwood Power Company or what portion of such services related thereto.

On the basis of the foregoing it is found that inclusion in the rate base of the amount of $17,875.34 would be improper.

Tower Foundations Abandoned.

Respondents contend that an amount of $3,595.95, consisting of expenditures incurred in the construction of four unused transmission tower foundations should be included in the rate base.

[102] The tower foundations were among seven the Respondents started to build in 1932 on rights-of-way procured for the projected Riverside line which was not constructed until 1937. Work on these foundations was ordered commenced to take advantage of the availability of a competent construction force in the vicinity at the time.

Respondents' witness Gunn testified that Respondents knew at the time of construction of the foundations that the use of several of them would be temporary. When the line was finally built only three of the tower foundations were used.

This expense essentially relates to abandoned work, and accordingly its inclusion in the rate base would be improper.

Items Previously Charged Operating Expense or Reserve for Depreciation.

Respondents propose to include in the rate base the sum of $96,116.84 obtained by reaccounting for expenditures formerly charged to the depreciation reserve or to operating expenses, after adjusting for certain recalculated overheads. Three categories of items are involved in the reaccounting: betterments in minor items, additions, and replacements including betterments in new units.

(a) *Betterments.*

Respondents contend that in the past there has been incorrect accounting for expenditures concerning 19 items of betterments arising in connection with minor items installed during the period from 1923 to 1931, in that at the time charges were incorrectly made to the depreciation reserve or to operating expenses in amounts of $14,813.34 and $11,339.99, respectively. The proposed adjusting entries consist of the total of the computed excess of the cost of such installations over [103] the cost of the old item trended to the year of installation by means of commodity price indices.

Except for one minor item (a sign) all the items here proposed for correction relate to necessary repair and maintenance work involving individual parts of equipment or structures such as transformer cooling coils, new rail siding, parts of a transformer oil circuit breaker, etc. (all charged to the depreciation reserve) and turbine lower

pedestal and rubber guide vanes, etc. (charged to operating expense). Respondents' witness Eichorn [Eichhorn], an accountant, admitted that, at the time of recording, the classification of such items as are here involved as a betterment was largely a matter of judgment, and the Staff's witness Newlands testified that these matters had been properly treated as repair and maintenance items at the time they were incurred according to then accepted accounting practice.[82]

Respondents' proposals with respect to this category clearly amount to re-accounting and the amounts related thereto should not be included in the rate base.

(b) *Additions.*

Similarly, Respondents contend that with respect to alleged additions there has been charged in error in the past an amount of $10,670.77 to the depreciation reserve, and an amount of $30,870.70 to operating expenses.

Respondents' witness Wetzel, who reclassified these items, testified that the determination of whether the item represented an addition involved the exercise of discretion and judgment. The Staff's witness Newlands testified that the original entries made on the books [104] for these transactions represented accepted accounting practice at the time of entry.[83]

These items were properly treated at the time of the original accounting as repairs and maintenance, and here, also, what Respondents are proposing merely amounts to re-accounting. Accordingly, the amounts proposed will not be included in the rate base.

(c) *Replacements.*

The final group for which Respondents propose to re-account relates to replacements (including betterments in new units) made from 1923 to 1936. The amount here in-

82. The original accounting was done under the State Commission's system of accounts then prescribed.

83. Penn Water was, during most of this period (1912-1935), subject to the accounting system of the Pennsylvania Commission.

volved totals $105,962.02, of which $13,341.75 would come from alleged past erroneous charges to the depreciation reserve and $92,620.27 from alleged erroneous charges to operating expenses.[84] Here, too, it is established in the evidence that the classification as a replacement rests upon judgment.[85]

These items represent the replacement of existing facilities at a time either prior to that when Respondents began recording retirements on their books or while the change to a retirement policy was being effected and Respondents were still charging the cost of replacement to the depreciation reserve or to operating expenses in lieu of the removal of the cost of the old facility from plant and the adding of the cost of the new. This was accepted accounting practice at the time, did not constitute error, and re-accounting at this time would be improper.

[105] (d) *Overheads.*

Respondents' proposed credit in the amount of $27,539.98 to retirements recorded prior to January 1, 1937,[86] includes interest during construction and other overheads which Respondents state that they believe are applicable to such retirements. However, the interest during construction and other overheads embraced in this proposed adjustment relate to amounts included in Respondents' contentions considered hereinbefore in other sections of this opinion and which, for the most part, have been excluded from the rate base. Therefore, it is found that the credit here proposed should not be permitted in connection with the determination of the rate base.

Respondents, in pricing certain unrecorded retirements, have included overheads not capitalized or allowed herein in the amount of $50,000.

---

84. The adjustment would involve both debits and credits to the depreciation reserve, the net becoming a credit of $13,341.75.

85. The original accounting had been pursuant to a system promulgated by the Pennsylvania Commission.

86. The effective date of the Commission's Uniform System of Accounts and Respondents' compliance with Electric Plant Instruction 2-D.

It follows that the amount in question should not be treated as a part of the cost of plant retired since it has not been considered a part of the cost of plant in the first instance. Therefore, the proposed credit is eliminated.

Contribution to Holtwood Church.

Respondents propose to include in the rate base an amount of $1,400 contributed in 1913 by Penn Water to the construction of a church at Holtwood (Pennsylvania) and previously accounted for as a charge to surplus.

This donation, made after the commencement of operations, was properly an income or surplus charge and not a proper charge to Penn Water's plant.

[106] *River Coal Investigation Expense.*

Respondents claim as includible in the rate base an amount of $6,132.41 representing "River Coal Investigation Expense", consisting of expenses incurred in connection with obtaining an engineering report on Susquehanna River coal, and in increasing the coal storage area and coal storage facilities of Anthracite Production Corporation.

The expense connected with the engineering report ($2,500) was incurred June 1920 and covered a survey of the history of river coal, its recoverability and marketability, as well as the determination of a location of a plant to be used in the recovery of such coal. Within four months thereafter, Holtwood Coal Company was organized as a wholly-owned subsidiary of Penn Water for the purpose of engaging solely in the commercial marketing of river coal. The coal recovered was dredged by the non-affiliate Anthracite Production Corporation, which located its plant as recommended by the aforesaid engineering report, at Shenk's Ferry (Pennsylvania). Subsequently, the market for the sale of coal by Holtwood Coal Company disappeared, and at the end of 1923 it withdrew from the business.

Although Penn Water expended some $23,000, which is included in the rate base, in an investigation of river coal

deposits, combustion characteristics of river coal, etc., in connection with the construction of its steam plant, it proposes here to charge an additional $2,500 to cost of the steam plant for expenses associated with the earlier report obtained in connection with the 1920 commercial marketing operations of Holtwood Coal Company. This non-utility expense is not a proper rate base item.

The proposal to include as steam station costs expenses ($1,340.98) incurred in connection with labor and material provided [107] Anthracite Production Corporation at the latter's coal storage facilities at Shenk's Ferry in 1921 and 1922, as well as the proposed inclusion of the amounts of reimbursement ($2,291.43) to Anthracite Production Corporation by Penn Water for the cost of moving transformers and a transmission line, and the building of a new office, laboratory and machine shop, also relate to Penn Water's non-utility business and should not be included in the rate base.

Respondents' Proposed Credit Adjustments.

Respondents propose to reduce claimed costs by the amount of $9,187.79, representing the rental income received from Transmission Company's Gunpowder line (Baltimore) during the period prior to the commercial operation thereof.

Penn Water also proposes to eliminate from plant account (1) $941.69 appearing in the flowage basin account (1910-1924), (2) $399.59 appearing in the flowage basin account (1925-1936), (3) a bond interest adjustment made in 1914 in the amount of $587.86, and (4) an item of Holtwood Power Company organization expense in the amount of $799.69, all totalling $2,731.83.

Penn Water further proposes to write off the value of stock of McCall Ferry Company [87] acquired by McCall Company from Hutchinson in the amount of $200.

87. Not to be confused with McCall Ferry Power Company (McCall Company).

The credit for the amount of rental received from the Gunpowder line, as well as the other credits totalling $2,931.83, appear to be proper in determining the rate base.

[108] *Summary.*

The foregoing findings relating to investment in electric plant in service and, therefore, to the rate base are summarized as follows:

Net amount in issue		$3,378,869.57
Less amounts to be included in the rate base:		
Triangulation survey and property ties	$ 6,495.96	
Additional interest during construction (January 1, 1911 to June 30, 1911)	192,789.00	199,284.96
Subtotal		$3,179,584.61
Respondents' proposed credits:		
Gunpowder line	9,187.79	
Other	2,931.83	12,119.62
Subtotal		3,191,704.23
Net exclusions from rate base conceded by Respondents		2,208,902.08
Total adjustments to electric plant in service		$5,400,606.31

This adjustment applied to the book amount of Electric Plant in Service and in Process of Reclassification produces an adjusted book amount, as of December 31, 1945, of $33,183,625.82.[88] This latter amount includes $75,722.25,

88. Electric Plant in Service and in Process of Reclassification, $38,584,232.13, less total adjustments, $5,400,606.31, equals the $33,183,625.82.

representing the book cost of certain real estate held for possible future transmission lines which should not be included in the rate base but should be recorded in Electric Plant Held for Future Use. The $75,722.25 deducted from the above adjusted book amount of $33,183,625.82 leaves a balance of $33,107,903.57.

[109] *Disposition of Amounts Improperly Charged to Plant.*

The amount of $11,946,831.77 was charged to plant account on the books of Penn Water to record the transfer of properties on January 13, 1910 from the Bondholders Committee of McCall Ferry Power Company. The amount recorded represented the face and par value of the securities issued to the Committee, less the net amount of miscellaneous assets and liabilities. The following adjustments are appropriate for disposing of the improper or incorrectly classified items as recorded on the books at December 31, 1945, totalling $5,400,606.31:

131	Materials and Supplies Estimate of the portion of sundry spare machine and equipment parts on hand at December 31, 1945.	$ 14,000.00
151	Capital Stock Expense Expenses in connection with the authorization, issue and sale of capital stock during the period 1923-1935.	82,963.12
250	Reserve for Depreciation of Electric Plant The net amounts of $335,728.20 representing unrecorded retirements and $122,488.49 of plant cost erroneously charged to the reserve for depreciation.	213,239.71

110	Other Physical Property Real estate determined by Penn Water to be outside the claimed project boundary and the investment of Penn Water in the hydraulic testing laboratory.	46,221.15
271	Earned Surplus The net amount of various remaining items representing improper charges and credits to fixed capital accounts.	5,044,182.33
	Total elimination from electric plant	$5,400,606.31

The project boundary claimed by the Respondents has not been investigated by the Staff or passed upon by the Commission. The extent and value of the properties proposed to be transferred herein to Other [110] Physical Property and Electric Plant Held for Future Use represent the Respondents' determination and are subject to future action by the Commission when the project boundary is established.

Construction Work in Progress.

The Staff recommends adding to adjusted plant, and to the rate base, construction work in progress in the amount of $32,119 for 1945 and $64,353 for 1946. Respondents contend that $237,361.79 of construction work was in progress for 1945 [89] and $226,672.07 for the year 1946. The recommendation of the Staff coincides with net additions permitted as an element in the computation of the power bill to Baltimore Company under the contract of June 1, 1931. Respondents' contention relates to a total of annual work orders which may be classified into four groups: (1) non-project property, (2) property held for future use,

89. This represents $205,243.01 recommended for exclusion by the Staff

(3) work in progress not included in the year's power bill, and (4) work in progress included in the year's power bill, as follows: [90]

	1945	*1946*
Non-project property	$ 52,140.33	$ 58,921.19
Property held for future use	67,848.06	67,848.06
Work in progress not included in power bill	85,254.62	35,549.75
Work in progress included in power bill	32,118.78	64,353.07
	$237,361.79	$226,672.07

[111] Non-project property includes the purchase of properties above both the Holtwood and Safe Harbor projects which is being held for use in connection with a future hydro development. Neither the specific location of the future development, nor the design, nor the date of the commencement of construction thereof has yet been determined, nor, in fact, can this development be used as a part of the Holtwood project and may not even be owned by Respondent, Penn Water.

Property held for future use consists principally of land items. The largest item relates to rights-of-way for a proposed line from Lehman Farm to Lancaster with some investment having been made for a line of less definite destination. It has not been decided when construction will begin on these lines and no contract has been closed with a customer requiring their construction.

With respect to the two remaining items contained in the foregoing tabulation, Respondents capitalize interest during construction under a definite policy which has been in effect since 1930, according to which interest is charged at ½% per month on construction expenditures with respect to all jobs estimated to cost $2,000 and to require

90. Non-project property and property held for future use are not included in the power bill.

more than one month in construction. This capitalization continues until the end of the month, during which the addition or facility becomes available for service, whereupon the cost of the work is included in computing the power bill.

According to the evidence, therefore, it is proper to allow as a part of the rate base only those of the foregoing items which are included in the power bill and the remaining items claimed are not to be included in the rate base.

[112] *Property Held for Future Use.*[91]

Respondents contend there should be included in the rate base an amount of $77,918.28 as representing property held for possible future use in respect to the construction of a new Lancaster transmission line and substation, lines parallel to Respondents' Perryville, York and Coatesville lines, a connection with the system of Pennsylvania Power & Light Company (Lancaster), and construction of lines parallel to Respondents' Ellicott City (Maryland) to Takoma Park (D. C.) lines, as well as future additions to the Ellicott City substation. In the testimony the estimated date of placing in service of these facilities varies from 1950 to 1955 to the unknown.

Purchases for the possible future line between Safe Harbor and Lancaster, which represents the major portion of this property, began in 1924 and are still in progress. The date when this line is to be built is undetermined.

Rights-of-way paralleling existing lines of Respondents were acquired at the time the transmission lines were constructed and there are no definite plans as to the date of their use.

Such items relate to matters which are too indefinite to justify consideration of the related amounts as a part of Respondents' rate base.

---

91. Other property being acquired currently to be held for future use is disposed of under the previous section, "Construction Work in Progress".

[113] DEPRECIATION.

There are three main aspects of depreciation which must be considered in this proceeding: (1) accrued depreciation to be deducted from cost of plant if a depreciated rate base is used, (2) annual depreciation expense, and (3) whether a depreciated or undepreciated rate base is appropriate.

Accrued Depreciation.

Respondent contends that the accrued depreciation as of the end of 1945 amounted to $6,000,000. The staff claims the amount was approximately the same as the depreciation reserve according to the books (adjusted) of the company, namely, $8,763,118.

The difference between the two foregoing figures represents, in the main, differences in method of determining accrued depreciation. Respondent's witnesses determined so-called actual depreciation of approximately $4,500,000, largely by the observation process, to which was added $1,500,000 as a "safety factor" to cover possible future loss from accidents, failures, floods, ice, hurricanes, sleet, snow, earthquakes, and the like. The staff, on the other hand, estimated accrued depreciation on the age-life, straight-line basis. This involved an estimate of the service lives of the various classes of plant and then a computation of the proper depreciation reserve, sometimes called the reserve requirement, which was taken as the measure of accrued depreciation.

Respondents' witnesses Gunn and Uhl testified that the "actual" depreciation in Respondents' depreciable property as of December 31, 1945 was as follows:

[114]

	Gunn	*Uhl*
Production Plant—Steam	$ 973,310	$ 955,370
Production Plant—Hydro	2,223,880	2,480,350
Transmission Plant	1,147,290	872,050
General Plant	200,420	172,360
	$4,544,900	$4,480,130

The agreement in totals testified to by these two witnesses should not be construed as agreement to details or to procedures. Only by the sheerest of coincidences could the determinations of these two witnesses approximate one another so closely. They disagreed in major respects not only to the presence or absence of functional depreciation, but also as to physical condition. To cite one example, Gunn estimated $326,760 for depreciation in Accessory Electric Equipment, whereas Uhl found only $226,020. Over 50% of Gunn's estimate represented obsolescence, whereas only 15% of Uhl's estimate came within that category.

The witness Gunn's method involved the determination of physical condition and the "comparative economic disadvantage" existing in any unit of property. Physical depreciation was based on studies of plant maintenance, test, inspection and operating records, consultations and studies, and was expressed by a per cent condition. "Economic disadvantage" was determined for individual units of equipment by comparing charges or costs applicable to the existing unit against charges or costs for a substitute unit of the most modern design to provide equivalent capacity, reliability and flexibility. He made substitute plant studies for the hydro and steam stations, the Holtwood and Highlandtown substation[s], the Holtwood-Highlandtown transmission line to Baltimore, and general plant, but not as to the rest of the property which he considered modern. [115] Gunn testified that the greater part of the property of Respondents was of a rugged, long-lived character for which there were few, if any, life statistics, that there were no mortality data available with respect to large hydroelectric equipment and structures, and that he did not use service lives, as in his opinion the results obtained thereby would bear no relation to existing depreciation except by coincidence, even if a series of adjustments were made, from time to time, until life expired.

In determining physical depreciation, however, Gunn used a time discount factor. But, when cross-examined with respect to specific instances in which the factor had entered into his determinations, he was very uncertain and indefinite as to what weight he gave it other than (1) he associated it with future usefulness, which apparently related to a consideration of life expectancy over a possible range of years, and (2) he "observed the effects of interest off of some compound interest curve" assuming that "technological depreciation" would proceed at a certain "rate". He confessed that this "time discount" factor was "far out in the realm of speculation" and depended on the exponent used, but he insisted it was entitled to some consideration and testified that, in fact, he did make estimates of depreciation based upon it and that he could not make an "accurate determination of . . . depreciation" without it.

Gunn's "economic disadvantage" produces a result dependent upon price levels through the effect of prices on current operating expenses of existing property and assumed operating expenses and capital costs of alternative or substitute property. Moreover, it was necessary for the witness, in order to carry out his method, to make judgment [116] determinations of what property was subject to "economic disadvantage" and then to speculate as to what would be the costs of building and operating substitute plants. In this connection, he obtained carrying charges by use of a factor developed 20 years ago, which he did not check for adaptability for current use, and which contained an element of return not appropriate in this proceeding, and an element of depreciation in no way related to his own method of determining depreciation. He estimated suppositious operating and maintenance savings and even assumed a value of power and energy losses that might be saved by modernization of substations.

Such consideration as Gunn gave to the economic aspects of depreciation is included in a method of determin-

ing economic disadvantage which has all of the speculation and faults of "reproduction new". His judgment of physical depreciation, as previously pointed out, is compromised, in major instances at least, by the use of a vaguely defined and vaguely used time-discount factor. It is necessary to conclude, therefore, that this witness' determinations are too speculative to be of real assistance to the Commission in determining accrued depreciation.

The witness Uhl also had available reports of an examination of structures and equipment, inspection and maintenance, maintenance expense history, and data on additions and retirements since the original construction. This witness estimated the per cent condition of structures and equipment, allowing for wear and tear, improvements and replacements, current and deferred maintenance, reflecting the "depreciation" (actually only deferred maintenance) that would be eliminated by Respondents' current maintenance policy, and stated that [117] he considered obsolescence where found. As did Gunn, he considered the mass concrete of the dam, the forebay ramp, the tail-race excavation and deflection wall, and sub-structure excavations as non-depreciable [92] but used the essentials of a service-life calculation to obtain an estimate of the deferred maintenance in the dam.[93]

Witness Uhl gave no real consideration to obsolescence, testifying that the current high cost of replacements made it impossible for him to make a good estimate and that he considered it as a very intangible element, depending, even in power plants, upon style and type as well as upon economic factors.

---

92. Also, the railroad relocation, land and flow rights, reservoir clearing, and organization and undistributed fixed capital costs. Deferred maintenance was found in such principal items as the dam, the turbines and gate mechanisms and the windings of generators and transformers and was included as depreciation. He distinguished between current and deferred maintenance, considering maintenace to be deferred if its periodicity was as much as 3 years, but admitted that in some instances, as the operators' village, it became mixed with improvements. He made no determination as to exactly what part of his determination of depreciation related to deferred maintenance alone.

93. Also in determining depreciation in conductors, line towers, the frequency converters, and transformers.

While Uhl stated that he gave consideration to the fact that some depreciation existed due to deterioration that could not be found by visual examination, it is nowhere apparent in the evidence what [118] weight he gave to this factor as it is obvious that he gave principal consideration and weight to "the physical condition of the property", as he found it.[94]

In essence, both Gunn and Uhl determined their so-called actual depreciation by the observation process, although Gunn, in particular, through generalizations and technical descriptions, endeavored to create the impression that his was a scientific study. To this so-called actual depreciation of some $4,500,000 was added the $1,500,000 previously noted and which witness Gunn admitted was not depreciation at all but merely a provision for some kind of contingency in the future.

We have, on many occasions, carefully considered testimony endeavoring to establish observed depreciation as actual accrued depreciation and have condemned that method so many times that it would seem to be futile to repeat what we have already said.[95] Suffice it to state here that the record in this case, just like the record in the *Safe Harbor* case, shows beyond any question of a doubt that such observed depreciation cannot be accepted as a measure of accrued depreciation for rate base purposes.

[119] The staff proceeded to determine accrued depreciation by the use of the straight-line, age-life method which involves the use of service lives, the same method employed by the Company in computing annual depreciation expense since it started depreciation accounting. Since 1931 the

94. The further criticism that physical depreciation cannot be wholly determined by visual inspection is strikingly borne out by Uhl's admissions that important elements of property were not capable of inspection and that he had to return and make a further inspection of the substructure of the hydraulic plant during the course of the hearing.

95. In the matter of

Chicago District Electric Generating Corp., 2 FPC 412, 423 (1941);
Hope Natural Gas Company, 3 FPC 150, 167 (1942);
Safe Harbor Water Power Corporation, 5 FPC 221, 250 (1946).

amounts of depreciation expense accrued in its books have, in effect, been collected from customers inasmuch as the Baltimore Company, under the supplemental agreement of June 30, 1931, was required to assure the company recovery of all of its proper expenses, including depreciation, in addition to a return on investment. Most of the present reserve was built up by accruals for which the company was specifically reimbursed under the foregoing supplemental contract since the depreciation reserve, as of December 31, 1930, amounted to only $2,875,440.89.

The first step in determining accrued depreciation under the straight-line method is a determination of service lives of the various units or classes of plant. The staff witnesses who estimated service lives did so after a field examination of Respondents' properties and a study of Respondents' operation, inspection, maintenance and trouble reports, and a consideration of functional (economic) as well as physical causes of plant retirement. Respondents did not offer any evidence in respect to service lives. We find in the record in this case that the service life estimates of the staff are reasonable and that they are, therefore, approved.

After a determination was made of the service lives, a proper depreciation reserve (reserve requirement) was computed by the staff. This reserve requirement represented, in terms of cost, that part of the service life of the properties which had expired or, in other words, [120] which related to the past. The method was substantially the same as that employed by the company in its accounts since it inaugurated depreciation accounting. The reserve determined by the staff, as of December 31, 1945, amounted to $8,408,373, as compared with the adjusted book reserve of $8,763,118 as previously noted. The book reserve was somewhat higher than the reserve requirement, the difference being primarily due to the fact that the book reserve contains allowances for resurfacing the dam and a few

other deferred maintenance items not included in the staff estimates.

It is now well-established that depreciation expense and accrued depreciation should be determined by the same method in order to do justice to rate payers and the company alike. The use of one method, such as observed depreciation, for determining accrued depreciation, and an age-life method for the purpose of depreciation expense, is the use of dual standards which inevitably results in injustice. We stated in the *Cape Harbor* case, where the issues in respect to depreciation were similar to the issues presented here, the straight-line method is now the generally accepted method of computing depreciation. The staff procedures in this case conformed to our well-established precedent.

There is disagreement between Staff's and Respondents' witnesses as to whether certain plant items (mass concrete of the dam, the forebay ramp, the tail-race excavation and deflection wall, and sub-structure excavations) are depreciable or non-depreciable, but Respondents' own witness Uhl admitted that it is the practice to put a life upon such structures as concrete dams and that he would consider them, and specifically, the Holtwood dam, as depreciable. The [121] Respondents themselves, since 1917, have accrued amounts to the reserve for depreciation for all of its depreciable plant, which included the dam, according to the straight-line method.

It is of evidence in the record of this proceeding that other electric companies treat comparable mass concrete dams as depreciable, some of the companies calculating the accrual on a straight-line basis, giving the dam account a service life ranging from 100 to 141 years.

In our opinion such plant items as are mentioned above have a limited service life and are properly subject to depreciation allowances in order to prevent the impairment of capital. We believe that the general practice of treating such property as depreciable is clearly correct and that the

novel treatment proposed by Respondents is not sound from either the financial or regulatory viewpoint.

Upon a consideration of all of the evidence it is found that reasonable and proper composite service lives for the steam, hydraulic, transmission and general plant classifications are 42, 69, 57 and 35 years, respectively, with corresponding annual depreciation rates of 2.38%, 1.45%, 1.75% and 2.86%. We find that the average accrued depreciation for 1946 was $9,001,873.

Depreciation Expense.

Respondents contend that the required annual charge for depreciation expense is $400,000 for property in service, plus 2½% on subsequent net additions of depreciable property. The Staff contends that for 1946 the proper annual charge for depreciation was $465,413, computed on a straight-line basis.

[122] Respondents' witness Gunn derived his estimate of the adequate annual allowance of $400,000 by applying to the 1945 book allowance for depreciation, $574,245, the ratio of his determination of the proper reserve at the end of 1945, $6,000,000, to the December 31, 1945 book balance in the depreciation reserve, $8,976,358, and increasing the result to $400,000 after consideration of several intangible counteracting factors.[96]

His recommendation of $400,000 is upon an equal annual (straight-line) basis, which he modified to an annuity of $175,000 if the annual allowance were on a 3% compound interest or sinking fund basis. Anticipating a net increase in the property of Respondents in the future, consisting of replacements and miscellaneous minor additions, both of

96. He testified that he verified this annual allowance by reviewing the present physical and economic condition of Respondents' plant, concluding that retirements for the next ten years may approximate $250,000 a year, permitting the retirement of 1/10 of all of Penn Water's depreciable property including such possibilities as the retirement of 2/3 of boiler plant equipment, 1/2 of all coal preparation and handling equipment, and all of the coal dredging and floating equipment, and rewinding all 10 generators in the hydro station, and all transformers in both the Holtwood and Highlandtown substations, etc.

which he expects to consist of units of property more susceptible to depreciation than the average of the property as a whole (i. e., carrying higher rates of depreciation), he added to his $400,000 an allowance of 2½% per annum applicable to net additions of depreciable property, assuming a straight-line basis of accumulation, or an allowance of 1.3% per annum, assuming depreciation be provided on a 3% interest basis. The $400,000 includes no allowance for obsolescence or what the witness called "economic disadvantage" in the future, except that which might be irregularly provided for at the time of the 5- and 10-year review advocated by the witness as a check of the accumulated reserve against then past experience in the way of retirements.

[123] It is apparent that even under Respondents' theories the derivation of the $400,000 can only be sustained by validation of the witness' use of the ratio of his determination of the reserve requirement to the book reserve. Having found that the witness' determination of the reserve requirement cannot be accepted, no basis exists for accepting his determination of the annual allowance.

Moreover, the procedures followed are impracticable and unsound. In our opinion the $400,000 annual allowance would be inadequate to return the investment in presently-owned depreciable property to respondents over the service lives of such properties, but on the other hand, the 2½% of depreciation to be applied to additions appears excessive. The combination of the two figures conceivably might result in a fair allowance over a period of years, but obviously this would be the result of accident rather than of sound practices.

The Staff's computations of the annual allowance conformed to the standard practice of applying the depreciation rates hereinabove found proper to the average of the appropriate plant balances for the year. Making this application to the average plant balances for the year 1946, it is found that the proper annual allowance for that year

is $467,701, including $2,288 applicable to the sums allowed herein with respect to triangulation and property tie surveys, and the allowance of additional interest during construction, less Respondents' proposed credits.

[124] *Depreciated or Undepreciated Rate Base.*

Respondents contend for an undepreciated rate base with a special credit to consumers, computed at 3% on their revised depreciation reserve balance of $6,000,000, plus subsequent net additions thereto.

The evidence relied upon by Respondents in support of this contention consists of the testimony of the witness Dorau, which sums up to the effect that in order for the stated return on investment to be fully realized, there must be a so-called proper correlation between the effect of the reserve deduction, where the deduction is made, in determining the rate base, and an upward adjustment in the allowed rate of return; or, the same result achieved by not deducting accrued depreciation and allowing a credit to consumers, based upon the amount in the reserve and a given interest rate. Thus, with straight-line accrual, deduction of the reserve, and no income from "reserve investments", the witness contends that in order to realize an "intended" fair return at the rate of 6½% (as assumed by him), there would be required an actual rate of return of 9.27%. On the other hand, with 3% earned on the "reserve investment", the rate of return actually realized would be 5.45%; on a 3% sinking-fund basis, with an undepreciated rate base and earnings on the "reserve investment" at 3%, the rate of return realized would be the witness' intended rate of 6.5%.[97]

[125] This concept of maintaining a "reserve investment" as if it were an actual fund is emphasized by Respondents'

97. As this Commission has comparatively recently pointed out in the *Safe Harbor* case, *supra* (5 FPC 22[illegible]248-249), the use of a sinking-fund method with a rate of interest applicable to the sinking fund, lower than the rate of return allowed on the investment, has the effect of not crediting the consumer with the full amount of the investment which is repaid by him in the form of depreciation expense.

contention that (1) reserve assets are in the nature of advances made by the consumers, which cannot be remitted to Respondents' investors until such investments are no longer needed to insure dependable service to the consumer, and further that (2) the deduction of the reserve would operate to effect a lower return, thereby relieving the consumer of paying for a part of the cost of service (the cost of Respondents' custody and management of the reserve) at the same time depriving the investor of a part of his return on the investment.

Dorau's approach is fallacious in several respects. So-called depreciation reserve assets—they are not identified as separate assets at all—are accumulated from rates paid by consumers but they do not in fact or in theory constitute a *corpus* of a trust fund such as is implied in Dorau's testimony. Whatever funds come into the possession of the utility through allowance of depreciation expense belong to the utility absolutely and may be used for all lawful purposes. Such unidentified funds can be used to pay off debt, purchase additional property, etc. If they are invested in utility plant, the plant is included in the rate base but if invested in such things as stocks and bonds, obviously rate regulation does not take them into account.

The trust fund analogy is strained to say the least. Accrued depreciation is not a fund. As previously stated, it represents that part of the cost of plant which relates to the past—expired service life. If it is not deducted in determining the rate base, a cost of past operations becomes the basis for a continuing charge. [126] In addition, accrued depreciation is deducted on equitable grounds. When a consumer has paid for plant consumption (depreciation), it is just as inequitable to charge a return on the amount reimbursed as it would be to charge a return on the cost of coal consumed in a previous year and duly recovered in operating expenses.

Respondents contend that, because of the long-lived character of their property, the depreciation reserve will

tend to accumulate to abnormal proportions, becoming and remaining for years in excess of 50% of the investment in depreciable property under the straight-line method. Assuming such computations to be accurate, the results thereof do not constitute a valid argument, *per se*, against the straight-line method and the employment of a depreciated rate base. The fact is that in the instance of Respondents, whose property is largely long-lived, the use of a sinking-fund method (usually associated with an undepreciated base) would postpone recoupment of a high proportion of their investment to the remote time when the properties are old, maintenance high and obsolescence a greater hazard. This would entail greater financial risks and might result in serious capital impairment.

We discussed in the *Safe Harbor* case the contention that an electric utility like Penn Water should employ the sinking-fund method of depreciation and enjoy an undepreciated rate base. The record in this proceeding does not alter what we there said, but no good purpose would be served by repetition.

[127] It is, therefore, concluded that the use of a depreciated rate base in this proceeding is proper. It is also our opinion that where the book reserve approximates the proper reserve (reserve requirement), the book reserve should be deducted as the measure of accrued depreciation. That is the situation here, the book reserve is only slightly higher than the reserve requirement and even the excess represents payment to Penn Water by its customers for deferred maintenance.

Accordingly, we find that from Respondents' average investment in plant for 1946, $33,126,585, the reserve for depreciation, averaged for the year $9,001,873, should be deducted in arriving at the 1946 rate base.

[128] WORKING CAPITAL.

Respondents contend that an adequate allowance for working capital requires the allowance of an amount of

$977,160, while the Staff contends that an allowance with respect thereto in the amount of $650,000 would be adequate.

Respondents contend that the required amount of the cash component of such an allowance is a sum of $488,092. However, the method used by Respondents in computing the amount claimed for this component is based upon several fallacies. The lag between expenditures and revenue is computed by Respondents on the theory that cash should be on hand the first of a month to meet all of that month's expenses and that revenues are not due until the various contract dates of payment, without any consideration of the fact that bills are not received on the first of the month, that operating expenses are not paid on the first of the month, that payrolls are paid twice a month or bi-weekly with little necessity for interim wage payments, and that bills usually either carry a ten-day discount or a 30-90 day payment provision. Accordingly, Respondents' use of a 48-day lag in terms of weighted dollars in this computation is not acceptable.

Further, Respondents' calculation of the cash component includes an allowance for contingencies such as floods, fires, etc., in the amount of $125,000, though in determining this amount no consideration was given by Respondents to their year-in and year-out actual contingency requirements, nor to the fact that the operating and maintenance element of such a casualty expense would be recouped in the monthly power bill [129] rendered by Respondent to Baltimore Company. Such vague over-all contingencies, however, are not properly provided for in this kind of an allowance.

Again, with respect to this same component, Respondents have included as a part of their operating expenses an allowance for rate case expense in the amount of $126,000, without regard to "periods of repose" or to the fact that, subject to the rights of the parties under the agreement of

June 1, 1931, Penn Water may include rate case expense as a part of the monthly power bill rendered Baltimore Company.

The Staff's contention that an adequate provision for the cash component would be an amount of $256,644 is based on the use of a 45-day period of lag between expenditures and revenue. The actual average period of lag, based upon the dates upon which the Respondent, Penn Water, actually receives payment from its customers, is only 25-35 days. The Staff's contention is also based upon the semi-monthly or bi-weekly character of Respondents' salary and payroll payments, and a ten-day discount period for the payment of materials and supplies. The Staff has excluded from the computation reflecting its contention the cost of purchased power, which is paid for after revenues are received; taxes, which are also paid after revenues are received; and depreciation expense, which does not represent a cash expenditure.

It is found that the amount of $256,644 represents an adequate amount for the cash component of a working capital allowance.

The tolerances provided in the 10-20 day margin between experienced lag and an allowed 45-day lag, and in the fact that Federal [130] income tax expense is an item on the monthly bill rendered Baltimore Company though payable by Penn Water only quarterly in the following year, appear to be sufficient for the maintenance by Respondents of minimum bank balances and for provision for average contingencies.

Respondents contend that an amount of $489,068 is required for the materials and supplies component including river coal in storage. Respondents' computation of the materials and supplies requirement, exclusive of river coal, is based upon a partial write-up of 1945 requirements, made on the basis of an assumed increase of 15% in the cost of purchased goods. The amount Respondents contend is re-

quired to cover river coal in storage is based on the averaging over 5 years of net tons in storage at the close of the annual dredging season, an estimated increase in cost of production in 1946 of 15%, and the addition to allocated general and administrative expense, including all general officers' salaries, rate case expense, and legal expense.[98] Respondents make no allowance for the fact that general and administrative expense is subject to monthly recoupment in the power bills to Baltimore Company. This component, as claimed by Respondents, is inflated, both because of the use of the average amount of coal in storage at the end of the dredging season,[99] and because an improperly computed unit price has been applied to the tonnage of such coal. This determination of the material and supplies component accordingly is not acceptable.

[131] The Staff contends that an allowance for materials and supplies (including coal on hand) of $396,421 is adequate. This is based upon a 12-months' average of total materials and supplies for the year 1946, and includes an average monthly inventory of coal.

The recommendation of the Staff as to the materials and supplies component is reasonable and is supported by the evidence.

The amount of $650,000 is herewith allowed in the rate base as Respondents' working capital requirement.

Net Investment Rate Base.

On the basis of the evidence in this proceeding and the foregoing findings and conclusions it is further found that the consolidated net investment rate base for Respondents for the year 1946 is as follows:

98. Although the full amount of general and administrative expense was previously included in calculating the cash component.

99. Respondents' average of 52,414 net tons in storage at the beginning of the non-productive period (i. e., the closing of the dredging season in December) compares with an average monthly balance of coal in storage, for the same 5 years used by Respondents, of 38,961 tons.

	1945	1946
Plant in Service and in Process of Reclassification (per books)	$38,584,232	$38,525,105
Adjustments to Plant in Service and in Process of Reclassification	5,476,329	5,476,310
As Adjusted	$33,107,903	$33,048,795
Construction work in progress	32,119	64,353
Total	$33,140,022	$33,113,148
Average for 1946		$33,126,585
Average depreciation reserve		9,001,873
Average net investment		$24,124,712
Working Capital		650,000
Net investment rate base for 1946		$24,774,712

[132]

RATE OF RETURN.

Upon a careful review of the extensive evidence of record in this proceeding which deals with the subject of rate of return, and applying the principles controlling the determination of a proper rate for utilities as enunciated by the Supreme Court,[100] it is found that a rate of return of 5¼% for Respondents is fair and reasonable.

Respondents contend that their fair return requirement is a gross figure of $2,450,000, the approximate result of applying a so-called over-all replacement cost rate of 5.6% to an undepreciated original cost rate base adjusted upward for present costs or prices.[101] Respondents further

100. *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 603; *Bluefield Water Works & Improvement Co.* v. *Public Service Commission*, 262 U. S. 679, 693; *United Railways* v. *West*, 280 U. S. 234, 251.

101. To determine the amount of the fair return requirement, Respondents' witness Foster applied his current cost of 5.6% to a rate base consisting of (1) Respondents' contended-for consolidated original cost as of December 31, 1946, plus (2) 42.6% (witness' computed present proportion of

contend that if an undepreciated original cost rate base be used, without adjustment for price changes, the rate of return allowed must be 6.5% in order to enable the realization of the required gross amount of $2,450,000. To obtain the same gross amount on the basis of a net investment rate base of $24,774,712, Respondents would have to be permitted to earn an over-all rate of nearly 10%.[102]

[133] The Respondents' witness described two bases of rate making which he indicated would induce the investment of capital in regulated enterprises, one of which he defined as the "competitive replacement basis", the other as the investment cost basis. He relied, however, only upon the former. In his computations he applied a rate which he testified represented the current (competitive) cost of obtaining capital to a base which he testified represented the current (competitive) cost of plant in terms of first a substitute plant and again in terms of the trended cost of Respondents' physical properties. The witness' method involves the attempted injection of speculative reproduction cost through the back door, i. e., rate of return testimony. It cannot be accepted.

Respondents are very little subject to even the ordinary risks of an electric operating utility. Penn Water has a ready market for all of its power, possesses strong power contracts, and is in a very favorable financial position. The contract with Baltimore Company assures Respondents of a stabilized income on a basis prior even to the return to the holders of the common stock of Baltimore Company. The witness Foster conceded that Baltimore

---

equity capital) of the difference between original cost and the nominal dollar investment adjusted for changes in purchasing power of the dollar to 1945, plus (3) the Respondents' contended-for working capital allowance ($977,160). The foregoing, though properly excluded from evidence, remained the basis of the witness' determination. The witness also checked by making other similar computations, using 42.6% of the difference between said consolidated original cost and the cost of a substitute plant, and 42.6% of the difference between such consolidated cost and the trended original cost; also making three somewhat similar calculations with a more economical equity capital proportion of 25%.

102. The witness did not concern himself with whether depreciation should be deducted, nor did he give consideration to the matter of giving a credit to consumers.

Company was generally a strong company and was regarded by investors as having better than average prospects so far as income stability was concerned. The degree of Respondent Penn Water's income stability is manifested by the fact that during the depression years following 1929, Respondent, Penn Water, maintained its common stock dividends at $3 per share without change, and Baltimore Company, likewise, avoided having to put into effect any reduction in dividends, while dividends paid by certain other electric operating utilities did decline.

[134] The Respondent, Penn Water, had outstanding, December 31, 1946, $10,068,000 of refunding mortgage and collateral trust bonds (3¼%) issued in 1939 and due in 1964, and $10,245,000 of refunding mortgage and collateral trust bonds (3¼%) issued in 1940 and due in 1970. There was also outstanding at the end of 1946, 21,493 shares of $5 cumulative preferred stock (no par), and 429,848 shares of its common stock (no par).[103]

Respondent's outstanding 3¼% bonds, series of 1964 and 1970, are widely distributed and admitted to unlisted trading on the New York Curb Exchange. The series of 1964, in the principal amount of $10,900,000, offered in 1939, was issued at a premium and on a yield basis of 3.02% and at a cost rate to maturity of 3.20%. The series of 1970, in the principal amount of $10,962,000, offered in 1940, was issued at a premium and on a yield basis of 3% and at a cost rate of 3.14%.

The series of 1964 is now callable at 105.5%, and the series of 1970 at 106.5%. Undoubtedly the possibility of call has prevented the yields on these bonds from following the downward movement of yields on other public utility bonds of comparable quality and Respondents' witness Foster testified that the average yield on Moody's "Aa" bonds during the year 1945 was better evidence of the required yield than the yields on Respondents' own bonds.

---

103. As stated hereinabove, Penn Water owns the entire issued capital stock and bonds of Transmission Company.

On the basis of yields to maturity at market price of 30 issues of mortgage bonds of electric and electric-combination utilities offered publicly during the period, April 1, 1945, to March 31, 1946, Respondents' witness Foster determined that 2.78% represented the replacement cost of [135] debt capital, on the basis of a required yield rate of 2.72% and an allowance of 0.6% for the financing spread.[104] He gave consideration to the relationship between the yield rate and, though the margins are generally large, to the prospective coverage of interest requirements, and particular attention to the yield rates of August, September, and October of 1945.

Respondents' preferred stock constitutes an issue relatively small both in amount and in proportion to the total capital structure. Sale prices, and even bid and asked quotations, on a sufficiently continuous and representative basis were not available at the time of the hearing in this proceeding. However, new offerings of electric operating utility preferred stocks in recent years have shown lower average yields to the purchaser.

On the basis of current yields on the preferred stock of 15 electric and electric-combination utility corporations, offered publicly during the period April 1, 1945 to March 31, 1946, Respondents' witness Foster, considering the percent of adjusted gross income required for equal and senior issues, determined that 3.72% represented the replacement cost of preferred stock capital, on the basis of a required yield of 3.60% and a cost of 0.12%.

While the evidence reveals favorable current economic conditions, showing interest rates and yields for corporations generally, and for electric utilities in particular, at low levels, and thus, tends to support witness Foster's 2.78% as the cost of debt capital and 3.72% as the cost [136] of preferred stock, we believe that Foster's results, defer-

104. While the average for "Aa" bonds was 2.70%, on the basis of a comparison with more complete data with respect to yields on outstanding "Aa" bonds he increased the 2.70% by 0.02%. As of March 1947, Penn Water's outstanding bonds of the 1964 and 1970 series were selling above the call price to yield 2.72% and 2.82%, respectively.

mined early in 1946, would not, in view of subsequent market trends, be fair to Respondents. Such trends in the cost of bonds and preferred stock subsequent to his determination indicate that the margin between Penn Water's cost of money and the current cost of money is not so great as to warrant rejection of Penn Water's present cost of bond and preferred stock capital. Accordingly, we find that Respondent Penn Water's cost of bond money for purposes of this rate proceeding is 3.17% and 5.21% for preferred stock.

Respondent, Penn Water, as of December 31, 1946, had outstanding 429,848 shares of no-par common stock with a stated value of $10,868,312.50. This stock has been outstanding over a long period of years and is actively traded.

Respo dent's witness Foster determined the so-called replacement cost of equity capital or common stock to be 9.25%, including 8.5% as the capitalization rate, and 0.75% as a margin for cost of financing. The capitalization rate was obtained by an adjustment of Penn Water's monthly earning-price ratios averaged over a period from August 1939 to December 1945.[105]

[137] Earnings-price ratios on outstanding common stocks of 14 well-known electric operating utilities have declined in recent years, the yields for 1946 being as low as 4.88% (March) with an upward movement in 1947 to 6.89%. The earnings-price ratio for 1,167,397 outstanding shares of Baltimore Company was 4.60% on March 30, 1946, rising

105. There was a sharp increase in the earning-price ratios of Penn Water's common stock subsequent to June 1944, contemporaneous with the initiation of the immediate rate proceeding. The adjustment referred to in the text, *supra*, consisted of a correction for this sharp increase by means of a computation of the average deviation of Penn Water's earning-price ratios from those of the medial four of six selected electric and electric-combination companies, averaged during the preceding period, August 1939 to August 1944. The witness referred to the six companies as representing a homogeneous group of dividend-paying common stocks, the composition of which did not change during the period from 1910 to date, and stated them to be substantially all of such companies that met that qualification. To get an imputed ratio for Respondent he assumed the average deviation could be applied from September 1944 as an addition to the ratios for the medial four. He used the 1939-1944 period as a cycle, though it was one dominated by war conditions.

to 6.84% February 28, 1947. Data with respect to common stocks issued to the public during 1946 showed earnings offering price ratios on an actual earnings basis ranging from 4.58% to 9.56% and on a pro-forma earnings basis from 5.07% to 6.37%. These compare with ratios on earlier issues (1935-1945) ranging from 5.37% to 11.70%. Respondent's witness Foster developed ratios for a group of six electric and electric-combination utilities which included Baltimore Company. These ratios (using the medial four) ranged from 6.7% for a so-called cycle from October 1929 to August 1936, to 7.2% for a so-called cycle from September 1936 to August 1939, to 7.8% for a so-called cycle from September 1939 to January 1946—with an arithmetic mean for the three cycles of 7.2%. Similarly, for a larger group of eleven, which included the six of the previous group, Foster obtained corresponding ratios (medial 5) of 6.3%, 6.7% and 7.1%, respectively. During the same cycles the earnings-price ratios on Penn Water's common stock were 8.0%, 6.9% and 8.5%. During the first nine months of 1946 the earnings-price ratios of the medial four of six varied from a low of 5.44% to a high of 6.25% (September) [138] and of Penn Water from 6.21% to 6.51%.

As of December 31, 1946, and subsequent to the adjustment to surplus which is required in the finding and order herein, Respondents' capitalization consists of 58.19% outstanding debt in the amount of $20,313,000, 6.10% cumulative preferred stock (no par) in the book amount of $2,130,895.50, and 35.71% common stock in the stated amount of $10,868,312.50 with a surplus of $1,598,812.18.

We find, therefore, that a rate of return of 5¼%, applied to the rate base heretofore described ($24,774,712 for 1946) is fair and reasonable. This rate of return which is based upon 3.17% for bonds and 5.21% for preferred stock, allows about 8.64% for common stock and surplus, which is adequate. This return for equity, which takes into consideration cost of floating the stock accords greatest weight to the most recent data and allows for the upward trend in equity investor requirements.

[139] REVENUES AND EXPENSES.

Revenues.

Penn Water's revenues, per books, are classified as follows for the year ended December 31, 1946:

SALES OF ELECTRIC ENERGY	
Sales to other electric utilities	
Consolidated Gas Electric Light and Power Company—	
Net Bill for year	$1,399,331.10
Portion of regulatory expenses and applicable taxes not paid	(294,379.25)
Total	1,104,951.85
Pennsylvania Power & Light Company—	
Lancaster, Pa:	1,944,484.32
Holtwood, Pa.	13,871.33
Total	1,958,355.65
Philadelphia Electric Company—	
Coatesville, Pa.	940,860.95
Edison Light & Power Company—	
York, Pa.	10,331.62
Metropolitan Edison Company—	
York, Pa.	657,123.11
Total sales to other electric utilities	4,679,623.18
Sales to railroads and railways—	
Pennsylvania Railroad Company	1,625,575.45
Total Sales of Electric Energy	6,305,198.63

OTHER ELECTRIC REVENUES:	
Rent from electric property	34.65
Miscellaneous electric revenues—	
Conowingo backwater payment	133,750.00
Other	—
Total	133,750.00
Total Other Electric Revenues	133,784.65
Total Operating Revenues	$6,438,983.28

[140] After adjusting the amount of $1,104,951.85 paid by Baltimore Company by deducting an additional amount of $25,179.56 paid Penn Water as part of the 1946 rate case expenses and adding the increased cost of power purchased from Safe Harbor in the amount of $37,063 for 1946 the adjusted revenue from Baltimore Company becomes $1,116,835.29 and the total revenues become $6,450,832.

Operating Expenses.

Penn Water's operating expenses for the year ended December 31, 1946, per books and as adjusted, are as follows:

	Per Books	As Adjusted
Electric generation—steam	$ 683,567	$ 683,567
Electric generation—hydro	402,895	402,895
Transmission	408,484	408,484
Administrative and general	571,429	571,429
Rate case expenses	319,559	—
Non-operating items	15,293	—
Sub-total Oper. and Maint.	$2,401,227	$2,066,375

Purchased power—Safe Harbor	1,016,501	1,053,564
Interchange power—net	(1,127,699)	(1,127,699)
Depreciation	573,877	467,701
Taxes, except Federal inc.	297,970	264,970
Federal Income tax	892,071	248,513
Total operating expenses	$4,053,947	$2,973,424

The Intervener, Baltimore Company, has petitioned the Commission to determine an allowable amount of rate case expense (with respect to these proceedings) that Respondent, Penn Water, may charge Baltimore Company under the contract between them. It is proper in this proceeding to eliminate from operating expenses and the revenues received from Baltimore Company, the rate case expenses, charged in 1946, as this is a non-recurring item, but Intervener's liability, if any, for such an item relating to past transactions, is a contractual one, which is determinable either under the arbitration procedure provided by the contract, or by proceeding in the courts.

[141] The item of $15,293 represents miscellaneous costs which Penn Water has classified as non-operating and excluded from the power bills to Baltimore Company.

The adjustment of the cost of power purchased from Safe Harbor, an increase of $37,063, has been made to give effect to the rate order of this Commission in the *Safe Harbor* case, supra.[106]

Depreciation expense has been adjusted to conform with the reasonable annual allowance previously discussed and the tax adjustments have been made to reflect the Pennsylvania and Federal income taxes on the basis of a reduction of revenues to yield a fair return of $1,300,672, which is 5.25% of the rate base in the amount of $24,774,712.

106. The Safe Harbor refinancing in 1946 resulted in eliminating income taxes entirely for that year, therefore, the power bill as rendered reflected abnormally low costs.

Excess Revenue.

The excess revenue for the year ended December 31, 1946 is $2,176,736, computed as follows:

Operating Revenues, as adjusted		$6,450,832
Operating Expenses, as adjusted	$2,973,424	
Return at 5.25%	1,300,672	
Deduct		4,274,096
Excess Revenues		$2,176,736

For cost allocation purposes the following reclassifications of revenue and expense items have been made.

[142] Instead of showing the net revenue from interchange power as a credit item to operating expenses, the amount thereof, $1,127,699 has been added to revenues from Baltimore Company. An adjustment of revenue received for special facilities from Pennsylvania Railroad, in the amount of $141,777, in accordance with the allocation of costs of special facilities, has been made by adding the amount to revenues from Baltimore Company and deducting it from revenues from the Pennsylvania Railroad. The item of $133,750 representing the Conowingo backwater payment has been removed from revenues and applied as a reduction of operating costs.

After giving effect to the foregoing adjustments and reclassifications, the gross revenues and cost of service are classified as follows:

Revenues:	
Baltimore Company	$2,386,311
Railroad (in Pa.)	1,483,798
P. P. & L. Co.	1,958,356
Philadelphia Co.	948,861
Metropolitan Co.	667,455
Total Revenues	$7,444,781

Cost of Service:	
Operation and Maintenance	$1,932,625
Purchased power—Safe Harbor	1,053,564
Taxes	513,483
Depreciation	467,701
Return at 5.25%	1,300,672
Cost of Service	$5,268,045

The difference between total revenues and the total cost of service, is therefore, $2,176,736. An allocation of cost has been made to determine the cost of service to each customer and the resulting excess revenue therefrom.

[143] ALLOCATION.

The determination of whether the demand, energy, special facility and other rates and charges paid by those receiving electric power and energy from Penn Water are reasonable is dependent upon the making of a proper allocation of the costs of service between these customers and a comparison of the costs so allocated to each customer with the revenues obtained from the customer.

Respondents contend that the allocation of costs to, and revenues from, Penn Water's Pennsylvania customers, should follow jurisdictional lines, and asserts that a comparison of costs and revenues as to Baltimore Company alone indicates that charges to the latter are actually deficient. The question of jurisdiction of the Commission with respect to the Pennsylvania rates and charges has, however, already been determined herein.

Disagreement as to Division of Cost of Service between Baltomore Company and Pennsylvania Customers.

Staff's witness Davis allocated the total cost of service for capacity, firm energy and special facilities supplied by Respondents. The allocation resulted in charging 96.5% of Respondents' cost of service to Pennsylvania customers and 3.5% to that rendered Baltimore Company, after crediting

the latter with an amount of firm energy and capacity supplied by it for use by Penn Water in serving the latter's customers in Pennsylvania. On the other hand, Respondents' witness Zinder, using a return of 6½% and other bases consistent with Respondents' contentions herein, allocated 41.4% of his total cost of service for 1946 to Baltimore Company.

[144] Respondents' witness Loane, using Davis' method for "illustrative purposes", and making several adjustments to the latter's exhibit, with respect to the credit for Baltimore Company's energy diverted at Safe Harbor and with respect to dependable capacity delivered to Baltimore Company at Highlandtown and capacity diverted by Penn Water at Safe Harbor, allocated 20.6% of the total cost of service to Baltimore Company, and 79.4% to the Pennsylvania customers. Baltimore Company's witness Gibbs, by contrast, submitted results of his revisions to Davis' exhibit, to show, according to that intervener's contentions, that the Pennsylvania customers were not fully paying for the cost of the service rendered but were, in effect, being subsidized by Baltimore Company by an amount of approximately 6.4% of total costs.

By combining recomputed firm power services rendered Baltimore Company by both Penn Water and Safe Harbor, Respondents' witness Spaulding testified that costs applicable to such services exceeded the recomputed billing by the amount of $266,578. Important bases for Spaulding's determination were the assumptions that Safe Harbor and Penn Water render joint services to Baltimore Company, and that Baltimore Company does not have a right or contract entitlement to two-thirds of Safe Harbor's output.

Methods Employed in Analyses of Costs.

Each of the several witnesses first analyzed costs on the basis of the allocation of investment both for special services to specific customers and for general services to all. With respect to special facility service each proceeded to

use a rate base and return [145] method for getting one element of cost,[107] the method of treating depreciation varying according to the contentions of the parties.[108] Davis included Penn Water's cost of purchased power as a part of operating expense to be allocated, but Respondent's witness Spaulding considered the capacity and output of the Penn Water-Safe Harbor plants on a system basis, without regard to Baltimore Company's entitlements under its contracts with Penn Water and Safe Harbor.[109]

The witness Davis based a part of his exhibit upon the pooling of investment or costs for all those facilities which he found were used in rendering a service common to all and not specifically applicable to any one customer, and upon a final allocation thereof according to capacity or energy use by each customer. The witness Spaulding employed a similar principle in [146] making his allocation to Baltimore Company using an undepreciated production plant rate base, and associated expenses, computed separately for Penn Water and Safe Harbor. The witness Zinder's exhibit reflected joint use of property to a very minor degree.

Neither Spaulding nor Zinder made any determination as to cost of service for any other customer than Baltimore Company.

Allocation of Transmission Facilities.

With respect to these facilities, the allocation of three groups are in issue:

---

107. The rate base, the allowance for working capital and the rates of return varied; Davis using a 5% rate of return, Spaulding 6½% for Penn Water, and 7% for Safe Harbor.

108. Respondents' witness Loane followed Davis' method of deducting the depreciation reserve, confining his adjustments to the latter's exhibit, to other matters. Davis used an allocation of the reserve which was based on the application of depreciation rates to property groups included in the facilities Davis had already allocated in his Table 1. Spaulding allocated the reserve simply in the ratio of investment (which reserve was not deducted from the rate base but used to obtain a credit to consumers to deduct from return). Zinder allocated the reserve also in direct ratio to investment.

109. Davis allocated depreciation expense between customers on the same basis as depreciable property, income taxes and capital stock taxes by investment ratio, property taxes on the same basis as property, unemployment insurance on the basis of operating expense, and gross receipts tax on the basis of gross revenues.

(d) 220 Kv. 60 Cycle Lines and Switching Stations.

The witness Spaulding allocated the costs associated with these facilities 100% to Baltimore Company, the witness Zinder 85% (except for the Ellicott City-Takoma Park line),[110] and Staff's witness Davis 66 2/3%, which last allocation was concurred in by Baltimore Company's witness Thomas.[111]

The allocation of the witness Spaulding is based upon his view that the transmission of energy from Baltimore to Pennsylvania does not relate to the firm demand requirements of any of the [147] Pennsylvania customers except the Railroad and that the supply to the Railroad is in part a responsibility of Baltimore Company.[112] But it should be observed that the river-run characteristics of Penn Water's hydro plant (and Safe Harbor's) makes it impracticable for Penn Water to serve the firm requirements of the Pennsylvania customers without the availability of the substantial amounts of off-peak energy which it obtains from Baltimore Company. Moreover, the contracts with Pennsylvania customers, providing for economy interchange, are obviously neither designed nor adequate for "firming up" Penn Water hydro for services to the Pennsylvania customers. The very use of the term "economy" in the contracts describing this type of interchange is demonstrative of such inadequacy.

The witness Zinder's allocation of 85% of the cost associated with these facilities to Baltimore Company is a judgment determination based in part upon his computation that, over a five-year period (1941-1945), approximately 81% of the energy flow over these same facilities repre-

110. Allocated 100% to Baltimore Company.

111. As the witness Davis allocated 33-1/3% of these transmission facilities to pool, and his method calls for further allocation of transmission costs to customers from this pool by way of capacity assignments, Baltimore Company would be further charged with an additional portion of these facilities and their costs, depending upon whether it receives capacity from Penn Water.

112. He considers the problem as if Baltimore Company's entitlement to power and energy from Safe Harbor did not exist. This interpretation of the subordination of entitlement is neither necessary nor supportable.

sented deliveries to Baltimore Company. This computation, coupled with his division of all costs into equal demand and energy components, amounts, in effect, to an allocation of 90% of the capacity cost to Baltimore Company.[113] Zinder's allocation does not [148] properly reflect the necessary use of these lines by Penn Water in meeting the firm requirements of the Pennsylvania customers.

Davis, on the other hand, assigned these facilities and their associated costs 66 2/3rd directly to Baltimore Company, giving consideration to the directional dominance of energy flows over the circuits by periods of the year, when, during four or five months of high river flow the great bulk of energy is being transmitted to Baltimore; during two or three months of extreme low river flow the great bulk of energy is being transmitted from Baltimore, to make up the deficiency in Penn Water's firm supply for its Pennsylvania customers; and during the remaining four to six months the facilities are used to transmit energy alternately in either direction, with Penn Water receiving energy from Baltimore Company during off-peak periods of the day, to enable it to store water at such times.[114]

Giving due consideration to the character of services provided to Baltimore Company and to the Pennsylvania customers by the use of these lines, and bearing in mind that Baltimore Company will also share pool costs as to these same facilities in proportion to the capacity service rendered it, Davis' allocation of 66 2/3rd directly to Baltimore Company, and 33 1/3 to the pool, is found to be reasonable.

---

113. Accordingly, his judgment of an over-all allocation of 85% of all costs to Baltimore Company is obtained first and the other figures constitute little more than a sequent.

114. His judgment was based on the 1943, 1944 water years, the latter a low-flow year; 1943 was nearer the average but affected by northern requirements for war production purposes. However, this factor alone does not require a specific modification of the proposed allocation. Observe that Intervener's witness Thomas testified that Davis' allocation was supported on the basis of the maximum one-hour supply in each direction in 1944.

[149] (b) *Safe Harbor-Perryville Line, Conestoga Substation and Perryville Switching Station.*

The witness Spaulding considered these 25 cycle, single phase facilities as special facilities for Railroad use in Pennsylvania and Maryland and, on an energy basis, allocated 52.8% of the cost of such facilities to Baltimore Company for services rendered to the Railroad in Maryland, less charges paid PEPCO by Baltimore Company for the use of a frequency-changer at Benning.

The witness Zinder allocated none of the costs associated with these facilities to Baltimore Company, on the ground that he confined his study to services rendered by Penn Water to Baltimore Company alone.

On the other hand, Staff witness Davis allocated the substation 47% to Baltimore Company and 53% to the Railroad in Pennsylvania, and the line and switching station 91% to Baltimore Company and 9% to the Railroad in Pennsylvania, in each instance on the basis of energy flows over the facilities and on the ground that these facilities were used not only for service to the Railroad in Pennsylvania and Maryland, but also for the rendering of interchange services to Philadelphia Company on the behalf of Baltimore Company from the residual of energy to which the latter is entitled under its contract.[115]

[150] Obviously, Spaulding's basis of allocation does not reflect the complete use to which these facilities are put.

The procedure employed by the witness Davis gives weight to the use of such facilities for interchange with Philadelphia Company, and the evidence supports his conclusion as to the ratio of the allocation.

(c) *Holtwood-York Line and Violet Hill Substation.*

Neither the witness Spaulding nor the witness Zinder made any allocation with respect to these facilities. The

115. In its Form 1 reports for 1944 and 1945, Penn Water reported that in the actual accounting for interchange tranasactions by Respondent with Philadelphia Company at Coatesville, Pennsylvania Power & Light at Lancaster, and Edison Light & Power Company at York, such energy was considered to have come from Maryland. With respect to Philadelphia Company, no other interchanges were shown.

witness Davis allocated associated costs 55% to Metropolitan Company and 45% to Baltimore Company, on the basis of the ratio of interchange energy to total energy delivered during the year. The allocation of this line and substation is approved as made by Davis, as proper recognition has been given by him to their use for interchange.

Special Facility Costs.

Based upon the foregoing conclusions and other allocations not contested except on broad general jurisdictional grounds [116] the following allocated special facility costs are obtained for each [151] customer: [117]

	Operating Expense	Bill for Safe Harbor Power	Taxes	Depreciation	Return	Total
P. P. & L.	$ 1,382	$——	$ 7,548	$ 766	$ 1,877	$ 11,573
Philadelphia Company	27,843	——	11,086	6,704	26,095	71,728
Metropolitan Company	14,772	——	7,479	4,744	15,811	42,806
Railroad	24,165	24,581	14,873	13,925	31,810	109,354
Baltimore Company	367,398	21,798	143,096	79,300	305,951	917,543
Total	$435,560	$46,379	$184,082	$105,439	$381,544	$1,153,004

Allocation of 25 Cycle Production Facilities to Pool.

The witness Spaulding, in effect, allocated these facilities on a capacity and energy basis 50.15% to Baltimore

116. There are no issues here raised with respect to Davis' allocation of the Holtwood-Highlandtown 66 kv line, the Highlandtown Substation, and the so-called Gunpowder Line (in the Baltimore area) 100% to Baltimore Company; the Holtwood-Coatesville line and the Newlinsville Substation (Coatesville) to Philadelphia Company; the 25-cycle Holtwood-Lancaster line, and 5 switching and substations to PP&L; the Fishing Creek Substation to the Railroad in Pennsylvania; and the rest of the transmission system, including the 60-cycle Safe Harbor-Holtwood line, to pool. The jurisdictional grounds have already been considered herein.

117. Davis allocated administrative or general expense to the pool. However, it appears from the evidence that because of the nature of the elements constituting administrative and general expense, a modification should be made with respect to this expense. Accordingly, it has been allocated in a manner consistent with the allocation of the other operating expenses, i. e. in the ratio of a facility investment totalling $33,126,585 after net allowances herein of $187,165.

Company and Respondents' witness Zinder 92% to that Company, substantially on an energy basis.[118]

Spaulding's 50.15% determination involves acceptance of his estimate of dependable hydro capacity and also his combining the dependable capacity for both Penn Water and Safe Harbor without regard to the Baltimore Company's entitlement (contract proportion) in [152] determining the capacity service rendered Baltimore Company. Zinder's 92% allocation to Baltimore Company assumes that all, or substantially all, of the capacity and energy delivered by such facilities are used by Baltimore Company at Baltimore and not in conjunction with the system's coordinated operations. However, intervener Baltimore Company's witness Thomas, an operating executive, testified that at times a part of the 25 cycle energy delivered at Highland town is converted through the frequency changers of Baltimore Company in Baltimore, Maryland, to 60 cycle energy either to transmit for use in Pennsylvania or to retain and substitute for energy at Baltimore thus either freeing 60 cycle Baltimore energy for transmission to Safe Harbor or some of Baltimore Company's entitlement at Safe Harbor for use in Pennsylvania.

On the basis of the foregoing testimony of the witness Thomas, and the evidence contained in the record in this proceeding in support thereof, Davis' allocation of these facilities entirely to the pool requires an adjustment.

In charging Pennsylvania customers equitably for energy received, it becomes necessary and proper to first charge Baltimore Company with all of the hydro capacity and energy received and to credit it for all steam capacity and energy supplied by it and all hydro capacity and energy diverted from it. Accordingly, on this basis, there should be charged to Baltimore Company the net Holtwood dependable hydro capacity (84,480 kw), less the Holtwood

118. No classification into demand and energy components was made by Zinder and no account was taken of the net conversion of 25 cycle to 60 cycle energy for the year, as he testified it would have made only an insignificant difference.

60 cycle hydro rating (24,000 kw), the Holtwood 25 cycle capacity supplies PP&L (5,000 kw) at Lancaster, Pennsylvania, and the capability [153] of the two 25-60 cycle frequency changers (14,000 kw) at Holtwood.

Allocation of Pool Costs.

The allocation of costs associated with pool facilities (facilities other than those already allocated to specific customers) involves the utilization of a determination of the dependable capacity available to Penn Water from its own resources and its entitlement with respect to Safe Harbor's resources.

Using a dependable hydro capacity for both Penn Water and Safe Harbor of 295,000 kw, Spaulding allocated a part of general production plant [119] to Baltimore Company on the basis of capacity and energy delivered to the latter after proportioning the dependable capacity and energy components in a 50-50 ratio,[120] because such a proportion gave results in dollars per kw and mills per kwh that appeared to him reasonable on a "competitive basis". Spaulding's 50-50 division of costs between capacity and energy is thus patently a departure from cost determination procedure.

[154] Davis allocated Penn Water's hydro and steam production plants, one-third of the 220 kv, 60 cycle lines and switching stations, a part of the transmission system referred to by him as "balance of transmission system" (including the Safe Harbor-Holtwood 66 kv circuits), intangible plant, and general plant to pool. He allocated production costs, including a part of the Safe Harbor bill, transmission operating expense associated with the foregoing allocation of transmission property to pool, all of ad-

119. Including Penn Water's hydro station, steam station, coal production and preparation plants, service buildings, step-up substations, certain tie circuits, dispatching facilities and the operators' village as well as similar Safe Harbor facilities.

120. He determined Baltimore should be charged with 54.0% of the costs of firm energy and 46.3% of those of capacity, and applied each of these ratios to 50% of the costs associated with the general production plant of Penn Water and Safe Harbor, separately.

ministrative and general expenses, a portion of taxes, depreciation expense and return as pool costs. Using a total dependable capacity of 250,000 kw, as compared with Spaulding's 295,000 kw, Davis then proceeded to develop (1) a total capacity cost by assigning 74.85% [121] of hydro power production cost (including a large part of the power purchased from Safe Harbor) as dependable hydro capacity cost, adding a computation of fixed steam costs, and all of pool transmission cost; and (2) a total energy cost by assigning 25.15% of such hydro power cost as a cost of energy and adding the variable steam cost.[122]

[155] *Dependable Hydro Capacity.*

The most important element in Spaulding's determination of capacity available for supply to Baltimore Company was the determination by Respondent's witness Watchorn of 295,000 kw as the dependable hydro capacity of the Holtwood and Safe Harbor plants. The latter employed a method involving an application of the theory of probability to several different factors bearing on dependability of service. This method of determining dependable capacity was not used by Penn Water in its operations prior to 1944 and is not only highly speculative but is of unproven reliability from an operating standpoint.

Davis' figures of 250,000 kw is based upon an estimate of basic load carrying capability of 167,000 kw increased by a judgment allowance for additional probable capacity totalling 83,000 kw. Davis' basic load-carrying capability represents (1) the use of the minimum recorded river flow for seven consecutive days in December, converted into a week's equivalent generation at both Safe Harbor and Holtwood;

121. Davis' determination of 74.85% as the proportion of production cost to be allocated to capacity is the ratio of total dependable hydro capacity to the total effective installed capacity of both Penn Water and Safe Harbor.

122. Davis obtained unit capacity costs by dividing the total capacity cost of dependable hydro, fixed steam and transmission costs by the Pennsylvania customers total non-coincident demands; and he obtained unit energy costs by dividing total energy cost by Penn Water's total steam and hydro energy resources (including Penn Water's entitlement from Safe Harbor) less certain transmission losses.

(2) the fitting of the total generation thus computed without regard to plant priority [123] in the top of the curve for the 1946 week peak load on the Baltimore-Washington-Holtwood-Safe Harbor system,[124] and (3) finding the maximum reduction [156] in peak that could be accomplished by both hydro plants under the assumed condition of river flow. This reduction in peak amounts to an ability to carry a load of 167,000 kw throughout the week on the basis of no loss of pondage except during the middle of the week.

Respondents object to Davis' determination on the ground that adverse flow conditions occur infrequently and the use of such conditions, as the basis for determining dependable capacity, does not adequately allow for the actual use that can be made of the installed capacity of the plants; that it overlooks the full effect of coordination of steam maintenance with river flows as well as capacity available for spinning reserve; and gives insufficient effect to the fact that during a large part of the year there is actually being utilized on the interconnected system capacity in excess of 300,000 kw.

As to criticism directed by Respondents to the limited amount allowed by Davis (28,000 kw) for pond drawdown for short-time peak loads, it may be said that the Safe Harbor and Holtwood hydro plants operate on a weekly recovery cycle which calls for pond refill over the weekends by every Monday morning. A larger allowance for drawdown than that provided by Davis would not only fail to fit into that program but the departure therefrom during a period of low flow would undoubtedly adversely affect the sustained peak-carrying hydro capacity of the plants. The allowance provided by Davis for drawdown, which is approximately 50% of that claimed [157] by Respondents for the same purpose, was supported by Balti-

123. Putting Holtwood hydro alone at the top of the curve would result in a dependable capacity for that plant approximately equal to its installed capacity

124. December 15-22. He adjusted the load curve by diminishing load requirements by the amount of capacity Metropolitan Edison would forfeit under minimum-flow conditions.

more Company's expert witness Thomas as reasonable from an operating standpoint. Davis makes further provision for additional capacity use in the amount of 55,000 kw. This is an adequate allowance for such intangibles as might inhere in additional use for scheduling of maintenance, short-time emergencies, load swings, expectation of flows better than minimum, etc. In this respect, Davis' determination of over-all dependable capacity (250,000 kw), though more liberal than the 237,000 kw testified to by Baltimore Company's witness, is better supported in the evidence than the latter figure.

It is therefore found that Davis' determination of dependable capacity is reasonable and acceptable for the purposes of this proceeding and that the determination of the witness Watchorn is not sufficiently supported by established or tested procedures to be reliable and here acceptable.

[158] Davis, however, prorated his finding of dependable capacity for both the Holtwood and Safe Harbor hydro plants (250,000 kw) between those plants in the ratio of the installed capacity at each development. Respondents contend that dependable capacity at Holtwood is not related to the proportion of installed capacity at those plants as the hydraulic head and available water at each is approximately the same.

In view of the large amount of idle machine capacity which the evidence shows would be available at each hydro plant during minimum flow conditions, Respondents' contention has merit and a modification should be made in the proration used by Davis. In consideration of the foregoing, and on the basis of the evidence, it is found that it is proper to prorate the 167,000 kw of dependable hydro capacity between the two hydro plants equally, provided weight be given to the fact that the over-all water use at the two plants varies at equivalent station loads. On the basis of water use at approximately 75% station load and water conditions used by the witness Davis, a week's gen-

eration under minimum flow conditions is computed to consist of 1,699,855 kwh produced by Holtwood and 1,861,745 kwh by Safe Harbor. The dependable capacity between the two plants should be prorated on the basis of this computed production of energy, thus assigning 79,705 kw of the 167,000 kw dependable capacity to Holtwood (Penn Water) and 87,295 kw to Safe Harbor.

[159] The remaining 83,000 kw entering into the 250,000 kw [125] found to be the combined total dependable capacity for the two hydro plants, because of the nature of the intangibles upon which it is based, should be prorated between the plants in the ratio of installed capacity at each plant in excess of the allocation of the 167,000 kw.

These adjustments to Davis' method will allocate a total dependable hydro capacity of 91,740 kw to Holtwood and 158,260 kw to Safe Harbor, before deduction for station uses and line losses, as follows:

Davis' Allocation	*Holtwood*	*Safe Harbor*	*Total*
Installed hydro:			
Effective reported	104,000 kw	230,000 kw	334,000 kw
Per cent of total	31.14%	68.86%	100.00%
Davis Allocation of Total Dependable Hydro Capacity (31.14% and 68.86%)	77,844 kw	172,156 kw	250,000 kw
Modified Allocation			
Allocation of Davis' 167,000 kw on basis of low water energy	79,705 kw	87,295 kw	167,000 kw
Excess of installed over minimum flow capacity	24,295	142,705	167,000

125. 167,000 kw basic dependable capacity with a minimum flow for 7 consecutive days in December, plus the 83,000 kw allowance for drawdown and intangible factors.

Per cent of excess to total of 167,000 kw	14.5%	85.5%	100.00%
Allocation of Davis' 83,000 kw allowance for pondage and intangibles (14.5% and 85.5%)	12,035 kw	70,965 kw	83,000 kw
Total dependable hydro capacity as reallocated	91,740 kw	158,260 kw	250,000 kw

[160] *Capacity Available to Baltimore Company.*

The resulting capacity available to Baltimore Company depends on the deductions to be made for Pennsylvania customer loads, including the Railroad's in Pennsylvania. Spaulding deducted from his figure of capacity available at the time of the combined system peak (305,000 kw) 134,000 kw for the Pennsylvania customer loads (including the Railroad's in Pennsylvania) and 20,000 kw as the share of combined system reserve to be carried by Penn Water and Safe Harbor, or a total of 154,000 kw. Davis deducted from his net dependable capacity available for load, a corresponding sum of 153,512 kw. While the two deductions are in practically the same amounts, Respondents object principally to the method used by the witness Davis in determining the demand to be deducted for the Railroad as representative of its Pennsylvania requirements. Davis did not use the actual Railroad requirement at the time of system peak (6 p. m., December 19, 1946) of 24,000 kw, but a resulting figure obtained after averaging the three maximum Railroad peaks in the month of December. The Railroad's load has an uneven fluctuating character and the very contract under which it is billed for demand provides a similar method of calculating that demand. It cannot be seriously contested that an averaging procedure is called for, and it is found that the one used by the witness Davis

has precedent and is fair, both as to the determination of the demand and as to the allocation of a portion [161] of such demand to Pennsylvania on the basis of energy used. Objection by Respondents to Davis' allowance of any amount as reserve for Metropolitan Company is without merit as the nature of the Metropolitan Company's contract in respect to reserve provision is no different from those of the other customers involved.

Davis' allowance of only 10% for reserve capacity is criticized both by Respondents, whose witness Spaulding used 15%, and by Baltimore Company, whose witness Gibbs used 22.5%. In view, however, of the adverse flow conditions assumed, with resulting idle machine capacity, the use of 10% for additional system reserve is an adequate allowance. The 22.5% proposed by the Intervener is not representative of a true operating reserve.

The balance available to Baltimore Company after deducting station use and transmission losses, the demands of Pennsylvania customers on system peak, and Baltimore Company's two-thirds entitlement from Safe Harbor was found by Davis to be a negative 3,200 kw. With the modifications found necessary, above, with respect to the method of treating the allocation of the costs associated with the 25-cycle production facilities and the method of allocating the dependable capacity between the two plants, the capacity considered as supplied to and by Baltimore Company is as follows:

[162]

	Holtwood		Safe Harbor	
	Steam (kw)	Hydro (kw)	Hydro (kw)	Total (kw)
Dependable capacity	28,000	91,740	158,260	278,000
Less prorated station use and line losses	2,216	7,260	12,524	22,000
	25,784	84,480	145,736	256,000

Less Baltimore Co.'s 2/3rds of Safe Harbor's capacity			97,157	97,157
Less 25 cycle to Highlandtown [126]		41,480		41,480
	25,784	43,000	48,579	117,363
Demands in Pennsylvania [127]				153,512
Balance to be supplied by Baltimore Company				36,149

Unit Costs for Capacity and Firm Energy and Further Allocations.

Allocating hydro production costs to capacity in the ratio of dependable to installed hydro capacity (250,000 kw to 334,000 kw), i. e., 74.85%, adding fixed steam production costs, and pool transmission costs, a sum of $2,882,478 is obtained as the total of pool capacity costs. Similarly, the addition of the remainder of the hydro production costs (25.15%) and variable steam production costs produces a sum of $1,232,563 as the total of pool energy costs. The foregoing total capacity cost ($2,882,478) divided by the Pennsylvania customers' maximum non-coincident demands [128] (154,000 kw) plus the net dependable [163]

126. Dependable 25 and 60 cycle capacity at Holtwood (net); 84,480 kw
Capability two Holtwood frequency converters 14,000 kw
Holtwood 60 cycle rated capacity 24,000
PP&L (Lancaster) 25 cycle load 5,000 43,000
41,480 kw

127. Coincident demands of Pennsylvania customers plus allowance for reserve:

P. P. & L.	55,000 kw
P. E. Co.	27,000 kw
Me. [ME] Co.	21,000 kw
Penna. R. R.	36,557 kw
10% Reserve	13,955 kw
Total	153,512 kw

128. To allow for mutual diversity of load benefits.

capacity available for Baltimore Company (5,331 kw) yields a unit capacity cost of approximately $18.09 per kw. This cost applied to an aliquot [129] of the maximum demands of the several Pennsylvania customers on a non-coincident basis and to the 41,480 kw of capacity found proper for allocation to Baltimore Company (*supra*) results in an allocation of the cost of pool capacity as a constituent of total capacity cost as follows:

	Pool Capacity Cost [129]	Baltimore Co. Supply Capacity Cost [130]	Total Capacity Cost
P. P. & L. Co.	$ 927,587	$188,724	$1,116,311
Philadelphia Co.	359,959	73,236	433,195
Metropolitan Co.	318,422	64,788	383,210
Railroad (in Pa.)	526,090	107,040	633,130
Baltimore Co.	750,420	(433,788)	316,632
Total	$2,882,478	—	$2,882,478

Holtwood unit energy costs are obtained by dividing the total energy cost ($1,232,563) by the delivery by Penn Water from its Holtwood hydro and steam plant and from its 1/3rd entitlement to Safe Harbor's output, which for 1946 totaled 992,320 mwh. The resulting Holtwood energy cost is 1.24 mills per kwh. 1946 sales of energy to Pennsylvania customers totaled 937,950 mwh of which 746,286 mwh was sold as firm and 191,664 mwh as net interchange. Of this 937,950 mwh supplied, Penn Water had available 615,636 mwh (992,320 mwh less deliveries of 25 cycle energy to Baltimore Company at Highlandtown) and the remainder required (322,314 mwh) [164] was obtained from Baltimore Company. It is not possible to trace the flow of energy from Baltimore Company to the Pennsylvania customers at all times or to distinguish the use to which such energy is put as between sales of firm and interchange

129. Assuming the Pennsylvania maximum demands are each met by Penn Water's capacity and Baltimore Company's supply in the ratio of 117,851 kw and 36,149 kw to the total of 154,400 kw.

130. Computed at $12 per kw.

energy. For this reason a proration procedure is necessary and, accordingly, using the ratio of Baltimore Company's contribution of 322,314 mwh (34.4%) and Penn Water's of 615,636 mwh (65.6%) to the total of their combined contributions, it is found that Penn Water delivered from its resources 489,835 mwh for firm sales (including the Railroad in Pennsylvania) and 125,801 mwh for interchange sales to Pennsylvania customers and Baltimore Company delivered 256,451 mwh for firm sales and 65,863 mwh for interchange in Pennsylvania. As interchange sales in Pennsylvania are on a when-as-and-if basis, the mwh so supplied by Penn Water comes from Baltimore Company's contract residual entitlement to Penn Water's resources and are therefore deemed to have been made for Baltimore Company's account. On this basis, Baltimore Company received a total of 502,485 mwh at the Holtwood energy cost, made up of deliveries to it at Highlandtown (376,684 mwh) and the amount sold by Penn Water from its own resources as interchange (125,801 mwh). Accordingly, the Pennsylvania customers are deemed to have received 489,835 mwh of firm energy at Holtwood energy cost (1.24 mills/kwh), and 256,451 mwh of firm energy at Baltimore Company's average steam production [165] cost (4.7 mills/kwh), while Baltimore Company is to be credited with the cost to it of supplying such firm energy against the charge made to it for the 502,485 mwh at the Holtwood energy cost. The allocation of these pool energy costs are as follows:

	Firm Energy Supplied			Firm Energy Cost		
TO:	From Holtwood (mwh)	From Baltimore (mwh)	Total (mwh)	From Holtwood ($)	From Baltimore ($)	Total ($)
PP&L	202,533	105,036	308,569	251,567	498,367	749,934
Philadelphia Co.	89,022	46,607	135,629	110,574	219,053	329,627
Metropolitan Co.	58,158	30,448	88,606	72,238	143,107	215,345
Railroad (in Pa.)	140,122	73,360	213,482	174,046	344,793	518,839
Sub-total	489,835	256,451	746,286	608,425	1,205,320	1,813,745
Baltimore Co.	502,485	(256,451)	246,034	624,138	(1,205,320)	(581,182)
Total	992,320	—	992,320	$1,232,563	—	$1,232,563

The amount of residual hydro energy delivered to Baltimore Company by Respondents in 1946 (502,485 kwh) at the Holtwood energy cost (1.24 mills) combines with the firm energy supplied by Baltimore Company (256,451 mwh) in 1946 for the use of Penn Water's Pennsylvania customers to give a net credit to Baltimore Company, for firm energy supplied by it against residual energy received, in the amount of $581,182.

Total Costs, Excess Revenues.

The allocated special facility costs added to the allocated hydro capacity cost and the allocated cost of capacity supplied by Baltimore Company (supra) and to firm energy costs give total allocated costs which compare with total revenues as follows:

[166]

	Total Costs	Total Revenues	Excess Revenues Amount	Percent
PP&L Co.	$1,877,818	$1,958,356	$ 80,538	3.70
Philadelphia Company	834,550	948,861	114,311	5.25
Metropolitan Company	641,361	667,455	26,094	1.20
Railroad (in Pa.)	1,261,323	1,483,798	222,475	10.22
Baltimore Company	652,993 [131]	2,386,311	1,733,318	79.63
Total	$5,268,045	$7,444,781	$2,176,736	100.00

RATE REDUCTION

The above determination of excess revenues demonstrates that Penn Water's rates are excessive, unreasonable and discriminatory. It is accordingly found that Respondent shall revise its rates and charges so as to result in a reduction of $80,538 to P. P. & L. Co., $114,311 to Phila-

131. This cost to Baltimore Company is made up of the charge of $750,420 for hydro capacity of 41,480 kw supplied to it plus a cost of special facilities of $917,543; less the credit to Baltimore Company of $433,788 for 36,149 kw of capacity supplied by it and the net credit of $581,182 for firm energy supplied.

delphia Co., and $26,094 to Metropolitan Company when applied to the demand energy and other charges made during the year ended December 31, 1946. As previously noted (*supra*, note 2 p. 22), we have confined our inquiry to Penn Water's sales to its resale customers. We determine, however, that Penn Water's cost of the service it rendered in 1946 under the contract for the sale to the Railroad was $222,475 less than the revenues it received therefor.

Under the arrangements now in effect the sales to Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company are made on a firm basis and Baltimore Company takes what is left. In fact, Baltimore Company in times of severe water shortage may carry the main burden of supplying the foregoing Pennsylvania customers.

[167] It is not feasible, because of the nature of Penn Water's operations, for the latter to assume firm commitments to all its customers, including Baltimore Company. The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. That arrangement will, therefore, be continued with, however, such modifications as are necessary to accomplish the reductions mentioned above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company.

Penn Water's rates and charges to Baltimore Company will be just and reasonable when the power bill is computed by the use of the fair rate of return and the rate base we have found, brought down to date every six months for changes in the plant investment, depreciation reserve and working capital. In computing the power bill to Baltimore Company there shall be added to the fair return all reasonable and necessary operating expenses, taxes and deprecia-

tion computed on the plant investment and at the depreciation rates we have herein found proper; there shall be deducted from such total electric revenues received from others, including the Conowingo backwater payment, and the gross revenues from Metropolitan Co., P. P. & L. Co., and Philadelphia Co., and the gross revenues, except the excess revenues, calculated at $222,475 for the year 1946, and income taxes associated therewith, from Pennsylvania Railroad.

[168] Our specific findings of fact and order will be entered in accordance with this opinion.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman, Thomas C. Buchanan, Claude L. Draper and Leland Olds.

January 4, 1949

In the Matter of
PENNSYLVANIA WATER & POWER COMPANY } Docket No. IT-5915

ORDER REDUCING RATES.

Upon consideration of the record in the above-entitled proceeding and the arguments adduced, and having this day issued its Opinion No. 173 in this matter, which hereby is incorporated by reference and made a part hereof—

The Commission further *finds* that:

(1) Penn Water (successor through reorganization under the laws of Pennsylvania, on January 13, 1910, of McCall Ferry Power Company which had been formed by the merger, on April 14, 1905, of [The] Hillside Water & Power Company and Susquehanna Water & Power Company) owns, operates and maintains hydroelectric and steam-electric generating facilities, all located on the Susquehanna River at Holtwood, Pennsylvania, about eight miles below the hydroelectric project of Safe Harbor, about nine miles north of the Pennsylvania-Maryland boundary line, and about 61 miles northeast of the City of Baltimore. Penn Water's hydro plant, comprising 10 main generating units (eight, 25-cycle, and two, 60-cycle), has an effective capacity of 104,000 kw; its steam plant, comprising two 60-cycle generating units, has an effective capacity of 26,000 kw. There are also two 5,000 kw, 25/60 cycle frequency changers.

(2) Safe Harbor Water Power Corporation (Safe Harbor) owns, operates and maintains a hydroelectric plant and certain appurtenant transmission facilities, all located in Pennsylvania on the Susquehanna River about 17 miles north of the Pennsylvania-Maryland boundary line. Safe Harbor's hydro plant, comprising seven main generating units (five, 60-cycle and two, 25-cycle) has an effective capacity of 230,000 kw. Safe Harbor owns, operates, and maintains the afore-described hydroelectric power project under a license for Project No. 1025, first issued April 22, 1930, by this Commission, pursuant to the Federal Power Act, which, as amended, is now Part I of the Federal Power Act (Act).

(3) Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) owns, operates and maintains, among other facilities, steam-electric generating facilities located in and near Baltimore, Maryland. Such facilities include four plants, comprising sixteen generating units (eight, 60-cycle, and eight, 25-cycle), having a total effective capacity of 479,000 kw.

(4) Susquehanna Transmission Company of Maryland (Transmission Company) is a wholly-owned subsidiary of Penn Water, engaged only in the transmission of electric energy in Maryland for Penn Water, Safe Harbor and Baltimore Company. Of the transmission facilities referred to in (5) below, those located in Maryland are owned and operated by Transmission Company.

(5) Penn Water owns and operates transmission facilities in Pennsylvania which have been constructed and are operated and maintained in combination with those of Trasmission Company in Maryland to form a transmission network, including: two 220 kv, 60-cycle, three-phase, single, transmission circuits extending from Safe Harbor to points of connection with Baltimore Company near its Westport and Riverside steam-electric plants in Maryland, and to a point of connection with Potomac Electric Power Company

(PEPCO) near Takoma Park, Maryland; four 132 kv, 25-cycle, single-phase, transmission circuits extending from the Conestoga Substation, near the Safe Harbor hydro plant, to a point of connection with facilities of the Pennsylvania Railroad (Railroad) at Perryville, Maryland; two 66 kv, 60-cycle, three-phase, transmission circuits between the Safe Harbor and Penn Water plants, which are tapped by lines owned and operated by Pennsylvania Power & Light Company (PP&L) extending from the Lehman Farm Substation to Lancaster, Pennsylvania, and from the Donegal tap to Harrisburg, Pennsylvania; two 66 kv, 60-cycle, three-phase, transmission circuits extending from the Holtwood Substation to a point of connection with Metropolitan Edison Company (Metropolitan Company) at York, Pennsylvania; two 66 kv, 60-cycle, three-phase, transmission circuits extending from the Holtwood Substation to a point of connection with Philadelphia Electric Company (Philadelphia Company) at Coatesville, Pennsylvania; two 66 kv, three-phase, transmission circuits (one, 60-cycle, and one, 25-cycle) extending from the Holtwood Substation to a nearby point of connection with a line owned and operated by PP&L which continues to Lancaster, Pennsylvania; and four 66 kv, 25-cycle, three-phase, transmission circuits extending from the Holtwood Substation to a point of connection with Baltimore Company at Transmission Company's Highlandtown Substation in the City of Baltimore.

(6) Penn Water, Baltimore Company, and Safe Harbor are parties to a contract dated June 1, 1931, as amended, which by its terms is to continue in effect until 1980. Under that contract, Baltimore Company purchases two-thirds, and Penn Water one-third of Safe Harbor's entire capacity and output of electric energy, and contributes annual payments to Safe Harbor in the same proportion. Payments under such contract, pursuant to the Commission's rate order of November 4, 1946, *Safe Harbor Water Power Corporation*, 5 F. P. C. 265, are sufficient to allow Safe Harbor.

a 5% rate of return on net investment, after operating expenses, taxes and depreciation. Under this contract, Penn Water provides, maintains, and operates certain transmission facilities, including lines extending from Safe Harbor, Pennsylvania, to Baltimore, Maryland.

(7) Penn Water and Baltimore Company are also parties to a contract dated December 31, 1927, as amended, which continues in effect until 1980, under which Baltimore Company purchases all of the electric capacity and energy, not otherwise disposed of under existing contracts, which are available from Penn Water's own generating facilities, as well as that available to Penn Water through purchase from Safe Harbor, as referred to in (6) above. Under this contract, Baltimore Company pays Penn Water for all of its operating expenses, including taxes, depreciation, and cost of power purchased from Safe Harbor, as well as a return on investment determined by a prescribed method, with a credit for the revenues which Penn Water receives from sales in Pennsylvania.

(8) By means of the transmission circuits referred to in (5) above, electric energy generated in Pennsylvania and consumed in Maryland and the District of Columbia is transmitted from Pennsylvania, and electric energy generated in Maryland and consumed in Pennsylvania is transmitted from Maryland. None of such facilities is used for the generation of electric energy or in local distribution or only for the transmission of electric energy in intrastate commerce, or for the transmission of electric energy consumed wholly by the transmitter.

(9) The transmission circuits referred to in (5) above are facilities for the transmission of electric energy in interstate commerce within the meaning of Section 201 (b) of the Act and are subject to the jurisdiction of this Commission. By reason of ownership and operation of such facilities, Penn Water and Transmission Company are "public utilities" within the meaning of Part II of the Act.

(10) By means of the transmission network referred to in (5) above, the power resources of Penn Water, Safe Harbor, and Baltimore Company referred to in (1), (2) and (3) above, are combined and coordinately operated as an integrated and interconnected electric system (interconnected system) serving areas in the States of Pennsylvania and Maryland as well as electrification requirements of Railroad in Pennsylvania, Maryland, and the District of Columbia.

(11) The interconnected system is designed and operated to supply its power and energy requirements at lowest cost. The output of each of the interconnected generating units flows into the system at such times and in such amounts as will secure maximum utilization of hydroelectric facilities, economy of operation and reliability of service. The contracts referred to in (6) and (7) above, facilitate the achievement of those objectives particularly by the methods of payment which they provide, and by reason of the fact that generation of energy is directed by the coordinated action of load dispatchers in the City of Baltimore, representing the three system companies. The direction of energy flows results from operations governed by consideration of river flow, relative costs of steam generation, and magnitude of loads; and energy moves from generating plants to loads without regard to state boundaries.

(12) The maximum utilization of the interconnected system's hydroelectric generating plants in Pennsylvania, one Penn Water's and one Safe Harbor's, is obtained through their operation in conjunction with the system's steam-electric generating plants, Penn Water's in Pennsylvania and Baltimore Company's four in Maryland. The Penn Water and Safe Harbor ponds impound only 24 hours' supply of water at full draft. During periods of high river flow, which occur principally in the spring months, the hydro plants generate their maximum output continuously, thus saving the maximum amount of fuel in the generation

of electric energy by steam. At other times, they can be so operated only part time, and are operated as peaking plants, to help carry the peak loads of the interconnected system, thus taking the place of steam-generated energy at those hours when the least economical steam generating plants would otherwise have to be used. The coordinated operation of the system makes available a larger useful system output at a lower cost than would result if each company were compelled to supply its requirements from its own generating facilities.

(13) As a result of the operations referred to in (12) above, during periods of high river flow, the flow of energy is south from Pennsylvania towards Maryland and at other times, the flow of energy tends to be to the north, although the direction of the flow on the lines crossing the state boundary may change frequently according to the needs of the consumers in Pennsylvania and Maryland.

(14) The operation of the interconnected system, referred to in (1) through (13) above, and the output of that system are in interstate commerce.

(15) Penn Water alone sells firm power and energy to Metropolitan Company under a 1945 agreement, to supply a part of the latter's requiremnets in York, Pennsylvania; to Philadelphia Company under a 1933 agreement, to supply its requirements in Coatesville, Pennsylvania; and to PP&L, under a 1933 agreement, to supply its requirements in Lancaster, Pennsylvania. In addition, Penn Water alone sells energy to each of these companies in interchange.

(16) Penn Water's sales, referred to in (15) above, are sales for resale in interstate commerce.

(17) Pursuant to the contract referred to in (7) above, Penn Water sells electric energy to Baltimore Company for resale. Energy so sold is transmitted from Pennsylvania to Maryland and is a sale for resale in interstate commerce. Such sale is made possible by the transmission network, re-

ferred to in (5) above, and by the coordinated operation of the interconnected system, referred to in (1) through (13) above.

(18) Each of Penn Water's sales of electric energy referred to in (7) and (15) above is a sale of electric energy at wholesale in interstate commerce subject to the jurisdiction of the Commission under the provisions of Section 201 (b) of the Act. Each rate and charge made, demanded, or received by Penn Water for or in connection with each such sale, including any rate or charge or part thereof, relating to electric energy, power, capacity, frequency control, phase, cycle, special facilities, transmission service, power factor cooperation, or reactive energy, is subject to the rate regulatory provisions of the Act.

(19) A 1939 order of this Commission required Penn Water to apply for a license under the provisions of Part I of the Act for the operation of its hydroelectric project, and the order was affirmed on court review. Thereafter, this Commission entered an order authorizing issuance of a license to Penn Water, but the matter of formal issuance is still pending. In these circumstances, Penn Water, for rate-regulatory purposes, must be treated as a "licensee" within the meaning of the Act.

(20) So much of the electric energy, or "power" within the meaning of Section 20 of Part I of the Act, generated, or developed, by Penn Water's hydroelectric project, as is sold under the contracts referred to in (7) and (15) above, is sold thereunder for sale and distribution in public service by the purchasing companies, or for sale and distribution or use in public service by their customers. By reason of the coordinated operations of the interconnected system referred to in (1) through (13) above, all such electric energy so sold is sold in, and enters, interstate commerce within the meaning of Section 20.

(21) The "States directly concerned" within the meaning of Section 20 are the States of Pennsylvania and Mary-

land. Such States are "unable to agree" through their properly constituted authorities on the rates or charges of payment within the meaning of that Section.

(22) Penn Water's rates and charges of payment provided for in the contracts described in (7) and (15) above, including any rate or charge, or part thereof, relating to electric energy, power, capacity, frequency control, phase, cycle, special facilities, transmission service, power factor cooperation, or reactive energy, are subject to the jurisdiction of this Commission under Section 20.

(23) Penn Water's rates and charges of payment provided for in the contracts described in (7) and (15) above, including any rate or charge, or part thereof, relating to electric energy, power, capacity, frequency control, phase, cycle, special facilities, transmission service, power factor cooperation, or reactive energy, are subject to the jurisdiction of this Commission under Section 20, irrespective of finding (21) above.

(24) For the purpose of determining whether Penn Water's rates or charges to Baltimore Company, Metropolitan Company, Philadelphia Company and PP&L are and will be excessive, unjust or unreasonable, such rates or charges may properly be tested by determining whether the net operating income of Penn Water produced by such rates or charges constitutes a fair return on a proper rate base, and the respective amounts shown by the record in this proceeding for the year 1946 may properly be used for that purpose.

(25) The actual legitimate investment in Penn Water's and Transmission Company's electric plant used and useful was $33,113,148 as of December 31, 1946, for the purposes referred to in (24) above. For the purpose of determining a proper rate base for Penn Water and Transmission Company for the year 1946, it is fair and reasonable to use that year's average actual legitimate investment in electric plant

used and useful, which was $33,126,585. For each of the periods hereinafter specified in (35) below, it is fair and reasonable to use the foregoing amount of $33,113,148, plus the recorded cost of additions less recorded retirements, as the actual legitimate investment in electric plant used and useful at the beginning of such period, if no substantial property addition is put into service during such period.

(26) The accrued depreciation as of December 31, 1946, was $9,240,628, the amount recorded in the books of Penn Water and Transmission Company as of that date, after proper adjustments. For the purpose of determining a proper rate base for Penn Water for the year 1946, it is fair and reasonable to use as accrued depreciation the average amount for that year which is $9,001,873. For each of the periods specified in (35) below, it is fair and reasonable to use the amount of $9,240,628, as of December 31, 1946, plus or minus the changes recorded on Penn Water's and Transmission Company's books between that date and the date hereof in conformity with the method followed by Penn Water and Transmission Company in 1946, and plus or minus the changes recorded on Penn Water's and Transmission Company's books between the date hereof and the periods referred to in (35) below, in conformity with (27) and (28) below.

(27) The service lives as shown in Exhibit 59 are proper and reasonable for the computation of Penn Water's and Transmission Company's annual depreciation allowance.

(28) The straight-line method of depreciation is the proper and adequate depreciation method for the purposes of computing Penn Water's bills for power and energy in accordance with the Commission's order in this case and for the purpose of accruing depreciation on its books.

(29) The proper and reasonable working capital allowance for the purpose of determining a proper rate base for

Penn Water and Transmission Company, for the year 1946, is not more than $650,000, representing the average amount of materials and supplies plus one-eighth of cash operating expenses for the year, not including taxes and purchased power. For each of the periods hereinafter specified in (35) below, it is fair and reasonable similarly to compute the working capital allowance upon the book, recorded amounts for the immediately preceding 12 months' period.

(30) The proper rate base for the year 1946 for the purposes of determining just and reasonable rates and charges to Metropolitan Company, Philadelphia Company, PP&L and Baltimore Company is not more than $24,774,712, as shown by the following tabulation:

Average Gross Investment for 1946	$33,126,585
Less: Average Reserve for Depreciation for 1946	9,001,873
Average Net Investment for 1946	24,124,712
Working Capital Allowance	650,000
Net Investment Rate Base	$24,774,712

and the rate base so computed reflects the actual legitimate net investment in Penn Water's and Transmission Company's electric plant in service as an assembled whole and an established plant in successful operation.

(31) A fair and reasonable annual rate of return to Penn Water and Transmission Company is 5¼%; the fair return for 1946 is $1,300,672 on a rate base of $24,774,712.

(32) Penn Water's and Transmission Company's net operating income, for 1946, exceeded a fair return by not less than $2,176,736.

(33) On the basis of a reasonable and proper allocation of the cost of service rendered by Penn Water and

Transmission Company to Baltimore Company, the rates and charges to Baltimore Company for 1946 are unjust and unreasonable by approximately $1,733,318.

(34) For the year 1946, on the basis of a reasonable and proper allocation, Penn Water's rates and charges to Philadelphia Company exceed the cost of service to that company by approximately $114,311; its rates and charges to Metropolitan Company exceed the cost of service to that company by approximately $26,094; and its rates and charges to PP&L exceed the cost of service to that company by approximately $80,538.

In the test year 1946, Penn Water received revenues amounting to $1,483,798 from the sale to the Pennsylvania Railroad (in Pa.). The proper allocation of Penn Water's and Transmission Company's total cost of service among Penn Water's customers results in the assignment of $1,261,323 thereof to serving the Pennsylvania Railroad (in Pa.). Accordingly, Penn Water's revenues from that service to Pennsylvania Railroad exceeded the cost of service for the test year 1946 by $222,475, which amount is subject to an adjustment for income taxes.

(35) Except as referred to in (38) below, a proper rate base for the purpose of determining the rates and charges to Baltimore Company for each six months' period following each June 30 and December 31, after issuance hereof, is one computed by adding to the gross investment of $33,113,148 (as of December 31, 1946), as referred to in (25) above, the cost of net additions to electric plant in service from the latter date to said June 30 or December 31; by deducting from the total thus determined the amount of the depreciation reserve as of said June 30 or December 31, according to Penn Water's and Transmission Company's books, adjusted as referred to in (26), (27) and (28) above; and adding working capital computed as referred to in (29) above.

(36) The application of a 5¼% per annum rate of return to the rate base determined as referred to in (35) above, will provide a fair return to Penn Water and Transmission Company.

(37) Penn Water's rates and charges to Baltimore Company will be just and reasonable when the power bill to Baltimore Company is computed by adding to the fair return, referred to in (36) above, all reasonable and necessary operating expenses and depreciation expenses, calculated as referred to in (27) and (28) above, and by deducting the Conowingo backwater payment, and all electric revenues received from others, including Metropolitan Company, Philadelphia Company, PP&L and Railroad. *Provided,* however, that the deduction in respect to revenues from Pennsylvania Railroad shall be only the amount calculated at rates which would have yielded $1,261,323, based on volumes and demands for the test year 1946 and, *Provided,* further, that income taxes associated with revenues from the Railroad in excess of such deduction shall not be included in the costs to be reimbursed by Baltimore Company.

(38) If a substantial addition to property is put in service between the dates for determination of the rate base referred to in (35) above, Penn Water may petition the Commission to include the cost thereof in the rate base from the date of its commercial operation.

The Commission *orders* that:

(A) Penn Water's and Transmission's Company's motion to dismiss for want of jurisdiction be and the same hereby is denied.

(B) The petition of Intervenor, Public Service Commission of Maryland, to reopen the record for the purpose of receiving certain additional evidence be and the same hereby is denied.

(C) Within 45 days after the date of issuance of this order, Penn Water shall file, in a form satisfactory to the Commission, new schedules of rates and charges for or in connection with its transmission and sale of electric energy in interstate commerce for resale to Metropolitan Company, Philadelphia Company and PP&L. The new schedules of rates and charges shall be effective on and after February 1, 1949, and shall effect a reduction, based upon Penn Water's and Transmission Company's operations during the test year 1946, of $26,094 to Metropolitan Company, $114,311 to Philadelphia Company and $80,538 to PP&L.

(D) Within 45 days after the issuance of this order Penn Water shall file in a form satisfactory to the Commission, a new schedule of rates and charges for or in connection with its transmission and sale of electric energy in interstate commerce for resale to Baltimore Company. Said schedule of rates and charges shall be such as, together with the Conowingo backwater payment, the revenues from the sales referred to in (C), above, and a credit for service to the Pennsylvania Railroad computed as set forth in (37), above, will provide a 5¼% return to Penn Water and Transmission Company, after operating expenses and depreciation charges, all as set forth in (37), above, on a rate base to be computed in the manner set forth in (G), below, and shall be effective on and after February 1, 1949.

(E) The Commission reserves the right to reject all or any part of the schedules of rates and charges referred to in Paragraphs (C) and (D) hereof and in lieu thereof to prescribe by further order the appropriate rates, charges, classifications, rules, regulations, practices, or contracts.

(F) Penn Water and Transmission Company shall compute annual depreciation expense beginning February 1, 1949, in accordance with the straight-line depreciation method for the purpose of computing its bills for energy and power, using in connection therewith the service lives which are set forth in Exhibit 59.

(G) For the purpose of determining the rates and charges to Baltimore Company, Penn Water and Transmission Company shall compute a rate base as of June 30, 1949, and as of each December 31 and June 30 thereafter in the manner set forth in findings (25) through (30), and (35), by adding to the amount of actual legitimate investment as of December 31, 1946, as found in (25), above, the net claimed cost, to the date of computation, of additions and retirements in its electric plant used and useful; deducting from this amount the depreciation reserve as of that date according to the companies' books in conformity with (F), above; and adding working capital computed for the period in question, in the manner set forth in finding (29) above.

(H) The rate base computed as set forth in (G), above, shall remain unchanged for the six months period beginning with the date as of which it is computed, provided, however, that in the case of substantial addition to property which is put in service between the dates for determination of the rate base, Penn Water and Transmission Company may petition the Commission to include the cost thereof in the rate base from the date of commercial operation.

(I) Penn Water and Transmission Company shall file on or before May 1, 1949, a statement showing the computation of the rate base referred to in (D)

hereof as of December 31, 1948, and thereafter on or before each May 1, for the preceding calendar year, a statement showing the computation of such rate base in accordance with this order, the operating expenses, depreciation, taxes, and return, and the resulting charges to Baltimore Company under said revised rate schedule.

By the Commission. Commissioner Draper concurring in the result only.

Sgd. LEON M. FUQUAY,
Leon M. Fuquay,
Secretary.

Date of Issuance: January 5, 1949.

EXHIBIT E TO PETITION FOR REVIEW.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

In the Matter of
PENNSYLVANIA WATER & POWER COMPANY } Docket No. IT-5915

APPLICATION FOR REHEARING OF ORDER ISSUED

January 5, 1949

(Filed January 28, 1949.)

Pennsylvania Water & Power Company (Penn Water), Respondent in the above proceeding, and Petitioner herein; being aggrieved on its own behalf by the "Order Reducing Rates," issued by the Commission January 5, 1949; and being separately and independently aggrieved by such Order as the owner of one-half of the Class B voting stock of Safe Harbor Water Power Corporation (Safe Harbor), said Safe Harbor being unable to intervene in this proceeding because of the deadlock in its Board of Directors as set forth in the orders of the Pennsylvania Public Utility Commission (Pennsylvania Commission) referred to herein in paragraph II (28) (c), and as agent for and on behalf of Safe Harbor under the provisions of certain contracts with Pennsylvania Power & Light Company (PP&L) and Philadelphia Electric Company (Philadelphia Company); and Susquehanna Transmission Company of Maryland (Transmission Company), Respondent and Petitioner herein, also being aggrieved by said Order; hereby apply to the Federal Power Commission (Commission) for a rehearing as provided by Section 313 (a) of the Federal Power Act (16 U. S. C. 1946 ed. § 825-l (a); 49 Stat. 860), of all of the matters presented or involved in this proceeding and covered or

affected by said Order and the accompanying Opinion No. 173; and pray that said Order and Opinion be abrogated, vacated, set aside, and reversed because of the matters erroneously decided, the errors with respect thereof and the objections of Petitioners to said Opinion and Order to wit: Petitioners respectfully show that in said Opinion and Order the Commission erroneously decided each and all of the following matters and committed each and all of the following errors, and Petitioners object to said Opinion and Order because of each and all of said matters erroneously decided and said errors for each and all of the following reasons; and show that since the record before the Commission was closed there have been substantial changes in the operations and contracts of Petitioner Penn Water, as hereinafter more fully described, so that the bases for the said Order and for many of the findings, conclusions, and requirements contained in said Opinion and Order are destroyed and such findings, conclusions and requirements are not in accord with the facts and the law:

I. The Federal Power Commission has no jurisdiction, authority, or power to issue and enforce said Order for the following reasons:

(1) Section 19 of Part I of the Federal Power Act (16 U. S. C. 1946 ed. § 812; 41 Stat. 1073, 49 Stat. 847) does not authorize or support the issuance of the said Order of the Commission, for the reason that both the States of Pennsylvania and Maryland have each authorized and empowered commissions within each of said States known as the Pennsylvania Public Utility Commission (Pennsylvania Commission) and the Public Service Commission of Maryland (Maryland Commission), respectively, to regulate and control any services to be rendered by Petitioners and the rates and charges of payment therefor, as provided in such Section 19; and there is no substantial evidence of record to the contrary.

(2) Section 20 of Part I of the Federal Power Act (16 U. S. C. 1946 ed. § 813; 41 Stat. 1073, 49 Stat. 847) does

not authorize or support the issuance of the said Order of the Commission, for the reason that the States of Pennsylvania and Maryland, which are directly concerned, have each provided a commission to enforce the requirements of such Section 20 and to regulate and control any services rendered by Petitioners and the rates and charges of payment therefor as therein provided; and that such States are not unable to agree through their properly constituted authorities on the services to be rendered by Petitioners or on the rates and charges of payment therefor; and there is no substantial evidence of record to the contrary.

(3) By its terms the said Order requires the filing of new schedules of rates and charges to be effective within a period of less than thirty days from the date of issuance of such Order, contrary to the requirements of Section 20 of the Federal Power Act insofar as such Section makes applicable the provisions of Section 15 (2) of the Interstate Commerce Act (49 U. S. C. 1946 ed. § 15 (2); 34 Stat. 589, 36 Stat. 551, 41 Stat. 484).

(4) A substantial part of the services rendered by Respondents and Petitioners and the rates and charges of payment therefor do not constitute interstate or foreign commerce, within the meaning of Section 20 of the Federal Power Act; a substantial part of such services and the rates and charges therefor do not constitute the transmission of electric energy in interstate commerce, or the sale of electric energy in interstate commerce, or the sale of electric energy at wholesale, within the meaning of Sections 201 (b), (c), and (d) of Part II of the Federal Power Act (16 U. S. C. 1946 ed. §§ 824 (b), (c), (d); 49 Stat. 847); there is no substantial evidence of record to the contrary; and neither under such Section 20, such Section 201, nor Section 206 (a) of Part II of the Act (16 U. S. C. 1946 ed. § 824 e (a), 49 Stat. 852), nor under any other provision of the Federal Power Act, does the Commission have jurisdiction, authority, or power, to regulate, control, determine,

or fix Petitioners' services or rates, charges, or classifications for services not constituting interstate or foreign commerce, or the rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

(5) None of the provisions of Part II of the Federal Power Act (16 U. S. C. 1946 ed. §§ 824-824 h; 49 Stat. 847) authorize or support the issuance of the said Order of the Commission, for the reason that Penn Water must be treated as a licensee within the meaning of Part I of the Act, and such a licensee is not subject to the rate regulatory provisions of Part II of the Act; for the reasons that:

(a) The services, rates, and charges of Petitioners are completely subject to regulation by the States of Pennsylvania and Maryland under Sections 19 and 20 of the Act, as set forth in paragraph I (1) and I (2) above, within the meaning of Section 201 (a) of the Act (16 U. S. C. 1946 ed. § 824 (a); 49 Stat. 847; and that

(b) Such regulation under Part II of the Act would deprive such States or their respective commissions of their lawful authority now exercised over the exportation of hydroelectric energy which is transmitted across the Pennsylvania-Maryland State line, under Sections 19 and 20 of the Act and under the respective statutes of such States, within the meaning of Section 201 (b) of the Act.

(6) Neither the provisions of Section 206 (a) of the Federal Power Act, nor any other provisions of the Act, authorize or support the issuance of the said Order of the Commission for the reasons that:

(a) Neither Penn Water nor Transmission Company have any rates, charges, or classifications subject to the jurisdiction of the Commission, within the meaning of Section 206 (a) of the Act or of Section 205 of the Act (16 U. S. C. 1946 ed. § 824 d; 49 Stat. 851), in that:

(i) The rendering of services by Penn Water to Metropolitan Edison Company (Metropolitan

Company), and jointly with Safe Harbor to PP&L, and Philadelphia Company, and the rates, charges, and classifications therefor, constitute transactions in intrastate commerce and do not constitute transactions, transmissions, or sales in interstate commerce, within the meaning of Sections 201 (b) and (c) of the Act; and there is no substantial evidence of record to the contrary.

(ii) The rendering of services by Penn Water, jointly with Safe Harbor, Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company), and Potomac Electric Power Company (PEPCO) to The Pennsylvania Railroad Company (Railroad), and the rates, charges, and classifications therefor, do not constitute sales of electric energy at wholesale, within the meaning of Sections 206 (a) and 201 (d) of the Act; and there is no substantial evidence of record to the contrary.

(iii) Penn Water has no rates, charges, or classifications for the transmission or sale of electric energy to Baltimore Company, within the meaning of Sections 206 (a) and 201 (b) of the Act.

(iv) Certain of the rates, charges, or classifications of Penn Water, or Penn Water and Safe Harbor jointly, for services rendered to Metropolitan Company, PP&L, and Philadelphia Company are not rates, charges, or classifications for the transmission or sale of electric energy, within the meaning of Sections 206 (a) and 201 (b) of the Act.

(b) The services rendered by Penn Water to PP&L, Philadelphia Company, Railroad Company, and Baltimore Company are rendered jointly with others not made Respondents to these proceedings, and the rates, charges, and classifications therefor are joint; there is no substantial evidence of record to the contrary; and the said Order of the Commission was issued without notice or opportunity for hearing to such other persons jointly obli-

gated to and jointly serving the foregoing customers, contrary to the provisions of Section 206 (a) of the Act and the due process clause of the Fifth Amendment to the Constitution of the United States.

(c) The said Order of the Commission requires Penn Water alone to file new schedules of rates and charges for services to PP&L and Philadelphia Company without requiring Safe Harbor to join or concur in the filing of such schedules, without authority under the Federal Power Act; thereby requiring Penn Water to assume the entire obligations to such customers instead of the joint obligation which exists to the impairment of its ability to render adequate service to its customers, within the meaning of Section 207 of the Act (16 U. S. C. 1946 ed. § 824 f; 49 Stat. 853); and there is no substantial evidence of record to the contrary.

(d) Insofar as the said Order of the Commission undertakes to require a reduction in the revenues of Penn Water alone it constitutes regulation by the Commission of the divisions of revenue received by Penn Water for its participation in the rendering of joint services to each of its customers except Metropolitan Company, without jurisdiction, authority, or power in the Commission to regulate divisions of rates or charges for joint service under the Federal Power Act.

(e) There is no substantial evidence of record to support any finding by the Commission that any of the rates, charges, or classifications, demanded, observed, charged, or collected by Penn Water, or that any rule, regulation, practice, or contract affecting any such rate, charge or classification is unjust, unreasonable, unduly discriminatory or preferential, as required by Section 206 (a) of the Act or by Section 20 of the Act insofar as such Section 20 makes applicable the provisions of Section 15 (1) of the Interstate Commerce Act (49 U. S. C. 1946 ed. § 15 (1); 24

Stat. 384, 34 Stat. 589, 36 Stat. 551, 41 Stat. 484, 48 Stat. 1162, 54 Stat. 911).

(f) The Commission made no finding in its said Order that any of the existing rates, charges, or classifications for service to PP&L, Philadelphia Company, or Metropolitan Company, are unjust, unreasonable, unduly discriminatory or preferential, as required by Section 206 (a) of the Federal Power Act or by Section 20 of the Act insofar as such Section 20 makes applicable the provisions of Section 15 (1) of the Interstate Commerce Act.

(g) The said Order of the Commission was issued without the hearing required by Section 206 (a) of the Act, by Section 20 of the Act insofar as such Section 20 makes applicable the provisions of Section 15 (1) of the Interstate Commerce Act, and contrary to the provisions of the due process clause of the Fifth Amendment to the Constitution of the United States, in that:

(i) Petitioners were given no notice of the terms or substance of the said Order prior to or during proceedings before the Commission, and were given inadequate description of the subjects and issues involved in the proceedings before the Commission prior to and during such proceedings.

(ii) Petitioners were required to proceed first with unspecified evidence and without the aforesaid notice or description, and were required to carry the burden of proof in the proceedings before the Commission despite the fact that they were not the proponents of any rule or order requiring changes in service, rates, charges, classifications, rules, regulations, practices, or contracts.

(iii) Petitioners were effectively prevented from adequate preparation for and from conducting necessary and reasonable cross-examination of the witnesses for the Commission, and other hostile and adverse

witnesses, required for a full and true disclosure of facts deemed material by the Commission in its said Opinion.

(iv) Petitioners were effectively prevented from adequate preparation for and from a reasonable opportunity for presentation of evidence in rebuttal to evidence presented on behalf of the Commission and other adverse parties near the end of the lengthy proceedings before the Commission, which evidence related to facts relied upon by the Commission in coming to its conclusions in said Opinion and Order and material to the validity of such conclusions; and the Commission's Examiner refused to hear Petitioners' counsel's detailed description of the essential and relevant rebuttal evidence Petitioners would have presented if they had been given the opportunity.

(v) The proceedings before the Commission and the functions of the Commission's Examiner were not conducted by him in an impartial manner, to the prejudice of Petitioners in their presentation of facts for the record.

(vi) Petitioners have had no opportunity to inspect an initial decision by the Commission's Examiner, if any, on the evidence received in the record in the proceedings presided over by him; and although the Commission did not preside at the reception of the evidence of record, no recommended decision by the Examiner who did preside has been filed or made available to Petitioners; the decision of the Commission in said Opinion and Order is not tentative, and the Commission made no finding nor is there evidence of record which would support a finding that due and timely execution of the Commission's functions imperatively and unavoidably require the foregoing procedure omitted by the Commission in issuing its said Opinion and Order.

(vii) No opportunity was afforded Petitioners to submit for the consideration of the Commission

exceptions, with supporting reasons for such exceptions, to the decision or recommended decision to the Commission, of the Commission's Examiner.

(viii) The Commission's said Opinion and Order, and the record before the Commission, do not show the ruling upon each finding, conclusion or requested ruling presented by Petitioners in their Briefs heretofore filed with the Commission in this proceeding; and such Opinion, Order, and record does not include a statement of findings and conclusions, as well as the reasons or basis therefor, upon all the material issues of fact and law presented on the record by Petitioners.

(h) Since the record in the proceeding has been closed, the contract of December 31, 1927, providing, among other things, for steam-generated energy service from Baltimore Company to Penn Water at the latter's request, and the purported agreements amendatory and supplemental to said 1927 contract have been terminated as more specifically shown hereinafter in paragraph II (6) (c); and since the closing of such record Penn Water has notified Baltimore Company that it has ceased to receive from Baltimore Company and will not pay for any electric energy or capacity or other electrical services in connection therewith generated in Maryland or elsewhere and transmitted across the Maryland-Pennsylvania State line into Pennsylvania; and that Petitioners' operations have been changed to effect that purpose. As a result of such changes in operations, no such electric energy generated in Maryland, or States other than Pennsylvania has since that date been, nor will be, transmitted from such States of generation into Pennsylvania and consumed in Pennsylvania, except for station uses at Holtwood and Safe Harbor and delivery to the Railroad Company if and when necessary and if given the opportunity on rehearing, Petitioners hereby offer to prove such facts.

(7) If the Federal Power Act can properly be construed otherwise than as described in paragraphs (1), (2), (4), (5), and (6) (a) (i) above, the same is unconstitutional because in violation of the Tenth Amendment to the Constitution of the United States.

(8) The said Order of the Commission requires Petitioners to make changes from time to time in the future in rates and charges for services to Baltimore Company without notice, opportunity for hearing, or findings as of such future times that the then existing rates and charges are unjust, unreasonable, unduly discriminatory, or preferential as of such future times, upon the basis of the facts as of such future times; without authority under the Federal Power Act and contrary to the provisions of Section 206 (a) of the Act; and contrary to Article I, Section 1, of the Constitution of the United States.

(9) The said Order of the Commission, and its Opinion, findings and conclusions, particularly the rates and charges which purport to be thereby determined, fixed, prescribed, and required to be filed, charged, and observed, are unlawful, unconstitutional, unreasonable, arbitrary, capricious, in excess of the Commission's statutory jurisdiction, authority, and limitations under the Federal Power Act and contrary to the provisions of such Act, without observance of the procedure required by law, unsupported by substantial evidence of record; and if enforced would deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States.

II. Insofar as any of the statements in the Commission's Opinion No. 173, dated January 4, 1949, which was incorporated by reference and made a part of the Commission's Order, issued January 5, 1949; and insofar as the references made in such Opinion No. 173 to discussion or conclusions in the Commission's Opinion No. 143, dated October 25, 1946, in its Docket No. IT-5914, *Re Safe Harbor*

Water Power Corporation; purport to be definite findings of fact or conclusions, or anything more than mere illustrative explanations of the Commission's conclusions, each and all of the following portions thereof are erroneous, unconstitutional, unlawful, arbitrary, capricious, contrary to the evidence of record, unsupported by any substantial evidence of record, and operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States, and results in exercise of authority in excess of statutory jurisdiction, authority, or limitations; and Petitioners seek rehearing on each and every one of the following portions thereof for the reasons and on the grounds as hereinafter stated:

(1) The statement of the Commission on page 1 of Opinion No. 173 as follows:

> "This is a proceeding under the Federal Power Act * * *"

on the ground that neither in this statement nor anywhere in such Opinion or the record before the Commission has there been any specification as to whether the proceedings or the Commission's said Order are an exercise of authority under Part I or Part II of the Federal Power Act, or any reference to the specific authority of the Commission under which the proceedings were conducted.

(2) The statement of the Commission on page 1 of Opinion No. 173 as follows:

> "* * * The matters at issue involve a determination of * * * the amount, if any, of revenues received by Penn Water in excess of the reasonable cost of service rendered by Penn Water and Transmission Company and of resulting reductions in rates subject to the Commission's jurisdiction."

on the ground that nothing in Section 20, Section 206 (a), or any other provision of the Act authorizes the Commis-

sion to require reductions in rates or charges based upon a determination of an excess of revenues over costs of service when the revenues received by Penn Water are the result of divisions of rates or charges for joint service with others, or when such revenues received by Penn Water are not received under rates or charges for electric energy or electric power service, as more specifically set forth herein in paragaraphs I (6) (a) (iii), I (6) (a) (iv), and I (6) (d) above.

(3) The statement of the Commission on page 4 of Opinion No. 173 as follows:

> "* * * Two 60-cycle generators in Penn Water's steam electric generating plant have a * * * 3-hour peak rating of 28,000 kw.[6] (* * * the base load rating of the steam plant is 26,000 kw at all times.)"

on the ground that if given an opportunity on rehearing Petitioners hereby offer to prove that since the close of the record in the proceeding the 3-hour peak rating of such steam plant has been increased to 30,000 kw and the base load rating has been increased to 28,000 kw.

(4) The statement of the Commission on pages 3 and 4 of Opinion No. 173 as follows:

> "* * * Penn Water, owns and operates * * * that part of an interconnected interstate transmission system * * * located in Pennsylvania. The respondent, Transmission Company, owns and operates that part of the same transmission system * * * located in Maryland."
>
> * * *
>
> "Respondents' interconnected interstate transmission system is a regional network * * *."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) The evidence of record shows that a substantial part of the transmission facilities of Penn Water and Transmission Company are not a part of any interstate transmission system or regional network but are facilities used solely for the transmission and sale of electric energy in intrastate commerce, as more specifically set forth in paragraphs I (4) and I (6) (a) (i); and the Commission failed to so find.

(c) The Gunpowder transmission line owned and operated by Transmission Company in Maryland is not a part of any interconnected system of Penn Water or Transmission Company; and the Commission failed to so find.

(d) As stated in paragraph I (6) (h) above.

(5) The statement of the Commission on page 5 of Opinion No. 173 as follows:

> "Operations of Penn Water, Safe Harbor, and Baltimore Company are closely integrated and coordinated as a matter of economy, efficiency, flexibility, and maximum utilization of hydro capabilities, contracts being carefully worked out for that purpose * * *."

on the ground that the purported contracts referred to in such statement have been terminated since the record in this proceeding has been closed, as more specifically shown hereinafter in paragraphs II (6) (c) and II (7) (c).

(6) The statements of the Commission on pages 2 and 7 of the Opinion No. 173 as follows:

> "Baltimore Company purchases electric power and energy from Penn Water * * *."
>
> * * *
>
> "Under a contract with Baltimore Company, dated December 31, 1927, as supplemented on several occasions thereafter, Penn Water is obligated to pro-

vide Baltimore Company at all times with all the capacity and energy available to the former (Penn Water) from its own hydro and steam generating plants, and from its Safe Harbor one-third entitlement, referred to below, insofar as such power and energy is not required in connection with contracts to which Penn Water is a party and which Baltimore Company has approved. In turn, Penn Water is entitled to obtain from Baltimore Company steam-generated energy in excess of the latter's own requirements up to the limit of its available generating capacity. This contract, according to its terms, is to continue in force until midnight, April 22, 1980.

"Pursuant to the provisions of the supplemental agreement of June 1, 1931, as modified by an agreement of September 29, 1939, Baltimore Company undertakes to pay, on the basis of a formulated power bill, all of Penn Water's operating expenses plus a specified return."

on the grounds that:

(a) There is no substantial evidence of record to support any of such statements, and more particularly the statement that "Penn Water is entitled to obtain from Baltimore Company steam-generated energy in excess of the latter's own requirements up to the limit of its available generating capacity", and that "Baltimore Company undertakes to pay * * * all of Penn Water's operating expenses * * *"; and such statements are contrary to the evidence of record.

(b) The evidence of record shows that the energy which Penn Water was entitled to obtain from Baltimore Company, under the purported contract referred to, was further limited by the requirement that Baltimore Company was not obligated to start up a station which would not otherwise have been operated; and that Balti-

more Company has arbitrarily refused to pay substantial amounts of Penn Water's operating expenses as required under the terms of the purported agreement; and the Commission failed to so find.

(c) Since the record in the proceeding has been closed the purported contract referred to, as supplemented, has been terminated by notice dated December 20, 1948; and if given the opportunity on rehearing Petitioners hereby offer to prove:

(i) The fact of such termination;

(ii) The contract was null, void, and unenforceable because the basic agreements were made at a time when Penn Water and Baltimore Company were affiliated through substantial ownership by Baltimore Company of Penn Water stock and by interlocking directors and officers; the basic agreements were never approved or ratified by the stockholders of Penn Water; the effect of Articles IV and V of the supplemental agreement of June 1, 1931, particularly as construed in practice by Baltimore Company, made the contract *ultra vires* and contrary to public policy; and such supplemental agreement constituted an agreement in unreasonable restraint of trade and in unreasonable restriction of competition in the generation and sale of electrical services, and unreasonably limited the output of electrical energy contrary to the laws of the United States, including Section 1 of the Sherman Antitrust Act of July 2, 1890 (15 U. S. C. 1946 ed. § 1; 26 Stat. 209, 50 Stat. 693), Section 5 of the Federal Trade Commission Act of September 26, 1914 (15 U. S. C. 1946 ed. § 45; 38 Stat. 719), and Section 10 (h) of the Federal Power Act (16 U. S. C. 1946 ed. § 803 (h); 41 Stat. 1068, 49 Stat. 842), and to the laws of Maryland and Pennsylvania;

(iii) Baltimore Company committed material breaches of the contract which justified its termination; and

(iv) The foregoing matters are now in litigation between Penn Water and Baltimore Company on complaint of Penn Water for declaratory and other relief, before the United States District Court for the District of Maryland, Civil Action No. 4179.

(d) The evidence of record shows that under a purported contract between Baltimore Company and Penn Water dated December 31, 1927, as amended on December 28, 1928, June 1, 1931, and September 29, 1939, Baltimore Company agreed to pay specific amounts in accordance with a formula, without regard to the amounts of services received from Penn Water, including the use of specified facilities; and the Commission failed to so find. Since the record in this proceeding has been closed such contract has been terminated, as more specifically shown herein in paragraph (c) above.

(7) The statement of the Commission on pages 7 and 8 of Opinion No. 173 as follows:

> "* * * Penn Water's entitlement from Safe Harbor relates to a fifty-year agreement of June 1, 1931 wherein Safe Harbor agreed with Baltimore Company and Penn Water (and the latter *inter sese*) that * * * the latter companies should be entitled to all of the capacity and energy available from the former's six-unit development in the ratio of two-thirds (to Baltimore Company) and one-third (to Penn Water)."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that under the terms of Articles II and III of the purported three-party agreement referred to Baltimore Company and Penn Water are entitled only to two-thirds and one-third, respectively, of the "total capacity and daily energy avail-

able" from Safe Harbor's hydro development after deduction of any capacity and energy which may be required for the performance of the duty and obligations to serve imposed on Safe Harbor by its charter and otherwise by law including its contractual obligations to Railroad Company, PP&L, and Philadelphia Company.

(c) Since the record in the proceeding has been closed Penn Water has notified Safe Harbor and Baltimore Company that the purported three-party contract referred to, as supplemented, is of no effect, null, void, and unenforceable; and if given the opportunity on rehearing Petitioners hereby offer to prove:

(i) The fact of such notification;

(ii) The contract was null, void, and unenforceable because made at a time when all of the parties were affiliated through stock ownership and interlocking officers and directors, and was part and parcel of the arrangements in connection with which the void two-party contract of June 1, 1931, between Baltimore Company and Penn Water was executed; the effect of the agreements, particularly as construed in practice by Baltimore Company, made the contract *ultra vires* and contrary to public policy; and such agreement constituted an agreement in unreasonable restraint of trade and in unreasonable restriction of competition in the generation and sale of electrical services, and unreasonably limited the output of electrical energy, contrary to the laws of the United States, including Section 1 of the Sherman Antitrust Act, Section 5 of the Federal Trade Commission Act, and Section 10 (h) of the Federal Power Act, and to the laws of Maryland and Pennsylvania;

(iii) Penn Water credits to the account of Safe Harbor an appropriate and reasonable division of revenues received from Pennsylvania customers served jointly by Penn Water and Safe Harbor.

(8) The statement of the Commission on pages 10 and 11 of Opinion No. 173 as follows:

> "Penn Water is further committed • • • to supply the entire electrical power and energy requirements of Philadelphia Company within a defined territory in the Coatesville (Pa.) area; to supply, under certain conditions, all of Pennsylvania Power & Light Company's (PP&L's) Lancaster 25-cycle and 60-cycle load requirements (Lancaster Co., Pa., and adjacent areas), coupled with a contingent obligation to meet a limited deficiency in PP&L's firm load carrying capacity for its Harrisburg area and provide a supplementary secondary capacity service."
>
> • • •
>
> "While Safe Harbor is a party to several of the contracts, its position in the PP&L and Philadelphia Company contracts is a nominal one, involving a legal technicality, which has no bearing or effect upon the operations of the system."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) The evidence of record shows that Safe Harbor is obligated to and does supply jointly with Penn Water the electrical requirements of the Pennsylvania customers referred to; that Safe Harbor's obligations to supply firm services to such customers as well as to Railroad Company are necessary to the rendering of the services required under such contracts, for the reason that the electric capacity and energy available to Penn Water from its own generating resources, plus its purchases from sources other than Safe Harbor, plus only one-third of the available Safe Harbor services, are insufficient to meet the total requirements for firm services required under the contracts

with PP&L, Philadelphia Company, Metropolitan Company, and Railroad Company; and the Commission failed to so find.

(9) The statement of the Commission on page 12 of Opinion No. 173 as follows:

> "* * * Respondents' * * * argument is that a Part I 'licensee' cannot be a 'public utility' under Part II, and that a licensee's interstate wholesale rate may be regulated by the Commission, if at all, only under Part I. The essentials of this argument we considered and rejected in *Safe Harbor Water Power Corporation* (5 FPC 221, 235-237)."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the record as shown by the contentions of Petitioners in their Briefs filed on November 14, 1947 and January 15, 1948, which Briefs are made a part hereof by reference.

(b) The record as shown by such Briefs shows that the contention of Petitioners in this respect is that, assuming Petitioners are "public utilities" within the meaning of Part II of the Federal Power Act by reason of ownership or operation of any facilities subject to the jurisdiction of the Commission as specified in the last sentence of Section 201 (b) of the Act, it does not follow that the Commission has jurisdiction, authority, or power to regulate the rates and charges of such a "public utility" under Section 206 (a) of the Act but must do so, if at all, under Part I of the Act (Main Brief, pp. 13-18; Reply Brief p. 2); and the Commission failed to consider such a contention in the *Safe Harbor* case, or in its Opinion No. 173, and failed to so find.

(c) Nothing stated in the Commission's Opinion No. 143, *Safe Harbor Water Power Corporation*, 5 FPC 221, 235-237, shows a valid ground for the Commission's

conclusion that it has jurisdiction, authority, and power to regulate the rates and charges of a licensee under Part II of the Act; and such conclusion reached therein constituted an error of law as it does in its Opinion No. 173.

(10) The statement of the Commission on page 13 of Opinion No. 173 as follows:

"* * * the provision of 201 (b) relating to State authority over the exportation of hydroelectric energy is inapplicable."

on the grounds that:

(a) As stated in paragraph I (5) above.

(b) Nothing stated in the Commission's Opinion No. 143, *Re Safe Harbor Water Power Corporation*, 5 FPC 221, 235, shows a valid ground for the Commission's conclusion that such provision of Section 201 (b) of the Act is inapplicable; and such conclusion reached therein constitutes an error of law as it does in its Opinion No. 173.

(11) The statements of the Commission on pages 13, 14, and 20 of Opinion No. 173 as follows:

"* * * these [transmission] facilities [across Pennsylvania-Maryland State lines] are used to effect the sale of electric energy by Penn Water to Baltimore Company."

* * *

"It is equally clear that those facilities are also used for sales by Penn Water for resale.[18] (Such sales are Penn Water's sales to Baltimore Company and to Penn Water's Pennsylvania resale customers.)"

* * *

"* * * facilities owned and operated by Respondents include facilities used * * * for 'the sale of electric energy at wholesale in interstate commerce.'"

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) As stated in paragraph I (6) (a) (i), I (6) (a) (iii), and I (6) (h) above.

(12) The statements of the Commission on pages 14, 16, 17, 18, 19, 20, and 22 of Opinion No. 173 as follows:

"* * * Penn Water's sales in Pennsylvania * * * are * * * sales of output of the integrated and coordinated interstate electric system of which Penn Water's facilities are an integral part."

* * *

"* * * contribution [to sales of output of integrated system] * * * of * * * Baltimore Company, being determined by the best use the system can make of the plant's capabilities."

* * *

"* * * electric energy from the numerous system sources [including Baltimore Company] is available for consumption at any point on their combined facilities. Their [including Baltimore Company] power resources and transmission facilities are thus operated as an integrated and coordinated electric system, and all of Respondents' facilities are integral parts of that system."

* * *

"During the rest of the year [other than spring months] the practice is to generate energy at the hydro plants of Penn Water and Safe Harbor so as to assist Baltimore Company in carrying its peak loads during the day, but at other hours and during weekends to stop hydro generation so as to allow the ponds to refill."

* * *

"* * * energy crossing the State boundary, with other system energy, is used to fulfill system requirements."

* * *

"There result times when system energy generated in Pennsylvania is used, mixed or unmixed, in meeting system requirements in Maryland. Similarly, there are occasions when system energy from Maryland is used, mixed or unmixed, in meeting system requirements in Pennsylvania."

* * *

"It is accordingly evident that the operations of the unified system enterprise are completely interstate in character * * *."

* * *

"In the making of sales of system energy, such as those by Penn Water to its Pennsylvania utility customers * * *."

* * *

"* * * each of Penn Water's sales in Pennsylvania is clearly a system transaction of a character wholly interstate * * *."

* * *

"In short, Penn Water is selling interstate system energy to purchasers outside the system. Such sales are sales 'in interstate commerce'."

* * *

"* * * all of the energy thus sold [to Baltimore Company] crosses the State line. This latter sale is an intrasystem transaction between two integral corporate parts of the system enterprise, which transaction is ancillary to the consummation of sales of system energy by Baltimore Company to purchasers outside the system, such as PEPCO, or in enabling Baltimore Company's use of that energy for delivery and sale to its resale customers."

* * *

"The energy sold by Safe Harbor, like that sold by Penn Water to its Pennsylvania resale customers, includes varying amounts of energy which never crosses a state line. All are nevertheless sales 'in interstate commerce'."

* * * *

"* * * Safe Harbor's sale is like Penn Water's sale to Baltimore Company in that both are intra-system transactions."

* * * *

"It is also evident that Penn Water's sales to its Pennsylvania resale customers and its sale to Baltimore Company are all sales 'subject to the jurisdiction of the Commission' within the literal terms of Sections 205 and 206.

* * *

"* * * Penn Water's operations are all integral activities of the unified interstate systems, and its sales are sales in 'interstate commerce'."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) The Commission has no jurisdiction, authority, or power to regulate the rates, charges or revenues of a y integrated system, but its jurisdiction is confined, if any, to the regulation of so much of the rates, charges or classifications of "licensees" or "public utilities" under the Federal Power Act as are for transmission or sale of electric energy at wholesale or for power service in interstate commerce; and the Commission failed to so conclude.

(c) The evidence of record shows that Baltimore Company has no obligations, contractual or otherwise, in the rendering of service by Penn Water or by Penn Water jointly with Safe Harbor to Metropolitan

Company, PP&L, and Philadelphia Company, and has no tariffs on file with any commission applicable to such service; that neither Penn Water nor Safe Harbor have any obligations, contractual or otherwise, to render service to PEPCO or to any of Baltimore Company's resale customers; that the interconnected system referred to by the Commission is an arbitrarily defined system assumed by the Commission, having no basis in fact; that the interconnections between Safe Harbor and Penn Water with Baltimore Company, and the operations and interchange of energy which formerly existed thereover were no different from similar interconnections, operations and interchanges with PP&L, Metropolitan Company, Philadelphia Electric, PEPCO, and others; and the Commission failed to so find.

(d) The evidence of record in this proceeding does not support the conclusions of the Court in *Safe Harbor Water Power Corp. v. Federal Power Commission,* 124 F. 2d 800, 802-803, 807, or the conclusions of the Commission in *Re Safe Harbor Water Power Corporation,* 5 FPC 221, with respect to the operations of Safe Harbor, made on the basis of the records in such other proceedings.

(e) As stated in paragraphs I (6) (a) (i), I (6) (a) (ii), I (6) (a) (iii), I (6) (h), II (6), and II (7) above.

(13) The statements of the Commission on pages 15, 16, and 18 of Opinio. No. 173 as follows:

> "* * * at times, energy generated by Baltimore Company or PEPCO is transmitted on these lines in the opposite direction to Safe Harbor. The 60-cycle energy thus received from Maryland * * * is transmitted by Penn Water * * * in part for delivery to PP&L's lines and in part for delivery over two 66 kv circuits (Nos. 15 and 16) to Holtwood. The energy so delivered at Holtwood is sometimes, in whole or in part, energy received at Safe Harbor from Baltimore and Takoma Park, Maryland. It is thereafter delivered * * * to

Philadelphia Company (Coatesville, Pa.), Metropolitan Company (York, Pa.) or PP&L (Lancaster, Pa.), via Circuit No. 18. At times it is also in part converted to 25-cycle three phase energy and transmitted and delivered to PP&L (Circuit No. 3) or to Baltimore Company at Highlandtown substation, or to both."

* * *

"The Highlandtown substation at times also receives from Baltimore Company a smaller amount of 25-cycle energy which is transmitted to Holtwood where it is delivered to PP&L or is converted to 60-cycle energy and delivered by Penn Water, to Safe Harbor or to the Pennsylvania customers."

* * *

"Energy flows in, across, and out of the system transmission network as the needs of the interconnected members develop from minute to minute and day to day."

on the ground that to the extent any of such statements were supported by the evidence of record, such statements are no longer in accord with the facts as a result of the material changes in operations and contracts occurring after the record was closed, as stated in paragraphs I (6) (h), II (6) and II (7) above.

(14) The statements of the Commission on pages 17 and 18 of Opinion No. 173 as follows:

"The system foundation contracts * * *, governing the operation of the system, were designed to facilitate this completely integrated operation of system generating and transmitting facilities. That purpose found expression in the Supplemental Agreement of June 1, 1931, Article VIII * * *.

"Contributing to the accomplishment of complete integration and pooling of the system's power resources are the provisions for over-all compensation to

Penn Water and Safe Harbor without regard to the amounts delivered or the points at which delivery is made."

* * *

"The very purpose of the system foundation contracts was the elimination of artificial barriers, such as State boundaries."

* * *

"* * * title to energy flowing on the system is of no significance among the companies comprising the system since they physically function as one enterprise and since the compensation features of the system contracts are so designed as to render considerations of title unimportant."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) As stated in paragraphs I (6) (h), II (6) (c), II (7) (c), and II (12) (c) above.

(15) The statement of the Commission on page 19 of Opinion No. 173 as follows:

"The principles by which the foregoing conclusions [Opinion No. 173, pp. 12-19] are reached do not differ from those which must be applied in determining the character of Safe Harbor's sale of its output."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) As stated in paragraphs I (4), I (6) (a), I (6) (b), I (6) (h), II (5), II (7), II (8), II (12), II (13) and II (14) above.

(16) The statements of the Commission on pages 20 and 21 of Opinion No. 173 as follows:

> "Respondents * * * contend that the Commission is without authority over the rate charged for the sales to PP&L, Philadelphia Company and Baltimore Company, claiming that such rates 'are joint rates over which this Commission has no jurisdiction'. This claim apparently rests upon the fact that Safe Harbor is a nominal party to Penn Water's contracts with PP&L and Philadelphia Company and upon the coordinated nature of operations of the integrated system. * * * it does not follow that the rates involved are 'joint' in any sense which removes them from this Commission's regulatory jurisdiction in this proceeding."
>
> * * *
>
> "* * * the real situation there [under Metropolitan Company contract] is precisely the same as that involved in Penn Water's contracts with PP&L and the Philadelphia Company where Safe Harbor is a nominal party."
>
> * * *
>
> "* * * the compensation features of the contracts by which Safe Harbor and Penn Water sell to Baltimore Company clearly refute any suggestion of 'joint rate'. Indeed, the record is replete with evidence, much of it supplied by Penn Water, which shows this 'joint rate' contention to be wholly without substance."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record, are contrary to the evidence of record, and insofar as they consist of a statement of Respondents' contentions are not supported by the record as shown by Petitioners' Briefs, filed November 14, 1947, and January 15, 1948, referred to above.

(b) Such Briefs show (Main Brief, pp. 20-21, 33-38, Reply Brief, pp. 7-8, 14-16) that Respondents never

contended that the Commission lacks jurisdiction over joint rates, but they did and now contend that where rates for joint services are involved the Commission, having no authority to regulate a division of those rates, must have all the parties to a joint rate before it and evidence relating to the reasonableness of the joint rate, not to the divisions thereof.

(c) As stated in paragraphs I (6) (a) (iii), I (6) (b), I (6) (d), II (2), II (8).

(17) The statement of the Commission on page 21 of Opinion No. 173 as follows:

> "* * * Penn Water contends that its rates apply not only to energy but, indivisably, to capacity service, transmission services, frequency control, power-factor cooperation, use of special facilities, and other services, as well as energy, and that this Commission's jurisdiction is limited to rates and charges relating only to the sale of 'energy' in a strictly limited, technical sense. But all of these other so-called services are usual incidents of the wholesale sale of energy and many of them involve no segregable costs of service. The rates here involved, however they may be attributed to energy, capacity, and the other incidents referred to, are clearly within the scope of the statutory reference to 'rates and charges . . . for or in connection with the . . . sale of electric energy subject to the jurisdiction of the Commission' (Section 205 (a)) and to 'any rule, regulation, practice or contract affecting such rate, charge, or classification' (Section 206 (a)). We perceive nothing in Respondents' sales for resale to take them outside the scope of the regulation provided by Congress."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record, is contrary to the evidence

of record, and insofar as it consists of a statement of Respondents' contention is not supported by the record as shown by Petitioners' Briefs, filed November 14, 1947, and January 15, 1948, referred to above.

(b) The evidence of record shows that under the contracts for services with PP&L, Philadelphia Company, Metropolitan Company, and Railroad Company, there are rates and charges for capacity services, the use of special facilities, and other services which are separate from, independent of, are not in connection with, and do not affect any rates, charges, or classifications for any transmission or sale of electric energy; that under the former contract between Penn Water and Baltimore Company the revenues paid by Baltimore Company to Penn Water were paid without regard to the amount of any services rendered, and there are no rates, charges or classifications of Petitioners contained in such contract, as supplemented by the agreement of June 1, 1931, for the transmission or sale of electric energy; and that the services rendered all of such customers, other than transmission and electric energy services, are not usual incidents of any wholesale sale of electric energy, and many of the more important of such services involve costs which may be readily and reasonably segregated; and the Commission failed to so find.

(c) Nothing in Section 205 (a) of the Federal Power Act gives the Commission jurisdiction, authority, or power to regulate, determine or fix any rates or charges; nothing in Section 206 (a) of the Act gives the Commission jurisdiction, authority or power to regulate, determine or fix rates or charges "in connection with" the transmission or sale of electric energy subject to the jurisdiction of the Commission; and nothing in Section 206 (a) of the Act gives the Commission jurisdiction, authority, or power to regulate, determine, or fix any rule, regulation, practice, or contract which may affect any rate, charge, or classification which is not for a transmission or sale of electric energy subject to the jurisdiction of the Commission.

(d) As stated in paragraphs I (6) (a) (iii) and I (6) (a) (iv) above.

(18) The statement of the Commission on page 22 of Opinion No. 173 as follows:

"Since Section 19 deals with intrastate rates, our attention here may be confined to Section 20."

on the grounds that:

(a) Nothing in Section 19 of the Act limits its application to intrastate rates; and the jurisdiction of the Commission under Part I of the Act must be determined by the application of the interrelated provisions of Sections 19 and 20; and the Commission failed to so find.

(b) As stated in paragraph I (4) above.

(19) The statement of the Commission on page 22 of Opinion No. 173 as follows:

"* * * Penn Water's retail deliveries to the Pennsylvania Railroad in Pennsylvania are deliveries in interstate commerce * * *".

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) As stated in paragraphs I (4), I (6) (a) (i) (as applied to Railroad Company), I (6) (a) (ii), II (6), II (7), and II (13) above.

(20) The statement of the Commission on page 22 of Opinion No. 173 as follows:

"By a separate agreement among themselves, to which the Railroad is not a party, Penn Water and Baltimore Company have agreed upon a division, at the State boundary, of their deliveries * * *".

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that by the separate agreement referred to the deliveries to Railroad Company within the States of Pennsylvania and Maryland were used only as an arbitrary measure of the basis for the division of the revenues received under the joint rate with the Railroad Company, and such deliveries do not measure the respective obligations of Penn Water and Baltimore Company, respectively, to the Railroad Company; and the Commission failed to so find.

(21) The statement of the Commission on page 23 of Opinion No. 173 as follows:

> "• • • the record shows that • • • during the course of such participation [by the Commissions of Pennsylvania and Maryland] and in the briefs of their respective counsel, clearly demonstrated that their positions are irreconcilable and that they are 'unable to agree'. Accordingly, we expressly find that the States are 'unable to agree'."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) Such statements are not supported by any findings by the Commission as to the nature of the disagreement by the State Commissions involved.

(c) As stated in paragraph I (2) above.

(22) The statement of the Commission on page 23 of Opinion No. 173 as follows;

> "• • • if Section 20 be construed to confer upon the states a priority of jurisdiction over the interstate

wholesale rates of a licensee-public utility, the conflicting part of Section 20 must be considered repealed by implication, * * *. We reaffirm and need not repeat our discussion of this problem in the Safe Harbor proceeding (5 F. P. C. 231, 239-243). Here, as there, we conclude that whether Section 20 may be given an interpretation avoiding conflict (p. 242)

'. . . or whether the conflicting part of that section be deemed repealed by implication, the finding that the States are unable to agree is not a necessary condition precedent to our authority under that section, for the rates here in question, being interstate wholesale rates held beyond the regulatory power of the States in the *Attleboro* case, *supra*, the condition of Section 20 would be inapplicable. Our jurisdiction, therefore, would not be dependent upon our finding that the States are unable to agree'."

on the grounds that:

(a) Nothing in the Federal Power Act or the legislative history thereof supports the Commission's conclusion that Section 20 is repealed by implication or supports the foregoing statement; and construction of Sections 19 and 20 of the Act, as stated in paragraphs I (1) and I (2) and I (5) above, would avoid conflict between provisions of Parts I and II in the Act.

(b) Nothing in the *Attleboro* case determined that the interstate wholesale rates of licensees for hydroelectric service were beyond the regulatory power of the States when such regulation was authorized by Congress as in Sections 19 and 20 of the Act.

(c) The conclusions reached by the Commission in *Re Safe Harbor Water Power Corporation*, 5 F. P. C. 221, 239-243, constitute erroneous conclusions as a matter of law.

(23) The statement of the Commission on page 24 of Opinion No. 173 as follows:

"• • • Respondents have had a fair hearing on adequate notice.

"The scope of the subjects and issues involved were clearly set forth in the Commission's orders instituting and enlarging the investigation herein and fixing the date of hearing. The detailed position of the Staff with respect to these subjects and issues, as developed during the course of the Staff's investigation, were set forth by Staff's counsel in his opening statement, and at other times during the course of the hearing. There is not the slightest evidence that Respondents were unable to prepare their case because of any alleged vagueness in the specification of issues, • • •.

"Nor were Respondents deprived of an adequate opportunity to present their evidence or to cross examine adverse witnesses."

• • •

"[Respondents'] counsel had • • • ample time in which to prepare and present evidence rebutting Staff's rebuttal.

• • •

"Respondents fail to show that they have been prejudiced by any substantial error in any ruling of the Examiner excluding evidence.

"The record in this proceeding, therefore, does not support Respondents' claim of not having had ample notice and not having had a fair trial."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) As stated in paragraphs I (6) (g) above.

(24) The statement of the Commission on page 139 of Opinion No. 173 as follows:

"Penn Water's revenues, per books, are classified as follows for the year ended December 31, 1946:

SALES OF ELECTRIC ENERGY

* * *

Total Sales of Electric Energy $6,305,198.63"

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) As stated in paragraphs I (6) (a) (iii), I (6) (a) (iv), and II (17) (b), above.

(25) The statement of the Commission on page 140 of Opinion No. 173 as follows:

"Penn Water's operating expenses for the year ended December 31, 1946, * * * as adjusted, are as follows:

* * *

Total operating expenses [as adjusted] $2,973,424."

on the grounds that:

(a) Such statements and adjustments are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) The evidence of record shows that Penn Water's total operating expenses for the year 1946 were not less than $4,053,947, and that such amount reflected the abnormally low operating costs of Safe Harbor for 1946 which were reflected in the abnormally low Safe Harbor power bill of $1,016,501; and that the Commission failed to so find.

(c) There is no substantial evidence of record to support adjustment of the cost of purchased power from

Safe Harbor by $37,063, or justify any failure to find that such adjustment should be substantially further increased.

(d) There is no substantial evidence of record to support the elimination from operating expenses for the year 1946 of the items of rate case expenses ($319,559), "non-operating items" ($15,293), and the adjustment downward of the following items of expense by eliminating the following amounts: Taxes, except federal income taxes ($33,000), Federal income taxes ($643,558); and the Commission has made no findings supporting such eliminations and adjustments.

(26) The statement of the Commission on page 140 of Opinion No. 173 as follows:

> "It is proper in this proceeding to eliminate from operating expenses * * * the rate case expenses, charged in 1946, as this is a non-recurring item, * * *"

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that rate case expenses have been incurred in substantial amounts in every year since 1944; and the Commission failed to so find.

(c) If given the opportunity for rehearing, Petitioners hereby offer to prove that since the record of the proceeding was closed substantial amounts for rate case expenses have been incurred in the years 1947 and 1948 and will continue to be incurred in the reasonably foreseeable future.

(d) The amounts of rate case expense incurred for each year should be allowed in total, or in the alternative an average amount for the years 1944 to date should be allowed as representative of a year's operating expenses for this item.

(27) The statement of the Commission on page 141 of Opinion No. 173 as follows:

> "The item of $15,293 represents miscellaneous costs which Penn Water has classified as non-operating * * *."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that such amount represented salaries and insurance premiums actually paid as operating expenses and accounted for as such, and were eliminated from the Baltimore Company bill under a special agreement which expressly did not determine that such amounts were unreasonable or were not proper operating expenses; and the Commission failed to so find.

(28) The statement of the Commission on page 141 of Opinion No. 173 as follows:

> "The adjustment of the cost of power purchased from Safe Harbor, an increase of $37,063, has been made to give effect to the rate order of this Commission in the *Safe Harbor* case, supra."

on the grounds that:

(a) There is no substantial evidence of record to support any reduction in the rates of Safe Harbor or payments by Penn Water to Safe Harbor; such payments by Penn Water were not for "power purchased", but included Safe Harbor's division of revenues received for joint services to the Pennsylvania customers; and when the rate order of the Commission in the *Safe Harbor* case is finally set aside and enjoined by the United States Circuit (sic) Court of Appeals for the Third Circuit, No. 9345, Penn Water will be required to pay sums to Safe Harbor substantially in excess of $1,053,564 annually.

(b) Since the close of the record in the proceeding Penn Water has notified Baltimore Company and Safe Harbor, as stated in Petitioner's offer of proof in paragraph II (7) (c) (iii) above, of additional credits to Safe Harbor as its division of revenues from the Pennsylvania customers, thereby increasing substantially the amounts Penn Water credits or pays to Safe Harbor.

(c) If given an opportunity on rehearing, Petitioners hereby offer to prove that since the close of the record in the proceeding the Pennsylvania Commission has issued its orders dated September 27, 1948, in its Complaint Docket No. 14028, asserting jurisdiction over the intrastate business of Penn Water and Safe Harbor, and requiring Penn Water and Safe Harbor to file tariffs designed to carry into effect the requirements of the orders which have the effect of substantially changing distribution of charges to customers and revenues between Penn Water and Safe Harbor. Copies of the Pennsylvania Commission's Orders are attached hereto and made a part hereof.

(29) The statement of the Commission on page 141 of Opinion No. 173 as follows:

> "* * * the tax adjustments have been made to reflect the Pennsylvania and Federal income taxes on the basis of a reduction of revenues to yield a fair return of $1,300,672 * * *"

on the ground that any such adjustment results in the failure to determine the justness, reasonableness, or lawfulness of existing rates and charges on the basis of existing expenses, as required by Section 206 (a) or Section 20 of the Act.

(30) The statement of the Commission on page 141 of Opinion No. 173 as follows:

> "The excess revenue for the year ended December 31, 1946 is $2,176,736 * * *"

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) As stated in paragraphs II (25), II (26), II (27), II (28), II (29) above and II (66).

(31) The statement of the Commission on page 142 of Opinion No. 173 as follows:

> "* * * the amount thereof [net revenues from interchange], $1,127,699 has been added to revenues from Baltimore Company."

on the grounds that:

(a) Such statement and adjustment is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that all interchange revenues received by Penn Water, net or otherwise, are received from PP&L, Philadelphia Company, and Metropolitan Company and not from Baltimore Company or as revenues from Baltimore Company, and such adjustment increasing revenues from Baltimore Company is wholly arbitrary and capricious; and the Commission failed to so find.

(32) The statement of the Commission on page 142 of Opinion No. 173 as follows:

> "An adjustment of revenue received for special facilities from Pennsylvania Railroad, in the amount of $141,777, in accordance with the allocation of costs of special facilities, has been made by adding the amount to revenues from Baltimore Company and deducting it from revenues from the Pennsylvania Railroad."

on the grounds that:

(a) Such statement and adjustment is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that Penn Water receives no revenues from the Railroad Company, but its revenues for service to Railroad Company are received as an arbitrary division of the revenues paid Baltimore Company by the Railroad Company, which division was $1,625,575.45 in 1946 and had no basis in the respective costs of Railroad Company service of Penn Water or Baltimore Company; and that such adjustment of Penn Water's division received from Baltimore Company by $141,777, is arbitrary and capricious and without authority under the Federal Power Act; and the Commission failed to so find.

(33) The statement of the Commission on page 142 of Opinion No. 173 as follows:

> "The item of $133,750 representing Conowingo back-water payment has been * * * applied as a reduction of operating costs."

on the grounds that:

(a) Such statement and adjustment is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that the receipt of such miscellaneous revenues does not operate to reduce the cost of service to Baltimore Company or any other customer; and such reduction in operating expenses by an amount equivalent to such miscellaneous revenues is arbitrary and capricious; and the Commission failed to so find.

(34) The statement of the Commission on page 142 of Opinion No. 173 as follows:

> "* * * the gross revenues and cost of service are classified as follows:

Revenues:	
Baltimore Company	$2,386,311
Railroad (in Pa.)	1,483,798
P. P. & L. Co.	1,958,356
Philadelphia Co.	948,861
Metropolitan Co.	667,455
Total Revenues	$7,444,781
Cost of Service:	
Operation and Maintenance	$1,932,625
Purchased Power—Safe Harbor	1,053,564
Taxes	513,483
Depreciation	467,701
Return at 5.25%	1,300,672
Cost of Service	$5,268,045

"The difference between total revenues and the total cost of service, is therefore, $2,176,736."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) As stated in paragraphs II (30), II (31), II (32), and II (33) above.

(35) The statement of the Commission on page 142 of Opinion No. 173 as follows:

"An allocation of cost has been made to determine the cost of service to each customer and the resulting excess revenue therefrom."

on the grounds that:

(a) Such statement is not supported by the evidence of record or the findings or statements in such

Opinion or the accompanying Order, and is contrary to the evidence of record.

(b) The findings or statements of the Commission show on their face that the resulting "excess revenue" determined by the Commission does not result from the allocation of the total costs of service of Penn Water as found by the Commission, but results from arbitrary and capricious adjustments of revenues and expenses and from arbitrary credits to Baltimore Company for an arbitrarily assumed diversion of capacity and energy without any support in the record by substantial evidence; and the Commission failed to so find.

(c) The evidence of record shows that the costs and revenues compared by the Commission as to each customer are, in fact, not comparable in that the services involved in the determination of costs are not the same services involved in the determination of revenues; and the Commission failed to so find.

(36) The statement of the Commission on page 143 of Opinion No. 173 as follows:

> "Staff's witness Davis allocated the total cost of service * * * supplied by Respondents."

on the grounds that:

(a) Such statement is not supported by the evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that Mr. Davis deducted from expenses substantial sums which were not allocated by him, and such deductions were arbitrary, capricious, and not supported by any substantial evidence of record or otherwise justified on the record; and the Commission failed to so find.

(c) The evidence of record shows that the allocation of that part of the costs of Penn Water by Mr. Davis represented by payments to Safe Harbor did not re-

flect the total Safe Harbor costs of service to the Pennsylvania customers which costs were substantially larger than the payments by Penn Water; and the Commission failed to so find.

(37) The statement of the Commission on page 143 of Opinion No. 173 as follows:

> "* * * crediting the latter [Baltimore Company] with an amount of firm energy and capacity supplied by it for use by Penn Water in serving the latter's customers in Pennsylvania."

on the grounds that:

(a) Such statement as to the amount of firm energy and capacity supplied by Baltimore Company is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that Safe Harbor supplied substantial amounts of firm energy and capacity in excess of one-third of its output for use in serving the joint Pennsylvania customers of Penn Water and Safe Harbor; that Baltimore Company had no title or other right to such capacity and energy, and no part of such Safe Harbor supply was supplied by Baltimore Company to Penn Water for use in serving any of the Pennsylvania customers; and the Commission failed to so find.

(c) Since the close of the record in the proceeding Penn Water has notified Baltimore Company and Safe Harbor, as stated in Petitioners' offer of proof in paragraph II (7) (c) (iii) above.

(38) The statement of the Commission on page 145 of Opinion No. 173 as follows:

> "Davis included Penn Water's cost of purchased power as a part of operating expense to be allocated,* * *"

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) The evidence of record shows that Mr. Davis did not include any of the costs of purchased interchange power paid by Penn Water as a part of Penn Water's operating expense to be allocated; that not all of the Safe Harbor costs of serving the Pennsylvania customers were included in the costs allocated, as stated in paragraphs II (25) (b), II (25) (c), II (28), II (36) (c) and II (37) (b), above; that the statements and findings of the Commission show that it committed the same errors in its allocation; and the Commission failed to so find.

(39) The statements of the Commission on pages 145 and 150 of Opinion No. 173 as follows:

> "* * * Davis based a part of his exhibit upon the pooling of investment or costs for all those facilities which he found were used in rendering a service common to all and not specifically applicable to any one customer, and upon a final allocation thereof according to capacity or energy use by each customer."
>
> * * * * * *
>
> "There are no issues here raised with respect to Davis' allocation of * * * the rest of the transmission system, * * * to pool."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) The evidence of record shows that a substantial part of the pool costs allocated by Mr. Davis consisted of the investment and associated costs of the 25-cycle substation and hydro production plants at Holtwood,

which is not used in rendering service common to all customers but is specifically applicable primarily to service to Baltimore Company, with a minor amount of service to PP&L; that as a result of such erroneous assumptions by Mr. Davis with respect to the use of such 25-cycle facilities a substantial portion of Penn Water cost properly allocable to Baltimore Company was not so allocated by Mr. Davis; that to the extent the Commission followed the principles and assumptions of Mr. Davis in this respect it committed the same error; and the Commission failed to so find.

(40) The statement of the Commission on page 147 of Opinion No. 173 as follows:

> "* * * the river-run characteristics of Penn Water's hydro plant (and Safe Harbor's) makes it impracticable for Penn Water to serve the firm requirements of the Pennsylvania customers without the availability of the substantial amounts of off-peak energy which it obtains from Baltimore Company."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) Since the close of the record in the proceedings, the operations of the interconnected systems of Penn Water and Safe Harbor have been so changed that no energy will be obtained from Baltimore Company, as stated in Petitioners' offer of proof in paragraph I (6) (h) above.

(41) The statement of the Commission on page 147 of Opinion No. 173 as follows:

> "* * * the contracts with Pennsylvania customers, providing for economy interchange, are obviously neither designed nor adequate for 'firming' up Penn Water hydro for services to the Pennsylvania cus-

tomers. The very use of the term 'economy' in the contracts describing this type of interchange is demonstrative of such inadequacy."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) Since the close of the record in the proceeding, the 1927 agreement with Baltimore Company providing for backfeed energy has been terminated and no such backfeed is now received, as stated in paragraphs I (6) (h) and II (6) (c), above; and if given the opportunity on rehearing, Petitioners further offer to prove that they can, and will obtain from already available sources in Pennsylvania an ample energy supply to supplement the capacity and energy resources of Safe Harbor and Penn Water to fully meet their firm power obligations to the Pennsylvania resale customers.

(42) The statements of the Commission on pages 147 and 148 of Opinion No. 173 as follows:

"Zinder's allocation does not properly reflect the necessary use of these lines [220 kv] by Penn Water in meeting the firm requirements of the Pennsylvania customers.

"Davis * * * assigned these facilities and their associated costs * * * giving consideration to * * * during two or three months of extreme low river flow the great bulk of energy is being transmitted from Baltimore, to make up the deficiency in Penn Water's firm supply for its Pennsylvania customers; and during the remaining four to six months the facilities are used to transmit energy alternately in either direction, with Penn Water receiving energy from Baltimore Company during off-peak periods of the day, to enable it to store water at such times.

"Giving due consideration to the character of services provided * * * to the Pennsylvania customers by the use of these lines, * * * Davis' allocation of 66-2/3rd directly to Baltimore Company * * *, is found to be reasonable."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record, are contrary to the evidence of record, and allocations based thereon result in a substantial understatement of the costs allocated to Baltimore Company.

(b) As stated in paragraphs I (6) (h), II (11), II (12), and II (13) above.

(43) The statement of the Commission on pages 150 and 151 of Opinion No. 173 showing the allocated special facility costs obtained for each customer on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record which shows such costs to be substantially higher.

(b) The evidence of record shows that the operating expenses shown do not include an allocated portion of all of Penn Water's operating expenses, as stated in paragraphs II (25), II (26), and II (27), above; that the amounts shown for "Bill for Safe Harbor Power" do not include an allocated portion of all the costs of Safe Harbor special facilities, as stated in paragraph II (28) above; that the taxes shown do not include an allocated portion of actual taxes paid, as stated in paragraph II (29) above; that the amounts for return shown are insufficient, as stated in paragraph II (66), and in addition are based

upon rate bases which do not include an allocated portion of general and intangible plant, and as stated in paragraphs II (60), II (61), II (62), II (63), II (64), II (65), and II (67); and the Commission failed to so find.

(44) The statement of the Commission on page 152 of Opinion No. 173 as follows:

> "In charging Pennsylvania customers equitably for energy received, it becomes necessary and proper to * * * credit it [Baltimore Company] for all steam capacity and energy supplied by it and all hydro capacity and energy diverted from it."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record or findings by the Commission, and is contrary to the evidence of record.

(b) The evidence of record shows that no issue was raised in the notice of investigation or otherwise as to the justness, reasonableness, or lawfulness of the rates or charges of Baltimore Company for steam-generated electric capacity and energy service to Penn Water, under Article 6 of the Penn Water-Baltimore Company contract of December 31, 1927, and no such investigation has been made; that any credits to Baltimore Company for any steam-generated electric services, other than at the rates or charges specified in such Article 6, have no basis or support by substantial evidence in the record; that no hydro capacity or energy has been or is diverted from Baltimore Company which would justify any credits on the basis of Baltimore Company steam costs or otherwise, as stated in paragraph II (35) above; and the Commission failed to so find.

(45) The statement of the Commission on pages 152 and 153 of Opinion No. 173 as follows:

> "* * * there should be charged to Baltimore Company the net Holtwood dependable hydro capacity (84,480 kw), less the Holtwood 60 cycle hydro rating (24,000 kw), the Holtwood 25 cycle capacity supplies PP&L (5,000 kw) at Lancaster, Pennsylvania, and the capability of the two 25-60 cycle frequency changers (14,000 kw) at Holtwood."

on the grounds that such statement is not supported by any substantial evidence of record or by any findings or statements of the Commission; is arbitrary, capricious, and contrary to the evidence of record; results in a substantial understatement of the costs allocated to Baltimore Company; there is no justification of record supporting the deduction of the 60-cycle hydro rating (24,000 kw), and such deduction is not an allocation of "dependable hydro capacity" between 25 and 60 cycle services, and such deduction is the deduction of a gross amount before station use and line losses from a net amount after such uses and losses; and there is no justification for deduction of frequency converter capacity in determining dependable hydro capacity at Holtwood available to Baltimore Company.

(46) The statement of the Commission at page 153 of Opinion No. 173 as follows:

> "Spaulding's 50-50 division of costs between capacity and energy is thus patently a departure from cost determination procedure."

on the ground that such statement is not supported by any substantial evidence of record, or by any findings or statements of the Commission, and is contrary to the evidence of record.

(47) The statements of the Commission on pages 155, 156, 157, and 158 of Opinion No. 173 as follows:

"The most important element in Spaulding's determination of capacity available for supply to Baltimore Company was the determination by Respondent's witness Watchorn of 295,000 kw as the dependable hydro capacity of the Holtwood and Safe Harbor plants. * * * This method [Watchorn's] of determining dependable capacity was not used by Penn Water in its operations prior to 1944 and is not only highly speculative but is of unproven reliability from an operating standpoint.

* * *

"A larger allowance for drawdown than that provided by Davis would not only fail to fit into that program [weekly recovery cycle] but the departure therefrom during a period of low flow would undoubtedy adversely affect the sustained peak-carrying hydro capacity of the plants. * * * Davis * * * provision for additional capacity use in the amount of 55,000 kw * * * is an adequate allowance for such intangibles as might inhere. * * *

* * *

"It is therefore found that Davis' determination of dependable capacity is reasonable and acceptable for the purposes of this proceeding and that the determination of the witness Watchorn is not sufficiently supported by established or tested procedures to be reliable and here acceptable."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record or by any findings or statements of the Commission, are contrary to the evi-

dence, and any allocation based thereon results in a substantial understatement of the costs allocated to Baltimore Company.

(b) If given the opportunity on rehearing Petitioners hereby offer to prove that the testimony of the witness Watchorn, characterized as speculative and of unproven reliability, has been verified and shown to be conservative by operating experience of Penn Water and other companies since the close of the record in the proceeding.

(c) If given an opportunity on rehearing Petitioners hereby offer to prove that using Davis' method of determining "dependable hydro capacity" the amount thereof would be increased substantially under 1948 conditions of operation; that the one-hour integrated generation of the Holtwood and Safe Harbor hydro plants for the peak hours of Area 6 (plus the Pennsylvania customers) were 292,000 kwh and 313,000 kwh for 1947 and 1948, respectively, and the total hydro capacity operating and available was 318,000 kw and 328,000 kw for such years, respectively; and that the 1948 hydro load carrying capability which was actually depended upon during such peak hour was 319,000 kw.

(d) The evidence of record shows that the dependable hydro capacity used by Mr. Spaulding was the result of his independent investigation and determination; and the Commission failed to so find.

(48) The allocation of 91,740 kw of dependable capacity to Holtwood, as shown on page 159 of Opinion No. 173 on the ground that such allocation is not supported by any substantial evidence of record or by any findings or statements of the Commission, is contrary to the evidence of record, and any allocation based thereon results in a substantial understatement of the costs allocated to Baltimore Company.

(49) The statement of the Commission on page 160 of Opinion No. 173 that Mr. Davis' deduction of 153,512 kw as the Pennsylvania customer loads corresponded to the deduction for such loads by Mr. Spaulding; on the ground that such statement is not supported by any substantial evidence of record and is contrary to the evidence of record, in that the deduction made by Mr. Spaulding was made upon different factors of dependable capacity and load requirements; and the Commission failed to so find.

(50) The statement of the Commission on pages 160 and 161 of Opinion No. 173 that the Railroad load deducted by Mr. Davis has precedent and is fair, both as to the determination of the demand and as to the allocation of a portion of such demand to Pennsylvania on the basis of energy used; on the ground that such statement is not supported by any substantial evidence of record and is contrary to the evidence of record; and any allocation based upon such a deduction results in a substantial understatement of the costs allocated to Baltimore Company; and if given an opportunity on rehearing Petitioners hereby offer to prove that the actual one-hour integrated Railroad load at the time of the combined Area 6 (plus Pennsylvania customers) peak load was 56,000 kw and 52,000 kw in 1947 and 1948, respectively.

(51) The statement of the Commission on page 161 of Opinion No. 173 that Respondents' objection to any allowance by Mr. Davis of any amount for reserve for Metropolitan Company is without merit and that:

> "* * * the nature of the Metropolitan Company's contract in respect to reserve provision is no different from those of the other customers involved."

on the ground that such statements are not supported by any substantial evidence of record, are contrary to the evidence of record, and any allocation based thereon results in a substantial understatement of the costs allocated to Baltimore Company; and, if given an opportunity on rehear-

ing, Petitioners hereby offer to prove that Metropolitan Company's report on FPC Form 12 for the years 1946 and 1947 show that Metropolitan Company does not rely on any provision for reserve capacity from Penn Water.

(52) The statement of the Commission on pages 161 and 162 of Opinion No. 173 as follows:

"* * * the capacity considered as supplied to and by Baltimore Company is as follows:

	Holtwood Steam (kw)	Holtwood Hydro (kw)	Safe Harbor Hydro (kw)	Total (kw)
Dependable capacity	28,000	91,740	158,260	278,000
Less prorated station use and line losses	2,216	7,260	12,524	22,000
	25,784	84,480	145,736	256,000
Less Baltimore Co's 2/3 rds of Safe Harbor's capacity			97,157	97,157
Less 25 cycle to Highlandtown [126]		41,480		41,480
	25,784	43,000	48,579	117,363
Demands in Pennsylvania [127]				153,512
Balance to be supplied by Baltimore Company				36,149"

* * * * * * *

"126. Dependable 25 and 60 cycle capacity at Holtwood (net); 84,480 kw

Capability two Holtwood frequency converters	14,000 kw	
Holtwood 60 cycle rated capacity	24,000	
PP&L (Lancaster) 25 cycle load	5,000	43,000
		41,480 kw

"127. Coincident demands of Pennsylvania customers plus allowance for reserve:

P. P. & L.	55,000 kw
P. E. Co.	27,000 kw
M. E. Co.	21,000 kw
Penna. R. R.	36,557 kw
10% Reserve	13,955 kw
Total	153,512 kw"

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record; are not supported by any findings or statements of the Commission, and are contrary to the evidence of record.

(b) The evidence of record shows that the dependable capacity assigned to Holtwood of 91,740 kw is understated, for the reasons as stated in paragraphs II (45), II (46), II (47) and II (48) above; that there is no justification for a deduction of 97,157 kw as "Baltimore Co's 2/3rds of Safe Harbor's capacity", for the reasons as stated in paragraph II (7) above; that the coincident demands in Pennsylvania of 153,512 kw are overstated, for the reasons stated in paragraphs II (49), II (50), and II (51) above, and paragraph (c) hereof; and that Baltimore Company supplies no part of the demands in Pennsylvania, for the reasons stated in paragraphs I (6) (h) and II (44) above; and the Commission failed to so find.

(c) The evidence of record shows that under the contract with PP&L, Penn Water and Safe Harbor have the option to reduce their supply to PP&L by 20% during on-peak periods of days of low flow so that in determining the dependable capacity available to Baltimore Company (under conditions of low flow) the actual demand of PP&L should be reduced by 20% to correctly state the dependable capacity actually available to Baltimore Company; that the amount of 153,512 kw less reserve is substantially in excess of the actual coincident demands of the customers shown; that any allocation based upon the deduction of such amount results in a substantial understatement of the costs to Baltimore Company; and the Commission failed to so find.

(d) The evidence of record shows that the coincident demands of Pennsylvania customers deducted

by the Commission in determining the net dependable capacity available for Baltimore Company (5,331 kw), are not the coincident demands of such customers at the time of the peak demand on the system of Penn Water or the system of Penn Water and Safe Harbor; the dependable capacity determined by the Commission to be available to the Baltimore Company is not coincident with and does not measure the maximum demand by Baltimore Company on the system of Penn Water or the system of Penn Water and Safe Harbor; the peak demands on the system of Penn Water or the system of Penn Water and Safe Harbor are substantially different from and are not coincident with the peak demands on the Area 6 system or the system assumed by the Commission; and the Commission failed to so find.

(e) As stated in paragraph II (3).

(53) The statements of the Commission on pages 162 and 163 of Opinion No. 173 as follows:

> "The foregoing total capacity cost ($2,882,478) divided by the Pennsylvania customers' maximum non-coincident demands (154,000 kw) plus the net dependable capacity available for Baltimore Company (5,331 kw) yields a unit capacity cost of approximately $18.09 per kw. This cost applied to an aliquot of the maximum demands of the several Pennsylvania customers on a non-coincident basis and to the 41,480 kw of capacity found proper for allocation to Baltimore Company (*supra*) results in an allocation of the cost of pool capacity as a constituent of total capacity cost as follows:

	Pool Capacity Cost [129]	Baltimore Co. Supply Capacity Cost [130]	Total Capacity Cost
P. P. & L. Co.	$ 927,587	$ 188,724	$1,116,311
Philadelphia Co.	359,959	73,236	433,195
Metropolitan Co.	318,422	64,788	383,210
Railroad (in Pa.)	526,090	107,040	633,130
Baltimore Co.	750,420	(433,788)	316,632
Total	$2,882,478	—	$2,882,478"

"129. Assuming the Pennsylvania maximum demands are each met by Penn Water's capacity and Baltimore Company's supply in the ratio of 117,851 kw and 36,149 kw to the total of 154,000 kw.

"130. Computed at $12 per kw."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) As stated in paragraphs II (25), II (26), II (27), II (28), II (29), II (33), II (35), II (36), II (37), II (38), II (39), II (44), II (45), II (46), II (47), II (48), II (49), II (50), II (51) and II (52) above; II (60) through II (67), inclusive.

(c) Such allocation is made by the Commission on the non-coincident peak basis instead of the coincident peak responsibility basis, without justification in the record and arbitrarily and capriciously; and the evidence of record shows that the non-coincident demands of the various customers used by the Commission are not comparable peak demands; and the Commission failed to so find.

(54) The statements of the Commission on pages 163, 164 and 165 of Opinion No. 173 as follows:

"Holtwood unit energy costs are obtained by dividing the total energy cost ($1,232,563) by the delivery by Penn Water from its Holtwood hydro and steam plant and from its 1/3rd entitlement to Safe Harbor's output, which for 1946 totaled 992,320 mwh. The resulting Holtwood energy cost is 1.24 mills per kwh. * * * Of this 937,950 mwh supplied [to Pennsylvania customers], Penn Water had available 615,636 mwh (992,320 mwh less deliveries of 25 cycle energy to Baltimore Company at Highlandtown) and the remainder required (322,314 mwh) was obtained from Baltimore Company. * * * * using the ratio of Baltimore Company's contribution of 322,314 mwh (34.4%) and Penn Water's of 615,636 mwh (65.6%) to the total of their combined contributions, it is found that Penn Water delivered from its resources 489,835 mwh for firm sales (including the Railroad in Pennsylvania) and 125,801 mwh for interchange sales to Pennsylvania customers and Baltimore Company delivered 256,451 mwh for firm sales and 65,863 mwh for interchange in Pennsylvania. As interchange sales in Pennsylvania are on a when-as-and-if basis, the mwh so supplied by Penn Water comes from Baltimore Company's contract residual entitlement to Penn Water's resources and are therefore deemed to have been made for Baltimore Company's account. On this basis, Baltimore Company received a total of 502,485 mwh at the Holtwood energy cost, made up of deliveries to it at Highlandtown (376,684 mwh) and the amount sold by Penn Water from its own resources as interchange (125,801 mwh). Accordingly, the Pennsylvania customers are deemed to have received 489,835 mwh of firm energy at Holtwood energy cost (1.24 mills/kwh), and 256,451 mwh of firm energy at Baltimore Company's average steam

production cost (4.7 mills/kwh), while Baltimore Company is to be credited with the cost to it of supplying such firm energy against the charge made to it for the 502,485 mwh at the Holtwood energy cost. The allocation of these pool energy costs are as follows:

	Firm Energy Supplied			Firm Energy Cost		
	From Holtwood	From Baltimore	Total	From Holtwood	From Baltimore	Total
TO:	(mwh)	(mwh)	(mwh)	($)	($)	($)
PP&L	202,533	106,036	308,569	251,567	498,367	749,934
Philadelphia Co.	89,022	46,607	135,629	110,574	219,053	329,627
Metropolitan Co.	58,158	30,448	88,606	72,238	143,107	215,345
Railroad (in Pa.)	140,122	73,360	213,482	174,046	344,793	518,839
Sub-Total	489,835	256,451	746,286	608,425	1,205,320	1,813,745
Baltimore Co.	502,485	(256,451)	246,034	624,138	(1,205,320)	(581,182)
Total	992,320	—	992,320	$1,232,563	—	$1,232,563

"The amount of residual hydro energy delivered to Baltimore Company by Respondents in 1946 (502,485 kwh) at the Holtwood energy cost (1.24 mills) combines with the firm energy supplied by Baltimore Company (256,451 mwh) in 1946 for the use of Penn Water's Pennsylvania customers to give a net credit to Baltimore Company, for firm energy supplied by it against residual energy received, in the amount of $581,182."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record or by any findings or statements of the Commission, and are contrary to the evidence of record.

(b) As stated in paragraphs I (6) (h), II (25), II (26), II (27), II (28), II (29), II (33), II (35), II (36), II (37), II (38), II (39), and II (44), above; and II (60) through II (67), inclusive.

(c) If given the opportunity on rehearing Petitioners hereby offer to prove that since the close of the

record in the proceeding the generation of steam energy at Holtwood has substantially increased on a normal annual basis, and that the annual net interchange sales of energy to the Pennsylvania customers are substantially decreased on a normal annual basis.

(55) The statement of the Commission on pages 165 and 166 of Opinion No. 173 as follows:

"The allocated special facility costs added to the allocated hydro capacity cost and the allocated cost of capacity supplied by Baltimore Company (supra) and the firm energy costs give total allocated costs which compare with total revenues as follows:

	Total Costs	Total Revenues	Excess Revenues Amount	Percent
PP&L Co.	$1,877,818	$1,958,356	$ 80,538	3.70
Philadelphia Co.	834,550	948,861	114,311	5.25
Metropolitan Co.	641,361	667,455	26,094	1.20
Railroad (in Pa.)	1,261,323	1,483,798	222,475	10.22
Baltimore Company	652,993	2,386,311	1,733,318	79.63
Total	$5,268,045	$7,444,781	$2,176,736	100.00

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record or by any findings or statements of the Commission, and are contrary to the evidence of record.

(b) As stated in paragraphs II (24), II (30), II (31), II (32), II (33), II (34), II (35), II (43), II (53) and II (54); above.

(56) The statement of the Commission on page 166 of Opinion No. 173 as follows:

"The above determination of excess revenues demonstrates that Penn Water's rates are excessive, unreasonable and discriminatory. It is accordingly found that Respondent shall revise its rates and charges so as to result in a reduction of $80,538 to

P. P. & L. Co., $114,311 to Philadelphia Co., and $26,094 to Metropolitan Company * * *."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record or by any findings or statements of the Commission, and is contrary to the evidence of record.

(b) As stated in paragraph II (55) above.

(c) If given an opportunity on rehearing Petitioners hereby further offer to prove that since the close of the record in the proceeding the orders of the Pennsylvania Commission referred to in paragraph II (28) (c) above, have directed Penn Water and Safe Harbor to change their rates and charges for intrastate services to the Pennsylvania customers referred to, effecting changes in revenues differing substantially from the changes referred to by the Commission and in direct conflict therewith.

(57) The statement of the Commission on page 166 of Opinion No. 173 as follows:

"* * * Baltimore Company in times of severe water shortage may carry the main burden of supplying the foregoing Pennsylvania customers."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record.

(b) As stated in paragraph I (6) (h) above.

(58) The statement of the Commission on page 167 of Opinion No. 173 as follows:

"It is not feasible, because of the nature of Penn Water's operations, for the latter to assume firm commitments to all its customers, including Baltimore Company. The present arrangement whereby * * * Bal-

timore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. That arrangement will, therefore, be continued • • •"

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and contrary to the evidence of record.

(b) As stated in paragraphs II (6) (a) and II (6) (c) above.

(59) The statement of the Commission on page 167 of Opinion No. 173 as follows:

"Penn Water's rates and charges to Baltimore Company will be just and reasonable when the power bill is computed by the use of a fair rate of return and the rate base we have found, brought down to date every six months for changes in the plant investment, depreciation reserve and working capital. In computing the power bill to Baltimore Company there shall be added to the fair return all reasonable and necessary operating expenses, taxes and depreciation computed on the plant investment and at the depreciation rates we have herein found proper; there shall be deducted from such total electric revenues received from others, including the Conowingo backwater payment, and the gross revenues from Metropolitan Co., P. P. & L. Co., and Philadelphia Co., and the gross revenues, except the excess revenues, calculated at $222,475 for the year 1946, and income taxes associated therewith, from Pennsylvania Railroad."

on the grounds that:

(a) Such statement is not supported by any evidence of record and is contrary to the evidence of record.

(b) As stated in paragraph II (55) above.

(60) Petitioners seek rehearing of the following statements, findings, and conclusions on pages 128 to 131, inclusive of the Commission's Opinion No. 173.

1. That Petitioners' claim for $488,092 as the cash component of working capital is not acceptable. (page 128)

2. That Petitioners' claim of $125,000 for "contingencies such as floods, fires, etc., in" working capital is not properly allowable. (pages 128, 129)

3. That Petitioners' claim of $126,000 for rate case expense in working capital is not properly allowable. (page 129)

4. That "the amount of $256,644 represents an adequate amount for the cash component of a working capital allowance." (page 129)

5. That Petitioners' claim of $489,068 for the materials and supplies component in working capital is not acceptable. (page 130)

6. That the recommendation of the Staff that an allowance of $396,421 for the materials and supplies component in working capital "is reasonable and is supported by the evidence." (page 131)

7. That "the amount of $650,000 is herewith allowed in the rate base as Respondents' working capital requirement." (page 131)

on the grounds that:

(a) The statements, findings, and conclusions are not supported by substantial evidence, are contrary to the substantial evidence and are contrary to law and the Federal Power Act; and

(b) The statements, findings, and conclusions result in depriving Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States.

(61) Petitioners seek rehearing of the Commission's Order No. 173 for failure of the Commission to make the following findings and conclusions:

1. That the required cash component in working capital for the year 1946 is $488,092 and an allowance of that amount is proper.

2. That an allowance of $125,000 for 1946 is required as a part of the cash component for "contingencies such as floods, fires, etc."

3. That an allowance of $126,000 for 1946 is required as a part of the cash component for rate case expense.

4. That an allowance of $489,068 is required for the materials and supplies component in working capital and should properly be made.

5. That the amount of $977,160 for working capital for 1946 is required and should be properly allowed.

6. That the Commission's Staff recommendations as to working capital are not supported by the substantial evidence and are contrary to the substantial evidence.

on the grounds that:

(a) The failure to make such findings and conclusions is contrary to law and the Federal Power Act and results in depriving Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States.

(62) Petitioners herein object to and seek rehearing of the following portions of the Commission's Opinion No. 173, relating to the determination of electric plant, rate base and the original cost of Petitioners' property, on the grounds that the Commission erroneously decided each and all of the following statements, matters, findings and conclusions of law and erred with respect thereto in that said

statements, matters, findings and conclusions of law are not supported by substantial evidence, are contrary to the substantial evidence and contrary to law and the Federal Power Act:

1. That it is incumbent upon the Petitioners to show that the amount they claim as cost was cost to an affiliate and not profit. (page 28)

2. That Cary T. Hutchinson's activities culminated in the completion of financial arrangements for the erection of the dam or the incorporation of McCall Company. (page 28)

3. That the "no-profits-to-affiliates" rule applies in connection with the valuation of McCall Company stock. (page 28)

4. That "the original syndicate" enlisted and obtained the aid of Harvey Fisk & Sons. (page 29)

5. That Lee, Higginson & Company and C. A. Coffin, principally or entirely, secured subscriptions of approximately $4,000,000 of bonds. (page 29)

6. That the stock purchase agreement, dated March 25, 1905, was the result of negotiations with the Fisk firm by the original syndicate. (page 29)

7. That any arrangements agreed upon between the syndicate members themselves as to control of the McCall Company, and distribution of its stock, etc., are unknown. (page 29)

8. That bonds totaling $8,075,000, principal amount, were sold at 90 cents on the dollar. (pages 29, 30)

9. That the March 25th agreement is the only contemporaneous evidence which refers to compensation to be received by the Fisk firm. (page 30)

10. That there is no other contemporaneous evidence showing that the Fisk firm received or was en-

titled to compensation other than that hoped to be realized through the resale of the bonds at a price above 90. (page 30)

11. That Mr. Hutchinson was to receive and retain 48,840 shares of common and 4,000 shares of preferred stock of the McCall Company. (page 31)

12. That there is no credible evidence to support Petitioners' claimed distribution of the stock of McCall Company. (page 32)

13. That it is questionable as to whether it was intended that the firm of Bertron, Storrs & Griscom should retain 7,462½ shares as compensation for services rendered. (page 32)

14. That Petitioners' claim must be rejected insofar as it relates to Harvey Fisk & Sons. (page 32)

15. That on the question of control of the McCall Company, Petitioners' claim that Mr. Hutchinson lost control of the enterprise to Harvey Fisk & Sons should be rejected. (page 32)

16. That credible evidence exists to furnish a basis for the Commission to conclude that when the Fisk firm came into the financing, the original promoters merely opened their ranks to an additional member and thereafter all shared control of the McCall Company until it encountered financial difficulties and went into receivership. (page 32)

17. That during the period, March 1905 to December 1908, control of McCall Company was shared by Mr. Hutchinson with Bertron, Storrs & Griscom; Lee, Higginson & Company; C. A. Coffin, and Harvey Fisk & Sons as a result of a pooling of their interests. (page 33)

18. That each of three interests was represented on the voting trust committee. (page 33)

19. That the fact that each interest was represented on the McCall Company Executive Committee indicates each interest shared in control. (page 33)

20. That the letter of January (July) 19, 1907 indicates that the management of the McCall Company was in the hands of a committee on which was a member of each of three banking firms. (page 33)

21. That the letter dated June 22, 1906 from Mr. Hutchinson to Mr. Dimock indicates that control of the McCall Company was jointly shared. (page 33)

22. That Petitioners failed to show that the Fisk firm controlled the directors and the McCall Company. (page 34)

23. That the McCall Company was not controlled solely by Harvey Fisk & Sons but that control was shared with Hutchinson and the other interests. (page 34)

24. That the affidavits of Messrs. Hutchinson, Fisk, Lee and Hopkins fail to state (1) that their respective valuations of the common stock represent cash value of the stock in June 1905 and (2) that those parties purchased any of the McCall Company stock at the valuations set forth by them in said affidavits. (page 35)

25. That Petitioners' selection of $25.00 per share for the common stock and $50 per share of (sic) [for] preferred stock of McCall Company is unsupported by the valuations of Messrs. Hutchinson, Fisk, Lee and Hopkins. (pages 35, 36)

26. That the record contains no showing that Mr. Lee was in fact unavailable to testify because of age, health or other reasons. (page 36)

27. That Petitioners' failure to produce the attorney who obtained the Fisk affidavit or the physician who prepared an affidavit to the effect that Mr. Hutchinson had the ability to understand the purport of his actions had

any adverse effect upon the weight to be accorded to the affidavits of Messrs. Fisk and Hutchinson. (page 36)

28. That the record fails to show what duties, if any, Mr. Lee had in connection with the firm of Lee, Higginson & Company's financing activities with regard to the McCall Company. (page 37)

29. That the fact that Mr. Lee was not presented for cross-examination makes his opinion unreliable for the purposes of determining the cash value of the stock involved in Petitioners' claim. (page 37)

30. That the fact that Mr. Fisk stated his recollection had been dimmed by a lapse of years and that he had taken very little active interest in the McCall enterprise indicated his valuation of the stock was entitled to no weight. (page 37)

31. That Mr. Fisk's method of valuing the stock proceeded upon a questionable assumption. (page 37)

32. That there is no merit to the contention that the Fisk firm received stock compensation for either financial or management services or that Mr. Fisk's $50.00 valuation for preferred and $18.00 valuation for common stock of McCall Company were arrived at by valuing non-existent services. (page 37)

33. That Mr. Hutchinson's method of valuing the common stock of McCall Company starts with an unestablished premise and is contrary to Section 14 of the Federal Power Act providing that "net investment shall not include or be affected by * * * prospective revenues." (page 38)

34. That the letter of January 19, 1906 written by Mr. Hutchinson refutes or is at variance with Mr. Hutchinson's or Petitioners' claimed value for the stock of McCall Company. (page 38)

35. That the Hutchinson affidavit was prepared upon the basis of representations made by Petitioners witness Gunn to an attorney in Miami, Florida. (page 38)

36. That Mr. Hutchinson had only four days to consider the facts before he executed his affidavit. (page 38)

37. That Petitioners witness Gunn did not ascertain the facts with reference to the points mentioned in his letter of January 9, 1939, prior to that date. (pages 39, 40)

38. That the information in the possession of Mr. Hutchinson at the time he signed his affidavit was insufficient to permit him to recall the true facts. (page 39)

39. That the weight to be given to Mr. Hutchinson's affidavit is adversely affected by the fact that Petitioners witness Gunn had not secured complete information from Mr. Fisk before securing Mr. Hutchinson's affidavit. (page 40)

40. That Messrs. Fisk and Hutchinson did not have sufficient information nor sufficient time to study the facts prior to the time they executed their affidavits. (pages 38, 39, 40)

41. That a comparison of excerpts from the letter, dated January 9, 1939, with Mr. Hutchinson's affidavit "reveals the extent to which Gunn's tentative 'story' crystalized into a categorical statement of fact within the brief span of one or two days, although, apparently, he had obtained no further information". (page 40)

42. That Petitioners witness Uhl's valuation was based entirely upon engineering factors designed to reflect power site value and had no relation to cost. (page 41)

43. That Petitioners witness Uhl's method of valuation has been held either by the Commission or the

courts to be of no probative value in determining the costs of a project. (page 41)

44. That Petitioners have not sustained their claimed cash values of $25.00 and $50.00, respectively, for the common and preferred stock of the McCall Company. (page 41)

45. That it is clear that the stock of McCall Company could have had no cash value at all at the time Petitioners claimed a $25.00 and $50.000 value. (page 41)

46. That Petitioners' claimed value for the stock of McCall Company was erroneous because that company was at the time in question a newly created company, had no formal contracts for the sale of power, had not perfected finally the specifications for the development of the project, the development was a pioneer project, and because the exact location of the dam had not been determined. (pages 41, 42)

47. That the fact that the development had a large initial investment and heavy prior charges for bond interest contributed in some way to a lack of cash value for the stock of McCall Company. (page 42)

48. That the financial difficulties encountered which necessitated calling in the Fisk firm indicated that the stock of the McCall Company could have not been sold for cash. (page 42)

49. That the testimony of Mr. J. H. Harlow indicated that the stock of the McCall Company had no cash value at the time Petitioners claim a value for same. (page 42)

50. That the common and preferred stock of the McCall Company had no cash value in 1905 and the aggregate cash value claimed by Petitioners should be disallowed. (page 43)

51. That there are additional grounds for the disallowance of most of Petitioners' claimed cost sought

to be established by the use of the cash value claimed for the common and preferred stock of McCall Company. (page 43)

52. That the common stock of McCall Company had no cash value. (page 44)

53. That assuming for purposes of argument McCall Company's stock received by Mr. Hutchinson in payment for his land, water rights, services, etc., had a cash value, Petitioners' claim would still have to be disallowed. (page 44)

54. That Mr. Hutchinson was paid $750,000 cash for 2896.54 acres of land and water rights. (page 44)

55. That the cost estimate prepared by Mr. Hutchinson on December 18, 1905 lists the cost to McCall Company of his properties as $750,000. (page 44)

56. That there is other credible evidence that the cost to McCall Company of Mr. Hutchinson's properties was $750,000. (page 44)

57. That Mr. Hutchinson was at all times in control or sharing in control of the McCall Company. (page 44)

58. That the "no-profits-to-affiliates" rule applies in connection with Mr. Hutchinson's transactions with McCall Company. (page 44)

59. That in Mr. Hutchinson's transactions with McCall Ferry Power Company there was a lack of an arm's-length transaction and that there was no showing of costs incurred by Mr. Hutchinson in excess of the $750,000 cash payment. (page 44)

60. That Mr. Hutchinson paid $155,000 for half of his properties which he had acquired from York Furnace Power Company. (page 45)

61. That it is reasonable to assume from the known prices paid for a few of Mr. Hutchinson's parcels

of land that the cost of the other half of his land and water rights was less than or did not exceed the $155,000 paid for the York Furnace properties. (page 45)

62. That the total price of all of Mr. Hutchinson's properties was not more than $310,000 or that $440,000 was paid to Mr. Hutchinson to cover his other expenditures and as compensation for other efforts. (page 45)

63. That Mr. Hutchinson's expenditures in connection with acquiring his land and water rights are not proper project costs. (page 45)

64. That Mr. Hutchinson's costs which he incurred in connection with his activities should be disallowed in view of the 6% interest allowance made by the Commission to Petitioners. (page 45)

65. That expenditures made by Mr. Hutchinson to secure the enactment of legislation favorable to his plan are disallowable. (pages 45, 46)

66. That it was abundantly fair to Petitioners to allow as actual legitimate original cost only the $750,000 cash paid to Mr. Hutchinson. (page 46)

67. That the McCall Company stock had no cash value when issued. (page 46)

68. That Petitioners' claim of $28,750 for 1,150 shares of common stock issued by McCall Company to the Harlow-McGaw interests and C. D. Pullen must be disallowed. (page 46)

69. That 10 shares of McCall Company's common stock was given Mr. Hutchinson in exchange for the stock of the merged companies. (page 46)

70. That the ten incorporators' shares of common stock of the McCall Company issued to Mr. Hutchinson in exchange for the stock of merged companies, had no value. (page 46)

71. That the issuance of the ten incorporators' shares of common stock of the McCall Company was not proper organization expense. (page 46)

72. That it is reasonable to conclude that the $750,000 cash payment Mr. Hutchinson received for his properties covered all costs previously incurred by him including the cost of incorporating the predecessor companies. (page 47)

73. That the $250.00 valuation for the ten incorporators' shares of McCall [Ferry] Power Company common stock should not be allowed as part of Petitioners' rate base. (page 47)

74. That "such excess [$49,000] lacks any color of support in the Fisk affidavit". (page 47)

75. That the McCall Company stock had no cash value when issued and the distribution claimed by Petitioners to the Fisk firm was not sustained by the evidence. (page 48)

76. That there is no basis in the evidence for the contention that the Fisk firm rendered management services. (page 48)

77. That allowance of any portion of the claim of the Fisk firm for management or banking services would do violence to the "no-profits-to-affiliates" rule. (page 48)

78. That allowance of any portion of the claim for Fisk management or banking services would do violence to the "no-profits-to-affiliates" rule irrespective of whether the Fisk firm shared control of the McCall Company or exercised control singly over that company. (page 48)

79. That neither the March 25, 1905 financing plan nor any other contemporary evidence of record supports the contention that the Fisk firm managed the McCall Company. (page 48)

80. That it was contemplated in the event that the development proved successful, bonds might be repurchased and resold by the Fisk firm at a profit. (page 48)

81. That there is an absence of evidence indicating the Fisk firm performed management and banking services. (page 49)

82. That it is entirely possible that it was the intention of the syndicate members that the Fisk firm was to be compensated for its services through the repurchase and resale of the bonds. (page 49)

83. That there is no evidence showing that Harvey Fisk & Sons were consulted on matters of policy, the construction of the project, the allocation of funds, the expenditures of the McCall Company, the selection of personnel, the negotiation of power contracts, the conduct of law actions, the determination of the ultimate level at which it was decided to build the crest of the dam, the cessation of construction activities in 1907. (page 49)

84. That the evidence is that Harvey Fisk & Sons had no more to do with management than each of the others participating in promotion of the development. (page 49)

85. That correspondence of Lee, Higginson & Company, dated July 19, 1907, discloses that Harvey Fisk & Sons was not in sole control of the management of the enterprise. (page 49)

86. That Staff accounting witness Newlands was competent to testify. (page 49)

87. That the fact that Staff accounting witness's search of Petitioners' files failed to disclose to him any indication of management activities on the part of Harvey Fisk & Sons proves lack of management services rendered by that firm. (page 49)

88. That the absence of management services was indicated by the fact that Staff witness Newlands was unable to find any communication from or to the Fisk firm or Mr. Barnum dealing with management of McCall Company. (page 50)

89. That the lack of management services by the Fisk firm was indicated by the fact that Staff witness Newlands' examination of the files indicated to him that it was the President of the McCall Company to whom reports and communications were addressed. (page 50)

90. That Petitioners witness Gunn testified that the Fisk firm never received any amount of stock for management services as distinguished from financial services. (page 50)

91. That Petitioners witness Gunn testified that he knew of no contracts negotiated by Mr. Barnum or of any reports or management functions which the McCall Company officers cleared through the Fisk firm or Mr. Barnum. (page 50)

92. That the fact that Petitioners witness Gunn could not point to any matter, which Mr. Barnum was instructed to investigate or which he introduced at Executive Committee meetings or to any written orders or communications relating to management or construction issued by the Fisk firm or Mr. Barnum to officers of McCall Company or to the construction contractors and could not identify any individual who was employed by Mr. Barnum for McCall Company indicates lack of control by the Fisk firm. (page 50)

93. That there is no evidence to support the contention that the Fisk firm rendered management services. (page 50)

94. That the evidence shows that there was no necessity for the rendition of management services by the Fisk firm. (page 50)

95. That the statements contained in the Fisk affidavit are at variance with the facts established by any evidence. (page 51)

96. That the responsibility for management rested with the Company officers, its special Board of Advisory Engineers or someone else, to the exclusion of the Fisk's firm sole management prerogative. (pages 51, 52)

97. That there exists no justification for the allowance of the amount of $199,570.31 and that this amount must be excluded from Petitioners' rate base. (page 52)

98. That the item of $81,906.59 claimed by Petitioners was erroneously classified in Account 301, Organization Expense, and that this amount is chargeable to Account 151, Capital Stock expense. (page 52)

99. That issuance of additional stock after actual organization neither entails organization expense within the meaning of Account 301 nor represents an "extension" of the organization of Penn Water. (pages 52, 53)

100. That Hutchinson arranged for the employment of the Board of Advisory Engineers and that contracts with Mr. Cooper and Sanderson & Porter were negotiated by Messrs. Dimock and Coffin. (page 52)

101. That Petitioners' claim that the bankers received McCall Company's stock as compensation for the sale of $8,075,000 of bonds. (page 53)

102. That the amount of $331,703.15 is not properly includible in Petitioners' rate base. (page 54)

103. That the McCall Company stock had no cash value. (page 54)

104. That Petitioners' claimed distribution of stock to the bankers was not sustained by credible evidence. (page 54)

105. That, therefore, no cost was incurred by its issuance which could have been carried forward under the Aldred Plan. (page 54)

106. That no part of the claim for McCall Company's stock could be allowed because of the "no-profits-to-affiliates" rule. (page 55)

107. That there was an absence of a showing of cost to the bankers of services rendered by them. (page 55)

108. That the bankers were affiliated. (page 55)

109. That any such cost would be a financing cost, not a cost to physical property and the 6% interest allowance hereinafter made is in lieu of all other financing costs. (page 55)

110. That the amount claimed by Petitioners for stock issuance expense is not properly includible in Account 301, Organization Expense. (page 55)

111. That the agreement between Mr. Aldred and the McCall Company Bondholders Committee did not expressly vest Mr. Aldred with management powers. (page 56)

112. That there is no credible evidence on the basis of which it can be determined that the parties so construed the agreement between Mr. Aldred and the McCall Company Bondholders Committee. (page 56)

113. That the failure of Staff witness Newlands to find in Petitioners' files any indication that the Bondholders Committee had arranged for management services to be rendered by Mr. Aldred indicates the lack of such management services. (page 56)

114. That surveys made by Mr. Aldred were solely for the purpose of informing himself in connection with his negotiations concerning the refinancing. (page 57)

115. That there is no proof that any management services were rendered by Mr. Aldred prior to the date of the memorandum of understanding with the Bondholders Committee of April 24, 1909. (page 57)

116. That it is apparent that as of May 20, 1909 and August 5, 1909, Mr. Aldred understood that his phase of the managership was to be conducted in his capacity as receiver. (page 57)

117. That as to none of the eight contracts is it shown that at the time of the execution, Mr. Aldred had made up his mind to act otherwise than in his capacity as receiver. (page 59)

118. That nowhere does it appear that Mr. Aldred was put to any personal expense in connection with any liability he may have technically assumed under these contracts. (page 59)

119. That Mr. Aldred's statement in his affidavit that "to expedite the work * * * it became incumbent on me to enter into a number of contracts, personally" is contrary to what he did. (page 59)

120. That Mr. Aldred received adequate compensation for his management services in the fee he claimed and was granted by the court as receiver. (page 60)

121. That there was no period of time during which Mr. Aldred rendered management services that he was not either under employment as receiver of McCall Company or an officer of Penn Water (page 60)

122. That the fact that Mr. Aldred was at one time a receiver of McCall Company and later an officer of Penn Water indicates he failed to perform the management services claimed by Petitioners. (page 60)

123. That there is no evidence that the term, "management," as the parties to the refinancing plan used

it, ever meant or was intended to mean anything more than the "control" that Mr. Aldred exercised as receiver or as an officer of Penn Water or under the voting trust. (page 60)

124. That Staff witness Newlands' failure to find that Mr. Aldred was to perform any duties in addition to those for which he was paid compensation as receiver and as an officer of Penn Water indicates that Mr. Aldred failed to perform valid management services for which he was entitled to the compensation claimed by Petitioners. (page 60)

125. That the 5,000 shares of Penn Water stock which Mr. Aldred received could only have represented an expectation of an indefinite realization of the future operating income of the Company. (page 61)

126. That Penn Water stock had no cash value as of the time of its issuance and that no cash value was indicated for the immediate future for Penn Water stock. (page 61)

127. That Mr. Aldred stated that Penn Water stock had no cash value. (page 61)

128. That the 5,000 shares of stock issued to Mr. Aldred was for financing services and not a part of the project cost. (page 61)

129. That due allowance for Petitioners' claimed management services in behalf of Mr. Aldred was made by the Commission in the allowance of 6% interest by them. (page 61)

130. That quotations of sales of Penn Water stock proved by Petitioners are not evidence that the stock had a cash value at the time of its issuance. (page 61)

131. That the conversion of 66 McCall Company bonds afforded no evidence as to the value as to McCall stock. (page 61)

132. That the sum of $218,750 is properly disallowed by the Commission. (page 61)

133. That estimates made at that time (June 20, 1906) disclosed that a 165 ft. dam at McCall Ferry with 7 initial units providing an output of 50,000 hp. would cost $8,859,000. (page 64)

134. That on November 1, 1907 work on the dam ceased and the work on the tailrace, walls and other parts of the powerhouse stopped. (page 65)

135. That only such men were retained as were deemed needed to guard the completed work against danger during the winter, put the construction equipment in winter quarters and for minor work in the powerhouse. (page 65)

136. That the work, as a whole, was estimated 80% completed. (page 65)

137. That in April 1908, provision was made for resuming work on the tailrace, cleaning up around the powerhouse and raising the wing dam. (page 65)

138. That after the first and through the 22nd of November 1907, there were never more than 124 men employed on any one day at the site, and these were employed on concrete and form work, some repairs and miscellaneous minor matters, and that the work included placing of only 600 yards of concrete in the powerhouse substructure for protection against water, and 130 yards in arches as protection against ice. (page 65)

139. That by February 1, 1908 none of the hydraulic engineer's construction organization was considered necessary. (page 65)

140. That from November 1908, no further work was done at the site until after Mr. Aldred became receiver in July 1909. (page 66)

141. That construction work was resumed approximately on September 1, 1909. (page 66)

142. That there is no evidence that the 1907-1909 cessation can be attributed to the fact that the Knickerbocker Trust Company went into receivership in October 1907. (page 67)

143. That the Knickerbocker Trust Company was not obligated on call for funds for project construction purposes as of October 1907. (page 67)

144. That the shortages of finances had not taken the officers of McCall Company by surprise. (page 67)

145. That Mr. Hutchinson stated, in effect, that the omission to take steps to provide more money led to the Company's discontinuance of construction. (page 67)

146. That Mr. Hutchinson stated that cessation was due to delays and not the economic depression. (page 67)

147. That the evidence fails to prove that the work performed during the cessation period contributed to shortening the construction period. (page 67)

148. That interest during construction should not be allowed for the period November 1, 1907 to August 31, 1909, inclusive. (page 67)

149. That the initial plant was conceived as a 7-unit project. (page 68)

150. That the available market was not determined at the time the initial plant was first projected. (page 68)

151. That Unit No. 1 was first subject to a minor bearing defect. (page 68)

152. That Unit No. 1 was always considered operational. (page 68)

153. That Units Nos. 2 and 3 operated without outages arising from known causes until after October 1, 1911. (page 69)

154. That Unit No. 4 experienced no outages prior to October 1, 1911. (page 69)

155. That transformers Nos. 1, 2 and 3 experienced outages for only brief periods during the first six months of 1911. (page 69)

156. That from June 1 to October 1, 1911, Petitioners did not have less than a rated normal transformer capacity available of 22,500 kw., which was approximately sufficient to carry the combined Baltimore load. (pages 69, 70)

157. That early in March 1911, Petitioners were supplying the contract requirements of Baltimore Company from two units. (page 70)

158. That for causes not satisfactorily established in the evidence, Baltimore Company's load dropped. (page 70)

159. That the evidence indicates that the delivery of power to Baltimore Company was going along very well in mid May 1911. (page 70)

160. That the work of preparation for delivery of power to United Railways Company was going along in fine shape. (page 70)

161. That Petitioners were ready to deliver power to the United Company by June 15, 1911. (page 70)

162. That it was significant that the United Company experienced none of the service interruptions previously experienced by the Baltimore Company. (page 71)

163. That the remaining three causes of total interruption to service in 1911 were "causes not here significant". (page 71)

164. That all other interruptions were caused by customers' systems, or were insignificant in effect. (page 71)

165. That interruptions stated in total elapsed time of 1 hr.-49 minutes and 1 hr.-12 minutes indicate that Petitioners' service was reliable. (page 71)

166. That Petitioners' difficulty with lightning was not peculiar to their system. (page 71)

167. That the Commission considered all of the pertinent facts in determining the date of the beginning of commercial operation of the project. (page 72)

168. That suspension of machines for supplemental construction does not influence the determination of the date of beginning of commercial operation. (page 72)

169. That outages do not influence the determination of the date of beginning of commercial operation. (page 72)

170. That the date of the end of the construction period was June 30, 1911 and that interest is capitalizable only through that date except for the "cessation period" and net revenues should be credited to cost of plant up to that time. (page 72)

171. That Petitioners witness Gunn admitted that the contribution of the office work done during the cessation period, to the shortening of construction after the resumption of work, cannot be determined. (page 74)

172. That Petitioners' contention that the salary of the Vice President and General Manager and the Secretary and Treasurer of McCall Company should be included in the rate base because their services related to plant designing during the period, is based upon unsupported inferences. (page 75)

173. That Mr. Hutchinson was not during the cessation period in direct supervision of construction. (page 75)

174. That Mr. Cooper was paid for work he did not do. (page 75)

175. That Sanderson & Porter never did more than prepare certain designs. (page 75)

176. That Petitioners witness Gunn's opinion that general engineering conducted during the cessation period contributed to decrease the time necessary to complete the project after assumption of construction is based upon speculation. (page 75)

177. That there is no showing that the general designing, planning and administration of the cessation period served to shorten the following period of construction. (pages 75-76)

178. That the amounts claimed by Petitioners representing expenditures during the cessation period should not be included in the rate base. (page 76)

179. That organization expense generally or as referred to in Account 71 of the ICC Classification of Investment in Road and Equipment of Steam Roads are usually incurred at the inception of a company and not over a period of years subsequent thereto. (page 76)

180. That Petitioners conceded that it is impossible to tell what the so-called promotion expenses incurred from 1911 to 1914 represent. (page 76)

181. That Petitioners witness Gunn stated that the item of stock issuance expense represented an unsegregatable amount. (page 77)

182. That Petitioners witness Gunn could not state the nature of the activities of the officers whose salaries were partly charged as promotion expense, nor the purpose of charging office rent or traveling expense. (page 76)

183. That the nature of the items making up the claimed promotion expense from 1911 to 1914 indicates

that such expenses are composed in part of operating expenses and in part of stock issuance expenses and that Petitioners are unable to identify same. (page 77)

184. That the promotion expenses claimed by Petitioners in the amount of $29,601.59 should not be included in Petitioners' rate base. (page 77)

185. That the costs claimed by Petitioners for the preparation of a map for Moody's manual are not proper capital expense. (page 77)

186. That the land below Cully's Falls should never have been included in plant account. (page 79)

187. That Petitioners assumed that after 1905 more than a majority of the rights and interests acquired under the Harlow-McGaw contract were retained. (page 79)

188. That Petitioners' assumption that after 1905 a majority of the rights and interests acquired under the Harlow-McGaw contract were retained is not substantiated by the evidence. (page 79)

189. That the $200,000 is the best evidence of the proper credit to Penn Water's plant account. (page 79)

190. That it is improper for Petitioners to credit plant account with the amount of $162,936.02 instead of $200,000. (pages 77-79)

191. That considerably more than a half of the rights and interests retained up to 1930 by Penn Water, out of the original Harlow-McGaw properties, were transferred to Safe Harbor. (page 80)

192. That the adjustment contended for by Petitioners in the amount of $119,940.20 should not be made in determining Petitioners' cost or rate base. (page 80)

193. That Petitioners' plant accounts indicated that the original cost of the Harlow-McGaw properties was $379,824. (page 80)

194. That the Harlow-McGaw properties were divided so that 11.68 miles of canal and 117 acres were transferred to Safe Harbor, and 8.32 miles and 28 acres were retained by Penn Water. (page 80)

195. That Petitioners as of September 1912 had gotten very satisfactory results from the use of the flashboards. (page 81)

196. That except for the change from solid supporting pins to seamless tube supporting pins, the same flashboard system in use in 1912 is now in use. (page 82)

197. That the flashboard expense incurred by Petitioners during the period 1911-1912 adequately covered the original cost of installing a system adequate to provide for the additional storage of water required. (page 82)

198. That all of the other claimed expenditures of Petitioners relate to either improvements in operations or to experimental improvements tried and abandoned without having been put to permanent use. (page 82)

199. That the expenditures here in issue in the amount of $49,754.97 are not proper cost of plant and are not properly includible in Petitioners' rate base. (page 82)

200. That from March 1916 to and including 1924 only a part of the acquisitions were concerned with flowage rights and a significant number of those arose out of previous litigation. (page 84)

201. That Petitioners implied by their evidence that a reasonably complete identification of expenses connected with such other matters could not be made and could not be segregated. (page 84)

202. That many of these other duties clearly related to operations and expenses relating thereto and are improper items to capitalize. (page 84)

203. That there is insufficient evidence upon which to make a segregation of allowable items of expense after March 16, 1916. (page 84)

204. That none of the services can be identified with any particular property and further no properties were acquired from April 1916 to July 1920 except for foreclosure in 1919 with respect to a single property. (page 85)

205. That Petitioners are unable to state the basis used for the determination or apportionment of fees and the inclusion thereof in plant is unjustified on the record in this proceeding. (page 85)

206. That Petitioners charged the amount of $45,325.71 and $561.65 to the Flowage Basin sub-accounts without explanation of the work done. (page 85)

207. That Petitioners did not relate the engineering work set forth in the field notes and drawings to any specific charges in Flowage Basin accounts. (page 86)

208. That the items of cost (referred to by the Commission on page 86 of the Opinion) are ordinary operating expenses. (page 86)

209. That the cost of such surveys (described on page 86 of the Opinion) have been segregated in another Flowage Basin sub-account entitled "Surveying Property" which the Commission has allowed in full. (page 86)

210. That there was no evidence that the costs of property surveys were improperly classified at the time of the cost distribution. (page 86)

211. That Petitioners' reclassification of costs was unsupported by evidence. (page 86)

212. That the inclusion in plant account of $45,325.71 and $561.65 is not justified. (page 87)

213. That the item in the amount of $4,988.45 for river observations is subject to the Commission's general conclusions applicable to the consideration of similar functions set forth in connection with Petitioners' contentions relating to office engineering expense. (page 87)

214. That because of the character of the Lancaster office after 1925 as an office having a minor relation to any sort of project cost work and as Petitioners have failed to present any evidence enabling determination of any item of Lancaster office expense as proper for capitalization none of the amount of $20,787.41 can be included in plant. (page 88)

215. That there is no evidence that the charges in the account, survey of storage reservoir sites, represented the establishment of gauges for the determination of river flow. (page 88)

216. That during the period 1926 to 1930 only one new property was acquired by Petitioners and there was only one flooding or flashboard suit. (page 88)

217. That Staff witness Newlands' failure to find in Petitioners' accounts, records and files, supporting data is an indication that the amount of $12,420.77 should not be allowed as proper capital cost. (page 89)

218. That the evidence shows that Mr. Bennett was engaged from 1909 to 1911 in a continuing investigation of probable sites for the storage of water on the tributaries of the Susquehanna River and in obtaining data for use before the state legislature. (page 89)

219. That such work continued at least late into 1911. (page 89)

220. That Petitioners have not established the propriety of the inclusion of $12,420.77 in their rate base. (page 90)

221. That the transaction concerning the cost of land acquired from the Baltimore Electro Alloys Company is one involving a profit between affiliates. (pages 90, 91)

222. That the amount of $24,151.83 consists of a write-up and is not properly includible in plant account or in the rate base. (page 91)

223. That the action at law added nothing to the value of the property as subsequently acquired and the original accounting with respect to the cost of defending title was correct. (page 91)

224. That the amount of $1,427.42 should not be included as part of Petitioners' rate base. (page 91)

225. That Petitioners contend that the sum of $39,301.46 should be included as part of the rate base because it is identified with an agreement relating to the adjustment of interests in connection with the construction of a downstream hydro plant and embraces the cost of the study made as to the anticipated effect of the downstream development on Penn Water's hydro operations as well as a fee for legal services and certain travel expenses with respect thereto. (pages 91, 92)

226. That the facts are that the agreement of February, 1926 does not settle title claims, as both parties thereto explicitly save their contentions and the proceeding is merely stayed. (page 93)

227. That the sum of $39,301.46 is an expense relating to operations. (page 93)

228. That the item of $39,301.46 should not be included in the rate base because such a long time has elapsed since said item was incurred. (page 93)

229. That Petitioners abandoned the project concerning the construction of a transmission line from Holtwood to Lancaster, Pennsylvania or allowed the options to expire. (page 94)

230. That because Petitioners acquired no property or facilities as a result of the expenditure of the sum of $12,459.23 the same is not a proper one for inclusion in plant or rate base of petitioners. (page 94)

231. That the amount of $5,668.48 should not be included in Petitioners' rate base because Petitioners

acquired no property and possessed nothing with which "cost" can be associated. (page 95)

232. That Petitioners have no supporting detail other than the testified to possibility that most of the spoilage in cement occurred during the cessation period. (page 95)

233. That Staff witness Newlands' testimony indicates that the item of $13,033.04 should be eliminated from Petitioners' rate base. (page 96).

234. That a physical inventory in 1908 showed a total of 35,736 barrels of good cement on hand, the cost price of which amounted to $51,653, and that of this old cement the receiver used only 7,852 barrels and Petitioners a further 8,626 barrels, leaving a balance of 19,258 barrels unaccounted for. (page 96)

235. That there was no evidence that the remaining barrels of old cement were ever used in construction or that contemporary correspondence and Staff testimony indicates that such cement was on hand but had spoiled. (page 96)

236. That the record supports the conclusion the $13,033.04 should be eliminated from Petitioners' rate base. (page 96)

237. That Petitioners' proposal to include the sum of $13,033.04 in its rate base as proper original cost is not approved. (page 96)

238. That the loss of $130.99 cannot on the evidence in this proceeding be associated with the cost of constructing the project. (pages 96, 97)

239. That no justification has been shown for including the amount of $130.99 in Petitioners' rate base. (pages 96, 97)

240. That the Susquehanna Contracting Company is described in the evidence as a "paper" company. (page 97)

241. That the administrative expenses of the Susquehanna Contracting Company could at best only be regarded as financing costs. (page 97)

242. That the amount of $6,621.85 is not allowable as a part of the rate base in view of the 6% interest allowance hereinbefore made. (pages 97, 98)

243. That there is no indication that the fee of $50,194.73 represents the distribution of the time of supervisory employees named by Petitioners witness Gunn as being those whose services were involved in connection with said fee. (page 99)

244. That it is clear from the evidence that the fee of $50,194.73 constituted a profit between affiliates and that the amount thereof should not be included in investment in electric plant by Petitioners. (page 99)

245. That Petitioners witness Gunn did not know how the fee of $50,194.73 was determined. (page 99)

246. That Petitioners had no records of the time, services or salaries allocated to the Steam Plant. (page 99)

247. That Petitioners witness Gisiger testified that Petitioners' engineers made only minor modifications in the plans for the design of the Steam Plant. (page 99)

248. That the Staff showed that Holtwood Power Company was in fact solely organized by Penn Water's lawyers. (page 100)

249. That the activities of Mr. Bushong and the Lancaster office constituted incidental part time work of a clerical nature. (page 100)

250. That uncontested expenses allowed by the Commission and its Staff contain ample provision for organization expense of the Holtwood Power Company. (page 100)

251. That Mr. Bushong's services were of an incidental nature in organizing Holtwood Power Company and should not be capitalized. (page 101)

252. That Petitioners have failed to identify or explain the items for office salaries and expenses or those for salaries and traveling as relating to the organization of Holtwood Power Company. (page 101)

253. That Petitioners witness Gunn did not know the nature of Mr. Zimmerman's services. (page 101)

254. That Petitioners have made no showing that all of the attorney's services were rendered in connection with the organization of Holtwood Power Company or what portion of such services related thereto. (page 101)

255. That inclusion in Petitioners' rate base of the amount of $17,875.34 would be improper. (page 101)

256. That work on the tower foundations was ordered commenced solely to take advantage of the availability of a competent construction force in the vicinity at the time. (page 101)

257. That the expense of $3,595.95 relates to abandoned work and is improperly included in Petitioners' rate base. (page 102)

258. That Petitioners proposal to include in their rate base the sum of $96,116.84 represents reaccounting for expenditures. (page 102)

259. That except for one minor item all these items here proposed for correction relate to necessary repair and maintenance work involving individual parts of equipment or structures. (page 103)

260. That Staff witness Newlands' opinion that the items of betterment had been properly treated as repair and maintenance items by Petitioners at the time

they were incurred according to then accepted accounting practice indicates that said items were not betterments but were repair and maintenance items. (page 103)

261. That Petitioners witness Eichhorn stated that it was a matter of judgment in determining whether the items in question were maintenance and repair or betterments. (page 103)

262. That Petitioners' proposal to adjust the entries of $14,813.34 and $11,339.99 respectively amount to reaccounting and said sums should not be included in the rate base. (page 102)

263. That Petitioners witness Wetzel testified that a determination of whether particular items represented an addition or maintenance and repair involved the exercise of discretion and judgment. (page 103)

264. That Petitioners' original accounting of the items of betterments was done under or pursuant to the state commission's system of accounts then prescribed. (page 103)

265. That Staff witness Newlands' testimony that Petitioners' original entries as to the additions made on their books represented accepted accounting practice at the time of entry indicates that said entries were in accord with proper accounting practice at the time. (page 104)

266. That the items of additions were properly treated at the time of the original accounting as repairs and maintenance and that what Petitioners are proposing merely amounts to reaccounting. (page 104)

267. That the proposed items of additions should not be included in Petitioners' rate base. (page 104)

268. That Petitioners' proposals as to items of replacements amount to reaccounting. (page 104)

269. That it was established by the evidence that the classification as a replacement as distinct from maintenance or repair rests upon judgment. (page 104)

270. That the original accounting as to replacements had been pursuant to or in accord with a system promulgated by the Pennsylvania Commission. (page 104)

271. That Petitioners' original recording of the items of replacements was pursuant to accepted accounting practice at the time, did not constitute error, and reaccounting therefore at this time would be improper. (page 104)

272. That the Petitioners' proposed credit in the amount of $27,539.98 should not be permitted in connection with the determination of the Petitioners' rate base. (page 105)

273. That overheads in the amount of $50,000 should not be included or allowed herein. (page 105)

274. That the amount of $27,539.98 should not be treated as part of the cost of plant retired. (page 105)

275. That Petitioners' proposed credit of $27,539.98 should be eliminated. (page 105)

276. That Petitioners' donation of $1,400 to the construction of the Holtwood church was properly an income or surplus charge and not a proper capital charge. (page 105)

277. That $6,132.41 representing "river coal investigation expense" was a non-utility expense and is not a proper part of Petitioners' rate base. (page 106)

278. That the expenses of $1,340.98, $2,291 43 relate to Penn Water's non-utility business and should not be included in the rate base. (pages 106, 107)

279. That Petitioners' claimed original cost should be reduced by $3,191,704.23. (page 108)

280. That the amount of $75,722.25 representing the book cost of real estate held for possible future use should not be included in the rate base. (page 108)

281. That "the following adjustments are appropriate for disposing of the improper or incorrectly classified items as recorded on the books at December 31, 1945, totaling $5,400,606.31". (page 109)

282. That neither the specific location of the future development, nor the design, nor the date of the commencement of construction thereof has yet been determined, nor, in fact, can this development be used as a part of the Holtwood project and may not even be owned by Penn Water. (page 111)

283. That it has not been decided when construction will begin on these lines and no contract has been closed with the customer requiring their construction. (page 111)

284. That according to the evidence it is proper to allow as a part of the rate base only those of the foregoing items which are included in the power bill and the remaining items claimed are not to be included in the rate base. (page 111)

285. That the date when the proposed new Lancaster transmission line is to be built is undetermined. (page 112)

286. That there are no definite plans as to the date of the use of rights of way paralleling existing lines of Petitioners. (page 112)

287. That such items relate to matters which are too indefinite to justify consideration of the related amounts as a part of Petitioners' rate base. (page 112)

288. That on the basis of the evidence and the findings of facts and conclusions of law in the opinion the consolidated net investment rate base for Petitioners for

the year 1946 is as set forth on page 131 of the Opinion. (page 131)

289. That the total investment rate base for Petitioners for the year 1945 is $33,140,022 and for the year 1946 $33,113,148. (page 131)

290. That the average investment rate base for Petitioners for the year 1946 is $33,126,585. (page 131)

291. That the average net investment of Petitioners for the year 1946 is $24,124,712. (page 131)

292. That Petitioners' net investment rate base for the year 1946 is $24,774,712. (page 131)

(63) Petitioners herein object to and seek rehearing of Opinion No. 173 of the Commission because of its failure to find the following facts and make the following conclusions of law. Said failure to find the following facts being contrary to the substantial evidence in the record and the failure to determine the following conclusions of law being contrary to law and the Federal Power Act and resulting in depriving Petitioners of their property without due process of law:

1. That Staff witness Newlands was unqualified as a witness and his testimony should be rejected.

2. That Commission Staff had no independent evidence as to any of the disputed original cost items and simply limited itself to endeavoring to pick flaws in the positive evidence of Petitioners.

3. That the Staff failed to introduce on the subject of original cost a witness who had the proper engineering, valuation, investment or legal knowledge necessary to support his conclusions.

4. That it was proper for Petitioners to value the common and preferred stock of the McCall Company on the basis of property received and services rendered therefor.

5. That Petitioners' claim that original cost arising out of the stock of McCall Company amounts to $1,031,273.46, represents proper capital cost and should be included in Petitioners' rate base.

6. That purchasers of McCall Company bonds paid $900 for a $1,000 bond with either $450 or $500 par value of preferred stock.

7. That Petitioners accurately proved the distribution of the McCall Company stock to Bertron, Storrs & Griscom; Harvey Fisk & Sons; Mr. Hutchinson; Lee, Higginson & Co., and Coudert Bros.

8. That the banking firm of Bertron, Storrs & Griscom received McCall Company common stock in return for banking services rendered.

9. That Harvey Fisk and Sons and Cary T. Hutchinson received 17,537½ and 18,840 shares respectively of McCall Company common stock in return for services rendered and property conveyed.

10. That of the total shares of the common stock issued, 18,840 shares having a cash value of $471,000 went to Mr. Hutchinson as part consideration for the purchase of his land, water rights, engineering and legal investigations, etc.; of the balance 1,150 shares having a cash value of $28,750 were transferred to other individuals as part consideration for land and water rights owned by them. Of the remaining, 10 shares having a cash value of $250 were issued to incorporators. All of the foregoing total $500,000 which is proper original cost and should be included in Petitioners' rate base.

11. That the affidavits of Messrs. Fisk, Hutchinson, Lee, Hopkins and Aldred were made after lengthy consideration of the facts by each and are of controlling weight in determining the facts stated therein.

12. That Mr. Griscom of the firm of Bertron, Storrs & Griscom stated the stock of McCall Company had value.

13. That Petitioners witness Gunn furnished adequate documentary evidence to Messrs. Fisk and Hutchinson for their consideration long prior to the date of their affidavits.

14. That Mr. Hutchinson's receipt of 18,840 shares of common stock of McCall Company was not inconsistent with the agreement of June 14, 1905.

15. That the stock paid to Mr. Hutchinson was for land, water rights and services rendered and represented no profit to him.

16. That Mr. Hutchinson transferred more than 2,896.54 acres of land and water rights to the McCall Company in return for the cash and stock paid to [redacted].

17. That it is improper to compare the land and water rights transferred by Mr. Hutchinson to the McCall Company on an acreage basis.

18. That the common and preferred stock issued to Harvey Fisk & Sons; Lee, Higginson & Co., and Bertron, Storrs & Griscom was for services rendered.

19. That Staff witness Newlands admitted he knew nothing about the distribution of McCall Company stock.

20. That the McCall Company common stock had a cash value of $25.00 per share and the preferred stock of $50.00 per share at the time it was accepted by Messrs. Fisk and Hutchinson, and Lee, Higginson & Co.; Bertron, Storrs & Griscom; Harlow-McGaw and Pullen in return for services rendered and property conveyed.

21. That aside from a value created by actual buying and selling on the market, the value of stock depends upon the value of the net corporate assets behind it.

22. That Petitioners witness Uhl properly valued the land and water rights received by McCall Company at $3,300,000.

23. That Petitioners witness Uhl's valuation clearly supports Petitioners' claimed value of $25.00 and $50.00 per share for the common and preferred stock of McCall Company.

24. That Mr. Hutchinson's and Petitioners witness Uhl's valuations of the McCall Company stock were not based upon a capitalization of prospective earnings.

25. That prospective earnings afford a proper element for valuing stock if they are considered by a person who actually traded in the stock at the time in question.

26. That Petitioners witness Uhl valued the land and water rights in question by considering the value of other similar lands and water rights necessary for the construction and operation of other similar hydroelectric projects which method is followed by all reputable real estate experts in valuing property.

27. That Petitioners witness Uhl's valuation has no relation whatever to capitalization of earnings but is based upon the expert judgment of this witness who has had a lifetime of experience in valuing for the purpose of purchase and sale of land and water rights for hydroelectric use.

28. That the affidavits of Messrs. Hutchinson, Fisk, Lee, Hopkins and Aldred are entitled to conclusive weight in respect to the facts therein contained.

29. That Mr. Lee was prevented from testifying in this case because of his age and physical condition.

30. That the evidence relied upon by the Commission in refusing to allow a cash value for the McCall Company stock is entirely circumstantial and equally supports either of two or more opposed or inconsistent infer-

ences and cannot of itself be deemed to furnish support for one of such inferences to the exclusion of the other.

31. That the transaction between Mr. Hutchinson and McCall Ferry Power Company pursuant to which Mr. Hutchinson conveyed land and water rights to the McCall Ferry Power Company was an arm's-length transaction.

32. That Mr. Hutchinson received no profit in the transaction pursuant to which he conveyed land and water rights to the McCall Ferry Power Company.

33. That the banking firm of Harvey Fisk & Sons dominated the McCall Ferry enterprise from the time of that firm's first connection with said enterprise to the exclusion of all other interested persons.

34. That there was no substantial evidence in the record to support the conclusion that the stock of the McCall Company was not worth $25.00 and $50.00 per share for the common and preferred respectively at the time Petitioners claimed a value therefor.

35. That at March 1905 the value of McCall Company securities agreed to be issued amounted to $10,764,375.00 and things of value supporting their cash value amounted to $10,554,750.00.

36. That Petitioners are entitled to capitalize the cost of the common and preferred stock of the McCall Company at $25.00 and $50.00 per share respectively whereever this stock was given or exchanged for properties or services received.

37. That the banking firm of Harvey Fisk & Sons performed management services for the McCall Company and that it is proper for Petitioners to capitalize $199,570.31 as representing three-eighths of the total value of the common and preferred stock at $25.00 and $50.00 respectively of the McCall Ferry Power Company received

by Harvey Fisk & Sons as compensation for both management and banking services.

38. That the firm of Harvey Fisk & Sons performed essential management services contributing to the McCall Company enterprise.

39. That pursuant to the agreement between Mr. Aldred and the Bondholders Committee, Mr. Aldred was to finance and manage the project and receive a total of 35,000 shares of common stock of which 5,000 shares were to be compensation for management services.

40. That Mr. Aldred in fact rendered management services to the enterprise and was entitled to receive 5,000 shares of stock as compensation therefor.

41. That said 5,000 shares of stock of Penn Water which Mr. Aldred received as compensation for his management services represented proper cost to the extent of $60.00 per share for the portion applicable to the construction period and was the result of an arm's-length transaction.

42. That Petitioners are entitled to capitalize $218,750.00 as representing payment to Mr. Aldred for management services performed by him for the development from November 1, 1908 to October 1, 1911.

43. That Petitioners are entitled to capitalize and include in their rate base $331,703.15 of McCall Company bond issuance expense as Penn Water stock issuance expense.

44. That Petitioners are entitled to capitalize and include in their rate base $81,906.59 of stock issuance expense incurred for the issuance of Penn Water's capital stock from 1923 to 1935.

45. That the Interstate Commerce Commission Classification of Investment in Road and Equipment of Steam Roads attached to and made a part of the Federal

Power Commission Uniform System of Accounts, Account 71, requires the inclusion in plant account of the items of $31,703.15 and $81,906.59.

46. That Petitioners are entitled to capitalize and include in their rate base interest during construction or accumulated Construction balances for the period November 1, 1907 to September 1, 1909 at 6% per annum.

47. That there was no mismanagement or lack of due diligence on the part of representatives of McCall Ferry Power Company in securing finances for the continuation of construction.

48. That representatives of McCall Company made timely arrangements to secure additional funds necessary to continue construction but the financial panic of 1907 prevented the securing of these funds.

49. That at the time of the occurrence of the financial panic of 1907 funds were available to carry on the project to the end of the year but the McCall Company representatives were prevented from securing these funds as a result of said panic.

50. That the financial panic of 1907 prevented McCall Company from securing additional capital theretofore arranged for and temporarily tied up funds from the original financing due to the failure of the Knickerbocker Trust Company and was the factor which accounted for the so-called cessation period.

51. That the management of McCall Ferry Power Company is presumed to have acted properly and without negligence until the contrary is established by competent evidence and there was no evidence indicating that management failed to act with due diligence.

52. That there was work of a substantial nature done during the cessation period and said work contributed to the expeditious completion of the development.

53. That the initial development was not in commercial operation until October 1, 1911.

54. That during the construction period all costs are proper and must be allowed unless there is a showing of lack of due diligence on the part of management responsible for the construction work.

55. That at the close of the construction period reliable commercial operation is considered to begin when (1) construction is substantially complete, all major work contemplated for the time done, (2) the power units and related property have been generating and transmitting for a sufficient time to iron out operating difficulties and mistakes in setting up and (3) they have been delivering steady power long enough that further unexpected stoppage is improbable.

56. That commercial operation begins when in the course of due diligence the project has been sufficiently completed to be reasonably reliable and available for service. Not merely its technical physical functioning but the nature of the use for which it is designed and its adequacy to meet the burdens ~~such use~~ entails are factors to be considered.

57. That the initial development consisted of 50,000 hp. accomplished by the installation of 5 units.

58. That no portion of the construction period should be deleted in computing interest during construction unless a rate of interest greater than 6% is used.

59. That Petitioners are entitled to capitalize and include in their rate base the amount of $1,008,579.57, which has been eliminated by the Commission, as proper interest during construction.

60. That the capitalization of administrative and other overhead expenses by Petitioners during "Cessation Period" amounting to $52,899.52 is proper, and said

items represent proper original cost and should be included in Petitioners' rate base.

61. That costs totalling $36,445.21 incurred during the cessation period are proper capital costs and Petitioners are entitled to include them as a part of the rate base.

62. That the cessation account expenses totalling $36,445.21 contributed to the completion of the project and are proper original costs.

63. That engineering salaries and fees totalling $54,636.73 are proper capital items and Petitioners are entitled to include them in their rate base.

64. That Petitioners have properly determined the nature of the promotion expenses in the amount of $29,691.59 and the said expenses are properly includible in Petitioners' rate base.

65. That Petitioners are entitled to correct their books of account by charging $37,063.98 to plant account.

66. That the sale price of the bonds and stocks of Susquehanna Power and Susquehanna Properties Companies in 1912 is not evidence as to their value in 1908.

67. That the proper original cost of the lands acquired by McCall Company from Harlow-McGaw and Willson and Witmer was $119,940.20 less than the fair value thereof as found by the Commission in 1930.

68. That Petitioners can properly transfer the amount of $119,940.20 from electric plant land account to surplus.

69. That it was proper for Petitioners to capitalize the amount of $49,754.97 as representing proper experimental costs incurred from 1913 to 1921 in connection with the perfecting of a system of flashboards to be used on the crest of the dam for the purpose of providing

additional head which in turn, would permit the generation of additional electricity.

70. That experiments in the use of flashboards properly covered the period from 1911 to 1921 before the use of said flashboards had been substantially perfected and Petitioners' costs as to this experimental period are a proper part of their rate base.

71. That it was proper for Petitioners to capitalize and include in their rate base the sum of $209,134.30 representing proper acquisition costs, cost of establishing gauges, cost of property acquired from the Baltimore Electro Alloys Company and acquisition costs of property described as the Boyd Mill tract.

72. That acquisition expenses and necessary legal and engineering services totalling $171,134.28 represent proper, original cost and are properly includible in Petitioners' rate base.

73. That Petitioners have identified the items in connection with the acquisition expenses and necessary legal and engineering studies in the amount of $171,134.28.

74. That the amount of $12,420.77 is a proper capital item and is properly includible in Petitioners' rate base. Said amount relates to the establishment of gauges up river from the Holtwood pond.

75. That the item of $24,151.83 represents the cost of property acquired by Petitioners from the Baltimore Electro Alloys Company and is a proper item to be included as original cost in Petitioners' rate base.

76. That the property acquired by Petitioners from Baltimore Electro Alloys Company was first devoted to public service when acquired by Petitioners.

77. That the meaning of the phrase "devoted to public service" is the setting aside for public use.

78. That the item of $1,427.42 represents expenses in defense of title to land described as the Boyd Mill tract charged in error to operating expenses when incurred and is properly includible by Petitioners in their rate base.

79. That every expenditure made by Petitioners must be assumed to have been made with the exercise of sound reasonable judgment unless the contrary is shown by the evidence and the contrary has not been shown by the evidence in this case.

80. That Petitioners witness Bortner was on several occasions offered for cross-examination at the hearing and counsel for the Commission refused to cross-examine this witness.

81. The amount of $39,301.46 properly represents legal and engineering fees incurred by Petitioners in defending their title to land and water rights located below the dam and powerhouse.

82. That the amount of $39,301.46 represents proper original cost and should be allowed in Petitioners' rate base.

83. That the amounts of $12,459.23 and $5,668.48 represent costs incurred by Petitioners in connection with the construction of a transmission line from Holtwood to Lancaster, Pennsylvania, and the construction of the Takoma Park Substation, both of which facilities are used in rendering service to the public.

84. That the amounts of $12,459.23 and $5,668.48 are properly includible in Petitioners' rate base.

85. That unless Petitioners are permitted to include the amounts of $12,459.23 and $5,668.48 in their rate base as proper original cost the consumers will enjoy the benefits arising from the use of property without payment of any kind therefor.

86. That the amount of $13,033.04 represents materials and supplies unaccounted for during construction

and is a proper capital item and properly includible in Petitioners' rate base.

87. That the amount of $130.99 represents cash unaccounted for during the construction period and is a proper item of original cost to be included in Petitioners' rate base.

88. That the item of $6,621.85 properly includes miscellaneous administrative expenses, including legal fees, New York City and state taxes, salaries, printing and stationery, etc. incurred in the formation, operation and dissolution of the Susquehanna Contracting Company.

89. That the item of $6,621.85 represents proper original cost and is properly includible in Petitioners' rate base.

90. That $50,194.73 represents the cost of supervisory engineering services furnished by Petitioners during the years 1922 to 1924 in the construction of the Holtwood Power Company steam station and represents proper original cost and is properly includible in the Petitioners' rate base.

91. That $17,875.34 represents money expended for legal fees and supervisory expenses in connection with the formation of Holtwood Power Co. and is properly includible in Petitioners' rate base.

92. That the item of $3,595.95 represents expenditures incurred by Petitioners in the construction of unused tower foundations and is proper original cost and properly included in Petitioners' rate base.

93. That the Commission cannot substitute its judgment for that of management.

94. That $96,116.84 represents physical items of property which were originally charged in error to operating expenses or depreciation reserve on Petitioners'

books and the Commission is without power to prevent Petitioners from correcting their books to accurately reflect the cost of their property.

95. That the sum of $96,116.84 represents proper original cost and is properly includible in Petitioners' rate base.

96. That $1,400.00 represents a contribution by Petitioners to the trustees of the Holtwood Presbyterian Church for the purpose of assisting said trustees to construct a church on land owned by Petitioners and represents proper original cost and should be included in Petitioners' rate base.

97. That $6,132.41 represents the cost of experiments made by Petitioners to determine the question of the economy of using river coal for steam generation of electricity, represents proper original costs and should be included in the Petitioners' rate base.

98. That $77,918.28 represents the amount of property held by Petitioners for future use and is properly includible in Petitioners' rate base as proper original cost.

99. That the sum of $237,361.79 represents construction work in progress and is properly includible in Petitioners' rate base as of December 31, 1945.

100. That the undisputed amount of construction work in progress as of December 31, 1945 which was in service as of December 31, 1946 was $110,676.08.

101. That there is no duplication in connection with the inclusion by Petitioners of uncompleted construction work in progress in the rate base because Petitioners have not capitalized interest on any of the jobs in progress amounting to $126,685.71.

102. That where the use to which property is to be put is definite and the time of use is specified it should be included in the rate base as property held for future use.

103. That Petitioners are entitled to capitalize a total of $3,476,859.81, disallowed by the Commission, as representing proper original cost and said amount is properly includible in their rate base.

104. That the rate base of Petitioners as computed and determined by the Commission is less than the "net investment" of the Petitioners in their project as the term "net investment" is defined in Section 3 (13) of Part I of the Federal Power Act.

105. That the Petitioners' rate base as computed by the Commission has not been determined in accordance with the terms and provisions of the Federal Power Act but in violation thereof.

106. That the term "net investment" as defined in Section 3 (13) of the Act means "the actual legitimate original cost thereof (the project) as defined and interpreted in the 'classification of investment in road and equipment of steam roads, issue of 1914, Interstate Commerce Commission', plus similar costs of additions thereto and betterments thereof, minus the sum of the following items properly allocated thereto, if and to the extent that such items have been accumulated during the period of the license from earnings in excess of a fair return on such investment: (a) Unappropriated surplus, (b) aggregate credit balances of current depreciation accounts, and (c) aggregate appropriations of surplus or income held in amortization, sinking fund, or similar reserves, or expended for additions or betterments or used for the purposes for which such reserves were created." The term "net investment" as used by the Commission in its Opinion and its "Order Reducing Rates" is not "net investment" as defined in Section 3 (13) of the Federal Power Act.

107. That there is no evidence upon which the Commission could find that any deduction of depreciation reserve, or other deduction, should be made in the determination of net investment in Petitioners' property.

(64) Petitioners herein object to and seek rehearing of the following portions of the Commission's Opinion No. 173 relating to depreciation and net investment in Petitioners' property; on the grounds that the Commission erroneously decided each and all of the following statements, matters, findings and conclusions of law and erred with respect thereto in that said statements, matters, findings and conclusions of law are not supported by substantial evidence, are contrary to the substantial evidence, contrary to law, the Federal Power Act and deprive Petitioners of property without due process of law in violation of the Fifth Amendment to the Constitution of the United States:

1. That Petitioners contend that accrued depreciation in their properties at the end of 1945 amounted to $6,000,000. (page 113)

2. That Petitioners' method of determining actual depreciation was largely by the observation process. (page 113)

3. That the Staff estimated accrued depreciation on the age-life straight-line basis. (page 113)

4. That the Staff made an estimate of the service lives of the various classes of plant of Petitioners. (page 113)

5. That the Staff made a proper computation of depreciation reserve or reserve requirement. (page 113)

6. That the Staff's method of determining depreciation reserve or the reserve requirement represents the proper measure of determining accrued depreciation. (page 113)

7. That the agreement in total by Petitioners witnesses Gunn and Uhl should not be construed as an agreement as to details or to procedures. (page 114)

8. That it was only by the sheerest of coincidences that the determination of Petitioners witnesses

Uhl and Gunn approximated one another so closely. (page 114)

9. That the Petitioners witnesses Gunn and Uhl disagreed in major respects. (page 114)

10. That over 50% of Petitioners witness Gunn's estimate for depreciation in accessory electric equipment represented obsolescence whereas only 15% of Petitioners witness Uhl's estimate came within that category. (page 114)

11. That Petitioners witness Gunn stated that he did not use service lives as in his opinion the results obtained thereby would bear no relation to existing depreciation except by coincidence, even if a series of adjustments were made from time to time until life expired. (page 115)

12. That Petitioners witness Gunn was very uncertain and indefinite as to what weight he gave to a time discount factor. (page 115)

13. That Petitioners witness Gunn's use of a time discount factor apparently related to a consideration of life expectancy over a possible range of years. (page 115)

14. That Petitioners witness Gunn assumed that depreciation in Petitioners' property would proceed at a certain rate. (page 115)

15. That Petitioners witness Gunn stated he could not make an accurate determination of depreciation without the use of a time discount factor. (page 115)

16. That Petitioners witness Gunn's determination of economic disadvantage produced a result dependent upon price levels through the effect of prices on current operating expenses of existing property and assumed operating expenses and capital costs of alternative

17. That all of Petitioners witness Gunn's studies as to depreciation involved the exercise of judgment without factual basis. (pages 115, 116)

18. That Petitioners witness Gunn speculated as to what would be the cost of building and operating substitute plants. (page 116)

19. That Petitioners witness Gunn obtained carrying charges by use of a factor developed twenty years ago which he did not check for adaptability for current use and which contained an element of return not appropriate in this proceeding, and an element of depreciation in no way related to his own method of determining depreciation. (page 116)

20. That Petitioners witness Gunn's studies contained supposititious operating and maintenance savings. (page 116)

21. That Petitioners witness Gunn assumed a value of power and energy losses that might be saved by modernization of substations. (page 116)

22. That the studies or testimony of Petitioners witness Gunn had "all of the speculation and faults of reproduction new". (page 116)

23. That Petitioners witness Gunn's judgment of depreciation is compromised by the use of a vaguely defined and vaguely used time discount factor. (page 116)

24. That Petitioners witness Gunn's determinations are too speculative to be of real assistance to the Commission in determining accrued depreciation. (page 116)

25. That Petitioners witness Uhl's determination of depreciation actually represented only deferred maintenance. (page 116)

26. That Petitioners witnesses Gunn and Uhl used essentials of a service life calculation to obtain an estimate of the deferred maintenance and depreciation. (page 117)

27. That Petitioners witness Uhl gave no real consideration to obsolescence. (page 117)

28. That it is nowhere apparent in the evidence what consideration Petitioners witness Uhl gave to depreciation existing due to deterioration that could not be found by visual examination. (pages 117, 118)

29. That it is obvious that Petitioners witness Uhl gave principal consideration and weight to the physical condition of the property as he found it. (page 118)

30. That both Petitioners witnesses, Gunn and Uhl, determined their so-called actual depreciation by the observation process. (page 118)

31. That Petitioners witness Gunn endeavored to create the impression that his was a scientific study through generalizations and technical descriptions. (page 118)

32. That Petitioners witness Gunn stated that the $1,500,000 was merely a provision for some kind of contingency in the future. (page 118)

33. That Petitioners method of determining depreciation was "observed depreciation". (page 118)

34. That prior decisions of the Commission are an indication that Petitioners' method of determining depreciation is unlawful or improper. (page 118)

35. That the record in this case shows that Petitioners' method of determining depreciation cannot be accepted as a measure of accrued depreciation for rate base purposes. (page 118)

36. That the decision in the Safe Harbor Water Power Corporation case indicates in some way that

Petitioners' method of determining depreciation in this case is unlawful or improper. (page 118)

37. That the Safe Harbor Water Power Corporation case decided by this Commission is a precedent for this case. (page 118)

38. That the Safe Harbor Water Power Corporation case heretofore decided by this Commission correctly decides the issues therein determined. (page 118)

39. That Petitioners witnesses determined depreciation in Petitioners' property wholly by visual inspection. (page 118)

40. That Commission Staff determined accrued depreciation. (page 119)

41. That Petitioners have employed a method in computing annual depreciation expense similar to the Staff's method of determining accrued depreciation by the use of straight-line, age-life method in this case. (page 119)

42. That since 1931 amounts of depreciation expense accrued in Petitioners' books have been collected from customers. (page 119)

43. That most of Petitioners' reserve was built up by accruals for which Petitioners were specifically reimbursed under the purported Agreement of June 1, 1931. (page 119)

44. That Petitioners' use of service lives in computing annual depreciation expense for accounting purposes is evidence in and of itself of the existence of actual depreciation. (page 119)

45. That Commission Staff properly determined service lives of the various units or classes of Petitioners' property. (page 119)

46. That Commission Staff witnesses estimated service lives. (page 119)

47. That Commission Staff witnesses made a field examination or study of Petitioners' operation, inspection, maintenance and trouble reports in considering functional (economic) as well as physical causes of plant retirement. (page 119)

48. That Petitioners did not offer any evidence in respect to service lives. (page 119)

49. That the service life assumptions (estimates) of the Staff are reasonable and that they should be approved. (page 119)

50. That the Commission or its Staff made a determination of service lives. (page 119)

51. That the Commission Staff witnesses made a proper determination of depreciation reserve (reserve requirement). (page 119)

52. That the reserve requirement assumed (estimated) by Commission Staff witnesses represented that part of the service life of Petitioners' property which had expired or in other words, which related to the past. (pages 119, 120)

53. That Commission Staff witnesses' method of determining depreciation reserve was substantially the same as that employed by Petitioners in their accounts since they inaugurated depreciation accounting. (page 120)

54. That a method of accounting for depreciation in and of itself is evidence of depreciation. (page 120)

55. That the Staff of the Commission properly determined Petitioners' reserve requirement as of December 31, 1945 in the amount of $8,408,373. (page 120)

56. That the book reserve of Petitioners was somewhat higher than the reserve requirement. (page 120)

57. That the difference between Petitioners' book reserve and actual depreciation is represented by the fact that the book reserve contains allowances for resurfacing the dam and a few other deferred maintenance items not included in the Staff's estimates. (page 120)

58. That it is now well established that depreciation expense and accrued depreciation should be determined by the same method in order to do justice to rate payers and the company alike. (page 120)

59. That Petitioners used dual standards in determining accrued depreciation or depreciation expense which inevitably resulted in injustice. (page 120)

60. That Petitioners' method of determining depreciation was by "observed depreciation". (page 120)

61. That the straight-line method is now the generally accepted method of computing actual depreciation. (page 120)

62. That the issues in the Safe Harbor case are the same as the issues in this case. (page 120)

63. That the Safe Harbor case heretofore decided by the Commission properly decides the issues contained therein. (page 120)

64. That the procedure of the Commission Staff in determining depreciation expense and accrued depreciation conformed to a well established precedent. (page 120)

65. That Petitioners witness Uhl admitted that it is the practice to put a life upon such structures as concrete dams and that he would consider them and specifically, the Holtwood dam, as depreciable. (page 120)

66. That methods of accounting for depreciation are in and of themselves evidence of actual accrued depreciation or actual annual depreciation expense. (page 121)

67. That Petitioners accrue amounts to the reserve for depreciation according to the straight-line method. (page 121)

68. That the evidence offered by the Commission Staff in this proceeding as to how certain electric companies treat mass-concrete dams furnishes a basis for concluding that Petitioners' concrete dam is depreciable. (page 121)

69. That the plant items of the electric companies referred to by Commission Staff in the record are comparable to Petitioners' plant. (page 121)

70. That "such plant items as are mentioned above have a limited service life and are properly subject to depreciation allowances in order to prevent the impairment of capital". (page 121)

71. That there is a general practice of treating long-life properties such as mass concrete in dams as depreciable. (page 121)

72. That the treating of the property which Petitioners claim as non-depreciable as depreciable property is clearly correct. (page 121)

73. That Petitioners' proposal to treat certain items of property as non-depreciable is a novel treatment and is not sound from either the financial or regulatory viewpoint. (page 121)

74. That "Upon a consideration of all the evidence it is found that reasonable and proper composite service lives for the steam, hydraulic, transmission and general plant classifications are 42, 69, 57 and 35 years, respectively, with corresponding annual depreciation rates of 2.38%, 1.45%, 1.75%, and 2.86%". (page 121)

75. That the average accrued depreciation in Petitioners' property for the year 1946 was $9,001,873. (page 121)

76. That Petitioners "witness Gunn derived his estimate of the adequate annual allowance of $400,000 by applying to the 1945 book allowance for depreciation, $574,245, the ratio of his determination of the proper reserve at the end of 1945, $6,000,000, to the December 31, 1945 book balance in the depreciation reserve, $8,976,358, and increasing the result to $400,000 after consideration of several intangible counteracting factors". (page 122)

77. That Petitioners witness Gunn's recommendation of $400,000 is upon the straight-line basis. (page 122)

78. That Petitioners witness Gunn assumed a straight-line basis of accumulation in his determinations of depreciation. (page 122)

79. That Petitioners witness Gunn included no allowance for obsolescence in his $400,000 annual allowance for depreciation. (page 122)

80. That Petitioners witness Gunn's derivation of the $400,000 annual allowance can only be sustained by validation of his use of the ratio of his determination of the reserve requirement to the book reserve. (page 123)

81. That Petitioners witness Gunn's determination of the reserve requirement cannot be accepted. (page 123)

82. That no basis exists for accepting Petitioners witness Gunn's determination of annual allowance for depreciation. (page 123)

83. That procedures followed by Petitioners witness Gunn were impractical or unsound. (page 123)

84. That Petitioners witness Gunn's $400,000 recommended annual allowance would be inadequate to return the investment in presently owned depreciable property to Petitioners over the service lives of such property. (page 123)

85. That Petitioners witness Gunn's 2½% of depreciation to be applied to additions is excessive. (page 123)

86. That the fact that Petitioners witness Gunn's annual allowance for depreciation and determination of accrued depreciation would result in a fair allowance over a period of years is the result of accident rather than sound practices. (page 123)

87. That the Staff's computation of annual allowance conformed to standard practice. (page 123)

88. That the depreciation rates assumed by the Commission Staff witnesses are proper. (page 123)

89. That Commission Staff witnesses were correct in applying the depreciation rates found by the Commission to be proper here to the average of the appropriate plant balances for the year. (page 123)

90. That the proper annual allowance for the year 1946 is $467,701. (page 123)

91. That Petitioners witness Dorau's testimony is the only evidence in the support of their contention that their rate base should be undepreciated. (page 124)

92. That the use of the sinking-fund method with a rate of interest applicable to the sinking fund, lower than the rate of return allowed on the investment, has the effect of not crediting the consumer with the full amount of the investment which is repaid by him in the form of depreciation expense. (page 124)

93. That depreciation expense represents a repayment of investment by the consumers. (page 124)

94. That Petitioners witness Dorau's contention as to the validity of an undepreciated rate base is that the reserve investment is "an actual fund". (page 125)

95. That Petitioners witness Dorau's testimony is fallacious. (page 125)

96. That depreciation reserve assets do not in fact or theory constitute a trust fund. (page 125)

97. That funds coming into the possession of a utility through allowance of depreciation expense belong to the utility absolutely and may be used for all purposes. (page 125)

98. That funds coming into the hands of the utility through allowance of depreciation expense can be used to pay off all debts. (page 125)

99. That if assets reflected by the depreciation reserve are invested in stocks and bonds, rate regulation does not take them into account. (page 125)

100. That Petitioners witness Dorau's trust fund analogy is strained. (page 125)

101. That accrued depreciation represents "that part of the cost of plant which relates to the past—expired service life". (page 125)

102. That if accrued depreciation is not deducted in determining rate base a "cost of past operations becomes the basis for a continuing charge". (page 125)

103. That there are equitable grounds for deducting accrued depreciation from cost to determine Petitioners' rate base. (page 126)

104. That consumers pay for plant consumption. (page 126)

105. That "it is just as inequitable to charge a return on the amount reimbursed as it would be to charge a return on the cost of coal consumed in a previous year and duly recovered in operating expenses". (page 126)

106. That the results of Petitioners witnesses' computations "do not constitute a valid argument, *per se*,

against the straight-line method and the employment of a depreciated rate base". (page 126)

107. That the use of the sinking-fund method would postpone recoupment of a high portion of Petitioners' investment to the remote time when the properties are old, maintenance high and obsolescence a greater hazard. (page 126)

108. That "this would entail greater financial risks and might result in serious capital impairment". (page 126)

109. That the Safe Harbor Water Power Corporation case hereinbefore decided by the Commission correctly determines the issues raised therein. (page 126)

110. That the Safe Harbor Water Power Corporation case is a precedent for the instant use. (page 126)

111. That the record in this proceeding does not alter what was said by the Commission in the case of Safe Harbor Water Power Corporation. (page 126)

112. That the use of a depreciated rate base in this proceeding is proper. (page 127)

113. That Petitioners' book reserve approximates a proper reserve requirement. (page 127)

114. That a reserve requirement as computed by the Staff represents a proper reserve. (page 127)

115. That the book reserve of Petitioners should be deducted as a measure of accrued depreciation in Petitioners' property. (page 127)

116. That Petitioners' book reserve is only slightly higher than its reserve requirement, and even the excess represents payment to Penn Water by its customers for deferred maintenance. (page 127)

117. That "we find that from Respondents' (Petitioners) average investment in plant for 1946,

$33,126,585, the reserve for depreciation, averaged for the year $9,001,873, should be deducted in arriving at the 1946 rate base". (page 127)

Whenever in the Opinion or "Order Reducing Rates" in this case the Commission has adopted or referred to the record or Opinion No. 143 in the case of Safe Harbor Water Power Corporation, Docket IT-5914, Petitioners adopt and make a part hereof all of the points set forth in the application for rehearing in that case filed with the Commission on December 4, 1946.

(65) Petitioners herein object to and seek rehearing of Opinion No. 173 of the Commission because of its failure to find the following facts and make the following conclusions of law, said failure to find the following facts being contrary to the substantial evidence in the record and the failure to determine the following conclusions of law being contrary to law, the Federal Power Act and results in depriving Petitioners of their property without due process of law in violation of the Fifth Amendment to the Constitution of the United States:

1. That the accrued depreciation in Petitioners' property amounted to approximately $4,500,000 as of December 31, 1945 and an adequate depreciation reserve as of the same date amounted to $6,000,000.

2. That the testimony of Petitioners witnesses Gunn and Uhl was based upon comprehensive engineering and economic studies of Petitioners' property and is substantial, uncontradicted evidence as to the proper amount of actual depreciation on December 31, 1945.

3. That Staff witness Roland was incompetent to determine service lives of Petitioners' property and his testimony and exhibits should be rejected.

4. That the service lives assigned to Petitioners' properties by Commission Staff are arbitrary and unsupported by substantial evidence.

5. That property is non-depreciable when there are no causes, physical or non-physical, in current operation which will bring about its retirement and when the property will continue in use, substantially unchanged, as long as the enterprise exists.

6. That the following property of Petitioners is properly classified as non-depreciable: the forebay ramp, the mass concrete in the dam and tailrace deflection wall, and the excavation for the tailrace, dam and powerhouse.

7. That if the forebay ramp, the mass concrete in the dam and tailrace deflection wall, the excavation for the tailrace, dam and powerhouse are classified as depreciable and assigned the Staff's recommended lives, it will result in the accumulation of a grossly excessive reserve for depreciation.

8. That the service lives used by the Staff were erroneous and the amount of the depreciation determined thereby is erroneous.

9. That the use of the straight-line method of depreciation with the service lives recommended by Commission Staff is not proper and deprives Petitioners of property without due process of law and results in a method which is unlawful, unjust and discriminatory to Petitioners.

10. That the actual depreciation in Petitioners' property should as a matter of law and can as a matter of fact be determined by comprehensive engineering and economic studies of such property based upon the same principles that govern the installation and retirement of property.

11. That Petitioners witnesses Gunn and Uhl possess the necessary qualifications to make such engineering and economic studies to determine actual depreciation in Petitioners' property and said witnesses employed proper methods in their studies.

12. That a determination of actual depreciation, proper reserve balance and the annual allowance for Petitioners' property, simply by accounting methods, is unsound and must yield to the facts developed by comprehensive engineering and economic studies of such property made by Petitioners' witnesses.

13. That depreciation is the loss of service value which is manifested in property because it is property which depreciates, not the money which has been used to acquire property, nor the accounts in which it is recorded.

14. That depreciation is factual in nature and occurs at the time and to the extent of the incidence and progression of its causes.

15. That depreciation does not occur by reason of the mere expiration of time, nor in the absence of causes actually operating to bring about the retirement of property.

16. That depreciation, as applied to electric plant of Petitioners, means the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of electric plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand and requirements of public authorities.

17. That a study by competent persons of the effect of causes of depreciation is essential, to determine the proper amount of the depreciation reserve as well as a proper annual allowance for Petitioners' property.

18. That it is correct to determine physical depreciation through a comparison of the property under

consideration with the condition of the property when new and also with its condition when it will be replaced.

19. That it is correct to determine economic depreciation through a comparison of the property under consideration with the most economical practical property that will give the same quantity and quality of service.

20. That the size of the depreciation reserve should be governed by the amount of depreciation actually existing in the property.

21. That the size of the depreciation reserve should be greater than the depreciation existing in the property by an adequate factor of safety to cover unforeseen contingencies.

22. That Commission Staff, in its use of the straight-line method of computing depreciation erroneously assumes that actual depreciation occurs in equal annual amounts.

23. That Staff witness Roland fixed service lives of Petitioners' property as a result of speculation, and guesswork, and his service lives must be rejected.

24. That the inspection of Petitioners' property and records by Staff witness Roland was cursory and wholly inadequate for the purpose of accurately determining depreciation in Petitioners' property or a proper annual allowance.

25. That the so-called life tables of other companies utilized by Staff witness Roland were clearly inapplicable to Petitioners' property which was recognized by him to be unique.

26. That an adequate reserve for Petitioners' property as of December 31, 1945 was $6,000,000 rather than the adjusted book reserve for depreciation figure of $8,763,118.

27. That the annual charge for depreciation to be applied to Petitioners' property at the present time should be $400,000 plus 2½% per annum applied to net additions of depreciable property subsequent to December 31, 1945.

28. That depreciation does not occur in equal annual amounts.

29. That the annual allowance for depreciation in Petitioners' property should be so determined as to provide for large items of deferred maintenance.

30. That the testimony and exhibits of Petitioners witness Gunn constitute substantial and uncontradicted evidence that the amount of $400,000 plus 2½% per annum on net additions of depreciable property subsequent to December 31, 1945 is a fair and reasonable annual charge for depreciation in Petitioners' property.

31. That the straight-line method used by Commission Staff is based on assumed service lives which are fundamentally erroneous and the annual charge for depreciation, based thereon, is also erroneous.

32. That a fair and reasonable annual depreciation charge cannot be determined by an arbitrary choice of accounting method.

33. That it is necessary as a matter of law to make thorough and exhaustive studies of actual depreciation by qualified and experienced engineers to determine the proper charges to depreciation expense and Commission Staff witnesses failed to make such studies.

34. That Petitioners witness Gunn is a qualified and experienced engineer and his testimony and exhibit as to the proper annual depreciation charge for Petitioners' depreciable property constitute substantial and uncontradicted evidence.

35. That an annual charge for depreciation of $467,781 for Petitioners' depreciable property for the year 1946, as well as similarly computed amounts for future years, is improper and unlawful.

36. That the amount of annual depreciation allowance recommended by Commission Staff is the result of its witnesses arbitrarily applying an accounting formula unrelated to the actual facts of depreciation and is excessive.

37. That the purpose of accounting, including accounting for depreciation, is to record the facts and the legal effect of business transactions and occurrences; and accounting methods unrelated to the true facts determine nothing.

38. That the facts as to actual depreciation should determine and control the accounting; and the accounting should not be permitted to distort the facts or their legal consequences.

39. That Mr. Roland did not base his service lives for Petitioners' property on the only factual basis available, i. e., actual existing depreciation.

40. That Mr. Roland did not give proper consideration to the causes of depreciation in determining service lives for Petitioner.

41. That the use of an equal annual charge for depreciation with a substantially risk-free credit or the sinking-fund method of accounting with an interest rate equal to that which is actually earnable from investments which are substantially risk-free, will not do any injustice to consumers, but, on the contrary will result in equality and justice to both consumers and investors.

42. That the use of an equal annual charge for depreciation with a substantially risk-free credit or the sinking-fund method of accounting with an interest rate

equal to that which is actually earnable from investments which are substantially risk-free, will not result in the investors earning more than a fair return on their investment.

43. That the use of an equal annual charge for depreciation with a rate of return credit or a sinking-fund method of accounting for depreciation with an interest rate equal to the rate of return will discriminate against the investors and in favor of the consumers and will be unfair, unjust, unreasonable and confiscatory to the investors.

44. That Petitioners showed by substantial evidence that deduction of the reserve balance would result in a declining rate base and in a failure to earn the rate of return intended, and that the only circumstances under which the enterprise would actually earn the intended fair rate of return are those in which an undepreciated rate base is employed in conjunction with a consumer credit on depreciation reserve balances equal to the income actually earned upon the investment of the assets reflected by such balance without added risks, hazards and uncertainties.

45. That Petitioners have showed by substantial evidence that the regulatory procedure recommended by Commission Staff would result in a declining rate base and a failure of the enterprise to earn the intended fair rate of return in the future.

46. That under the straight-line method with a reserve balance deduction it is impossible for Petitioners to earn a predetermined rate of return on their investment unless the enterprise assumes additional risks, uncertainties and responsibilities in the employment of the funds generated by the reserve accrual and thus no predetermined fair rate of return can actually be earned under this method.

47. That there cannot be full employment of every dollar accrued for depreciation from the time of its accrual.

48. That the testimony of Staff witness Dunn must be rejected because his conclusions are erroneous and are based upon assumed service lives which in and of themselves are fundamentally erroneous.

49. That Commission Staff desiring to deduct the greatest possible amount from Petitioners' original cost to arrive at their rate base computed a composite rate of depreciation that would result in a reserve requirement of approximately the same amount as Petitioners' excessive book reserve by dividing the total of the past accruals to the depreciation reserve by the total accumulated average annual balances of what the Staff considered depreciable electric plant.

50. That Staff witness Roland was given by Commission's accounting staff a predetermined average depreciation rate of 1.73%, for the purpose of designing a life table which would appear to justify that rate.

51. That Commission Staff predetermined the average depreciation rate for Petitioners' property which it desired prior to the time Staff witness Roland began his studies for the purpose of fixing service lives.

52. That the determination of just and reasonable rates for Petitioners under Section 206 (a) of the Federal Power Act requires the application of a fair utility rate of return to an undepreciated rate base.

53. That a credit of 3% on a depreciation reserve balance of $6,000,000 as of December 31, 1945 plus a credit of 3% on all subsequent net increases of the depreciation reserve should be granted to Petitioners' customers.

54. That the use of a depreciated rate base would constitute a deprivation of Petitioners' property without due process of law in violation of the 5th Amendment of the Federal Constitution and the Federal Power Act.

55. That Petitioners, by virtue of their status as licensees, are entitled, whenever their rates and charges are regulated or controlled by the Federal Power Commission, to have such rates and charges regulated and controlled in accordance with the provisions of the Federal Power Act. Under the general provisions of licenses and the provisions of said Act, Petitioners are entitled to a fair return upon their "net investment" and their "net investment" is:

> "the actual legitimate original cost thereof (the project) as defined and interpreted in the 'classification of investment in road and equipment of steam roads, issue of 1914, Interstate Commerce Commission,' plus similar costs of additions thereto and betterments thereof, minus the sum of the following items properly allocated thereto, if and to the extent that such items have been accumulated during the period of the license from earnings in excess of a fair return on such investment: (a) Unappropriated surplus, (b) aggregate credit balances of current depreciation accounts, and (c) aggregate appropriations of surplus or income held in amortization, sinking fund, or similar reserves, or expended for additions or betterments or used for the purposes for which such reserves were created."

The Petitioners' "net investment" as determined by the Commission does not accord with and is contrary to the statutory definition contained in Section 3 (13) of the Federal Power Act.

56. That the use of an undepreciated rate base together with the granting of a credit of 3% to customers on an adequate depreciation reserve balance is fair and equitable to both investors in and customers of Petitioners.

57. That the use of a depreciated rate base would illegally impose upon Petitioners' investors the re-

sponsibility for the custody and management of the assets reflected by the depreciation reserve balance without compensation to the investors for this burden.

58. That the assets accumulated from advances by consumers for depreciation expense are not a return of capital to investors because they are not free assets but must be retained in the business and thus remain devoted to public use.

59. That the advances made with respect to depreciation do not constitute a return of the investment to the investors and in no real and economically meaningful sense do they even return the investment to the enterprise because such funds are collected and retained for restricted purposes; in effect, the enterprise does not come into a full and unincumbered ownership of such assets until its rights in them have been matured by a retirement.

60. That Petitioners' investors are entitled to earn and receive a fair return upon the money prudently invested by them and used in rendering public service, until such time as their investment is returned to them as free capital.

61. That it is the duty of Petitioners to render efficient, dependable and continuous service to the public until relieved of that obligation by proper regulatory authorities and the consumers have the obligation to pay the total cost thereof.

62. That it is the duty of Petitioners to accumulate and maintain an adequate depreciation reserve, the primary purpose of which is to enable Petitioners to maintain their plant in proper condition for efficient operation.

63. That it is the duty of Petitioners to retain within the business the assets reflected by the depreciation reserve and Petitioners may not return these assets to their investors as free capital.

64. That the nature of hydroelectric property employed in the public service requires the collection of large sums on account of depreciation long in advance of the time when they will be needed for the purposes which justified their collection.

65. That Petitioners' property is relatively static and is long lived, and abnormally large sums must be collected on account of depreciation and held for unusually long periods with little or no opportunity to invest with regularity such funds in utility property.

66. That the assets reflected by the depreciation reserve balance of a public utility must be held in the enterprise to replace property retired and maintain the integrity of the investment, and cannot legally be returned to the investors.

67. That the measurement by engineering studies of actual existing depreciation is more accurate and reliable than assumptions of service lives of Petitioners' property and should govern and control the amount of the depreciation reserve balance.

68. That the assets reflected by the depreciation reserve balance remain devoted to the public service and are not free capital which can be returned by the company to the investors.

69. That the net cost of the retention of the assets reflected by the depreciation reserve balance in a utility enterprise is an unavoidable part of the cost of the service and should be borne by the customers.

70. That the use of an undepreciated rate base is proper since Petitioners are required to have an amount of assets in excess of capital stock, debts and other liabilities sufficient to equal the reserve for depreciation or their capital will be impaired.

71. That the capital invested in Petitioners is not and cannot be returned to the investors until the regu-

latory authorities determine that such capital is no longer needed in the business and may be disinvested.

72. That Petitioners' investors are entitled to receive the utility rate of return upon their undepreciated investment for the reason that no part of it has been returned to them.

73. That the customers of Petitioners are entitled to receive the benefit of whatever return may be obtained from the investment of the assets reflected by the reserve for depreciation in securities which are substantially risk-free which return is deemed to be for the present 3%.

74. That the requirement of a 3% credit to consumers, even though not actually earned on the reserve assets, furnishes the incentive and obligation for management to economically utilize such fund.

75. That the net cost of the retention of the assets reflected by the depreciation reserve balance is measured by the difference between the utility rate of return and the rate which is earnable on substantially risk-free capital.

76. That part of the cost of service which arises from the retention in the enterprise of the assets reflected by the depreciation reserve balance should be borne by the consumers just as all other parts of the cost of service.

77. That in computing the net cost of the retention of the assets reflected by the depreciation reserve balance, the consumers are entitled to a credit of no more than is actually earnable on substantially risk-free capital because they assume no risk and in the event of loss, the absolute and undivided responsibility for the loss must be borne by the investors.

78. That the net cost to Petitioners of the custody and management of the assets reflected by the reserve

for depreciation is a cost of rendering public utility service not substantially different from the recognition and allowance of the cost of necessary Working Capital and Materials and Supplies.

79. That if by any regulatory procedure the consumers are allowed any greater reduction of the depreciation burden such allowance can only be made at the expense of the investors who will either receive less than a fair return on their investment or will be compelled to assume additional risks, uncertainties and responsibilities for which they will not receive adequate compensation.

80. That investment of assets reflected by the reserve for depreciation in government bonds would improperly compel Petitioners to sustain a loss of income represented by the difference between a fair rate of return for a public utility and the yield on such government bonds.

81. That investment of the assets reflected by the reserve for depreciation in bonds of other companies would improperly impose upon Petitioners a loss of income represented by the differential between a fair rate of return for a public utility and the yield on such bonds.

82. That investment of the assets reflected by the reserve for depreciation in stocks of other companies would result in the investment of funds originally dedicated to public use in alien enterprises and ventures over which Petitioners would have no control.

83. That investment of the assets reflected by the reserve for depreciation in stocks of other companies would impose upon Petitioners the risk of other enterprises, which risks would be different and additional to that of operating Petitioners' property.

84. That the investment of the assets reflected by the reserve for depreciation in retirement of Petitioners' own bonds would improperly require Petitioners to lose the income derived from the employment of their

capital represented by the difference between a fair rate of return for a public utility and the interest payable on their bonds.

85. That a depreciated rate base is not appropriate when investment is the standard for rate base determination.

86. That the historical practice of deducting actual depreciation in order to arrive at "fair value" does not warrant the deduction of actual depreciation from original cost in the instant case.

87. That the deduction of the reserve for depreciation from Petitioners' original cost to determine the rate base illegally and inequitably relieves Petitioners' customers of the obligation to pay any return on that portion of the investment reflected by the reserve for depreciation.

88. That the assumption of Commission Staff witnesses that the use of the straight-line method of accounting for depreciation necessarily requires the use of a depreciated rate base for the purpose of determining a fair return is without foundation.

89. That the testimony and exhibits of Petitioners' witness Dorau furnish substantial evidence which is controlling.

90. That Petitioners' witness Dorau has established that the deduction of the reserve balance from original cost in determining Petitioners' rate base would result in a declining rate base and in a failure to earn the rate of return intended.

91. That the straight-line method of computing depreciation results in the retention in the enterprise of the largest amount of assets for the longest period of time and therefore results in the greatest total actual cost of the service.

92. That if depreciation is to be deducted in determining a rate base, only the adequate reserve balance of $6,000,000 should be so deducted.

That the Petitioners seek rehearing of the Opinion and Order for the purpose of proving that the adjusted reserve balance of $9,240,628 as determined by the Commission as of December 31, 1946 was excessive when compared to the total depreciable plant of $26,651,886 as of December 31, 1946, resulting in a ratio of adjusted reserve balance to depreciable plant of 34.67%. That this ratio has become increasingly excessive as evidenced by the fact that as of December 31, 1948 the adjusted reserve balance was $10,258,925 and the total depreciable plant was $27,161,528 resulting in a ratio of adjusted reserve balance to depreciable plant of 37.77%. or an increase of approximately 9%.

(66) Petitioners seek rehearing of the statement, findings, and conclusions on pages 132, 133, 138, and 141 of the Commission's Opinion No. 173, which read as follows:

"Upon a careful review of the extensive evidence of record in this proceeding which deals with the subject of rate of return, and applying the principles controlling the determination of a proper rate for utilities as enunciated by the Supreme Court, it is found that a rate of return of 5¼% for Respondents is fair and reasonable."

* * *

"Respondents are very little subject to even the ordinary risks of an electric operating utility. Penn Water * * * possesses strong power contracts, and is in a very favorable financial position. The contract with Baltimore Company assures Respondents of a stabilized income on a basis prior even to the return of the holders of the common stock of Baltimore Company."

* * *

"We find, therefore, that a rate of return of 5¼%, applied to the rate base heretofore described ($24,774,712 for 1946) is fair and reasonable. This rate of return which is based upon 3.17% for bonds and

5.21% for preferred stock, allows about 8.64% for common stock and surplus, which is adequate. This return for equity, which takes into consideration cost of floating the stock accords greatest weight to the most recent data and allows for the upward trend in equity investor requirements."

• • •

That the fair return is $1,300,672. (page 141) on the grounds that:

(a) A rate of return of 5¼% does not adequately compensate Petitioners for existing hazards and risks including among others, damage from flood, ice and storms, the progress of other methods of electric generation at lower cost thus presaging more competitive conditions, government competition, Petitioners' lack of a territory in which they enjoy a monopoly and the risks incident to variations in river flow; and

(b) The return provided of $1,300,672 does not reasonably assure confidence in Petitioners' financial soundness and is not adequate to assure Petitioners' ability to maintain their credit and to enable them to raise the capital necessary for the discharge of their public duties; and

(c) The return of $1,300,672 provided by the order is less than the return enjoyed by other invested capital in the same territory subject to corresponding risks and uncertainties; and

(d) The Commission's Order will result in depriving Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States; and

(e) The statements, findings and conclusions are not supported by substantial evidence of record, are contrary to the substantial evidence of record and are contrary to law and the Federal Power Act; and

(f) The Commission failed to find that 6½% is the fair and reasonable rate of return; and

(g) The Commission failed to find that the return resulting from the 6½% fair rate of return applied to original cost undepreciated is the fair and reasonable return; and

(h) The Commission failed to find that the minimum fair return required by Petitioners, after appropriate treatment for depreciation, is $2,270,000; and

(i) The Commission failed to find that 9.25% is the capitalization rate of and is the proper and fair allowance for return on the equity capital.

(j) As stated in paragraph II (6) (c) above.

(67) Petitioners seek rehearing of the statements, findings, and conclusions on pages 25, 26 and 133 of the Commission's Opinion No. 173, as follows:

> That Petitioners' evidence as to (1) reproduction cost, (2) the cost of a substitute plant and (3) original cost stated in terms of the purchasing power of the dollar in 1945, was properly excluded and that such evidence is unnecessary and useless for rate making purposes and would not aid in the determination of just and reasonable rates. (pages 25, 26)
>
> • • •
>
> "The witness' method involves the attempted injection of speculative reproduction cost through the back door, i. e., rate of return testimony. It cannot be accepted."

on the grounds that:

(a) The statements, findings, and conclusions are not supported by substantial evidence, are contrary to the substantial evidence and are contrary to law and the Federal Power Act; and

(b) The Commission's failure to find that such evidence is admissible and is essential to the determination of the proper rate base and the fair and reasonable return results in depriving Petitioners of a fair and reasonable return and of their property without due process of law.

(68) Petitioners seek rehearing of the statements, findings, and conclusions made on pages 134 and 136 of the Commission's Opinion No. 173, referring to Penn Water's outstanding bonds, which read as follows:

> "The series of 1964, in the principal amount of $10,900,000, offered in 1939, was issued at a premium and on a yield basis of 3.02% and at a cost rate to maturity of 3.20%. The series of 1970, in the principal amount of $10,962,000, offered in 1940, was issued at a premium and on a yield basis of 3% and at a cost rate of 3.14%."
>
> * * *
>
> "Accordingly, we find that Respondent Penn Water's cost of bond money for purposes of this rate proceeding is 3.17% * * *."

on the grounds that:

(a) The statements, findings, and conclusions are not supported by substantial evidence of record and are contrary to the substantial evidence of record; and

(b) The Commission failed to find that the cost rates of the 1964 series and 1970 series are 3.21% and 3.83%, respectively, and that the cost of bond money to Penn Water for the purpose of this proceeding is 3.505%.

(69) Petitioners seek rehearing of the statements, findings, and conclusions on page 138 of the Commission's Opinion No. 173, which read as follows:

> "As of December 31, 1946, and subsequent to the adjustment to surplus which is required in the finding

and order herein, Respondents' capitalization consists of 58.19% outstanding debt in the amount of $20,313,000, 6.10% cumulative preferred stock (no Par) in the book amount of $2,130,895.50, and 35.71% common stock in the stated amount of $10,868,312.50 with a surplus of $1,598,812.18."

on the grounds that:

(a) The statements, findings, and conclusions are not supported by substantial evidence of record and are contrary to the substantial evidence of record; and

(b) The adjustment to surplus is contrary to law, is not supported by substantial evidence of record and is contrary to the substantial evidence of record; and

(c) The Commission failed to find that Petitioners' capitalization consists of 52% outstanding debt, 5.4% cumulative preferred stock (no par) and 42.6% common stock and surplus.

III. The Commission's statements, findings, and conclusions in its "Order Reducing Rates", issued January 5, 1949, as referred to below are contrary to the evidence, are unsupported by any substantial evidence, unsupported by adequate subsidiary findings, are unlawful, erroneous, arbitrary, capricious, and unconstitutional and operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States, and result in an exercise of authority in excess of statutory jurisdiction, authority, or limitations; and Petitioners seek rehearing on each and every one of the following purported findings on the grounds hereinafter stated:

(1) Finding No. (1) on the grounds as stated in paragraph II (3) herein.

(2) Finding No. (2), to the extent that it finds that Safe Harbor owns, operates, and maintains transmis-

sion facilities on the grounds that such statement is not supported by any substantial evidence and is contrary to the evidence.

(3) Finding No. (5) on the grounds herein specifically set forth in paragraphs I (6) (h), I (9), II (4), II (12), II (13), and II (14).

(4) Finding No. (6) on the grounds herein specifically set forth in paragraphs I (6) (a) (iii), I (6) (a) (iv), I (6) (b), I (6) (h), I (9), II (5), II (7), II (12), II (13), II (14), II (16), II (28).

(5) Finding No. (7) on the grounds herein specifically set forth in paragraphs I (6) (a) (iii), I (6) (a) (iv), I (6) (b), I (6) (h), I (9), II (5), II (6), II (12), II (13), II (14), II (16), II (17), II (20), II (25), II (26), II (27), II (28), II (58).

(6) Finding No. (8) on the grounds herein specifically set forth in paragraphs I (4), I (6) (h), I (9), II (4), II (5), II (6), II (7), II (11), II (12), II (13), II (14), II (15), II (19), II (57).

(7) Finding No. (9) on the grounds herein specifically set forth in paragraphs I (4), I (6) (h), I (9), II (4), II (5), II (6), II (7), II (11), II (12), II (13), II (14), II (15), II (19), II (57).

(8) Finding No. (10) on the grounds herein specifically set forth in paragraphs I (4), I (6) (h), I (9), II (4), II (5), II (6), II (7), II (11), II (12), II (13), II (14), II (15), II (19), II (57).

(9) Finding No. (11) on the grounds herein specifically set forth in paragraphs I (4), I (6) (a) (iii), I (6) (a) (iv), I (6) (b), I (6) (h), I (9), II (4), II (5), II (6), II (7), II (11), II (12), II (13), II (14), II (16), II (17), II (19), II (20), II (25), II (26), II (27), II (28), II (57), II (58).

(10) Finding No. (12) on the grounds herein specifically set forth in paragraphs I (6) (h), II (4), II (5), II (6), II (7), II (11), II (12), II (13), II (14), II (15), II (19), II (57).

(11) Finding No. (13) on the grounds herein specifically set forth in paragraphs I (6) (h), II (4), II (5), II (6), II (7), II (11), II (12), II (13), II (14), II (15), II (19), II (57).

(12) Finding No. (14) on the grounds herein specifically set forth in paragraphs III (1) through III (11), inclusive.

(13) Finding No. (15) on the grounds herein specifically set forth in paragraphs I (4), I (6) (a) (i), I (6) (a) (iv), I (6) (b), I (6) (h), I (9), II (8), II (11), II (12), II (13), II (16), II (17), II (41), II (44), II (51), II (57).

(14) Finding No. (16) on the grounds herein specifically set forth in paragraphs I (4), I (6) (a) (i), I (6) (a) (iv), I (6) (b), I (6) (h), I (9), II (8), II (11), II (12), II (13), II (16), II (17), II (41), II (44), II (51), II (57).

(15) Finding No. (17) on the grounds herein specifically set forth in paragraphs III (1) through III (11).

(16) Finding No. (18) on the grounds herein specifically set forth in paragraphs III (1) through III (15).

(17) Finding No. (20) on the grounds herein specifically set forth in paragraphs III (1) through III (16).

(18) Finding No. (21) on the grounds herein specifically set forth in paragraphs I (1), I (2), II (18), II (21).

(19) Finding No. (22) on the grounds herein specifically set forth in paragraphs I (1), I (2), II (18), II (22), III (1) through II (sic) [III] (18).

(20) Finding No. (23) on the grounds herein specifically set forth in paragraphs I (1), I (2), II (18), II (22), III (1) through III (19).

(21) Finding No. (24) on the grounds herein specifically set forth in paragraphs I (4), I (6), I (7), I (9), II (2), II (8), II (11), II (12), II (13), II (16), II (17), II (35), II (41), II (44), II (51), II (53), II (54), II (60) to II (67), inclusive.

(22) Finding No. (25) on the grounds herein specifically set forth in paragraphs II (60) to II (65) inclusive, and II (67).

(23) Finding No. (26) on the grounds herein specifically set forth in paragraphs II (60) to II (65), inclusive, and II (67).

(24) Finding No. (27) on the grounds herein specifically set forth in paragraphs II (64), II (65).

(25) Finding No. (28) on the grounds herein specifically set forth in paragraphs II (64), II (65).

(26) Finding No. (29) on the grounds herein specifically set forth in paragraphs II (60), II (61).

(27) Finding No. (30) on the grounds herein specifically set forth in paragraphs I (4), I (5), I (6), I (7), I (9), II (2), II (56), II (59), II (60) to II (67), inclusive.

(28) Finding No. (31) on the grounds herein specifically set forth in paragraphs II (66) to II (69), inclusive.

(29) Finding No. (32) on the grounds herein specifically set forth in paragraph II (30).

(30) Finding No. (33) on the grounds herein specifically set forth in paragraph II (55).

(31) Finding No. (34) on the grounds herein specifically set forth in paragraphs II (55), II (56).

(32) Finding No. (35) on the grounds herein specifically set forth in paragraphs II (60) to II (65), inclusive, and II (67).

(33) Finding No. (36) on the grounds herein specifically set forth in paragraphs II (66) to II (69), inclusive.

(34) Finding No. (37) on the grounds herein specifically set forth in paragraphs I (8), I (9), II (6), II (58), II (59), II (62) to II (69), inclusive.

(35) Finding No. (38) on the grounds that such finding is contrary to law and without authority under the Federal Power Act.

IV. The Commission's orders or requirements in its "Order Reducing Rates" as set forth below are erroneous in law and fact, are contrary to the evidence, and are unsupported by any substantial evidence, unsupported by findings, and are unlawful, erroneous, arbitrary, capricious and unconstitutional, operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States and result in an exercise of authority in excess of statutory jurisdiction, authority or limitations; and Petitioners seek rehearing on each and every one of the following orders or requirements:

(1) Paragraph (A) of the Order on the grounds herein specifically set forth in paragraphs I, II and III.

(2) Paragraphs (C) and (D) of the Order on the grounds herein specifically set forth in paragraphs I, II and III.

(3) Paragraph (E) of the Order on the ground that the Commission has no jurisdiction, authority, or power, under the Federal Power Act to reject any schedules of rates or charges or any rules, regulations, practices, or contracts affecting any such rates or charges, except after following the procedure prescribed by Section 205 (e) of the Act (16 U. S. C. 1946 Ed., Sec. 824d (e), 49 Stat. 851).

(4) Paragraph (F) of the Order on the grounds herein specifically set forth in paragraphs II (64), II (65).

(5) Paragraph (G) of the Order on the grounds herein specifically set forth in paragraphs I, II, III.

(6) Paragraph (H) of the Order on the grounds herein specifically set forth in paragraph I (8).

(7) Paragraph (I) of the Order on the grounds herein specifically set forth in paragraphs I, II, III.

V. Petitioners seek rehearing of the Commission's "Order Reducing Rates" on the ground that the Commission failed to affirm the Petitioners' following requests for findings:

"1. Pennsylvania Company (Penn Water) owns and operates a project, as defined in Section 3 (11) of the Federal Power Act, and develops, transmits and distributes power for sale or use in public service in the State of Pennsylvania.

• • •

"3. Pennsylvania Company receives power from Safe Harbor, a licensee under the Federal Power Act, and transmits, distributes, sells and uses in public service such power within the State of Pennsylvania.

"4. The States of Pennsylvania and Maryland have each authorized and empowered commissions within such States to regulate and control the services to be rendered by Respondents and the rates and charges of payment therefor.

"5. The States of Pennsylvania and Maryland have each authorized and empowered commissions within such States to enforce the requirements of Section (sic) 19 and 20, or any provisions of the Federal Power Act which commit authority to the States.

"6. The Pennsylvania Public Utility Commission is now actively engaged in the regulation and control of the rates and charges of Pennsylvania Company.

• • •

"8. There is no evidence of record that the States of Pennsylvania and Maryland are unable to agree through

their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor of Respondents.

"9. The rate regulatory provisions of Part II of the Federal Power Act are not applicable to the rates or charges of Respondents which are subject to regulation and control under the provisions of Part I of the Act.

"10. Respondents demand, observe, charge, or collect no rates, charges or classifications which are for a transmission of electric energy in interstate commerce or for a sale of electric energy at wholesale in interstate commerce.

"11. The rates or charges, participated in by Pennsylvania Company, for joint services to the Pennsylvania Railroad Company (Railroad) are not for sales of electric energy at wholesale.

"12. All revenues received by Pennsylvania Company for its participation in joint service to the Pennsylvania Railroad Company are its division of the joint rates or charges demanded, observed, charged and collected from the Railroad by Baltimore Company, and such revenues are not all retained by Pennsylvania Company.

"13. Firm power revenues are received by Pennsylvania Company, acting for itself and as agent for Safe Harbor, from Pennsylvania Power & Light Company (PP&L) and Philadelphia Electric Company (Philadelphia Company), for joint service to such companies by Pennsylvania Company and Safe Harbor, and all of such revenues are not retained by Pennsylvania Company.

"14. Revenues received by Pennsylvania Company from Baltimore Company are independent of the services rendered to Baltimore Company and are its division of the total payments by Baltimore Company to Pennsylvania Company and Safe Harbor for the joint services rendered

by the latter companies; and include compensation for services rendered the Pennsylvania Railroad Company.

"15. The Commission has no authority, under the provisions of the Federal Power Act, to regulate, control or fix any divisions of joint rates received by Pennsylvania Company.

"16. The Commission has no authority, under the provisions of the Federal Power Act, to regulate, control or fix any joint rates, charges, classifications, rules, regulations, practices or contracts participated in by Pennsylvania Company without according a hearing on adequate notice to all participants in such joint rates, charges, classifications, rules, regulations, practices or contracts.

"17. The Commission has no authority, under the provisions of the Federal Power Act, to regulate, control or fix any rates, charges, classifications, rules, regulations, practices or contracts of Respondents because they have not been afforded a fair hearing or adequate notice.

"18. The Commission has no authority, under the provisions of the Federal Power Act, to regulate, control or fix any rates, charges, classifications, rules, regulations, practices or contracts of Respondents because there is no evidence of record which will support a finding that any existing rates, charges, classifications, rules, regulations, practices or contracts are unjust, unreasonable, or unduly discriminatory or preferential.

"19. The allocations of costs and revenues testified to by Commission Staff witness Davis will not support any findings with respect to the reasonableness of any rates, charges or classifications of Respondents, and such allocations have no support by the evidence of record.

"20. This proceeding should be dismissed.

* * *

"Assuming, without conceding, that the Commission has jurisdiction in this proceeding, it is requested that the following additional findings and conclusions be made:

"A. The total amount of original cost as of December 31, 1945, of the property of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland (Transmission Company), is $36,605,700.08.

"B. The facts and conclusions stated in each of the original cost points in Respondents' brief are true and correct.

"C. The proper allowance for working capital is, at least, $977,160.

"D. The proper depreciation reserve balance as of December 31, 1945 is $6,000,000, which covers the depreciation actually existing in the property as of that date and an adequate margin of safety.

"E. There is no competent evidence of record to support the service-life assumptions of Commission Staff witness Roland.

"F. Deferred maintenance should be reflected in the annual charge for depreciation every year, with the deferred maintenance expense charged to the depreciation reserve when the expenditure is made.

"G. The proper annual allowance for depreciation and deferred maintenance for the property in service as of December 31, 1945 is $400,000, with an additional 2½% on net additions of depreciable property after 1945.

"H. The depreciation reserve should not be deducted from original cost in arriving at the rate base.

"I. If an investment rate base is to be used, it should be an undepreciated rate base with a 3% credit

to the consumers on the proper depreciation reserve balance, which as of December 31, 1945 was $6,000,000.

"J. If an investment rate base is to be used, the Commission must, in determining the fair return, give consideration to changing price levels in fixing the fair rate of return.

"K. In determining the fair return, the Commission must give consideration to changing price levels either in the fair rate of return or in the rate base.

"L. There is no evidence of record which will support a finding that any existing rates, charges, classifications, rules, regulations, practices or contracts are unjust, unreasonable, or unduly discriminatory or preferential.

"M. The rulings of the Trial Examiner, in the respects specified in Respondents' brief, were in error."

The substantial evidence in the record supports such findings and there is no substantial evidence in the record to justify the failure of the Commission so to find.

VI. The Petitioners do not waive but expressly reaffirm and renew each and all of their objections and exceptions to the jurisdiction of the Commission or the admission or exclusion of evidence, as shown in the record, including particularly (without limiting the generality of the foregoing) their objections and exceptions to the jurisdiction of the Commission and exceptions to the exclusion of evidence relating to present value or cost of reproduction or current cost of the Petitioners' property.

Respectfully submitted,

F. G. Awalt,
Raymond Sparks,
Daryal A. Myse,
Preston G. King, Jr.,
Counsel for Petitioners.

Dated at Washington, D. C.
January 28, 1949.

DISTRICT OF COLUMBIA, *ss.:*

The undersigned, being first duly sworn, states that he is counsel for the applicants in the foregoing application; that he has read said application and knows the contents thereof; and that all of the statements contained therein are true and correct to the best of his knowledge, information or belief.

(s) RAYMOND SPARKS.
Raymond Sparks.

Sworn to and subscribed before me, a notary public, in and for said District of Columbia, this 28th day of January, 1949.

(s) FLORA A. MYERS.

(SEAL)

My commission expires Oct. 14, 1953.

CERTIFICATE OF SERVICE.

I hereby certify that I have this day served the foregoing document upon all parties of record in this proceeding by mailing a copy thereof properly addressed to:

HOWARD E. WAHRENBROCK, Assistant General Counsel;
and REUBEN GOLDBERG, Attorney,
Federal Power Commission,
Hurley Wright Building,
Washington 25, D. C.

CHARLES D. HARRIS, General Counsel,
The Public Service Commission of Maryland,
Munsey Building,
Baltimore, Maryland.

CHARLES E. THOMAS, Counsel, and ARTHUR J. DISKIN, Attorney,
Pennsylvania Public Utility Commission,
Harrisburg, Pennsylvania.

G. KENNETH REIBLICH, Counsel for
Consolidated Gas Electric Light and Power,
Company of Baltimore,
Baltimore, Maryland.

Dated at Washington, D. C., this 28th day of January, 1949.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Complaint Docket No. 14028

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

PENNSYLVANIA WATER & POWER COMPANY

and

SAFE HARBOR WATER POWER CORPORATION

ORDER.

By THE COMMISSION, SEPTEMBER 27, 1948:

This proceeding is an inquiry and investigation to determine the fairness, reasonableness and justness of the rates and charges of Pennsylvania Water & Power Company, and Safe Harbor Water Power Corporation, sometimes hereinafter referred to as PW&P and SHWP respectively.

On December 5, 1944, our order instituted the inquiry and investigation against PW&P. That order directed that the inquiry and investigation include consideration of the imposition of temporary rates under the provisions of Section 310 of the Public Utility Law, the act of May 28, 1937, P. L. 1053, as amended. Under authority of the Public Utility Law, a questionnaire containing 21 questions was directed to PW&P for answer. The answers were admitted into the record at the initial hearing held October 9, 1946. Subsequently, seven additional days of hearings were held at which further testimony was introduced by PW&P, and it completed its case in chief, except for possible redirect examination, at the hearing on September 19, 1947. The record then included well over 100 exhibits and 986 pages of oral testimony. The record includes evidence of original cost, book cost, reproduction cost, accrued depreciation, annual depreciation, operating revenues, operating ex-

penses, rate of return, and allocation of plant to the respective uses in serving the several customers.

PW&P submitted testimony and exhibits with respect to Susquehanna Transmission Company of Maryland, a wholly owned subsidiary, which owns the transmission facilities in Maryland used by PW&P, and also with respect to SHWP. The record as a whole portrays an operation conducted to a great extent on a joint basis by PW&P and SHWP. The operation of the two companies is so intertwined that efficient and just regulation required that SHWP be joined as a respondent in this proceeding. Accordingly, on October 6, 1947, we instituted an inquiry and investigation of Safe Harbor Water Power Corporation to determine the fairness, reasonableness and justness of that company's rates and charges. SHWP was joined as a respondent in this proceeding and the order directed that the inquiry include consideration of the imposition of temporary rates under the provisions of Section 310 of the Public Utility Law.

A hearing was scheduled on November 6 and 7, 1947, among other things, for the purpose of affording SHWP the opportunity of appearing and offering evidence in support of its burden of proof. However, no appearance was entered for SHWP. In lieu of that, the President of SHWP under oath made a statement of position with respect to SHWP to the effect that PW&P and Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) are the only stockholders of SHWP, each having equal voting power and that the Board of Directors of SHWP comprises 10 members, five being nominees of each of the two stockholders. It further appears from that statement that the stockholders have at this time irreconcilable differences concerning the position which SHWP should take with respect to our order of October 6, 1947, by which SHWP was made a respondent in this proceeding. Because of this statement in voting control between equal stockholders the statement points out that the respective

stockholders will petition us for permission as stockholders to intervene in this proceeding so that each stockholder may present its contentions and submit such evidence as it may consider necessary to protect the interests of SHWP.

The capital structure of SHWP consists of 200,000 shares of Class B voting common stock, 100,000 shares of which are owned by PW&P and 100,000 shares by Baltimore Company; and 100,000 shares of Class A non-voting common stock, all owned by Baltimore Company. All of these shares are of no par value and have a stated value of $30.00 per share.

PW&P is a Pennsylvania public utility owning and operating a hydro-electric plant at Holtwood, Lancaster County, on the Susquehanna River, and transmission facilities located in Pennsylvania. At the site of the hydro plant, the company also owns and operates a steam electric plant, coal for which is obtained by dredging from the pond of the hydro-electric plant. The hydro plant has a capacity of 104,000 kilowatts; the steam plant a capacity of 26,000 kilowatts. In 1946, 181 million kilowatt-hours were generated by steam and 629 million kilowatt-hours by hydro.

This development had its inception in construction studies made prior to 1905 in which year construction was begun. Commercial operation began in 1911. All of the property owned and operated by PW&P is located within Pennsylvania. In 1910 a wholly and (sic) [owned] subsidiary, Susquehanna Transmission Company of Maryland, hereinafter sometimes referred to as STCo, was created for the purpose of owning those transmission facilities utilized by PW&P in Maryland.

By 1914, eight of the generating units were in place with the final two being placed in 1924 bringing the hydro capacity to 104,000 KW. In 1924 and 1925 the steam electric generating plant was constructed.

The development at Safe Harbor had its inception in studies which began in 1916, culminating in the formation in 1930 of Safe Harbor Water Power Corporation, a Penn-

sylvania public utility, a combination of two predecessor companies formed in 1927. The plant of SHWP on the Susquehanna River, eight miles upstream from Holtwood, the site of the plant of PW&P, was constructed in 1930-1932 and placed in commercial operation in 1932. The plant has an installed capacity of 230,000 KW and in 1946 produced 877 million KWH.

PW&P itself, or through its wholly owned subsidiary STCo, owns all the transmission system connecting SHWP and PW&P with Metropolitan Edison Company at York, Pennsylvania Power & Light Company's lines leading to Harrisburg and Lancaster, Philadelphia Electric Company at Coatesville, Baltimore Company at Baltimore, Potomac Electric Power Company near Washington, D. C., and transmission facilities to provide service to The Pennsylvania Railroad Company in Pennsylvania and in Maryland. PW&P owns those transmission facilities in Pennsylvania, STCo owns those in Maryland.

PW&P has power contracts with Metropolitan Edison, Pennsylvania Power & Light and Philadelphia Electric. SHWP is likewise a party to those contracts with Pennsylvania Power & Light and Philadelphia Electric. PW&P, SHWP, Baltimore Company and Potomac Electric Power Company have a joint contract with Pennsylvania Railroad to provide certain of the railroad company's electric power requirements. PW&P has a contract with Baltimore Company to receive a guaranteed income which does not fluctuate with the amount of power delivered to Baltimore Company and others. PW&P and Baltimore Company have a similar contract with SHWP guaranteeing the latter company a fixed income.

In short, PW&P and SHWP sell power at wholesale to five customers. Four of these, namely, Metropolitan Edison, Philadelphia Electric, Pennsylvania Power & Light and Pennsylvania Railroad receive service within Pennsylvania. Pennsylvania Railroad and Baltimore Company receive service within the confines of Maryland.

The record contains estimates of reproduction cost for PW&P, STCo and SHWP, of the plant extant December 31, 1946, at average prices for the five year period 1942-1946. Estimates of "actual" depreciation against these reproduction cost estimates have likewise been submitted. Further, the record contains statements of original cost of property extant December 31, 1946 of the three companies, together with estimates of "actual" depreciation against such cost, and of "adequate" depreciation reserves. Cross-examination by Commission Counsel has not been completed on the testimony and exhibits adduced.

The record contains several exhibits and extensive testimony from which PW&P contends that a rate of return of 6.8 per cent on an undepreciated original cost rate base should be provided for PW&P and STCo, and that a rate of return of 6¼ per cent on such rate base should be provided for SHWP. However, Exhibit 82 shows a rate of return of 5.6 per cent on an undepreciated original cost rate base for SHWP. In calculating cost of service PW&P applies the rates of 6.8 per cent and 6¼ per cent to the respective undepreciated original cost rate base, but offsets the resulting amounts by a credit of 3 per cent on what it considers "adequate" depreciation reserves.

Exhibit 84 was presented at the hearing on September 19, 1947 to show cost of firm power service supplied by PW&P, STCo and SHWP to the three Pennsylvania customers above recited and Pennsylvania Railroad, within Pennsylvania. To arrive at such cost, the exhibit considers the operations of PW&P, STCo and SHWP in rendering service in Pennsylvania and Maryland as a coordinated system and from this system cost ascertains the cost of service to the several customers within Pennsylvania.

Exhibit 84 ascertains the rate base of the three involved companies using original cost as of December 31, 1946, adding thereto the net authorized major additions to be constructed in 1947-1948, and further adding allowances for working capital. The exhibit further contains esti-

mates of "adequate" depreciation reserve as of December 31, 1947. The information is summarized in Table I as follows:

Table I

Rate Base and Depreciation Reserve
(from Exhibit 84)

	PW&P ($1,000)	STCo ($1,000)	SHWP ($1,000)
Original Cost (Dec. 31, 1946)	30,941	5,595	30,240
Authorized Major Additions 1947-48	857	9	108
Adj. for Genl. & Intang. Plant	(162)	162	—
Total Original Cost	31,636	5,766	30,348
Working Capital	835	142	315
Total Rate Base	32,471	5,908	30,663
"Adequate" Depr. Resv. Dec. 31, 1947	5,602	976	2,727

The exhibit allocates the original cost of plant and depreciation as set out above in Table I on the principle of use as between, first, the specific facilities which are used by the five customers with the allocation to PRR divided between Pennsylvania and Maryland; and, second, all of the remaining plant being allocated to production plant and plant used commonly by all of the customers, described in short as Production and Common. With the plant and depreciation allocated to these respective uses the exhibit ascertains the required operating income, calculating a return of 6.8 per cent on the rate base for PW&P and STCo, and 6¼ per cent for SHWP, offset by a credit of 3 per cent on "adequate" depreciation reserve in all three in-

stances. This information is summarized in Table II as follows:

Table II

Allocation of Rate Base, Depreciation and Income
(from Exhibit 84)

	PW&P ($1,000)	STCo ($1,000)	SHWP ($1,000)
Rate Base Allocated to			
Production & Common	27,611	251	28,708
Penna. Customers	1,716	—	—
PRR in Penna.	1,056	125	1,383
in Md.	822	391	572
Baltimore Co.	1,266	5,141	—
Total Rate Base	32,471	5,908	30,663
"Adequate" Depreciation Reserve Allocated to			
Production & Common	4,981	35	2,553
Penna. Customers	189	—	—
PRR in Penna.	145	17	123
in Md.	113	54	51
Baltimore Co.	174	870	—
Total Reserves	5,602	976	2,727
Required Operating Income			
Production & Common	1,727	16	1,718
Penna. Customers	111	—	—
PRR in Penna.	68	9	82
in Md.	53	25	35
Baltimore Co.	81	323	—
Totals	2,040 (1)	373 (1)	1,835 (2)

Notes: (1) Return 6.8% on Rate Base, less credit of 3% on depreciation.

(2) Return 6.25% on Rate Base, less credit of 3% on Depreciation.

The Susquehanna River, across which the hydro plants of respondents are constructed, like all natural streams, is subject to the vagaries of rainfall with resulting variation in stream flow throughout the years. In a year of drought, when stream flow is low, the quantity of hydro energy which can be generated is correspondingly small; in periods of high river flow, due to higher than average rainfall, the quantity of hydro energy which can be generated is correspondingly high. Accordingly, it is necessary to fix the charges for service by respondents on the average river flow, that is upon a "normal" year.

Exhibit 84 accordingly estimates the capacity which is capable of being furnished to the several customers, and the energy, based on past experience, which the several customers require, and which is capable of being furnished. It is estimated that a total of 332 thousand KW of firm capacity can be supplied by the two respondents and ascribed to the several customers to meet their demands, as summarized in Table III as follows:

Table III

Capacity to Several Customers
(from Exhibit 84)

		1,000 KW Capacity Normal Year
Metropolitan Edison	27	
Philadelphia Electric	30	
Pennsylvania Power & Light	80	
Total		137
PRR in Pennsylvania		48
Total for Penna.		185
Baltimore Co. (incl. PRR in Md.)		147
Total Capacity		332

The firm energy which Exhibit 84 estimates can be furnished in a "normal" year is summarized in Table IV as follows:

Table IV

Energy to Several Customers
(from Exhibit 84)

		Million KWH of Firm Energy—Normal Year
Metropolitan Edison	113	
Philadelphia	158	
Pennsylvania Power & Light	349	
Total		620
PRR—in Pennsylvania		227
Total for Penna.		847
Baltimore Co. (incl. PRR in Md.)		826
Total Energy		1,673 (1)

Note: (1) In addition to this quantity of Firm Energy there is 100 million KWH of Interchange Energy delivered to Penna. Customers and 15 million KWH of Interchange Energy delivered to Baltimore Co. and received from Penna. Customers.

Based upon operating experience and present cost of operation, Exhibit 84 estimates the cost of operation in a "normal" year. With all inter-company transactions eliminated such costs total 11,548 thousand dollars and are summarized in Table V as follows:

Table V

Annual Costs

(eliminating inter-company transactions)

(from Exhibit 84)

	Normal Year Annual Cost ($1,000)
PW&P	
Operating Expenses	3,234
Depreciation Expense	354
Income Taxes	937
Operating Income (Table II)	2,040
Total for PW&P	6,565
STCo	
Operating Expenses	435
Depreciation Expense	72
Income Taxes	161
Operating Income (Table II)	373
Total for STCo	1,041
SHWP	
Operating Expenses	876
Depreciation Expense	352
Income Taxes	879
Operating Income (Table II)	1,835
Total for SHWP	3,942
Total for the three companies	11,548

These total annual costs are allocated in Exhibit 84 to production and common facilities, to special facilities utilized by the respective customers and to interchange power. These costs as appear in Exhibit 84 are summarized in Table VI, as follows:

Table VI

Allocation of Annual Costs—Normal Year (from Exhibit 84)

	FW&P ($1,000)	STCo ($1,000)	SHWP ($1,000)	Total ($1,000)	Adjusted Total ($1,000)
Production & Common					
Capacity	2,105	19	1,839	3,963(2)	3,963(2)
Energy	3,185	20	1,839	5,044(1)	5,016(1)
Special Facilities					
Penna. customers	246	—	—	246	246
PRR—in Penna.	167	20	185	372	372
PRR—in Md.	132	61	79	272	272
Baltimore Company	186	921	—	1,107	1,107
Interchange	544	—	—	544(1)	572(1)
Totals	6,565	1,041	3,942	11,548	11,548

Notes: (1) 10 million KWH of hydro and PW&P steam energy sold as interchange reduces 5,044 to 5,016(3) and increases 544 to 572.

(2) The 3,963 of capacity cost for 332 thousand KW from Table III above results in a firm capacity cost of $11.94 per KW per year.

(3) The 5,016 energy cost as above in foot note (1) for 1,673 million KWH as in Table IV above results in a unit cost of energy of 2.998 mills per KWH.

In making allocations of operating expense, depreciation expense, income taxes and operating income, the principle of use has been followed in Exhibit 84, at least as viewed by PW&P. Those elements of cost which relate to special facilities used directly by any one of the five customers of respondents have been so allocated. Likewise, costs directly attributable to interchange power have been so allocated. Such elements of cost as fuel and purchased power have been allocated directly against energy costs. All remaining costs have been allocated to production and common plant and divided 50-50 between capacity and energy costs. With the principles which have been used in the preparation of Exhibit 84 we find ourselves in general agreement, but in prescribing temporary rates it is unnecessary for us to pass upon each individual allocation in particular.

The several elements of cost of service derived in Exhibit 84 are summarized in Table VI above, and these costs represent the combined cost of PW&P, STCo and SHWP for all service rendered by those companies in Pennsylvania and Maryland. We now direct our attention to that service rendered by respondents within Pennsylvania alone. This service covers the special facilities and capacity and energy furnished to Metropolitan Edison, Pennsylvania Power & Light, Philadelphia Electric and Pennsylvania Railroad. The cost of the service furnished these four customers within Pennsylvania in a normal year as set out in Exhibit 84, is summarized in Table VII as follows:

Table VII
Cost of Service Within Pennsylvania
(from Exhibit 84)

		Normal Year Annual Cost ($1,000)
Firm Power		
Pennsylvania Customers		
Special Facilities (Table VI)	246	
Capacity (Tables III & VI)		
137,000 KW @ $11.94	1,636	
Energy (Tables IV & VI)		
620 million KWH @ 2.998 mills	1,859	3,741
PRR		
Special Facilities (Table VI)	372	
Capacity (Tables III & VI)		
48,000 KW @ $11.94	573	
Energy (Tables IV & VI)		
227 million KWH @ 2.998 mills	681	1,626
Total		5,367

The cost of service being furnished by respondents within Pennsylvania for a normal year as determined in

Exhibit 84, and shown above in Table VII, totals 5,367 thousand dollars. Under existing tariffs respondents' customers are paying for this service, in a normal year, a total of 6,011 thousand dollars. Accordingly, based on the derivations in Exhibit 84, revenues exceed costs by 644 thousand dollars. This information is summarized in Table VIII as follows:

Table VIII

Comparison of Revenues and Costs
within Pennsylvania
(from Exhibit 84)

	NORMAL YEAR		
	Revenues (Present Rates) ($1,000)	Annual Cost (Table VII) ($1,000)	Excess ($1,000)
Firm Power Pennsylvania			
Customers	4,197	3,741	456
PRR (in Penna.)	1,814	1,626	188
Total	6,011	5,367	644

From this it would appear that existing revenues for service within Pennsylvania, as furnished by respondents, should be reduced 644 thousand dollars, annually, and the respondents would still be provided a return of 6.8 per cent on the undepreciated original cost rate base of the facilities utilized by PW&P and STCo in furnishing service within Pennsylvania and a return of 6¼ per cent on the undepreciated original cost rate base of facilities utilized by SHWP in furnishing service within Pennsylvania; such amounts of return being offset by 3 per cent on what PW&P considers to be "adequate" depreciation reserves applicable to such original cost figures. Such reduced revenues, in addition to providing the above described amounts of return, would fully reimburse the three companies for all elements of operating expenses, depreciation expense

and income taxes attributable to the service furnished within Pennsylvania.

We are here in this order fixing temporary rates in accordance with Section 310 of the Public Utility Law. The orders by which this proceeding was instituted specifically included consideration of the imposition of such temporary rates.

This proceeding has been pending since 1944, and the record now contains adequate information upon which we can base temporary rates. Exhibit 84 itself indicates, on an undepreciated original cost rate base, that a reduction in charges should be made for service rendered in Pennsylvania. To delay until the final completion of the record in this proceeding works an injustice upon the customers in Pennsylvania taking service from respondents and accordingly the imposition of temporary rates is indicated and is in order.

Section 310 of the Public Utility Law provides that we may, if it is our opinion that the public interest so requires, prescribe temporary rates pending final determination of a rate proceeding, and that such temporary rates shall

> "be sufficient to provide a return of not less than five per centum upon the original cost, less accrued depreciation, of the physical property (when first devoted to public use) of such public utility, used and useful in the public service, and if the duly verified reports of such public utility to the commission do not show such original cost, less accrued depreciation, of such property, the commission may estimate such cost less depreciation and fix, determine, and prescribe rates as hereinbefore provided."

From this it is noted that temporary rates are authorized to provide a return of as low as 5 per cent upon depreciated original cost of the physical property used and useful in the public service. PW&P contends for a return

of 6.8 per cent on undepreciated original cost rate base for PW&P and STCo and 6¼ per cent on undepreciated original cost rate base for SHWP, partially offset however by a credit of 3 per cent on what PW&P contends are "adequate" depreciation reserves applicable to original cost. While contending for these rates of return, Exhibit 82 sets forth a return on undepreciated original cost of SHWP of but 5.6 per cent. For the purposes of fixing temporary rates, we shall provide a return of 6 per cent on the depreciated original cost rate base as hereinafter defined. In fixing such a return we are well above the minimum prescribed in Section 310 of the Public Utility Law quoted above in part.

The depreciation reserves on the books of PW&P and STCo approximating nine million dollars are described in the record as ". . . an amount which has been accumulated in the depreciation reserve out of the Companies' past operations." Opposed to this PW&P estimates that an "adequate" reserve for PW&P and STCo as of December 31, 1947 totals six million dollars of which 5,160 thousand dollars is for PW&P and 840 thousand dollars is for STCo. For SHWP the book depreciation reserve of 2,399 thousand dollars is considered by PW&P to be an "adequate" reserve as of December 31, 1946. As set out above in Table I, these "adequate" reserves become as of December 31, 1947, 5,602 thousand dollars for PW&P, 976 thousand dollars for STCo and 2,727 thousand dollars for SHWP.

While PW&P contends that the depreciation reserves on the books of PW&P and STCo are more than is considered adequate, they are stated to be something which has been accumulated out of the operations of those two companies. To this extent the actual reserve represents a return of capital by the customers through the medium of payment of charges for services received from the utilities. The same comment would appear to apply to the book reserve of SHWP. These are the reserves which appear on

the books of respondents and STCo and with respect to respondents are the figures in the annual reports of those utilities to us. However, at this time we shall not resolve the question of accrued depreciation but shall use the "adequate" reserves as contended for by PW&P, rather than the book reserves.

The original cost of PW&P and SHWP as set out in the record has not been reviewed by us or accepted for accounting purposes under our original cost requirements. Accordingly, we are in no position to state whether the original cost is as it will be determined finally. However, we shall use the figures as submitted by PW&P, which are summarized above in Table I, and we will combine them with the "adequate" depreciation reserves as of December 31, 1947 and as in Table I, in the preparation of Table IX which follows. In this table we allow a return of 6 per cent on the depreciated original cost rate base.

Table IX

Allocation of Rate Base, "Adequate" Depreciation Reserves and Return
(by Commission)

	PW&P ($1,000)	STCo ($1,000)	SHWP ($1,000)

PRR in Penna.	55	6	76
in Md.	42	20	31
Baltimore Co.	65	257	—
Totals	1,612	296	1,676

Note: (1) Return is 6% on Original Cost less "Adequate" Depreciation Reserves.

Because of reduced return occasioned by a lower rate base and a lower rate of return, we have decreased the allowances for income taxes as appear in Exhibit 84. With respect to the subject of income taxes it is to be noted that at the present time, by reason of the form of contract which respondents have with Baltimore Company, Federal Income Tax is at a lower rate than would be experienced if the companies did not have this contractual arrangement. The Federal Income Taxes set out in Column 6, page 5 of Exhibit 84 are based upon the higher rate. While we have calculated the Federal Income Taxes at the higher rate it is to be noted that such taxes will not be experienced while the present contracts with Baltimore Company continue in force. We leave this point for the final determination in this proceeding.

Using the same operating expenses and depreciation expense for the three companies as in Exhibit 84 and summarized above in Table V, the income taxes as above described and the return as set out in Table IX, we summarize below in Table X, eliminating all intercompany transactions, the annual cost of furnishing service by respondents and STCo.

Table X

Annual Costs

(*eliminating intercompany transactions*)

(by Commission)

	Normal Year Annual Cost ($1,000)
PW&P	
Operating Expenses	3,234
Depreciation Expense	354
Income Taxes	661
Return (Table IX)	1,612
Total for PW&P	5,861
STCo	
Operating Expenses	435
Depreciation Expense	72
Income Taxes	112
Return (Table IX)	296
Total for STCo	915
SHWP	
Operating Expenses	876
Depreciation Expense	352
Income Taxes	776
Return (Table IX)	1,676
Total for SHWP	3,680
Total for the three companies	10,456

Following the same allocation principles used in Exhibit 84, the annual costs as shown in Table X are allocated to the respective uses made of the several parts of the plant of respondents and STCo with resultant figures as summarized below in Table XI. It is noted that compared with capacity costs of $11.94 per KW per year and energy costs of 2.998 mills per KWH as in Exhibit 84, summarized above in Table VI, our findings are $10.65 per KW per year and 2.742 mills per KWH. Costs for special facilities are reduced in our findings as compared with those in Exhibit 84 and as in Table VI.

Table XI

Allocation of Annual Cost—Normal Year

(by Commission)

	PW&P ($1,000)	STCo ($1,000)	SHWP ($1,000)	Total ($1,000)	Adjusted Total ($1,000)
Production & Common					
Capacity	1,805	15	1,717	3,537(2)	3,537(2)
Energy	2,883	17	1,716	4,616(1)	4,588(1)
Special Facilities					
Penna. Customers	211	—	—	211	211
PRR in Penna.	145	17	174	336	336
in Md.	114	53	73	240	240
Baltimore Company	159	813	—	972	972
Interchange	544	—	—	544(1)	572(1)
Totals	5,864	915	3,680	10,456	10,456

Notes: (1) 10 million KWH of hydro and PW&P steam energy sold as interchange reduces 4,616 to 4,588(3) and increases 544 to 572.

(2) The 3,537 of capacity cost for 332 thousand KW from Table III above results in a form (sic) [firm] capacity cost of $10.65 per KW per year.

(3) The 4,588 energy cost as above in footnote (1) for 1,673 million KWH as in Table IV above results in a unit cost of energy of 2.742 mills per KWH.

These are the costs of rendering service by the consolidated system of respondents and STCo. In applying these costs to the service within Pennsylvania to the Pennsylvania customers, namely, Metropolitan Edison, Penn-

sylvania Power and Light and Philadelphia Electric, and Pennsylvania Railroad, the following results, as set out in Table XII. These costs as determined by us of 4,841 thousand dollars compare with the costs as in Exhibit 84 summarized above in Table VII of 5,367 thousand dollars.

Table XII

Cost of Service within Pennsylvania
(by Commission)

		Normal Year Annual Cost ($1,000)
Firm Power		
Pennsylvania Customers		
Special Facilities (Table XI)	211	
Capacity (Tables III & XI)		
137,000 KW @ $10.65	1,460	
Energy (Tables IV & XI)		
620 million KWH @ 2.742 mills	1,700	3,371
PRR		
Special Facilities (Table XI)	336	
Capacity (Tables III & XI)		
48,000 KW @ $10.65	511	
Energy (Tables IV & XI)		
227 million KWH @ 2.742 mills	623	1,470
Total		4,841

A comparison of the revenues for services rendered within Pennsylvania under present contracts and the foregoing costs as determined by us is summarized as follows in Table XIII from which it appears that revenues exceed costs by 1,170 thousand dollars per year for a normal year.

Table XIII

Comparison of Revenues and Costs within Pennsylvania
(by Commission)

	NORMAL YEAR		
Firm Power	Revenues Present Rates ($1,000)	Annual Cost (Table XII) ($1,000)	Excess ($1,000)
Pennsylvania Customers	4,197	3,371	826
PRR (in Penna.)	1,814	1,470	344
Total	6,011	4,841	1,170

Accordingly, we shall direct respondents to file new tariffs for the service rendered by them within Pennsylvania designed to produce for such service in a normal year a total of $4,841,000.

The tariffs shall contain specific charges for special facilities to the respective three Pennsylvania customers totaling 211 thousand dollars, annually, with appropriate clauses providing for changes up or down to meet changes in depreciated original cost rate base of plant utilized for the respective customers and changes in direct operating expenses with respect to those facilities. For Pennsylvania Railroad (in Pennsylvania) the tariffs shall include specific charges for special facilities totaling 336 thousand dollars, annually, apportioned between PW&P, STCo and SHWP as shown above in Table XI for the facilities specifically used in rendering service to the railroad in Pennsylvania, with clauses to modify these figures up or down to meet changes in depreciated original cost rate base of facilities so used and changes in actual operating expenses with respect to those facilities. The tariffs shall be designed to result in an annual charge of $10.65 per KW of demand of the three Pennsylvania customers and Pennsylvania Railroad (in Pennsylvania) for the respective capacities shown in Exhibit 84 for a normal year, and to

result in a charge of 2.742 mills per KWH for the energy for a normal year as in Exhibit 84.

Of the charges made for the service within Pennsylvania, the charges for the special facilities shall be apportioned to PW&P, STCo and SHWP in accordance with the figures set out above in Table XI adjusted in future years with modifications in accordance with the formula used in the preparation of that table.

With respect to capacity charges, distribution among the participants will be 51.03 per cent to PW&P, 0.42 per cent to STCo and 48.55 per cent to SHWP. For energy charges distribution among the participants will be 62.46 per cent to PW&P, 0.37 per cent to STCo and 37.17 per cent to SHWP. These ratios among the three companies, ascertained from Table XI above, represent the proportions attributable to a normal year. These proportions will vary from year to year, but the formula by which they are determined shall be the same formula as used by us in the preparation of the allocation shown in Table XI.

In fixing the temporary rates, as hereinbefore set out, there are several features of this proceeding which at this time we have not resolved. In summary, these features are (a) the original cost of PW&P and SHWP used in this proceeding is as submitted by PW&P and as yet no determination has been made as to whether it meets our original cost requirements. The final determination may be somewhat lower than as contended for by PW&P. (b) PW&P contends for "adequate" depreciation reserves which figures are $3,420,000 less than the book depreciation reserves as of December 31, 1947. (c) We have used a rate of return of 6 per cent on a depreciated original cost rate base. This rate is well above the 5 per cent minimum fixed by The Public Utility Law for temporary rates but is not to be considered the rate which we will finally determine. (d) While we have accepted operating expenses as contended for by PW&P for the three companies in ascertaining system costs, we leave for final determination whether

such operating expenses contain higher than average charges. (e) Likewise have we accepted the depreciation expense as is estimated by PW&P and leave for final determination the propriety of the several amounts. (f) We have accepted the estimates for Federal Income Taxes based upon the filing of individual returns by PW&P and SHWP even though this allowance is upwards of 220 thousand dollars, annually, more than the companies experience under their present contractual arrangement with Baltimore Company.

Thus, it is apparent that temporary rates herein prescribed are well above the minimum required by the Public Utility Law, will assure respondents ample funds to enable them to provide adequate service to their several customers in Pennsylvania and are at such a level as to be considered fair; THEREFORE

IT IS ORDERED: That on or before November 1, 1948, Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation file, to become effective November 15, 1948, tariffs designed to carry into effect our order as above set out, namely, to produce within a normal year the revenue of $4,841,000 for firm power service within Pennsylvania as in Table XII above, together with complete detailed supporting explanation to show that the tariffs will comply with our order.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Complaint Docket No. 14028

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

PENNSYLVANIA WATER & POWER COMPANY

and

SAFE HARBOR WATER POWER CORPORATION

ORDER

By THE COMMISSION, SEPTEMBER 27, 1948:

The Commission on December 5, 1944 instituted an inquiry and investigation into the rates of Pennsylvania Water & Power Company (PW&P) at Complaint Docket No. 14028. Hearings were held in that proceeding and testimony was taken which indicated a coordinated operation and rendering of joint services by PW&P and Safe Harbor Water Power Corporation (SHWP) to their several customers.

Thereafter, on October 6, 1947, the Commission issued an inquiry and investigation into the rates of SHWP and joined SHWP as a respondent at Complaint Docket No. 14028. Hearing was held November 6, 1947 to give SHWP an opportunity to be heard. At the hearing on November 6, 1947, the president of SHWP appeared and recited the division of voting control between PW&P and Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company), and stated that the Board of Directors of SHWP consisted of 10 members, five of whom were nominees of PW&P and five nominees of Baltimore Company, and that irreconcilable differences between the two parent companies made it impossible for SHWP to take any affirmative action at that time.

At said hearing Baltimore Company filed a petition to intervene as a stockholder of SHWP and presented therewith, conditional upon allowance of such intervention, a motion to dismiss the proceedings as to SHWP for want of jurisdiction. By order of May 25, 1948, the Commission permitted Baltimore Company to intervene for the sole purpose of questioning this Commission's jurisdiction and fixed July 16, 1948, for filing of briefs and oral argument. At said oral argument, counsel for PW&P appeared in opposition to the motion to dismiss. Thus, the matter is now before the Commission on the question of our jurisdiction over the rates and charges of SHWP.

Baltimore Company's motion to dismiss is based upon two principal arguments

1. The Federal Power Commission instituted its own proceeding against the rates and charges of SHWP on September 1, 1944, and, on November 4, 1946 issued its order reducing said rates and charges. SHWP has presently pending an appeal from said order taken to the Circuit Court of Appeals of the United States for the Third Circuit, which appeal has not been heard or disposed of, and the FPC order is presently in full force and effect.

2. The exercise by the FPC of jurisdiction over the rates and charges of SHWP excludes any state regulatory power or jurisdiction thereover so long as the exercise of such jurisdiction by the FPC is in full force and effect, and the courts of Pennsylvania and a fortiori the Public Utility Commission have no power to review such FPC action either directly or collaterally.

In support of these contentions, Baltimore Company's brief contains references to various cases, which, in our opinion, do not control the present situation.

We do not believe that a sovereign state must appear before a federal administrative agency to determine whether its law or a related federal law governs a given situation. Nor can the decision of a federal administra-

tive agency in interpreting a state statute be considered binding upon the state. We feel that these principles of law are basic and founded in the long established division of powers between state and federal governments.

We have asserted jurisdiction over the rates of SHWP and PW&P according to the powers and duties imposed upon us by the Pennsylvania Public Utility Law. The field in which we have acted is intrastate commerce, and the FPC cannot, by its mere assertion, oust our jurisdiction. The Federal Power Act does not confer such jurisdiction upon the FPC, and it would be unconstitutional if it did so. We are of the opinion that the attempt of the FPC to exercise jurisdiction over SHWP does not deprive this Commission of its jurisdiction, nor does it prevent us from exercising jurisdiction over the rates and charges of SHWP in our own proceeding.

SHWP was created under the laws of the Commonwealth of Pennsylvania. On February 11, 1929, at Application Docket No. 17675, the Pennsylvania Public Service Commission issued a certificate of public convenience approving the incorporation, organization and creation of Safe Harbor Water Power Company (sic) [Corporation] for the purpose of supplying, storing and transporting water and water power for commercial and manufacturing purposes in the Township of Manor, Lancaster County, Pennsylvania. On December 23, 1929, the Commission issued a certificate of public convenience at Application Docket No. 21579, approving the consolidation and merger of Safe Harbor Water Power Company [Corporation] and Chanceford Water Power Corporation, forming a new corporation to be known as Safe Harbor Water Power Corporation.

Following the issuance of the aforementioned certificate of public convenience, SHWP was granted authority by the Public Service Commission to acquire land located in York and Lancaster counties, Pennsylvania, by eminent domain proceedings, in some 49 separate cases.

Subsequently, the Public Service Commission approved several transactions involving the sale of real estate owned by SHWP to various parties, and the Public Service Commission, further, gave permission to SHWP to keep its books, records and accounts in its office in Baltimore, Maryland. SHWP has filed annual reports with this Commission and its predecessor, the Public Service Commission, continuously since the year 1930. It has paid annual assessments, commencing from the time said assessments were first begun by the Public Utility Commission in 1937.

It has kept its tariffs on file in accordance with Commission rules. As a certificated public utility, SHWP has complied with the various rules and regulations of the Commission with respect to its rates and charges and the filing of various reports, tariffs and other data required from time to time.

SHWP owns and operates a hydroelectric power development at Safe Harbor, Pennsylvania, on the Susquehanna River. It is solely a hydroelectric development, having a presently rated capacity of 230,000 kw. Its plant is electrically connected only to the primary inter-connected transmission system of PW&P at Safe Harbor. SHWP's stock has been owned only by PW&P and Baltimore Company, with 50 per cent of the voting stock being owned by each of said companies.

From a review of the facts on record, it is apparent that SHWP is a Pennsylvania Corporation with all of its facilities in Pennsylvania, filing tariffs with this Commission and rendering electric services in Pennsylvania. Furthermore, it is clear that the electric services of SHWP rendered to Pennsylvania customers for resale in Pennsylvania and directly to the Pennsylvania Railroad Company in Pennsylvania is intrastate commerce. Although SHWP admittedly does interstate as well as intrastate business, the two types of service are readily separable for the pur-

poses of regulation. Ample evidence appears of record for us to make such separation.

The record discloses an integrated and coordinated system operated by PW&P and SHWP, and since these unified operations result in intrastate commerce in Pennsylvania this Commission is bound to exercise jurisdiction over such intrastate activities.

From its inception, SHWP has been subject to the jurisdiction of this Commission as fully and completely as could be possible under any circumstances. Any attempted exercise of jurisdiction by any other agency, whether state or federal, over the rates and charges of SHWP, could have no effect to oust the jurisdiction of this Commission. The rates and charges for the output of electrical energy sold in Pennsylvania by SHWP are subject to our jurisdiction.

After consideration of the motion to Baltimore Company to dismiss the proceedings as to Safe Harbor Water Power Corporation, we are of the opinion that the said motion should be denied; THEREFORE,

IT IS ORDERED: That the motion of Consolidated Gas Electric Light and Power Company of Baltimore to dismiss the proceedings at Complaint Docket No. 14028 against Safe Harbor Water Power Corporation be and is hereby denied,

EXHIBIT F TO PETITION FOR REVIEW.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman; Thomas C. Buchanan, Claude L. Draper, Leland Olds and Harrington Wimberly.

January 31, 1949

In the Matter of
Pennsylvania Water & Power Company } Docket No. IT-5915

ORDER GRANTING STAY.

On January 18, 1949, Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, respondents in the above-entitled proceeding, filed an application for a stay of the effective date of the Commission's order entered January 4, 1949, and issued January 5, 1949. On January 25, 1949, the Public Service Commission of Maryland advised this Commission of its opposition to respondents' application.

The respondents request that the effective date be stayed "for a period of thirty days from February 1, 1949, or until such time as the Commission shall act upon the Application for Rehearing which will be filed" by respondents, "plus an additional period of sixty days thereafter, being the statutory period allowed" for respondents "to obtain a review" of the Commission's order.

Subsequently, on January 28, 1949, the respondents filed their application for rehearing as to the order issued January 5. That application we retain under consideration at this time.

The rate reduction was made effective February 1, 1949. Respondents now allege that they will "sustain and

suffer serious, substantial, and irreparable injury, loss and damage" unless the operation of the Commission's order is stayed. The "injury, loss, and damage" refers to the difference between the revenues respondents will receive under the terms of the Commission's order and the revenues respondents would receive if the Commission's order were not effective.

Respondents further assert that in the event the Commission's order is set aside respondents will have lost forever the revenues they would have been authorized to collect at the higher rates. Respondents say that this result will follow because "the Commission has no authority and can make no provision for the recouping by and reimbursement to" the respondents "of the very substantial loss" they will have sustained "without means of recouping such loss."

We do not agree with this view which implies that we may only stay our orders unconditionally. If that were so, that fact would be a sound reason for denying a stay because such a stay would permit respondents to continue to charge rates which we have held to be unreasonable and to retain the excessive revenues as though our order had never been entered, even though it may ultimately be affirmed by the courts. To do that would make our use of the stay power an instrument for accomplishment of the very result which it was the purpose of the Act to prevent when it provided in Section 205 that such rates as are here involved "shall be just and reasonable and any such rate or charge that is not just and reasonable is hereby declared to be unlawful" and in Section 206 that we should determine the just and reasonable rate "to be thereafter observed and in force." We believe that our power to grant or deny a stay necessarily carries with it the power to grant the stay on such conditions as will maintain the status quo and save respondents harmless if and to the extent our order may be set aside or modified, and protect the interests of those entitled to the benefits of the rate

reduction from and after February 1, 1949, if and to the extent our order is affirmed.

Furthermore we think it clear, and we find that the condition hereinafter prescribed is necessary and appropriate under Section 309 of the Federal Power Act to carry out the provisions of that Act.

The Commission therefore *orders:*

The effective date provided for in the order issued January 5, 1949, be and the same hereby is stayed, but only upon the condition hereinafter provided, pending expiration of the period in which the application for rehearing thereon may be acted upon and petition for judicial review may be filed. Such stay shall be upon condition that the difference between the payments received by respondents under existing rates or arrangements and those which would be required under the Commission's order issued January 5, 1949, during the period of the stay, together with earnings thereon, shall be clearly earmarked, separately accounted for and retained by respondents in a segregated reserve solely for the purposes hereinafter specified. If and to the extent that the Commission's order issued January 5 shall finally become effective, respondents shall pay such difference, together with the earnings thereon, to customers, in the proportions their payments would have been reduced if the Commission's order had not been stayed, for the benefit of the ultimate consumers, or such other persons as may be shown to be entitled thereto. If and to the extent that the Commission's order shall be modified or set aside on rehearing or review, such difference, together with the earnings thereon, shall be freed of the restrictions hereby imposed.

By the Commission.

[1]* UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

In the Matter of Pennsylvania Water & Power Company	Docket No. IT-5915

OPINION NO. 173-A

By THE COMMISSION:

Applications for rehearing on our Opinion No. 173 and order, issued January 5, 1949, were filed January 28, 1949, by the Respondents, Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, and on January 31, 1949, by the Intervenor, Pennsylvania Public Utility Commission. The Respondents' application objects to virtually every statement, finding and requirement of that opinion and order. With few exceptions, those objections simply repeat the arguments advanced during the course of the hearings and in the briefs filed subsequently to the close of the hearings. No useful purpose would be served in setting them forth here again. We considered them carefully and fully before issuing our original opinion and order and we do not believe they offer any basis for a rehearing.

The objections presenting new points have also received our careful consideration. Thus Respondents properly call our attention to the fact that we omitted to find, in the language of Sections 20 and 206, that Penn Water's existing rates and charges to Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison are "unjust" and "unreasonable". That was an inadvertence as indicated by the fact that, in sub-

* Figures in brackets represent page numbers of opinion in typewritten form.

stance, we found the existing rates and charges to those Pennsylvania customers (Finding No. 34) exceed a reasonable cost of service. For that cost of service [2] includes an allowance of a fair return, based upon the fair rate of return, which we found to be 5¼%. We will, accordingly, amend our order issued January 5, 1949, to include this finding in specific statutory terms.

None of the other new points made by Respondents has substantial merit, although one of them may warrant a further modification of our order by inclusion of an additional finding.

Thus Respondents assert that the Commission "has no jurisdiction, authority, or power to issue and enforce" its order issued January 5, 1949, because the order requires the new schedule of rates and charges "to be effective within a period of less than thirty days from the date of issuance of such Order, contrary to the requirements of Section 20 of the Federal Power Act insofar as such Section makes applicable the provisions of Section 15 (2) of the Interstate Commerce Act"; and because, it is contended, the hearing and the Commission's findings regarding the unreasonableness of Penn Water's rates and charges are not in accordance with the requirements of Section 15 (1) of the Interstate Commerce Act insofar as the provisions thereof are made applicable by Section 20. (Application for Rehearing, pp. 3, 7-8) Thus by a technicality Respondents seek to postpone yet longer the already long overdue rate reduction.

Not only are these objections inapplicable to the extent that our rate order is viewed as based on our rate-making authority Under Part II of the Act, but they are also without merit even to the extent that our order is viewed as based upon Part I of the Act. [3] *Pennsylvania Power & Light Co. v. Federal Power Commission*, 139 F. 2d 445, 453 (C. C. A. 3), *cert.* denied 321 U. S. 798; *Safe Harbor Water Power Corporation v. Federal Power Commission*, 124 F. 2d 800 (C. C. A. 3), *cert.* denied 316 U. S.

663. In the first case, the Court held that a licensee has no vested right in a procedural provision of Part I of the Act, and in the second, that the review provisions of Part I were repealed by the later enactment of the conflicting review provisions of Part II. While Section 15 (2) of the Interstate Commerce Act, referred to in Section 20 of the Federal Power Act, provides that orders shall take effect within not less than thirty days, all orders of this Commission (including those issued under Section 20) are now governed by the subsequently enacted Section 309, which provides:

> "Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe."

Furthermore, insofar as the objections stated above rest on the provisions of Section 15 (1) of the Interstate Commerce Act, we fail to perceive the significance of the objection or that the practice and procedure followed in this case were not in accord with the terms of that Section. The procedural provisions of that Section, insofar as they appear to be relevant, only stipulate that a rate order may be entered "after full hearing" and appropriate findings. Respondents have had ample notice of the issues and a full hearing with opportunity to adduce evidence, cross-examine and argue. They also have had full opportunity to point out specifically any deficiencies [4] in our findings. If some other objection is intended, Respondents' references to Section 15 (2) and 15 (1) are too unspecific, vague and indefinite to be susceptible to any more detailed consideration, and in either event, must be over-ruled.

In their Application for Rehearing, Respondents also allege "that since the record before the Commission was closed there have been substantial changes in the operations and contracts of Petitioner Penn Water, * * * so that the bases for the said Order and for many of the findings, conclusions, and requirements * * * are destroyed and * * * are not in accord with the facts and the law" (page 2

of Application for Rehearing). On the basis of the claimed changes exception is taken to many of the Commission's statements and findings as no longer true, if ever true. (E. g., see pages 46, 47, 58 of Application for Rehearing.)

More particularly it is alleged in the Petition for Rehearing that since the record has been closed the agreement of December 31, 1927, as supplemented, between Penn Water and Baltimore Company has been terminated by Penn Water; that Penn Water has notified Baltimore Company that it was ceasing to receive from the latter and ceasing to pay for any electric energy or capacity generated in Maryland, or elsewhere, and transmitted across the Maryland State line into Pennsylvania; that the operations of the Respondents were being changed to effect that purpose; that if given the opportunity they will prove the fact of such termination; that the contract was null, void and unenforceable; that Baltimore Company has committed material [5] breaches of the contract which justify its cancellation; and that these matters are now in litigation between Penn Water and Consolidated on Penn Water's complaint for declaratory judgment and other relief before the District Court of the United States for the District of Maryland (pages 10-11, 17-18 of Application for Rehearing).

Similarly, it is alleged that since the record in this proceeding has been closed, Penn Water has notified Safe Harbor and Baltimore Company that the three-party contract of June 1, 1931, between the aforesaid is of no effect, null, void and unenforceable. Respondents state that if afforded the opportunity on rehearing, they will prove the fact of such notification; that the contract was null, void and unenforceable, and that Penn Water credits to the account of Safe Harbor an appropriate and reasonable division of revenues received from Pennsylvania customers served jointly by Penn Water and Safe Harbor, which credits have increased substantially the amounts Penn Water credits or pays to Safe Harbor (pages 19-20, 39, 45 of Application for Rehearing).

The contracts which Penn Water by the *ex parte* action thus alleged has sought to terminate are the fifty-year foundation contracts referred to in our former opinion. Under those contracts the steam and hydroelectric generating capacity and transmission facilities of Baltimore Company, Penn Water, Susquehanna, and Safe Harbor, were designed and constructed, and for up to 17 years and more operated, so as to achieve close integration and coordination [6] among all of the companies. We pointed out in our opinion that such pooling of Baltimore Company's steam capacity with the hydro capacity of the other companies resulted in a much more economical supply of the combined power requirements of all the companies, including supply to Pepco in the Washington area.[1]

Penn Water has consistently in its representations to its stockholders and to regulatory authorities explained and emphasized the results and importance of the pooling arrangements. Thus in its 1941 Report to Stockholders it said:

> "Coordinated operation of this pool of power means that each member not only has available in emergency the combined resources of the interconnected systems, but also derives through daily and seasonal interchange arrangements the benefit which arises from the use of the most economic sources of generation for supplying the power requirements of the pool. A further benefit flows from the possibility of planning generating-capacity additions of the most economic type and size with consequent reduction in the amount of unused reserve capacity that would occur were the systems uncoordinated. Thus the regional transmission network of the Pennsylvania Water & Power Company has multiple purposes, and energy continually flows in, across, and out of it as

1. See Opinion No. 173, p. 17, for some of the most pertinent language from one of the contracts.

the needs of the interconnected members develop from minute to minute and day to day."

• • •

"The System had its origin 32 years ago.

"It arose from the necessity of finding a solution to the problem of providing, without large and expensive reservoirs, a uniform supply of power while utilizing the unharnessed energy of a drainage [7] area subject to severe droughts and floods. The average daily flow at Holtwood has varied from as little as 1700 cubic feet per second up to 756,000 cubic feet per second since the Company began operations. Nevertheless, out of this difficult situation, an important and reliable power pool has been developed.

"The answer to the problem was combined hydro and steam supply; not the substitution of hydro for steam, but from the outset the integration and coordination of hydro and steam in the planning for the capacity needed and in the operation and maintenance of the facilities."

• • •

"Favorably located in regard to harnessing the river, the Holtwood plant is also strategically situated for serving through short transmission lines the major load centers of one of America's chief industrial and agricultural regions.

"Through long range planning and cooperation with its customers—cooperation which found expression in the design as well as the operation of the plants—the Company so developed its transmission system that from the original transmission line to provide standby steam or supplementary hydro power, as the needs might be, there evolved a comprehensive network supplying power and interchanging power on a regional basis for utility companies supplying a

population of 2,600,000 in the 4,600 square mile area served by the interconnected companies.

"This network is wholly within the two adjoining states of Pennsylvania and Maryland, the supply to Washington being over an interconnection with the Potomac Electric Power Company's own system near the District of Columbia line."

Repeated statements to the same effect have been made by Penn Water's officers and witnesses in the record in this proceeding, with substantiating detail.

By the terms of those contracts the installation of additional facilities by Penn Water is subject to approval by Baltimore [8] Company,[2] to assure coordinated planning and investment to meet the growing power needs of the system as a whole with resulting additional economies and consumer benefits.

The regional integration and coordination of facilities, the resulting economies, and the utilization and conservation of natural resources thus achieved are precisely what was sought to be encouraged and fostered by the Federal Power Act and established as a part of the criterion of the public interest to be served by regulation thereunder (Cf. Section 202 (a)). If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions. In our opinion and order we took care to leave the continuation of the operation of the integrated and in-

2. Thus Article V of the June 1, 1931, amendment to the December 31, 1927 agreement reads:

"So far as possible consistently with the performance of any duty or obligation aforesaid, Power shall obtain the approval of Electric (1) before incurring any single commitment for investment (except for renewals or replacements) in excess of $50,000.00 on the basis of which Electric shall make payment under Article III (b) hereof, and (2) before alienating or disposing of in any one year any property, plant, or equipment, other than stores and construction equipment, having a total value in excess of $50,000.00 and included in the investments of Power and/or subsidiaries of Power in plant, property or power development devoted to the generation, transmission, or distribution of electrical power and energy."

terconnected system in full effect, merely changing the rates, as shown by our statement wherein we specifically stipulated that

[9] "The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. That arrangement will, therefore, be continued with, however, such modifications as are necessary to accomplish the reductions mentioned above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company."

Now, by the changes referred to in Penn Water's application for rehearing, all of the carefully built-up benefits of pool design, investment, construction and operation apparently are intended to be sacrificed by Penn Water. Penn Water's non-receipt of steam generated energy from outside Pennsylvania for sale to resale customers would destroy the pool economies under the established method of operation.

We have heretofore recognized, in cases not involving regulation of rates or service, that, conformably to its contract obligations, a company which is subject to regulation as a "public utility" under the Federal Power Act, may terminate the operations which cause it to be such a "public utility" and remove itself from such regulation (The Connecticut Light and Power Company, Opinion No. 151, Docket No. IT-5665, decided May 28, 1947). Here, however, interstate operations, insofar as they involve the transmission and sale at wholesale of electric energy transmitted from Pennsylvania and consumed at points in Maryland or the District of Columbia, are not alleged to have been terminated and no new question is raised by any of the changes as to our jurisdiction over such operations or over the Respondents.

[10] Furthermore, our rules (Section 35.5) require that when a rate or service which has been filed with the Commission, as these foundation contracts have been, "is proposed to be cancelled and no new rate schedule is filed in its place * * * each public utility required to file the schedule shall formally notify the Commission of the proposed cancellation" 30 days in advance and shall submit a statement of the reasons therefor and that notice has been served upon the other parties to the schedule or contract. A copy of such notice to the Commission is required to be duly posted.

Compliance with filing requirements is particularly important in a case like the present where the filings cover, not a single sale and delivery by one party to the other, but interchange of energy and capacity between and among the parties to the contracts and numerous other obligations and rights which are required to be filed as changes under Section 35.3 (c).

In this case refusal of Penn Water to receive energy originating outside of Pennsylvania from Baltimore Company would not be merely a termination of the purchase and sale of that energy (i. e., a cancellation subject to Section 35.5 of the Rules) but would constitute a change in rates and service in several aspects which cannot be accomplished except in compliance with requirements prescribed under Section 205 of the Federal Power Act. (1) It substantially changes the consideration to be paid by Baltimore Company for the energy received by it from Penn Water and Safe Harbor (i. e., effects a change in rate required to be filed under Section 35.3 of our Rules). [11] (2) It will remove the Baltimore Company's outlet for surplus steam generated power heretofore supplied by it to Penn Water whereby it has been enabled to make fuller use of its generating facilities and achieve substantial economies (i. e., effect a change in that service, required to be filed under Section 35.3 of our Rules). (3) It may affect the service to Baltimore Company by impairing Penn

Water's ability to provide peaking capacity in low water seasons when its non-receipt of out-of-state steam generated energy from Baltimore Company may force it to draw down its pond in off-peak hours in order to supply the power needs of its Pennsylvania customers, thereby leaving insufficient water in its pond to operate at full capacity during peaking hours so as to serve Baltimore Company's needs for peaking capacity (i. e., effect a change in service also required to be filed under Section 35.3 of our rules). (4) It will affect the contractual rights of Baltimore Company to maintenance of long-term assured capacity and supply of energy under conditions of coordinated planning, design and construction of additional generating and transmitting facilities to take care of its load growth (i. e., effect a further change in the effective rate to the Baltimore Company, a change also required to be filed under Section 35.3 of our rules).

If such changes insofar as they affect rates charged Baltimore Company by Penn Water are to be legally effectuated under Section 205 (d) of the Act, that can only be done by filing as prescribed in our rules. This will afford 30 days opportunity for examination [12] of the changes before they become effective. If questionable, they are subject to suspension pending hearing and decision, under Section 205 of the Act. If at such a hearing it should appear that the changed rates to Baltimore Company are unjust or unreasonable (as a result of Penn Water's failure to utilize the more economical modes of operation previously followed or for any other reason), or that they are unduly discriminatory or preferential (because of an unreasonable difference between localities, or otherwise), the Commission may refuse to permit them to become effective insofar as they cover the services continued to be rendered by Penn Water to Baltimore Company.

Insofar as such changes affect service, compliance with the Rule referred to would enable the Baltimore Company, the Maryland Public Service Commission, or any other in-

terested electric utility or state commission, before such changes are put into effect to make application under Section 202 (b) for an order "to sell energy * * * or exchange energy" from and after the time of the proposed change or termination of service, or a complaint under Section 207 as to the adequacy of the service to be rendered.

None of these alleged changes having been made or proposed in the only way they could lawfully become effective, Respondents are in no position in this or any other proceeding to urge any objection or claim in reliance thereon. An unlawful attempt to avoid putting into effect the rate reduction we ordered affords no valid basis for objecting to that order.

[13] The only other alleged change since the record was closed is Respondents' offer to prove, if given an opportunity to do so on rehearing, that since the close of the record the Pennsylvania Commission has issued a rate order against Penn Water and Safe Harbor which is in conflict with this Commission's rate order (pages 39, 60 of Application for Rehearing). We do not perceive how that fact, if shown, would alter any of the grounds for our determination of our jurisdiction.

Furthermore, there is no allegation by Respondents in their application for rehearing that any of the changes occurred after the issuance of the order, or that they are of continuing effect. If they occurred before our order was issued Respondents cannot, on the allegations they have made, complain in this proceeding of our failure to hear matters which they failed to bring to our attention by timely application.

The failure to allege that the changes continue may be of consequence. If necessary we might notice the Pennsylvania Commission has been temporarily enjoined by the District Court of the United States for the Middle District of Pennsylvania in *Consolidated Gas Electric Light and Power Company of Baltimore v. John Siggins, et al.*, Civil Action No. 3274, from enforcing the order of that Com-

mission to which Respondents' allegations refer, and the companies subject thereto from complying therewith; also that the changes in operations sought to be put into effect by Respondents here have been temporarily enjoined by the District Court of the United States for the District [14] of Maryland in *Pennsylvania Water & Power Company v. Consolidated Gas Electric Light and Power Company of Baltimore,* Civil Action No. 4179, which is, presumably, the case referred to in Respondents' Application for Rehearing.

Finally, Respondents assert that the rate base does not conform to the requirements of Section 3 (13) of the Act. Although they do not specify in which respects, if any, that is true, we may point out that the standard for rate-making under Part I, which is found in Section 20, prescribes the customary statutory standard ("reasonable, nondiscriminatory and just") which the Supreme Court has construed to free the regulatory commission from adherence to any particular formula. *E. g., Federal Power Commission v. Natural Gas Pipeline Co.,* 315 U. S. 575; *Federal Power Commission v. Hope Natural Gas Co.,* 320 U. S. 591.

We have heretofore, in another proceeding (*Safe Harbor Water Power Corporation,* 5 F. P. C. 221) had occasion to deal with a contention that our deduction of accrued depreciation in computing a rate base was improper because Section 3 (13) defines "net investment" as "actual legitimate original cost" minus "aggregate credit balances of current depreciation accounts" "if and to the extent • • • accumulated during the period of the license from earnings in excess of a fair return on such investment". If such a contention is intended by the general allegation here made, it must be rejected. What we have already said concerning the controlling provisions of Section 20 is a complete answer to such contention. Moreover, even [15] if Section 3 (13) applied, it would apply only "during the period of the license", which in Penn Water's case begins January 1, 1938 (*Metropolitan Edison Co. v. Federal Power*

Commission, 169 F. 2d 719, 723 (C. C. A. 3)), and from 1938 through 1946 Penn Water has earned all of its recurring operating expenses, including depreciation and taxes, plus a fair return.

This is convincingly shown by the evidence in the record. During the years 1938 to 1945, inclusive, Penn Water earned an average return on its net investment (including working capital) of 10.4%. The returns earned ranged from 9.9% in 1943 to 11.8% in 1938.[3] It is therefore evident that during the period 1938 to 1946 Penn Water earned more than a fair return after depreciation, taxes, and all operating expenses. Because the license period begins with 1938 we confine our finding to those years.

If the Respondents here intend by their reference to Section 3 (13) to urge any other contention, we reject it for the further reason that it is not urged with sufficient particularity to be considered.

[16] The Pennsylvania Public Utility Commission's application for rehearing is based upon contentions which involve matters already carefully considered by this Commission and discussed in Opinion No. 173. Further consideration of these matters will serve no useful purpose. The Pennsylvania Commission's application will, therefore, be denied.

There is one respect in which our stay order of January 31, 1949, should be modified to facilitate the discharge of our duties in enforcing the provisions of the Act, and that is to require filing of certified copies of the bills rendered by Respondents to Metropolitan Company, Philadel-

3. These returns have permitted Penn Water after depreciation, to meet the interest and dividend requirements on its outstanding bonds and preferred stock and have provided an average return during the same period of 19.1% on the adjusted common stock equity (a high of 21.7%, in 1942, and a low of 17.6% in 1939 and 1940). The dividends paid on common stock during the period 1938 to 1945, inclusive, averaged 15.4% on the adjusted common stock equity. These common stock earnings may be compared to the earnings price ratios of the common stocks of fourteen typical electric operating companies during the period 1940-1945, inclusive, which the record shows ranged from a low in November, 1945, of 5.09% to a high of 12.92% in March, 1942, the average being 7.9%. The range of the medial four of six electric utilities used by Respondents' own witness Foster was a low of 5.16% in November, 1945, to a high of 11.20% in May, 1942, with an average during this period of 7.6%.

phia Company, PP&L, and Baltimore Company while the stay we ordered is in effect, and certified copies of the journal entries effectuating compliance with the conditions of the stay order.

Appropriate findings and order will be entered in accordance with this opinion.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman; Thomas C. Buchanan, Claude L. Draper, Leland Olds and Harrington Winberly.

February 26, 1949

In the Matter of PENNSYLVANIA WATER & POWER COMPANY	Docket No. IT-5915

ORDER DENYING APPLICATIONS FOR REHEARING, AMENDING RATE REDUCTION ORDER ISSUED JANUARY 5, 1949, AND AMENDING ORDER ISSUED JANUARY 31, 1949, CONDITIONALLY STAYING EFFECTIVE DATE OF RATE REDUCTIONS

Upon consideration of the application for rehearing filed January 28, 1949, by Pennsylvania Water & Power Company and Susquehanna Transmission Company of Baltimore (Respondents), the application for rehearing filed by the Pennsylvania Public Utilities Commission on January 31, 1949, and the record in this proceeding and having this day issued its Opinion No. 173A in this matter, which is incorporated by reference and made a part hereof.

The Commission further *finds* that:

(1) On the basis of a reasonable and proper allocation of the cost of service rendered by Penn Water and Transmission Company, Respondents, as of January 4, 1949, the rates and charges to Philadelphia Company, Metropolitan Company, and PP&L are unjust and unreasonable, the excess over just and reasonable rates for the year 1946 being

approximately $114,311, $26,094 and $80,538, respectively.

(2) The accrued depreciation referred to in finding (26), recorded and to be recorded as there set forth, insofar as it was accrued during the period from 1938 through 1946 was accumulated from earnings in excess of a fair return, and will continue to be so accumulated.

(3) It is necessary and appropriate to carry out the provisions of the Federal Power Act that Respondents be ordered to file certified copies of bills and accounting entries as provided for in paragraphs (B) and (C), below.

The Commission further *orders* that:

(A) The applications for rehearing are denied.

(B) Respondents shall file certified copies of every bill rendered to Philadelphia Company, Metropolitan Company, PP&L, and Baltimore Company for any service rendered during any part of the time the stay ordered January 31, 1949, remains in effect, within one week from the date each such bill is rendered, respectively.

(C) Respondents shall file certified copies of each accounting entry reflecting their accounting for all payments received from Philadelphia Company, Metropolitan Company, PP&L, and Baltimore Company for any service rendered during any part of the time the stay ordered January 31, 1949, remains in effect, and effectuating compliance with the terms of the conditions of that stay, such entries to be filed within one week from the date each such entry is made, respectively, and to be accompanied by such explanation and supporting data as

necessary to show that the steps taken do constitute compliance.

(D) The effective date of this order and Opinion No. 173A is February 26, 1949.

By the Commission.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

In the matter of PENNSYLVANIA WATER & POWER COMPANY	Docket No. IT-5915

APPLICATION FOR REHEARING OF ORDER ISSUED FEBRUARY 28, 1949

(Filed March 11, 1949.)

Pennsylvania Water & Power Company (Penn Water), Respondent and Petitioner herein; being aggrieved on its own behalf by the Order issued by the Commission February 28, 1949; and being separately and independently aggrieved by such Order as the owner of one-half of the Class B voting stock of Safe Harbor Water Power Corporation (Safe Harbor), said Safe Harbor being unable to intervene in this proceeding because of the deadlock in its Board of Directors as set forth in Petitioners' Application for Rehearing of the Commission's Order issued January 5, 1949, filed in this proceeding on January 28, 1949, and Penn Water also being separately and independently so aggrieved as agent for and on behalf of Safe Harbor under the provisions of certain contracts with Pennsylvania Power & Light Company (PP&L) and Philadelphia Electric Company (Philadelphia Company); and Susquehanna Transmission Company of Maryland (Transmission Company), Respondent and Petitioner herein, also being aggrieved by such Order; hereby apply to the Federal Power Commission (Commission) for a rehearing of said Order issued February 28, 1949, as provided by Section 313 (a) of the Federal Power Act (16 U. S. C. § 825-1 (a); 49 Stat. 860) of all of the matters

presented or involved in this proceeding and covered or affected by said Order and the accompanying Opinion No. 173-A; and pray that said Order and Opinion, the Commission's Order issued January 5, 1949, and the accompanying Opinion No. 173, be abrogated, vacated, set aside, and reversed because of the matters erroneously decided, the errors with respect thereof, and the objections of Petitioners to said Opinions and Orders to wit: Petitioners respectfully show that in said Opinion No. 173-A and said Order issued February 28, 1949, the Commission erroneously decided each and all of the following matters and committed each and all of the following errors, and Petitioners object to said Opinion and Order because of each and all of said matters erroneously decided and said errors for each and all of the following reasons:

I

The application of Petitioners for rehearing of the Commission's Order issued January 5, 1949 was erroneously denied for each and all of the reasons specified in Petitioners' Application for Rehearing of Order issued January 5, 1949, filed herein on January 28, 1949; and by reason of the new facts of continuing effect stated in such Application as offers of proof, and as stated herein.

II

Insofar as any of the statements in the Commission's Opinion No. 173-A, dated February 26, 1949, which was incorporated by reference and made a part of the Commission's Order issued February 28, 1949, purport to be definite findings of fact or conclusions, or anything more than mere illustrative explanations of the Commission's conclusions, each and all of the following portions thereof are erroneous, unconstitutional, unlawful, arbitrary, capricious, contrary to the evidence of record, unsupported by any substantial evidence of record, and operate to de-

prive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States, and results in exercise of authority in excess of statutory jurisdiction, authority, or limitations; and Petitioners seek rehearing on each and every one of the following portions thereof for the reasons and on the grounds as hereinafter stated:

(1) The statements of the Commission on page 1 of Opinion No. 173-A as follows:

> "With few exceptions, those objections [of Respondents] simply repeat the arguments advanced during the course of the hearings and in the briefs filed subsequently to the close of the hearings. No useful purpose would be served in setting them forth here again. We considered them carefully and fully before issuing our original opinion and order, and we do not believe they offer any basis for a rehearing."

on the grounds that:

(a) Such statements are not supported by the record and the Commission's Opinions No. 173 and 173-A and Order issued January 5, 1949 on their face demonstrate the error of such statements.

(b) With particular reference to the objections of Petitioners contained in paragraph II of their Application for Rehearing of Order issued January 5, 1949, filed January 28, 1949, it is apparent on the face of many of such objections that Petitioners had had no prior opportunity to object to or to offer proof of facts in rebuttal of many of the specific statements of the Commission contained in its Order issued January 5, 1949.

(c) Insofar as such statements represent a refusal or failure on the part of the Commission to make a ruling upon each finding, conclusion, or exception presented by Petitioners, or to give the reasons or basis for

its decisions on all of the material issues of fact or law presented on the record, the Commission's Orders issued January 5, 1949, and February 28, 1949, operate to deprive Petitioners of their property without due process of law in violation of the Fifth Amendment to the Constitution of the United States, and without a fair hearing in violation of said Amendment and of the provisions of the Federal Power Act.

(2) The statements of the Commission on pages 1 and 2 of Opinion No. 173-A as follows:

> "* * * in substance, we found the existing rates and charges to those Pennsylvania customers (Finding No. 34) exceed a reasonable cost of service. For that cost of service includes an allowance of a fair return, based upon the fair rate of return, which we found to be 5¼%."

on the grounds as specified in paragraphs III (31) and III (33) of Petitioners' said Application for Rehearing of Order issued January 5, 1949.

(3) The statement of the Commission on page 2 of Opinion No. 173-A as follows:

> "None of the other new points made by Respondents has substantial merit * * *"

on the grounds that such statement is not supported by the record; and Petitioners' said Application for Rehearing of Order issued January 5, 1949, on its face raises new points of substantial merit and contains offers of proof of new facts of continuing effect requiring substantial revision of statements deemed by the Commission to be decisive in its Opinions No. 173 and 173-A, and requiring abrogation of the Commission's Orders issued January 5, 1949, and February 28, 1949; and the Commission failed to consider all of such new points and offers of proof, and failed to make the revisions and changes required thereby.

(4) The statements of the Commission on pages 2 and 3 of Opinion No. 173-A as follows:

"Thus by a technicality Respondents seek to postpone yet longer the already long overdue rate reduction.

"Not only are these objections [objection to failure to make order effective after thirty days' time prescribed by statute] inapplicable to the extent that our rate order is viewed as based on our rate-making authority under Part II of the Act, but they are also without merit even to the extent that our order is viewed as based upon Part I of the Act. * * * all orders of this Commission (including those issued under Section 20) are now governed by the subsequently enacted Section 309, * * *."

on the grounds that:

(a) Such statements are not supported by the record; and there is no substantial evidence of record or findings of the Commission which would support any conclusion that any rate reduction by the Commission is due or overdue.

(b) Section 20 of the Act was re-enacted by the same legislation enacting Section 309 of the Act, so that insofar as rate regulatory orders of the Commission affect licensees under Part I of the Act both the provisions of Section 20 and Section 309 are applicable. The right to interpose the defense that the Commission's Order issued January 5, 1949, did not designate a lawful date for its effectiveness, under the provisions of Section 15 (2) of the Interstate Commerce Act, is not a mere technicality or procedural provision of Section 20 of the Federal Power Act but it is a statutory right of defense enforcing a statutory limitation on the power of the Commission to issue its orders, under Section 309 of the Act, with respect to their effective dates.

(c) Nothing in Section 309 of the Act, as limited by the rights to defenses contained in Section 20 of the Act and the provisions of Section 15 (2) of the Interstate Commerce Act, authorized or empowered the Commission to issue its Order of January 5, 1949, effective on February 1, 1949; and since the effective date designated in such Order is not a lawful one, the order did not become operative and was wholly ineffective and invalid; and no subsequent action by the Commission can lawfully make effective the requirements of such order of January 5, 1949, retrospectively from February 1, 1949, or any other past date, without being in excess of the statutory authority granted by the Federal Power Act and in violation of Section 1, Article III and the Fifth Amendment to the Constitution of the United States.

(5) The statement of the Commission on page 3 of Opinion No. 173-A as follows:

> "Respondents have had ample notice of the issues and full hearing with opportunity to adduce evidence, cross examine and argue."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record and is contrary to the evidence of record; and Petitioners have had no opportunity to rebut with evidence many of the erroneous and unsupported statements of the Commission contained in its Opinions No. 173 and 173-A and its Orders issued January 5, 1949, and February 28, 1949, of which statements Petitioners had no notice until made.

(b) As stated in paragraph I (6) (g) of Petitioners' Application for Rehearing of Order issued January 5, 1949.

(c) The refusal or failure of the Commission to grant a rehearing on each and all of the matters as prayed in Petitioners' said Application for Rehearing of

Order issued January 5, 1949, deprives Petitioners of the hearing required by Section 206 (a) of the Act, by Section 20 of the Act insofar as such Section makes applicable the provisions of Section 15 (1) of the Interstate Commerce Act, and contrary to the provisions of the due process clause of the Fifth Amendment to the Constitution of the United States.

(6) The statement of the Commission on pages 7 and 8 of Opinion No. 173-A as follows:

> "By the terms of those ['foundation'] contracts the installation of additional facilities by Penn Water is subject to approval by Baltimore Company, to assure co-ordinated planning and investment to meet the growing power needs of the system as a whole with resulting additional economies and consumer benefits."

on the grounds that:

(a) Such statement is not supported by any substantial evidence of record.

(b) There is no substantial evidence of record to support any conclusion that maintenance of the "foundation" contracts is essential to the derivation of economies or benefits arising out of coordinated planning and investment or out of pooling arrangements, or that any of such terms is essential to the encouragement or fostering of regional integration and coordination of facilities with resulting economies and the utilization and conservation of natural resources; what evidence there is of record is to the contrary; and if relevant and material to any issues in this proceeding, and if given an opportunity on rehearing, Petitioners hereby further offer to prove that such conclusions are in error, and that the maintenance of such "foundation" contracts results in inability on the part of Penn Water and Safe Harbor to integrate and coordinate their facilities with their Pennsylvania customers, and such integration and coordination is necessary to promote the greatest possible economies and benefits to the public and

achieve the most proper utilization and conservation of natural resources; and maintenance of such "foundation" contracts results in their inability to render adequate and sufficient service to their customers and to freely compete in the generation and rendering of electrical services by reason of the restrictive actions taken by Baltimore Company ostensibly under the terms of such contracts.

(7) The reliance by the Commission, on page 8 of Opinion No. 173-A, on the provisions of Section 202 (a) of the Act as support for continuation of the "foundation" contracts; the illegality of which is about to be determined in the Federal Courts on the ground that nothing in Section 202 (a) authorizes or supports any action by the Commission requiring involuntary interconnection or coordination of facilities for the generation, transmission, or sale of electric energy; and nothing in the Federal Power Act requires or authorizes the Commission to require the continuation of any integration or coordination of such facilities for the purpose of maintaining the Commission's regulatory jurisdiction, or to support any rate regulatory conclusions or order of the Commission; and the Commission has no authority to encourage, foster, or require any arrangements in violation of the public policy or the antitrust laws of the United States or the States.

(8) The statement of the Commission on page 8 of Opinion No. 173-A as follows:

> "* * * the validity of our order is not dependent upon the decision of those questions [decision of the legality of the 'foundation' contracts]."

on the ground that such statement is not supported by the record and is contrary to the record.

(9) The statements of the Commission on page 9 of Opinion 173-A as follows:

> "Now, by the changes referred to in Penn Water's application for rehearing, all of the carefully built-up

benefits of pool design, investment, construction and operation apparently are intended to be sacrificed by Penn Water. Penn Water's non-receipt of steam generated energy from outside Pennsylvania for sale to resale customers would destroy the pool economies under the established method of operation."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record and are contrary to the evidence of record.

(b) If not already apparent on the record, and if given an opportunity on rehearing, Petitioners hereby offer to prove that such statements are not in accord with the present facts, and that such present facts are of continuing effect; and that, in accordance with the offer of proof contained in paragraph II (41) (b) of Petitioners' said Application for Rehearing of Order issued January 5, 1949, and other facts of continuing effect ascertained by Petitioners since the issuance of the said Order, all or any of the benefits and economies of pool design, investment, construction and operation will be retained, enhanced, supplemented, and increased by integration and coordination with utility systems located and conducting operations entirely within the State of Pennsylvania; and that under present facts and circumstances of continuing effect the involuntary requirement for or maintenance of any integration and coordination between the systems of Penn Water and Safe Harbor and the system of Baltimore Company will not result in the greatest possible economy or in the most proper or feasible utilization or conservation of natural resources, to the detriment of the public interest.

(10) The statements of the Commission on pages 10, 11 and 12 of Opinion No. 173-A as follows:

"Furthermore, our rules (Section 35.5) require that when a rate or service which has been filed with

the Commission, as these foundation contracts have been, 'is proposed to be cancelled and no new rate schedule is filed in its place * * * each public utility required to file the schedule shall formally notify the Commission of the proposed cancellation' 30 days in advance and shall submit a statement of the reasons therefor and that notice has been served upon the other parties to the schedule or contract. A copy of such notice to the Commission is required to be duly posted.

"Compliance with filing requirements is particularly important in a case like the present where the filings cover, not a single sale and delivery by one party to the other, but interchange of energy and capacity between and among the parties to the contracts and numerous other obligations and rights which are required to be filed as changes under Section 35.3 (c).

"In this case refusal of Penn Water to receive energy originating outside of Pennsylvania from Baltimore Company would not be merely a termination of the purchase and sale of that energy (i. e., a cancellation subject to Section 35.5 of the Rules) but would constitute a change in rates and service in several aspects which cannot be accomplished except in compliance with requirements prescribed under Section 205 of the Federal Power Act. (1) It substantially changes the consideration to be paid by Baltimore Company for the energy received by it from Penn Water and Safe Harbor (i. e., effects a change in rate required to be filed under Section 35.3 of our Rules). (2) It will remove the Baltimore Company's outlet for surplus steam generated power heretofore supplied by it to Penn Water whereby it has been enabled to make fuller use of its generating facilities and achieve substantial economies (i. e., effect a change in that service, required to be filed under Section 35.3 of our Rules). (3) It may affect the service to Baltimore Company by

impairing Penn Water's ability to provide peaking capacity in low water seasons when its non-receipt of out-of-state steam generated energy from Baltimore Company may force it to draw down its pond in off-peak hours in order to supply the power needs of its Pennsylvania customers, thereby leaving insufficient water in its pond to operate at full capacity during peaking hours so as to serve Baltimore Company's needs for peaking capacity (i. e., effect a change in service also required to be filed under Section 35.3 of our rules). (4) It will affect the contractual rights of Baltimore Company to maintenance of long-term assured capacity and supply of energy under conditions of coordinated planning, design and construction of additional generating and transmitting facilities to take care of its load growth (i. e., effect a further change in the effective rate to the Baltimore Company, a change also required to be filed under Section 35.3 of our rules).

"If such changes insofar as they affect rates charged Baltimore Company by Penn Water are to be legally effectuated under Section 205 (d) of the Act, that can only be done by filing as prescribed in our rules. This will afford 30 days opportunity for examination of the changes before they become effective. If questionable, they are subject to suspension pending hearing and decision, under Section 205 of the Act. If at such a hearing it should appear that the changed rates to Baltimore Company are unjust or unreasonable (as a result of Penn Water's failure to utilize the more economical modes of operation previously followed or for any other reason), or that they are unduly discriminatory or preferential (because of an unreasonable difference between localities, or otherwise), the Commission may refuse to permit them to become effective insofar as they cover the services continued to be rendered by Penn Water to Baltimore Company.

"Insofar as such changes affect service, compliance with the Rule referred to would enable the Baltimore Company, the Maryland Public Service Commission, or any other interested electric utility or state commission, before such changes are put into effect to make application under Section 202 (b) for an order 'to sell energy * * * or exchange energy' from and after the time of the proposed change or termination of service, or a complaint under Section 207 as to the adequacy of the service to be rendered.

"None of these alleged changes having been made or proposed in the only way they could lawfully become effective, Respondents are in no position in this or any other proceeding to urge any objection or claim in reliance thereon. An unlawful attempt to avoid putting into effect the rate reduction we ordered affords no valid basis for objecting to that order."

on the grounds that:

(a) Such statements are not supported by any substantial evidence of record; and to the extent such statements constitute conclusions of law they are in error.

(b) The evidence of record shows that the contract between Penn Water and Baltimore Company, dated December 31, 1927, as amended, referred to in such statement, contains no rates or charges for any transmission or sale subject to the jurisdiction of the Commission, within the meaning of Sections 205 (c) and 201 (b) of the Act; and that such contract is not a schedule and is not required to be filed with the Commission under said Section 205 (c).

(c) Nothing in Section 205 (d) requires, authorizes or empowers the Commission to require by rule or otherwise, the filing with the Commission or posting of any notice of the changes in operations referred to in paragraph I (6) (h) of Petitioners' said Application for Re-

hearing of Order issued January 5, 1949, or any notice of the changes referred to in paragraphs II (6) (c) and II (7) (c); and to the extent that the Commission's rules purport to make any such requirement, and in addition make other or different requirements, such rules are invalid and unlawful and in excess of any statutory jurisdiction or authority of the Commission contained in the Federal Power Act.

(d) Nothing in Section 205 (e) or otherwise in the Act authorizes or empowers the Commission to suspend the termination of any service or the cancellation of any schedules applicable to any service; and nothing therein authorizes or empowers the Commission to suspend or enter upon a hearing concerning the lawfulness of the changes referred to in paragraphs I (6) (h), II (6) (c), or II (7) (c) of Petitioners' said Application for Rehearing of Order issued January 5, 1949.

(e) There is no substantial evidence of record to support any action by the Commission under Section 202 (b) or 207 of the Act; and if relevant and material to any issues in this proceeding, and if given an opportunity on rehearing, Petitioners hereby offer to prove that any action by the Commission compelling Penn Water to exchange energy with Baltimore Company would impair Penn Water's ability to render adequate service to its other customers, within the meaning of the provisos to such Sections.

(f) Nothing in Sections 205 (c) or 205 (d) or any other provision of the Federal Power Act, or any lawful provision of the Commission's rules prescribed thereunder, requires or authorizes and empowers the Commission to require Penn Water to file with the Commission any schedule or contract containing rates, charges, rules, or regulations for any service by Baltimore Company to Penn Water; and to the extent that the Commis-

sion's rules or orders prescribe any such a requirement they are unlawful and in excess of the Commission's statutory authority; but any such schedule or contract for such service by Baltimore Company, should be filed by that company.

(g) The evidence of record shows that under the terms of Article 6 of the parported agreement between Penn Water and Baltimore Company, energy service by Baltimore Company to Penn Water was received only "upon request" of Penn Water; that the refusal of Penn Water to receive any such energy from Baltimore does not constitute a termination or change of the contract terms of such purchase and sale but constitutes a permissible change within the terms of such contract; that such refusal of Penn Water does not constitute any change in any service by Penn Water to Baltimore Company, and has no relevancy to any issue of the reasonableness or lawfulness of any rates or charges of Penn Water for such service to Baltimore Company; and that, if such refusal by Penn Water to receive energy from Baltimore Company has any effect on the consideration to be paid by Baltimore Company for the energy received by it from Penn Water and Safe Harbor, it has such an effect only by the arbitrary, capricious, and unlawful action of the Commission by its Opinion No. 173 and its Order issued January 5, 1949, in determining excess revenues of Penn Water from service to Baltimore Company primarily by a determination of an increase in the rates or charges of Baltimore Company in the form of credits to it for purported service by Baltimore Company to Penn Water.

(h) There is no substantial evidence of record that the refusal of Penn Water to receive any energy from Baltimore Company will have any effect on (i) the ability of Baltimore Company to make fuller use of its generating facilities and achieve substantial economies;

(ii) the service to Baltimore Company by impairing Penn Water's ability to provide peaking capacity in low water seasons to supply Baltimore Company's needs for peaking capacity; or (iii) any contractual rights of Baltimore Company; and that, if given an opportunity on rehearing, Petitioners hereby offer to prove that such refusal by Penn Water has none of the effects or "affects" as stated by the Commission, and that any requirement that Penn Water continue to receive energy from Baltimore Company will prevent Penn Water and its Pennsylvania customers from achieving substantial economies by fuller use of their integrated and coordinated generating facilities, and will affect the services of Penn Water and Safe Harbor to their Pennsylvania customers by impairment of their ability to integrate and coordinate their respective systems for maximum utilization and conservation of natural resources and greatest possible economy and benefits in the public interest.

(i) Petitioners hereby complain pursuant to Section 306 of the Federal Power Act, and if given an opportunity on rehearing, hereby offer to prove that under present facts and conditions the credits allowed by the Commission to Baltimore Company as its rates or charges for its purported services to Penn Water are excessive, unreasonable, and unlawful, and in violation of Section 205 (a) of the Federal Power Act, (i) in that such credits result in revenues to Baltimore Company for such service which are substantially in excess of its operating expenses reasonably apportionable to such service plus a reasonable return on either the fair value or original cost-less-depreciation of its electric plant used and useful in such service, separately and apart from and without consideration of any expenses or plant used or useful by it in its gas or other business and (ii) in that Baltimore Company's accounts showing the net amount of electric plant in service contain substantial write-ups, fictitious paper increments and other amounts which do not constitute origi-

nal cost of such plant, as defined and applied by the Commission in this proceeding.

(11) The statements of the Commission on page 13 of Opinion No. 173-A as follows:

> "Furthermore, there is no allegation by Respondents in their application that any of the changes occurred after the issuance of the order, or that they are of continuing effect. If they occurred before our order was issued Respondents cannot, on the allegations they have made, complain in this proceeding of our failure to hear matters which they failed to bring to our attention by timely application."

on the grounds that:

(a) Such statements are not supported by the record, and are erroneous on the face of Petitioners' allegations by way of offers of proof in their Application for Rehearing of Order issued January 5, 1949.

(b) If given an opportunity for rehearing, Petitioners hereby offer to prove that the changes referred to in paragraphs I (6) (h) and II (7) (c) of Petitioners' said Application for Rehearing took place after the issuance of the Commission's Order of January 5, 1949; and that to the extent any of the facts alleged by way of offers of proof in said Application for Rehearing were known to Petitioners prior to the issuance of the Commission's Opinion No. 173 and its Order of January 5, 1949, Petitioners had reasonable grounds for failing to bring such matters to the attention of the Commission, in that:

(i) Petitioners had no reason to believe, at any time after the close of the hearings herein and prior to the issuance of such Opinion and Order, that the Commission would make any of the statements alleged in said application to be arbitrary, capricious, unlawful, or without support in the evidence, and which were the subject of offers of further proof, and

(ii) The Commission had notice in fact of the rate orders of the Pennsylvania Commission referred to on or about October 1, 1948, and Petitioners had no reason to believe that the Commission would ignore the effect of such Pennsylvania Commission Orders and the findings of fact contained therein which have a direct effect upon the validity of and are in conflict with many of the Commission's statements and conclusions in its opinions and orders in this proceeding or that the Commission would fail to confer with the Pennsylvania Commission with respect to such conflict, as authorized by Section 209 (b) of the Federal Power Act, and in accordance with published statements of the Commission offering to cooperate with such a State Commission.

(12) Petitioners herein object to and seek rehearing of the following portions of Opinion No. 173-A, relating to depreciation and net investment in Petitioners' property, on the grounds that the Commission erroneously decided each and all of the following statements, matters, findings and conclusions of law and erred with respect thereto in that said statements, matters, findings and conclusions of law are not supported by substantial evidence, are contrary to the substantial evidence, contrary to law, the Federal Power Act and deprive Petitioners of property without due process of law in violation of the Fifth Amendment to the Constitution of the United States;

(a) That Petitioners do not specify in what respects the rate base determined by the Commission does not conform to the requirements of Section 3 (13) of the Act. (page 14)

(b) That the Commission is free to disregard any of the requirements of Section 3 (13) of the Federal Power Act. (page 14)

(c) That Petitioners' contention that the Commission is bound by Section 3 (13) of the Federal Power Act must be rejected. (page 14)

(d) That what the Commission has said in the Safe Harbor Water Power Corporation case, or in any other case, is an answer to Petitioners' contention that the provisions of Section 3 (13) of the Federal Power Act are binding upon the Commission. (page 14)

(e) That Section 3 (13) applies only "during the period of the license" which in Penn Water's case begins January 1, 1938. (page 15)

(f) That the case of *Metropolitan Edison Co.* vs. *Federal Power Commission* is a precedent for the instant case. (page 15)

(g) That "from 1938 through 1946 Penn Water has earned all of its recurring operating expenses, including depreciation and taxes, plus a fair return". (page 15)

(h) That "During the years 1938 to 1945, inclusive, Penn Water earned an average return on its net investment (including working capital) of 10.4%." (page 15)

(i) That "The returns earned ranged from 9.9% in 1943 to 11.8% in 1938". (page 15)

(j) That "These returns have permitted Penn Water after depreciation to meet the interest and dividend requirements on its outstanding bonds and preferred stock and have provided an average return during the same period of 19.1% on the adjusted common stock equity (a high of 21.7%, in 1942 and a low of 17.6%, in 1939 and 1940)". (page 15)

(k) That "The dividends paid on common stock during the period 1938 to 1945, inclusive, averaged 15.4% on the adjusted common stock equity". (page 15)

(l) That the alleged common stock earnings of Penn Water may be compared to the earnings price ratios of the common stocks of other companies. (page 15)

(m) That "It is therefore evident that during the period 1938 to 1946 Penn Water earned more than a fair return after depreciation, taxes, and all operating expenses". (page 15)

(n) That "Because the license period begins with 1938 we confine our finding to those years". (page 15)

(o) That Petitioners have failed to allege with particularity their contentions as to Section 3 (13) of the Federal Power Act. (page 15)

(p) That there is substantial evidence to show Petitioners have, during the license period, earned in excess of a fair return upon their net investment as determined pursuant to Section 3 (13) of the Federal Power Act. (pages 14 and 15)

(q) That the Commission has properly determined Petitioners' "net investment" or the existence of alleged excess earnings pursuant to Section 3 (13) of the Federal Power Act.

(r) That the reasonableness of Petitioners' rates or charges can be determined by the use of a depreciated rate base without regard to a proper determination of excess earnings pursuant to Section 3 (13) of the Federal Power Act.

(s) The Commission has failed to make a finding, pursuant to Section 3 (13) and other provisions of Part I of the Act, of the fair return during the period of the license on the "investment" as determined under the provisions of that Section, as a basis for any determination of whether any aggregate credit balances of current depreciation accounts have been accumulated during the period of the license from earnings in excess of such a fair return so determined and should be deducted in determining "net investment" for rate base purposes; there is no substantial

evidence of record to support any such finding or subsequent determination; and in the absence of such evidence or findings it is unlawful for the Commission to determine the reasonableness of Petitioners' rates or charges upon the basis of any rate base determined by deducting any amounts accumulated in Petitioners' depreciation reserve accounts or any other accounts.

(t) That "the standard for rate making under Part I" of the Federal Power Act as found in Section 20 is other than "Net Investment". (page 14)

(u) That Section 20 of the Federal Power Act "prescribes the customary statutory standard ('reasonable, nondiscriminatory and just')" as the proper rate base under Part I of the Act. (page 14)

(v) That the Supreme Court has construed the customary statutory standard of "reasonable, nondiscriminatory and just" as applicable to licensees under Part I of the Act. (page 14)

III.

The Commission's statements, findings, and conclusions in its Order denying Petitioners' Application for Rehearing, issued February 28, 1949, as referred to below are contrary to the evidence, unsupported by any substantial evidence, unsupported by adequate subsidiary findings, are unlawful, erroneous, arbitrary, capricious, and unconstitutional and operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States, and result in an exercise of authority in excess of statutory jurisdiction, authority, or limitations; and Petitioners seek rehearing on each and every one of the following purported findings on the grounds hereinafter stated:

(1) Finding No. (1) on the grounds that:

(a) Such finding is not supported by any substantial evidence of record.

(b) As stated in paragraphs II (55), II (56), and III (31) of Petitioners' said Application for Rehearing of Order issued January 5, 1949.

(2) Finding No. (2) on the grounds that:

(a) Such finding is not supported by any substantial evidence of record or by the findings required by Section 3 (13) of the Act necessary for such a determination.

(b) As stated in paragraph II (12) above.

(3) Finding No. (3) on the grounds that:

(a) Such finding is not supported by any substantial evidence of record.

(b) Nothing in the Federal Power Act makes it necessary or appropriate that Petitioners be required to file any of the information referred to.

IV.

The Commission's orders or requirements in its Order issued February 28, 1949, are erroneous in law and fact, are contrary to the evidence, and are unsupported by any substantial evidence, unsupported by findings, and are unlawful, erroneous, arbitrary, capricious and unconstitutional, operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States and result in an exercise of authority in excess of statutory jurisdiction, authority or limitations; and Petitioners seek rehearing on each and every one of the said orders or requirements as follows:

(1) Paragraph (A) of the Order on the grounds herein specifically set forth in paragraphs I, II, III, V and VI.

(2) Paragraphs (B) and (C) of the Order on the grounds that:

(a) As stated in paragraph III (3) above.

(b) Such requirements are unjust, unreasonable, burdensome, and unnecessary or inappropriate to the carrying out of any provisions of the Federal Power Act or for any lawful purpose within the jurisdiction or authority of the Commission under such Act.

V.

Since the filing of Petitioners' said Application for Rehearing of Order issued January 5, 1949, Petitioners have newly discovered evidence relating to the statement of the Commission on page 11 of Opinion No. 173, and footnote 16 in connection therewith, which was the subject of paragraph II (8) of such Application for Rehearing. If given an opportunity on rehearing, Petitioners hereby further offer to prove that the position of Safe Harbor in the contracts with PP&L, Philadelphia Company, and Pennsylvania Railroad is more than that of a nominal party; that it became such a party for important and material reasons other than any legal technicality involving possible Pennsylvania gross receipts tax savings; and that it became such a party at the insistence of the customers for the purpose of reliance by them upon the resulting obligation of Safe Harbor to render service from its available capacity.

VI.

The Commission's Order issued February 28, 1949, and to the extent that it incorporates its Opinion No. 173-A therein, extends or modifies its Order issued January 5, 1949, its Opinion No. 173, and its Order issued January 31, 1949, adversely against Petitioners without further hearing, without authority under the Federal Power Act, in excess of the authority contained in Section 313 (a) of the Act, and in violation of Section 206 (a) of the Act, and deprives Petitioners of their property without due process

of law in violation of the Fifth Amendment to the Constitution of the United States.

Respectfully submitted,

F. G. Awalt,
Raymond Sparks,
Daryal A. Myse,
Preston C. King, Jr.,
Counsel for Petitioners.

Dated at Washington, D. C.,
March 11, 1949.

DISTRICT OF COLUMBIA, *ss.:*

The undersigned, being first duly sworn, states that he is counsel for the applicants in the foregoing application; that he has read said application and knows the contents thereof; and that all of the statements contained therein are true and correct to the best of his knowledge, information or belief.

(Signed) RAYMOND SPARKS.
Raymond Sparks.

Sworn to and subscribed before me, a notary public, in and for said District of Columbia, this 11th day of March, 1949.

(Signed) FLORA A. MYERS.

(SEAL)

My commission expires Oct. 14, 1953.

CERTIFICATE OF SERVICE.

I hereby certify that I have this day served the foregoing document upon all parties of record in this proceeding by mailing a copy thereof properly addressed to:

HOWARD E. WAHRENBROCK, Assistant General Counsel;
and REUBEN GOLDBERG, Attorney,
Federal Power Commission,
Hurley Wright Building,
Washington 25, D. C.

CHARLES D. HARRIS, General Counsel,
The Public Service Commission of Maryland,
Munsey Building,
Baltimore, Maryland

CHARLES E. THOMAS, Counsel, and ARTHUR J. DISKIN, Attorney,
Pennsylvania Public Utility Commission,
Harrisburg, Pennsylvania.

G. KENNETH REIBLICH, Counsel for
Consolidated Gas Electric Light and Power Company of Baltimore,
Baltimore, Maryland.

Dated at Washington, D. C., this 11th day of March, 1949.

(Signed) RAYMOND SPARKS.
Raymond Sparks.

EXHIBIT I TO PETITION FOR REVIEW.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman; Thomas C. Buchanan, Claude L. Draper and Leland Olds.

March 15, 1949

In the Matter of PENNSYLVANIA WATER & POWER COMPANY	Docket No. IT-5915

ORDER DENYING APPLICATION FOR REHEARING OF ORDER ISSUED FEBRUARY 28, 1949

On March 11, 1949, Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland filed an application "for a rehearing of (the) Order issued February 28, 1949 * * * of all of the matters presented or involved in this proceeding and covered or affected by said Order and the accompanying Opinion No. 173-A * * * ". That order was one entered on an application for rehearing.

Assuming, without deciding, that a second application for rehearing is proper, and without waiving the right to insist that any petition for judicial review must be filed within 60 days after our order upon the first application for rehearing, the application filed March 11 has been carefully considered and, upon such consideration, the Commission *finds:*

No new facts have been presented or alleged and no principles of law have been set forth which either were not fully considered by the Commission before it entered the order issued February 28, 1949, or which,

having now been considered, warrant further hearing, modification, or abrogation of the Commission's order.

The Commission *orders:*

The application for rehearing filed March 11, 1949, be and the same is hereby denied.

By the Commission.

No. 10,531.

PENNSYLVANIA WATER & POWER COMPANY, A CORPORATION, AND SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, A CORPORATION,
Petitioners,

v.

FEDERAL POWER COMMISSION,
Respondent,

PETITION FOR REVIEW.

(Filed February 8, 1950.)

To the Honorable, the Judges of the United States Court of Appeals for the District of Columbia Circuit:

Petitioners, PENNSYLVANIA WATER & POWER COMPANY (Penn Water), and SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND (Transmission Company), being aggrieved by an "Order Rejecting Proposed 'FPC Electric Tariff' and prescribing Rate Schedules", issued by the Federal Power Commission (the Commission) October 27, 1949 in its Docket No. IT-5915, and being aggrieved by an "Order Denying Application for Rehearing of Order issued October 27, 1949" issued by the Commission December 15, 1949 in the same proceeding, hereby file their Petition for Review under Section 313 (b) of the Federal Power Act (16 U. S. C. § 825-1 (b); 49 Stat. 860), and pursuant to Rule 38 of this Court, to review, hold unlawful, and set aside such orders of October 27, 1949 and December 15, 1949, and certain findings and conclusions incorporated therein, in accordance with the provisions of Section 10 of the Adminis-

trative Procedure Act (5 U. S. C. § 1009; 60 Stat. 243); and Petitioners represent and show to the Court:

The Nature of the Proceedings as to Which Review Is Sought.

I. Penn Water is a corporation organized and existing under the laws of the Commonwealth of Pennsylvania. It owns and operates a hydro-electric generating plant and a steam-electric generating plant on the Susquehanna River at Holtwood, Pennsylvania. It is engaged in the generation, transmission and distribution of hydro- and steam-electric power and renders other services for use in public service.

II. Transmission Company is a corporation organized and existing under the laws of the State of Maryland and is a wholly owned subsidiary of Penn Water. It owns transmission lines wholly within the State of Maryland, some of which are connected to the transmission lines of Penn Water at the Pennsylvania-Maryland State line.

III. On September 1, 1944, the Commission issued in its Docket IT-5915, a general Order of investigation to determine whether any rates, charges, classifications, rules, regulations, practices, or contracts of Penn Water, subject to the jurisdiction of the Commission, were unjust, unreasonable, unduly discriminatory, or preferential. By Order dated October 3, 1944, the proceeding was enlarged to include Transmission Company as a respondent. Hearings commenced on April 15, 1946, and were concluded on July 16, 1947.

IV. On January 5, 1949, the Commission issued its Order and accompanying Opinion No. 173 which provided in part for a reduction in Penn Water's revenues derived from services rendered to Pennsylvania Power & Light Company (PP & L), Philadelphia Electric Company (Philadelphia Company), Metropolitan Edison Company (Metro-

politan Company), and Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company). The Order contained no provision regulating Penn Water's revenues from its only other customer, The Pennsylvania Railroad Company, and the opinion disclaimed any intention to regulate such revenues. By paragraphs (C) and (D) of said Order Penn Water was required to file tariffs effecting specified reductions in revenues from PP & L, Philadelphia Company and Metropolitan Company, and effecting a reduction in revenue from Baltimore Company in accordance with a specific formula contained in such paragraph (D). A copy of the Commission's Order issued January 5, 1949, is attached hereto and made a part hereof as Exhibit A.

V. Petitioners filed an application with the Commission for a rehearing of said Order of January 5, 1949, which was denied by a subsequent Order of the Commission issued February 28, 1949, also accompanied by a Commission Opinion No. 173-A.

VI. On April 22, 1949, Petitioner filed in this Court their Petition for Review of, among others, the Commission's Orders of January 5, 1949 and February 28, 1949 (No. 10,236) and on April 28, 1949, this Court issued an Order staying the effectiveness of the Commission's order of January 5, 1949, insofar as it required a reduction in Penn Water's rates and charges to the aforesaid customers but requiring Penn Water to file with the Commission the rate schedules required by its Order of January 5, 1949.

VII. On May 31, 1949, Penn Water filed with the Commission its "FPC Electric Tariff, Original Volume I", consisting in part of four rate schedules for services to PP & L, Philadelphia Company, Metropolitan Company and Baltimore Company and providing for the reduction in Penn Water's revenues ordered in paragraphs (C) and (D) of the Commission's Order of January 5, 1949. A copy of such

tariff is attached hereto and made a part hereof as Exhibit B.

VIII. On June 2, 1949, the Commission certified and filed with this Court the transcript of the record of the proceedings in its Docket No. IT-5915 and thereupon exclusive jurisdiction to affirm, modify or set aside the Order of January 5, 1949 vested in this Court.

IX. On October 27, 1949, the Commission issued its Order amending and modifying its Order of January 5, 1949 and rejecting Penn Water's rate schedules filed on May 31, 1949 on the alleged ground that the said schedules failed to comply with its Opinions and Orders in its Docket No. IT-5915 and also prescribing its own rate schedules for Penn Water's services to PP & L, Philadelphia Company, Metropolitan Company and Baltimore Company.

X. The Commission's Order of October 27, 1949 amends and modifies its Order of January 5, 1949 in the following respects:

(a) It requires the rate schedule for services to Baltimore Company to include an annual credit to Baltimore Company in an amount of $141,777 in excess of the credits required by paragraph (D) of the Order of January 5, 1949.

(b) It requires the rate schedule for services to Baltimore Company to include a credit to Baltimore Company for fuel cost adjustment in connection with services to The Pennsylvania Railroad Company in accordance with a formula specified in said Order which credit was not required by or even referred to in the Commission's Order of January 5, 1949.

(c) It requires the rate schedules for services to PP & L, Philadelphia Company and Metropolitan Company to include a provision for fuel cost adjustment in accordance with a formula specified in said order which provision for

fuel cost adjustment was not required by or even referred to in the Commission's Order of January 5, 1949.

(d) It requires a reduction in the revenues of Penn Water which has the effect of reducing Penn Water's rate of return from its public utility business which the Commission seeks to regulate below the 5¼% rate, which the Commission has found to be a fair rate of return in its Order of January 5, 1949.

A copy of the Commission's Order of October 27, 1949, is attached hereto and made a part hereof as Exhibit C.

XI. On November 25, 1949, Petitioners filed with the Commission their application for rehearing of the Order issued October 27, 1949. A copy of such application for rehearing is attached hereto and made a part hereof as Exhibit D.

XII. On December 15, 1949, the Commission issued its Order denying Petitioner's application for rehearing of the Order issued October 27, 1949. A copy of the said Order of December 15, 1949 is attached hereto and made a part hereof as Exhibit E.

XIII. Petitioners are here before this Honorable Court for review of the Commission's Orders of October 27, 1949 and December 15, 1949, and the actions and rulings of the Commission in connection therewith in its Docket No. IT-5915.

The Facts and Statutes Upon Which Jurisdiction Is Based.

I. The final Orders of the Commission of which review is sought were issued October 27, 1949, and December 15, 1949, purportedly under the provisions of the Federal Power Act (16 U. S. C. § 791a *et seq.*; 41 Stat. 1063; 46 Stat. 797; 49 Stat. 838, 847). Petitioners have applied to the Commission for a rehearing of the Order of October 27, 1949, within the thirty days prescribed by Section 313 (a) of the Act (16 U. S. C. § 825-l (a), 49 Stat. 860), as shown

by Exhibit D hereto. By its Order of December 15, 1949, the Commission denied rehearing of its Order of October 27, 1949. This Petition for Review is filed within sixty days after the Order of the Commission denying rehearing; and a copy of this Petition for Review is being served forthwith upon a member of the Commission; as required by Section 313 (b) of the Act (16 U. S. C. § 825-l (b); 49 Stat. 860).

II. Section 313 (b) of the Federal Power Act provides for judicial review of Orders of the Commission in this Court by written petition to review praying that the Orders of the Commission be modified or set aside in whole or in part. Section 313 (b) also provides that if any party shall apply to the Court for leave to adduce additional evidence and shall show to the satisfaction of the Court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the Court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms as to the Court may seem proper.

III. Section 10 (a) of the Administrative Procedure Act (5 U. S. C. § 1009 (a); 60 Stat. 243) entitles Petitioners to judicial review of the Commission's Orders as persons suffering legal wrong because of such actions and as persons adversely affected and aggrieved by such actions. Section 10 (b) of such Act (5 U. S. C. § 1009 (b)) specifies the form of proceeding for such review to be that provided by the Federal Power Act, and in the event of inadequacy thereof, any applicable form of legal action. Section 10 (c) of such Act (5 U. S. C. § 1009 (c)) makes reviewable each of the Orders sought to be reviewed herein, and all preliminary, procedural, and intermediate orders, actions, and rulings of the Commission in its Docket No. IT-5915. Section 10 (e) of such Act (5 U. S. C. § 1009 (e)) provides

for the scope of judicial review and the authority of the Court in connection therewith.

The Relief Prayed.

Petitioners pray that:

I. The said Commission Orders of October 27, 1949 and December 15, 1949 be reviewed by this Court; and that said Orders be held unlawful and set aside, or modified as may be necessary to the extent such Orders are held unlawful; or that such other Orders may be made herein as to this Court may seem just;

II. All preliminary, procedural, and intermediate orders, actions, and rulings of the Commission in its Docket No. IT-5915 be reviewed and held unlawful by the Court to the extent necessary to render complete judicial relief from the actions of the Commission;

III. Petitioners hereby apply to the Court for leave to adduce additional evidence as specified in the offers of proof contained in paragraphs II (1) (b) (ii), II (1) (b) (iii), and II (1) (b) (iv) of Petitioners' Application for Rehearing of Order issued October 27, 1949, attached hereto as Exhibit D; and as a showing to the Court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, Petitioners state: that on their face all of such facts sought to be proved are material as facts showing the monetary effect of the requirements of the said Order of October 27, 1949, as such Order amended and modified the requirements of the Commission's Order of January 5, 1949, and that the Commission, by its Order of December 15, 1949, refused to give Petitioners any opportunity to adduce such evidence; and

IV. This Court grant such further relief as may seem just and proper in the premises.

The Points on Which Petitioners Intend to Rely.

I. The Federal Power Commission had no jurisdiction, authority or power to issue its said Orders of October 27, 1949 and December 15, 1949, for the following reasons:

(A) Pursuant to Section 313 (b) of the Federal Power Act, exclusive jurisdiction to amend or modify the Commission's Orders of January 5, 1949 and related Orders in its Docket No. IT-5915, vested in this Court, upon the filing with this Court of the transcript of the record in such Docket on June 2, 1949. The Commission's Order of October 27, 1949 modifies the Order of January 5, 1949 and related Orders, and requires additional reductions in Petitioners' revenues to the extent indicated in paragraph X of the statement of the Nature of the Proceedings hereinabove.

(B) The effect of the Commission's Order of October 27, 1949, if enforced, would be to reduce Penn Water's rate of return from its public utility business which the Commission seeks to regulate below the 5¼% rate, which the Commission has found to be a fair rate of return in its Order of January 5, 1949.

(C) The Commission's Order of October 27, 1949 requires the introduction of fuel cost adjustment clauses into Penn Water's rate schedules for services to PP & L, Philadelphia Company and Metropolitan Company without prior notice to Penn Water and without affording Penn Water or its said three customers an opportunity to be heard thereon or to present evidence with respect thereto, in violation of Sections 20 (16 U. S. C. § 813; 41 Stat. 1073) and 206 (16 U. S. C. § 824e; 49 Stat. 852) (to the extent, if any, that such section may be applicable to Penn Water) of the Federal Power Act, Sections 4 and 5 of the Administrative Procedure Act (5 U. S. C. §§ 1003, 1004; 60 Stat. 238, 239) and the Fifth Amendment to the Constitution of the United States.

(D) The rate schedules prescribed by said Order of October 27, 1949, insofar as the additional amount of $141,777 required to be credited to Baltimore Company is concerned, constitute an adjustment or revision of the divisional agreement between Penn Water and Baltimore Company for division of revenues received from The Pennsylvania Railroad, without authority under the Federal Power Act to regulate such division of rates.

(E) The said Order of October 27, 1949 constitutes an attempt to prescribe rate reductions in excess of the reductions prescribed by the Commission's Order of January 5, 1949, effective retroactively to February 1, 1949, without authority under the Federal Power Act to require retroactive rate adjustments.

II. The said Commission Orders of October 27, 1949 and December 15, 1949, the statements, findings and conclusions contained therein, all preliminary, procedural, and intermediate orders, actions, and rulings of the Commission, and the rate schedules prescribed thereby, are unlawful and unconstitutional in that they are unreasonable, arbitrary, capricious, discriminatory, in excess of the Commission's statutory jurisdiction, authority, and limitations under the Federal Power Act and contrary to the provisions of such Act, without observance of the procedure required by law, unsupported by substantial evidence, contrary to the substantial evidence, and result from consideration by the Commission of matters presented *ex parte* by other parties and from the failure of the Commission to make proper findings and determine proper facts and conclusions of law; and if enforced would deprive Petitioners of their property without due process of law and without just compensation, in violation of the Fifth Amendment to the Constitution of the United States; all as set forth in Petitioners' Applications for Rehearing and in Petitioners' Petition for Review of the Commission's Order of January 5, 1949 and related Orders filed with this Court April 22,

1949 in Case No. 10,236, which Petition for Review is incorporated herein by reference.

My commission expires October 14, 1953.

EXHIBIT A.

UNITED STATES OF AMERICA
FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman, Thomas C. Buchanan, Claude L. Draper and Leland Olds.

January 4, 1949

In the matter of Pennsylvania Water & Power Company } Docket No. IT-5915

ORDER REDUCING RATES

Upon consideration of the record in the above-entitled proceeding and the arguments adduced, and having this day issued its Opinion No. 173 in this matter, which hereby is incorporated by reference and made a part hereof—

The Commission further *finds* that:

(1) Penn Water (successor through reorganization under the laws of Pennsylvania, on January 13, 1910, of McCall Ferry Power Company which had been formed by the merger, on April 14, 1905, of Hillside Water & Power Company and Susquehanna Water & Power Company) owns, operates and maintains hydroelectric and steam-electric generating facilities, all located on the Susquehanna River at Holtwood, Pennsylvania, about eight miles below the hydroelectric project of Safe Harbor, about nine miles north of the Pennsylvania-Maryland boundary line, and about 61 miles northeast of the City of Baltimore. Penn Water's hydro plant, comprising 10 main generating units (eight, 25-cycle, and two, 60-cycle), has an effective capacity of 104,000 kw; its steam plant, comprising two 60-cycle generating units, has an effective capacity of 26,000 kw. There are also two 5,000 kw, 25/60 cycle frequency changers.

(2) Safe Harbor Water Power Corporation (Safe Harbor) owns, operates and maintains a hydroelectric plant and certain appurtenant transmission facilities, all located in Pennsylvania on the Susquehanna River about 17 miles north of the Pennsylvania-Maryland boundary line. Safe Harbor's hydro plant, comprising seven main generating units (five, 60-cycle and two, 25-cycle) has an effective capacity of 230,000 kw. Safe Harbor owns, operates, and maintains the afore-described hydroelectric power project under a license for Project No. 1025, first issued April 22, 1930, by this Commission, pursuant to the Federal [Water] Power Act, which, as amended, is now Part I of the Federal Power Act (Act).

(3) Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) owns, operates and maintains, among other facilities, steam-electric generating facilities located in and near Baltimore, Maryland. Such facilities include four plants, comprising sixteen generating units (eight, 60-cycle, and eight, 25-cycle), having a total effective capacity of 479,000 kw.

(4) Susquehanna Transmission Company of Maryland (Transmission Company) is a wholly-owned subsidiary of Penn Water, engaged only in the transmission of electric energy in Maryland for Penn Water, Safe Harbor and Baltimore Company. Of the transmission facilities referred to in (5) below, those located in Maryland are owned and operated by Transmission Company.

(5) Penn Water owns and operates transmission facilities in Pennsylvania which have been constructed and are operated and maintained in combination with those of Transmission Company in Maryland to form a transmission network, including: two 220 kv, 60-cycle, three-phase, single, transmission circuits extending from Safe Harbor to points of connection with Baltimore Company near its Westport and Riverside steam-electric plants in Maryland, and to a point of connection with Potomac Electric Power

Company (PEPCO) near Takoma Park, Maryland; four 132 kv, 25-cycle, single-phase, transmission circuits extending from the Conestoga Substation, near the Safe Harbor hydro plant, to a point of connection with facilities of the Pennsylvania Railroad (Railroad) at Perryville, Maryland; two 66 kv, 60-cycle, three-phase, transmission circuits between the Safe Harbor and Penn Water plants, which are tapped by lines owned and operated by Pennsylvania Power & Light Company (PP&L) extending from the Lehman Farm Substation to Lancaster, Pennsylvania, and from the Donegal tap to Harrisburg, Pennsylvania; two 66 kv, 60-cycle, three-phase, transmission circuits extending from the Holtwood Substation to a point of connection with Metropolitan Edison Company (Metropolitan Company) at York, Pennsylvania; two 66 kv, 60-cycle, three-phase, transmission circuits extending from the Holtwood Substation to a point of connection with Philadelphia Electric Company (Philadelphia Company) at Coatesville, Pennsylvania; two 66 kv, three-phase, transmission circuits (one, 60-cycle, and one, 25-cycle) extending from the Holtwood Substation to a nearby point of connection with a line owned and operated by PP&L which continues to Lancaster, Pennsylvania; and four 66 kv, 25-cycle, three-phase, transmission circuits extending from the Holtwood Substation to a point of connection with Baltimore Company at Transmission Company's Highlandtown Substation in the City of Baltimore.

(6) Penn Water, Baltimore Company, and Safe Harbor are parties to a contract dated June 1, 1931, as amended, which by its terms is to continue in effect until 1980. Under that contract, Baltimore Company purchases two-thirds, and Penn Water one-third of Safe Harbor's entire capacity and output of electric energy, and contributes annual payments to Safe Harbor in the same proportion. Payments under such contract, pursuant to the Commission's rate order of November 4, 1946, *Safe Harbor Water Power Corporation*, 5 F. P. C. 265, are sufficient to allow Safe Harbor a 5% rate of return on net investment, after operating ex-

penses, taxes and depreciation. Under this contract, Penn Water provides, maintains, and operates certain transmission facilities, including lines extending from Safe Harbor, Pennsylvania, to Baltimore, Maryland.

(7) Penn Water and Baltimore Company are also parties to a contract dated December 31, 1927, as amended, which continues in effect until 1980, under which Baltimore Company purchases all of the electric capacity and energy, not otherwise disposed of under existing contracts, which are available from Penn Water's own generating facilities, as well as that available to Penn Water through purchase from Safe Harbor, as referred to in (6) above. Under this contract, Baltimore Company pays Penn Water for all of its operating expenses, including taxes, depreciation, and cost of power purchased from Safe Harbor, as well as a return on investment determined by a prescribed method, with a credit for the revenues which Penn Water receives from sales in Pennsylvania.

(8) By means of the transmission circuits referred to in (5) above, electric energy generated in Pennsylvania and consumed in Maryland and the District of Columbia is transmitted from Pennsylvania, and electric energy generated in Maryland and consumed in Pennsylvania is transmitted from Maryland. None of such facilities is used for the generation of electric energy or in local distribution or only for the transmission of electric energy in intrastate commerce, or for the transmission of electric energy consumed wholly by the transmitter.

(9) The transmission circuits referred to in (5) above are facilities for the transmission of electric energy in interstate commerce within the meaning of Section 201 (b) of the Act and are subject to the jurisdiction of this Commission. By reason of ownership and operation of such facilities, Penn Water and Transmission Company are "public utilities" within the meaning of Part II of the Act.

(10) By means of the transmission network referred to in (5) above, the power resources of Penn Water, Safe Harbor, and Baltimore Company referred to in (1), (2) and (3) above, are combined and coordinately operated as an integrated and interconnected electric system (interconnected system) serving areas in the States of Pennsylvania and Maryland as well as electrification requirements of Railroad in Pennsylvania, Maryland, and the District of Columbia.

(11) The interconnected system is designed and operated to supply its power and energy requirements at lowest cost. The output of each of the interconnected generating units flows into the system at such times and in such amounts as will secure maximum utilization of hydroelectric facilities, economy of operation and reliability of service. The contracts referred to in (6) and (7) above, facilitate the achievement of those objectives particularly by the methods of payment which they provide, and by reason of the fact that generation of energy is directed by the coordinated action of load dispatchers in the City of Baltimore, representing the three system companies. The direction of energy flows results from operations governed by consideration of river flow, relative costs of steam generation, and magnitude of loads; and energy moves from generating plants to loads without regard to state boundaries.

(12) The maximum utilization of the interconnected system's hydroelectric generating plants in Pennsylvania, one Penn Water's and one Safe Harbor's, is obtained through their operation in conjunction with the system's steam-electric generating plants, Penn Water's in Pennsylvania and Baltimore Company's four in Maryland. The Penn Water and Safe Harbor ponds impound only 24 hours' supply of water at full draft. During periods of high river flow, which occur principally in the spring months, the hydro plants generate their maximum output continuously, thus saving the maximum amount of fuel in

the generation of electric energy by steam. At other times, they can be so operated only part time, and are operated as peaking plants, to help carry the peak loads of the interconnected system, thus taking the place of steam-generated energy at those hours when the least economical steam generating plants would otherwise have to be used. The coordinated operation of the system makes available a larger useful system output at a lower cost than would result if each company were compelled to supply its requirements from its own generating facilities.

(13) As a result of the operations referred to in (12) above, during periods of high river flow, the flow of energy is south from Pennsylvania towards Maryland and at other times, the flow of energy tends to be to the north, although the direction of the flow on the lines crossing the state boundary may change frequently according to the needs of the consumers in Pennsylvania and Maryland.

(14) The operation of the interconnected system, referred to in (1) through (13) above, and the output of that system are in interstate commerce.

(15) Penn Water alone sells firm power and energy to Metropolitan Company under a 1945 agreement, to supply a part of the latter's requirements in York, Pennsylvania; to Philadelphia Company under a 1933 agreement, to supply its requirements in Coatesville, Pennsylvania; and to PP&L, under a 1933 agreement, to supply its requirements in Lancaster, Pennsylvania In addition, Penn Water alone sells energy to each of these companies in interchange.

(16) Penn Water's sales, referred to in (15) above, are sales for resale in interstate commerce.

(17) Pursuant to the contract referred to in (7) above, Penn Water sells electric energy to Baltimore Company for resale. Energy so sold is transmitted from Pennsylvania to Maryland and is a sale for resale in interstate commerce. Such sale is made possible by the transmission

network, referred to in (5) above, and by the coordinated operation of the interconnected system, referred to in (1) through (13) above.

(18) Each of Penn Water's sales of electric energy referred to in (7) and (15) above is a sale of electric energy at wholesale in interstate commerce subject to the jurisdiction of the Commission under the provisions of Section 201 (b) of the Act. Each rate and charge made, demanded, or received by Penn Water for or in connection with each such sale, including any rate or charge or part thereof, relating to electric energy, power, capacity, frequency control, phase, cycle, special facilities, transmission service, power factor cooperation, or reactive energy, is subject to the rate regulatory provisions of the Act.

(19) A 1939 order of this Commission required Penn Water to apply for a license under the provisions of Part I of the Act for the operation of its hydroelectric project, and the order was affirmed on court review. Thereafter, this Commission entered an order authorizing issuance of a license to Penn Water, but the matter of formal issuance is still pending. In these circumstances, Penn Water, for rate-regulatory purposes, must be treated as a "licensee" within the meaning of the Act.

(20) So much of the electric energy, or "power" within the meaning of Section 20 of Part I of the Act, generated, or developed, by Penn Water's hydroelectric project, as is sold under the contracts referred to in (7) and (15) above, is sold thereunder for sale and distribution in public service by the purchasing companies, or for sale and distribution or use in public service by their customers. By reason of the coordinated operations of the interconnected system referred to in (1) through (13) above, all such electric energy so sold is sold in, and enters, interstate commerce within the meaning of Section 20.

(21) The "States directly concerned" within the meaning of Section 20 are the States of Pennsylvania and

Maryland. Such states are "unable to agree" through their properly constituted authorities on the rates or charges of payment within the meaning of that Section.

(22) Penn Water's rates and charges of payment provided for in the contracts described in (7) and (15) above, including any rate or charge, or part thereof, relating to electric energy, power, capacity, frequency control, phase, cycle, special facilities, transmission service, power factor cooperation, or reactive energy, are subject to the jurisdiction of this Commission under Section 20.

(23) Penn Water's rates and charges of payment provided for in the contracts described in (7) and (15) above, including any rate or charge, or part thereof, relating to electric energy, power, capacity, frequency control, phase, cycle, special facilities, transmission service, power factor cooperation, or reactive energy, are subject to the jurisdiction of this Commission under Section 20, irrespective of finding (21) above.

(24) For the purpose of determining whether Penn Water's rates or charges to Baltimore Company, Metropolitan Company, Philadelphia Company and PP&L are and will be excessive, unjust or unreasonable, such rates or charges may properly be tested by determining whether the net operating income of Penn Water produced by such rates or charges constitutes a fair return on a proper rate base, and the respective amounts shown by the record in this proceeding for the year 1946 may properly be used for that purpose.

(25) The actual legitimate investment in Penn Water's and Transmission Company's electric plant used and useful was $33,113,148 as of December 31, 1946, for the purposes referred to in (24) above. For the purpose of determining a proper rate base for Penn Water and Transmission Company for the year 1946, it is fair and reasonable to use that year's average actual legitimate investment in electric plant used and useful, which was $33,126,585. For each of

the periods hereinafter specified in (35) below, it is fair and reasonable to use the foregoing amount of $33,113,148, plus the recorded cost of additions less recorded retirements, as the actual legitimate investment in electric plant used and useful at the beginning of such period, if no substantial property addition is put into service during such period.

(26) The accrued depreciation as of December 31, 1946, was $9,240,628, the amount recorded in the books of Penn Water and Transmission Company as of that date, after proper adjustments. For the purpose of determining a proper rate base for Penn Water for the year 1946, it is fair and reasonable to use as accrued depreciation the average amount for that year which is $9,001,873. For each of the periods specified in (35) below, it is fair and reasonable to use the amount of $9,240,628, as of December 31, 1946, plus or minus the changes recorded on Penn Water's and Transmission Company's books between that date and the date hereof in conformity with the method followed by Penn Water and Transmission Company in 1946, and plus or minus the changes recorded on Penn Water's and Transmission Company's books between the date hereof and the periods referred to in (35) below, in conformity with (27) and (28) below.

(27) The service lives as shown in Exhibit 59 are proper and reasonable for the computation of Penn Water's and Transmission Company's annual depreciation allowance.

(28) The straight-line method of depreciation is the proper and adequate depreciation method for the purposes of computing Penn Water's bills for power and energy in accordance with the Commission's order in this case and for the purpose of accruing depreciation on its books.

(29) The proper and reasonable working capital allowance for the purpose of determining a proper rate base for Penn Water and Transmission Company, for the year 1946,

is not more than $650,000, representing the average amount of materials and supplies plus one-eighth of cash operating expenses for the year, not including taxes and purchased power. For each of the periods hereinafter specified in (35) below, it is fair and reasonable similarly to compute the working capital allowance upon the book, recorded amounts for the immediately preceding 12 months' period.

(30) The proper rate base for the year 1946 for the purposes of determining just and reasonable rates and charges to Metropolitan Company, Philadelphia Company, PP&L and Baltimore Company is not more than $24,774,712, as shown by the following tabulation:

Average Gross Investment for 1946	$33,126,585
Less: Average Reserve for Depreciation for 1946	9,001,873
Average Net Investment for 1946	24,124,712
Working Capital Allowance	650,000
Net Investment Rate Base	$24,774,712

and the rate base so computed reflects the actual legitimate net investment in Penn Water's and Transmission Company's electric plant in service as an assembled whole and an established plant in successful operation.

(31) A fair and reasonable annual rate of return to Penn Water and Transmission Company is 5¼%; the fair return for 1946 is $1,300,672 on a rate base of $24,774,712.

(32) Penn Water's and Transmission Company's net operating income, for 1946, exceeded a fair return by not less than $2,176,736.

(33) On the basis of a reasonable and proper allocation of the cost of service rendered by Penn Water and Transmission Company to Baltimore Company, the rates

and charges to Baltimore Company for 1946 are unjust and unreasonable by approximately $1,733,318.

(34) For the year 1946, on the basis of a reasonable and proper allocation, Penn Water's rates and charges to Philadelphia Company exceed the cost of service to that company by approximately $114,311; its rates and charges to Metropolitan Company exceed the cost of service to that company by approximately $26,094; and its rates and charges to PP&L exceed the cost of service to that company by approximately $80,538.

In the test year 1946, Penn Water received revenues amounting to $1,483,798 from the sale to the Pennsylvania Railroad (in Pa.). The proper allocation of Penn Water's and Transmission Company's total cost of service among Penn Water's customers results in the assignment of $1,261,323 thereof to serving the Pennsylvania Railroad (in Pa.). Accordingly, Penn Water's revenues from that service to Pennsylvania Railroad exceeded the cost of service for the test year 1946 by $222,475, which amount is subject to an adjustment for income taxes.

(35) Except as referred to in (38) below, a proper rate base for the purpose of determining the rates and charges to Baltimore Company for each six months' period following each June 30 and December 31, after issuance hereof, is one computed by adding to the gross investment of $33,113,148 (as of December 31, 1946), as referred to in (25) above, the cost of net additions to electric plant in service from the latter date to said June 30 or December 31; by deducting from the total thus determined the amount of the depreciation reserve as of said June 30 or December 31, according to Penn Water's and Transmission Company's books, adjusted as referred to in (26), (27) and (28) above; and adding working capital computed as referred to in (29) above.

(36) The application of a 5¼% per annum rate of return to the rate base determined as referred to in (35)

above, will provide a fair return to Penn Water and Transmission Company.

(37) Penn Water's rates and charges to Baltimore Company will be just and reasonable when the power bill to Baltimore Company is computed by adding to the fair return, referred to in (36) above, all reasonable and necessary operating expenses and depreciation expenses, calculated as referred to in (27) and (28) above, and by deducting the Conowingo backwater payment, and all electric revenues received from others, including Metropolitan Company, Philadelphia Company, PP&L and Railroad. *Provided,* however, that the deduction in respect to revenues from Pennsylvania Railroad shall be only the amount calculated at rates which would have yielded $1,261,323, based on volumes and demands for the test year 1946 and, *Provided,* further, that income taxes associated with revenues from the Railroad in excess of such deduction shall not be included in the costs to be reimbursed by Baltimore Company.

(38) If a substantial addition to property is put in service between the dates for determination of the rate base referred to in (35) above, Penn Water may petition the Commission to include the cost thereof in the rate base from the date of its commercial operation.

The Commission *orders* that:

(A) Penn Water's and Transmission's Company's motion to dismiss for want of jurisdiction be and the same hereby is denied.

(B) The petition of Intervenor, Public Service Commission of Maryland, to reopen the record for the purpose of receiving certain additional evidence be and the same hereby is denied.

(C) Within 45 days after the date of issuance of this order, Penn Water shall file, in a form satisfactory to the Commission, new schedules of rates and charges for or in connection with its transmission

and sale of electric energy in interstate commerce for resale to Metropolitan Company, Philadelphia Company and PP&L. The new schedules of rates and charges shall be effective on and after February 1, 1949, and shall effect a reduction, based upon Penn Water's and Transmission Company's operations during the test year 1946, of $26,094 to Metropolitan Company, $114,311 to Philadelphia Company and $80,538 to PP&L.

(D) Within 45 days after the issuance of this order Penn Water shall file in a form satisfactory to the Commission, a new schedule of rates and charges for or in connection with its transmission and sale of electric energy in interstate commerce for resale to Baltimore Company. Said schedule of rates and charges shall be such as, together with the Conowingo backwater payment, the revenues from the sales referred to in (C), above, and a credit for service to the Pennsylvania Railroad computed as set forth in (37), above, will provide a 5¼% return to Penn Water and Transmission Company, after operating expenses and depreciation charges, all as set forth in (37), above, on a rate base to be computed in the manner set forth in (G), below, and shall be effective on and after February 1, 1949.

(E) The Commission reserves the right to reject all or any part of the schedules of rates and charges referred to in Paragraphs (C) and (D) hereof and in lieu thereof to prescribe by further order the appropriate rates, charges, classifications, rules, regulations, practices, or contracts.

(F) Penn Water and Transmission Company shall compute annual depreciation expense beginning February 1, 1949, in accordance with the straight-line depreciation method for the purpose of computing its bills for energy and power, using in

connection therewith the service lives which are set forth in Exhibit 59.

(G) For the purpose of determining the rates and charges to Baltimore Company, Penn Water and Transmission Company shall compute a rate base as of June 30, 1949, and as of each December 31 and June 30 thereafter in the manner set forth in findings (25) through (30), and (35), by adding to the amount of actual legitimate investment as of December 31, 1946, as found in (25), above, the net claimed cost, to the date of computation, of additions and retirements in its electric plant used and useful; deducting from this amount the depreciation reserve as of that date according to the companies' books in conformity with (F), above; and adding working capital computed for the period in question in the manner set forth in finding (29) above.

(H) The rate base computed as set forth in (G), above, shall remain unchanged for the six months period beginning with the date as of which it is computed, provided, however, that in the case of substantial addition to property which is put in service between the dates for determination of the rate base, Penn Water and Transmission Company may petition the Commission to include the cost thereof in the rate base from the date of commercial operation.

(I) Penn Water and Transmission Company shall file on or before May 1, 1949, a statement showing the computation of the rate base referred to in (D) hereof as of December 31, 1948, and thereafter on or before each May 1, for the preceding calendar year, a statement showing the computation of such rate base in accordance with this order, the operating expenses, depreciation, taxes, and

return, and the resulting charges to Baltimore Company under said revised rate schedule.

By the Commission. Commissioner Draper concurring in the result only.

Leon M. Fuquay,
Secretary.

Date of Issuance: January 5, 1949.

EXHIBIT B.

FPC ELECTRIC TARIFF
ORIGINAL VOLUME NO. 1

OF

PENNSYLVANIA WATER & POWER COMPANY

issued on behalf of itself and

SAFE HARBOR WATER POWER CORPORATION

and

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE.

(Filed May 31, 1949)

Issued to comply with Order of Federal Power Commission, Docket No. IT-5915, issued January 5, 1949, as modified by order issued January 31, 1949.

Communications Covering Rates Should be Addressed to:

G. W. Spaulding, Executive Vice-President,
Pennsylvania Water & Power Company,
Lexington Building,
Baltimore, Maryland.

Original Sheet No. 2

PRELIMINARY STATEMENT

This tariff is filed under protest by Pennsylvania Water & Power Company in compliance with an order of the Federal Power Commission, in its Docket No. IT-5915, issued January 5, 1949, the effective date of which was stayed until April 29, 1949, by the Commission's order issued January 31, 1949, in the same Docket. It is filed by Pennsylvania Water & Power Company on behalf of itself with respect to Rate Schedules A, B, C and D; on behalf of itself and Safe Harbor Water Power Corporation with respect to Rate Schedules A, B, and D; and, on behalf of Consolidated Gas Electric Light & Power Company of Baltimore with respect to Rate Schedule E. It is effective and applicable to the joint services rendered by Safe Harbor Water Power Corporation and the issuing company, and to the services rendered by Consolidated Gas Electric Light and Power Company to Pennsylvania Water & Power Company only in the event appropriate concurrences to the above specified rate schedules are filed by such companies.

By order of the United States Court of Appeals for the District of Columbia Circuit, filed April 29, 1949 (Case No. 10236, April Term, 1949), the effectiveness of the rate schedules required to be filed by the Commission's order of January 5, 1949, were stayed and suspended pending final disposition of proceedings to review the Commission's orders and actions in its Docket No. IT-5915. In the event that the Commission's order of January 5, 1949, is modified or set aside in whole or in part in the aforementioned review proceedings, this tariff shall be null and void and of no effect.

Pennsylvania Water & Power Company
FPC Electric Tariff, Original Volume No. 1

Original Sheet No. 3

Neither the filing of this tariff, nor the inclusion herein of any particular rates, charges, or classifications for any service, are to be construed as a voluntary initiation of any rate, charge, or classification for any transmission or sale of electric energy, or as an admission by the issuing company that the Commission has any jurisdiction or statutory authority to regulate, control, determine, or fix any of such rates, charges, or classifications, or any of the rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

Pennsylvania Water & Power Company generates hydroelectric and steam-electric power, energy, and other electric services at its plant at Holtwood, Pennsylvania. It also owns and operates certain distribution facilities and a number of electric transmission lines in Pennsylvania connecting its plant at Holtwood and the hydroelectric plant of Safe Harbor Water Power Corporation, an affiliate, at Safe Harbor, Pennsylvania, with electric utility distribution companies in Pennsylvania and with the Pennsylvania Railroad Company in Pennsylvania. Susquehanna Transmission Company of Maryland, a wholly owned subsidiary of Pennsylvania Water & Power Company, owns transmission and distribution facilities within Maryland. Certain of the transmission lines of Susquehanna Transmission Company of Maryland connect certain of the transmission lines of Pennsylvania Water & Power Company, at the Maryland-Pennsylvania state line, with electric utility distribution companies in Maryland and the District of Columbia, and with the Pennsylvania Railroad Company in Maryland.

Pennsylvania Water & Power Company
FPC Electric Tariff, Original Volume No. 1

Original Sheet No. 4

Electric energy, capacity, and other services rendered under this tariff are rendered jointly by Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation to such customers as are so indicated herein. Such electric energy service as may be rendered by Consolidated Gas Electric Light & Power Company of Baltimore to Pennsylvania Water & Power Company under this tariff is the subject of a rate shcedule herein for Backfeed Service solely by reason of the requirements under the Commission's order of January 5 1949, and would not otherwise be included in this tariff, but would be contained in a separate tariff filed by Consolidated Gas Electric Light & Power Company of Baltimore. Such Backfeed Service to Pennsylvania Water & Power Company is the only service of Consolidated Gas Electric Light & Power Company of Baltimore included in this tariff.

Services by Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation, under this tariff, are rendered solely to electric utility distribution companies for use by such customers in distribution to their ultimate consumers. Services rendered to the Pennsylvania Railroad Company are not subject to any of the provisions of this tariff. It is the policy and practice of Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation to hold themselves out to serve such electric utility distibution companies and such other customers who have entered or who may in the future enter into valid and lawful service contracts with them.

FPC Electric Tariff, Original Volume No. 1

Original Sheet No. 5

The provisions of this tariff supersede only the rate provisions and adjustments thereof of service contracts or arrangements with customers of Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation existing as of the effective date of this tariff. The rate provisions of this tariff are applicable to no interchange services other than the Backfeed Services of Consolidated Gas Electric Light & Power Company. The filing of this tariff is without prejudice to the contentions of Pennsylvania Water & Power Company with respect to the non-existence or invalidity of any purported contracts between Pennsylvania Water & Power Company and Consolidated Gas Electric Light & Power Company of Baltimore, and between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation, and Consolidated Gas Electric Light & Power Company of Baltimore.

Original Sheet No. 6

RATE SCHEDULE A, Pennsylvania Power & Light Company.

Availability

Service is available to Pennsylvania Power & Light Company, under this rate schedule from Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation to the extent that there is available to them for joint service the electric resources of energy, capacity, and other services from their hydroelectric and steam-electric plants at Holtwood and Safe Harbor, and from such electric interchange services obtained by them from Pennsylvania Power & Light Company and others.

Applicability and Character of Service

The application of this rate schedule and the character and terms and conditions of the service are as set forth in the service contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation, and Pennsylvania Power & Light Company, dated May 1, 1933, as amended by letter agreement dated April 28, 1939, as supplemented by letter dated February 19, 1946; and as set forth in the service contract between Pennsylvania Water & Power Company and Edison Electric Company of Lancaster, Pa., dated October 9, 1912, as amended under date of October 19, 1923, to the extent that the provisions thereof were continued in effect by the foregoing service contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation, and Pennsylvania Power & Light Company.

Pennsylvania Water & Power Company
FPC Electric Tariff, Original Volume No. 1

Original Sheet No. 7

Rates

The rates for service under this rate schedule are as follows:

Demand Charge:

$1.38 per month per kilowatt of Billing Demand.

Energy Charge:

2.5 mills per kilowatthour for all energy except 4,000 volt service at Holtwood.

6.0 mills per kilowatthour for 4,000 volt service at Holtwood.

Reactive Charge:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatt hours of energy supplied under this rate schedule in that month.

Special Facilities Charge:

$965.00 per month.

The Billing Demand in any month shall be an amount equal to the maximum power requirement of the services specified in the existing service contract (excluding Excess Energy under Article IV of the contract dated May 1, 1933 and excluding interchange service), measured on a clock one-hour integrated basis in units of 1,000 kilowatts (1,000 kwh. per hour) during that month or the preceding eleven months. The 4,000 volt service at Holtwood is excluded in the determination of the Billing Demand.

RATE SCHEDULE B, Philadelphia Electric Company

Availability

Service is available to Philadelphia Electric Company, under this rate schedule, from Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation to the extent that there is available to them for joint service the electric resources of energy, capacity, and other services from their hydroelectric and steam-electric plants at Holtwood and Safe Harbor, and from such electric interchange services obtained by them from Philadelphia Electric Company and others.

Applicability and Character of Service

The application of this rate schedule and the character and terms and conditions of the service are as set forth in the service contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation, and Philadelphia Electric Company, dated August 1, 1933, as supplemented by agreement dated December 13, 1938; and by letters between the parties dated August 5, 1947 and August 19, 1947.

Rates

The rates for service under this rate schedule are as follows:

Demand Charge:

$1.38 per month per kilowatt of Billing Demand.

RATE SCHEDULE C, Metropolitan Edison Company

Availability

Service is available to Metropolitan Edison Company, under this rate schedule, from Pennsylvania Water & Power Company in accordance with the provisions of Article IV of the service contract between Pennsylvania Water & Power Company and Metropolitan Edison Company, dated November 15, 1945, as supplemented by letter dated November 24, 1948.

Applicability and Character of Service

The application of this rate schedule and the character and terms and conditions of the service are as set forth in such service contract dated November 15, 1945.

Rates

The rates for service under this rate schedule are as follows:

Demand Charge:

$1.38 per month per kilowatt of specified firm power.

$0.40 per 1,000 kilowatts of spinning reserve capacity for each clock hour in which such capacity is provided.

Energy Charge:

(a) 3.5 mills per kilowatt hour for energy supplied in any month in the portion of the customer's total requirements above its steam line.

(b) 2.75 mills per kilowatt hour for energy supplied in any month, between the hours of 7 a. m. and 9 p. m.

Issued by:

Eastern Standard Time, or Daylight Saving Time when in effect, on all days except Sundays and Holidays in the customer's specified area, in excess of energy billed under Section (a) above.

(c) 2.0 mills per kilowatt hour for all additional energy supplied in any month in excess of energy billed under Sections (a) and (b) above.

Reactive Charge:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatt hours of energy supplied under this rate schedule plus kilowatt hours use of spinning reserve capacity in that month.

Special Facilities Charge:

$2,751.00 per month.

Original Sheet No. 12

RATE SCHEDULE D, Consolidated Gas Electric Light & Power Company of Baltimore

Availability

Service is available to Consolidated Gas Electric Light & Power Company of Baltimore under this rate schedule from Pennsylvania Water & Power Company in coordination with joint service from Safe Harbor Water Power Corporation.

Service to such customer is available only to the extent that there is electric capacity and energy available to Pennsylvania Water & Power Company at its hydroelectric and steam-electric generating plants, and from the hydroelectric plant of Safe Harbor Water Power Corporation to which Pennsylvania Water & Power Company may be entitled, and not otherwise disposed of in performance of now existing contracts or arrangements, new contracts or arrangements, or obligations to serve imposed by charter or otherwise by law.

Applicability and Character of Service

The application of this rate schedule and the character and terms and conditions of service are as were set forth in a purported contract between Pennsylvania Water & Power Company and Consolidated Gas Electric Light & Power Company of Baltimore, dated December 31, 1927, as amended December 27, 1928, June 1, 1931, and September 29, 1939; and as were set forth in a purported contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation, and Consolidated Gas Electric Light & Power Company of Baltimore,

Issued by:
G. W. Spaulding, Executive Vice-Pres.
Pennsylvania Water & Power Company
Baltimore, Maryland
Issued on: May 27, 1949.

Effective:
Not effective under stay order of U. S. C. A. for D. C. Circuit, dated April 29, 1949 (No. 10236, April Term, 1949).

dated June 1, 1931, as amended August 1, 1932, and November 22, 1939; without prejudice to the position of Pennsylvania Water & Power Company that such contracts, as amended, are unlawful, void, and non-existent. In the event that either or both of such contracts, as amended, or any part thereof are determined by any court to be unlawful, void, or non-existent this rate schedule shall cease to be effective.

Rates

The annual charge for all services and facilities under this rate schedule, without regard to the amount of energy, capacity, or other services or facilities actually furnished, shall be computed in accordance with the following formula:

(A) Add the following items:

(1) An amount equal to the return allowed, computed in accordance with paragraphs (35) and (36) of the findings contained in the order of the Federal Power Commission, issued January 5, 1949, in its Docket No. IT-5915.

(2) An amount equal to all operating expenses, taxes (other than Federal and State taxes in respect to income), and depreciation expense (depreciation calculated in accordance with paragraphs (27) and (28) of such findings in such order).

after adjustment of such amount of return for interest deductions on account of outstanding debt, amortization charges or credits on such debt and any credits for dividends paid as are allowable under the then current tax laws.

(b) Any tax incurred in respect to the amounts determined in paragraph (4)-(a) above and in this paragraph.

(B) Deduct the following items from the sum of items in paragraph (A) above:

(1) An amount equal to the Conowingo backwater payment.

(2) An amount equal to all electric revenues received from others, including Metropolitan Edison Company, Philadelphia Electric Company, Pennsylvania Power & Light Company, but excluding any revenues received from the Pennsylvania Railroad Company.

(3) An amount, to the extent Pennsylvania Water & Power Company receives any revenue from the Pennsylvania Railroad, computed as the sum of;

(a) 2.43 mills per kilowatt hour times the portion of the annual energy supplied in Pennsylvania to the Pennsylvania Railroad, under a contract dated September 2,

Original Sheet No. 16

Rate Schedule E, Backfeed Service

Availability

Upon request of Pennsylvania Water & Power Company, Backfeed Service is available to it under this rate schedule from Consolidated Gas Electric Light & Power Company of Baltimore up to the limit of the latter's available generating capacity in excess of the requirements of Consolidated Gas Electric Light & Power Company provided, however, that Consolidated Gas Electric Light & Power Company is not obligated to start up a station which would not otherwise be operated.

Applicability and Character of Service

Backfeed Service consists of the furnishing of electric energy by Consolidated Gas Electric Light & Power Company of Baltimore to Pennsylvania Water & Power Company, upon request of the latter. The amount of such service shall be measured by the net hourly infeed from the system of Consolidated Gas Electric Light & Power Company of Baltimore to the Highlandtown Substation and the net hourly infeed at Safe Harbor on the Westport and Riverside Circuits.

Rates

The rate for Backfeed Service is 10.67 mills per kilowatt hour.

Issued by:
G. W. Spaulding, Executive Vice-Pres.

UNITED STATES OF AMERICA
FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman; Thomas C. Buchanan, Claude L. Draper and Harrington Wimberly.

October 25, 1949

In the Matter of Pennsylvania Water & Power Company } Docket No. IT-5915

ORDER REJECTING PROPOSED "FPC ELECTRIC TARIFF" AND PRESCRIBING RATE SCHEDULES

On May 31, 1949, Pennsylvania Water & Power Company (Penn Water) in purported compliance with the requirements of Paragraphs (C) and (D) of the Commission's order issued January 5, 1949,[1] filed "FPC Electric Tariff, Original Volume No. 1"[2] consisting of a Prelim-

1. Paragraphs (C) and (D) require Penn Water to file, in a form satisfactory to the Commission, new schedules of rates and charges for or in connection with Penn Water's transmission and sale of electric energy in interstate commerce for resale to Pennsylvania Power and Light Company, Metropolitan Edison Company, Philadelphia Electric Company, and Consolidated Gas Electric Light and Power Company of Baltimore. These schedules were to be effective on and after February 1, 1949. On April 22, 1949, Penn Water and its wholly-owned subsidiary, Susquehanna Transmission Company of Maryland, filed a Petition for Review in the United States Court of Appeals for the District of Columbia Circuit (No. 10236) of the Commission's order, among others, issued January 5, 1949. At the same time they filed a Motion for Stay of the requirements of that order. On April 29, 1949, the Court stayed "the effectiveness of paragraphs (C) and (D) * * * insofar as they provide that the rate schedules shall be effective on and after February 1, 1949, * * * pending conclusion of the review proceedings". The Court however refused to stay the requirement that the rate schedules be filed. Pursuant to oral stipulation the filing date was extended to May 31, 1949.

2. Penn Water's designation is not altogether proper since the proposed filing does not in all respects follow the form of a "tariff" as that term is commonly used and understood. For example, Penn Water's proposed "tariff" contains neither a statement of General Terms and Conditions nor Form of Service Contract.

inary Statement and four rate schedules designated Rate Schedules "A" to "D", inclusive, for service to Pennsylvania Power and Light Company (PP&L), Philadelphia Electric Company (Philadelphia Company), Metropolitan Edison Company (Metropolitan Company) and Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company), respectively, and Rate Schedule "E" for service by Baltimore Company to Penn Water.

Upon receipt of that filing, in accordance with the Commission's usual practice, copies thereof were served on interested parties (here the customer companies named above, the Maryland Public Service Commission, the Pennsylvania Public Utility Commission and the City of Baltimore) and their comments or suggestions invited. All responded.

PP&L, Metropolitan Company and Philadelphia Company stated they had no comments or suggestions to offer, the former two companies qualifying their replies as being "without prejudice" to their legal rights in the premises. The Pennsylvania Commission objected to the filing on the ground that it presupposed "jurisdiction over the rates and charges of" Penn Water and declined to comment on the "form or contents of the tariff itself". The Maryland Commission, the City of Baltimore and Baltimore Company urged rejection of the proposed filing as in violation of the Commission's opinions and orders in this case and urged the Commission to prescribe proper rate schedules pursuant to Paragraph (E) of the order issued January 5, whereby the Commission reserved the right to reject all or any part of the schedules of rates and charges filed by Penn Water and in lieu thereof to prescribe by further order the appropriate rates, charges, classifications, rules, regulations, practices or contracts.

Consideration of Penn Water's "FPC Electric Tariff" impels the conclusion that in many respects it fails to comply with the Commission's opinions and orders in this case; that it should be rejected; and that proper rate schedules should be prescribed by the Commission.

On the basis of the record in this case, the Commission found in Opinion No. 173 and accompanying order issued January 5, 1949 that Penn Water *alone* sells firm power and energy in interstate commerce to PP&L, Metropolitan Company, Philadelphia Company, and Baltimore Company. Consistently with such finding, the Commission ordered Penn Water (alone) to file the rate schedules for such sales. The Commission thereby expressly rejected Penn Water's contention that the rates involved are "joint" and stated "* * * the record is replete with evidence, much of it supplied by Penn Water, which shows this 'joint rate' contention to be wholly without substance."

But the "tariff" which Penn Water has submitted states that it is filed "on behalf of" Penn Water and Safe Harbor Water Power Corporation (Safe Harbor) with respect to the rate schedules for service to PP&L, Philadelphia Company, and Baltimore Company and is "effective and applicable to the joint services rendered by" them "only in the event appropriate concurrences" to such rate schedules are filed by Safe Harbor.

Thus, Penn Water disregards the Commission's order that Penn Water (not Penn Water jointly with someone else not a party to the proceeding) file schedules of its rates for services the Commission has determined Penn Water alone renders, by filing, as one of purported joint sellers, schedules of joint rates for joint services. This is neither a sole filing nor a joint filing. It expressly announces it is not a sole filing. And as a purported joint filing it is ineffective because it is not joined in by both of the parties purportedly jointly rendering the services, but is expressly contingent on concurrences which have not been received.

This failure to comply with the terms of the Commission's order can scarcely be explained as resulting from a misunderstanding of the Commission's findings and orders in this case. Reference need be made only to the Petition for Review filed April 22, 1949, by Penn Water and Susquehanna Transmission Company of Maryland in

the Court of Appeals for the District of Columbia Circuit and their allegations of error therein,[3] predicated on the very fact that the Commission had found the rates and services were not joint and had made its order applicable to Penn Water, alone.

Nor is Penn Water's violation excused by any necessity for protecting its position on review, that protection being fully afforded by the Court's stay order of April 29, 1949, which stayed the effectiveness of the rate schedules but left in force the requirement that they be filed *as ordered by the Commission.*

The schedules filed by Penn Water for service to PP&L and Philadelphia Company also violate the order of January 5, in that they provide for service only to "the extent that there is available", capacity, energy and other services. By so limiting the availability of service under these rate schedules "the present arrangements whereby sales to Pennsylvania customers are made on a firm basis" would be materially altered, contrary to the Commission's order which required that the obligation of Penn Water to these

3. Penn Water's Petition for Review alleges:

"(2) The services rendered by Penn Water to PP&L, Philadelphia Company, Railroad Company, and Baltimore Company are rendered jointly with others not made Respondents to these proceedings, and the rates, charges, and classifications therefor are joint; there is no substantial evidence of record to the contrary; and the said Commission Orders were issued without notice or opportunity for hearing to Safe Harbor jointly obligated to and jointly serving the foregoing customers, contrary to the provisions of Section 206(a) of the Act and the due process clause of the Fifth Amendment to the Constitution of the United States.

"(3) *The said Commission Order of January 5, 1949, requires Penn Water alone* to file new schedules of rates and charges for services to PP&L and Philadelphia Company *without requiring Safe Harbor to join or concur in the filing of such schedules,* without authority under the Federal Power Act; thereby requiring Penn Water to assume the entire obligations to such customers instead of the joint obligation which exists to the impairment of its ability to render adequate service to its customers within the meaning of Section 207 of the Act (16 U. S. C. 1946 ed. § 841f; 49 Stat. 853); and there is no substantial evidence of record to the contrary.

"(4) Insofar as the said Commission Order of January 5, 1949, undertakes to require a reduction in the revenues of Penn Water alone it constitutes regulation by the Commission of the divisions of revenue received by Penn Water for its participation in the rendering of joint services to each of is customers except Metropolitan Company, without jurisdiction, authority, or power in the Commission to regulate divisions of rates or charges for joint services under the Federal Power Act." (Emphasis supplied)

customers for firm supply of energy at the rates required by the Commission's rate reduction be continued in effect.

As for the rate schedule for service to Baltimore Company, it is not in accord with the requirements of the opinion and order because it fails to provide for a credit to Baltimore Company in the net amount of $141,777, which amount resulted from the reallocation of revenues (between Penn Water and Baltimore Company) received by Penn Water from the Pennsylvania Railroad for special facilities, which, we found, were in fact provided, in whole or in part, by Baltimore Company. The allocation of costs of service for special facilities, the excess revenues from sales by Penn Water to its customers, and the rate reductions ordered by the Commission are predicated on this credit to Baltimore Company of $141,777, as the opinion clearly states.

Penn Water's treatment of the $141,777 in its rate filing is paralleled in its segregation of excess revenues under the stay orders. The statements submitted by Penn Water to the Commission pursuant to the requirements of the Commission's temporary stay order, reporting on its earmarking and segregation of the difference between the payments received under existing rates or arrangements and those which would be required under the Commission's order issued January 5, 1949, show that Penn Water has not given effect to this adjustment of revenues in complying with the stay order. As a result of improper computations, the proper amounts have not been segregated in the required reserve. The order herein, accordingly, requires Penn Water to compute the amounts correctly and to adjust its reserve for the period covered by the Commission's stay order issued January 31, 1949.

The schedule for service to the Baltimore Company contains a further violation of the Commission's order issued January 5, 1949, since Paragraph A (2) of the rate schedule provides for a charge to Baltimore Company of an "Amount equal to all operating expenses" whereas find-

ing (37) of said order limits the charges to "reasonable and necessary operating expenses".

Although the Commission's opinions and orders will be searched in vain for any finding or order justifying or requiring a rate schedule to be filed by Penn Water, or Baltimore Company, for the supply of electric energy by Baltimore Company to Penn Water, Penn Water has purported to file rate schedule "E" as part of its tariff, "on behalf of" Baltimore Company. This filing is by its own terms ineffective, for it provides that it is to be "effective and applicable" only "in the event appropriate" concurrence is filed by Baltimore Company. Baltimore Company has protested the issuance of rate schedule "E" as a violation of its existing contractual arrangements with Penn Water, advising that it had no advance notice thereof and has not consented thereto. Thus Penn Water has attempted to file with the Commission a rate schedule which is not its own, for a service it does not render, in a "tariff" containing a number of rate schedules filed by Penn Water in purported compliance with the Commission's order.

Under the presently existing service arrangements and pool operations, Baltimore Company's energy is used by Penn Water to meet its firm power obligations in Pennsylvania. Furthermore, the existing mode of operation permits energy requirements to be supplied from the most economical sources. Such operations require Baltimore Company to generate energy in its steam electric plants for transmission to Pennsylvania.[4] No billing is made for this supply of energy by Baltimore Company because under the contractual arrangement in effect and the Commission's opinions and orders in this case, Penn Water's expenses for energy purchased are passed on to Baltimore Company. No rate is, therefore, necessary for the supply of Baltimore Company's energy. The Commission has explicitly taken "care to leave the continuation of (this)

4. This supply was referred to by Penn Water throughout the hearings in this case as "backfeed" in a transparent attempt to belittle the importance of the energy flows from Maryland to Pennsylvania.

operation of the integrated and interconnected system in full effect, * * *."

Penn Water's filing, in this respect, appears to be part of its effort to disrupt the presently coordinated operations of the pool,[5] and certainly not an effort to comply with the Commission's decision. Under rate schedule "E", the energy supplied by Baltimore Company is to be delivered only *upon request* of Penn Water. That means that Penn Water can refuse to receive any supply from Baltimore Company. As we stated in Opinion No. 173-A, "Penn Water's non-receipt of steam-generated energy from outside Pennsylvania for sale to resale customers would destroy the pool economies under the established method of operation". Moreover, a fixed rate for such energy will tend to defeat the purposes of the pooling arrangements in that the most economical sources of energy may not be utilized to meet the over-all energy requirements of Penn Water's Pennsylvania customers.

Finally, we find that no provision is made by Penn Water in its "Tariff" for adjustment of rates for variations in the cost of fuel. A consideration of the necessity for such an adjustment may conveniently be combined with an explanation of the nature of the clause embodied in the schedules we shall prescribe.

With the exception to the sale to PP&L, all existing contracts for Penn Water's sales to its Pennsylvania customers contain fuel cost adjustment clauses. Those clauses, however, are not uniform. The absence of any fuel cost adjustment clause in the contract with PP&L resulted in rates which were unduly preferential and discriminatory between PP&L and the other Pennsylvania customers.

To the extent that the supply of Pennsylvania customers' energy requirements depends upon utilization of Baltimore Company's steam generation (as the Commis-

5. In Opinion No. 173-A we have discussed Penn Water's efforts in this regard and the litigation it initiated in the United States District Court for the District of Maryland to accomplish this disintegration of the power pool.

sion recognized in Opinion No. 173 and accompanying order when it took into account an allocated part of the expense of that generation in determining the cost of service to the Pennsylvania customers), proper fuel cost adjustment clauses in the rates charged those customers are necessary to avoid undue discrimination against Baltimore Company by imposing on it any increased costs of serving the Pennsylvania customers due to increase in fuel costs, and to avoid undue preference to Baltimore Company by giving it any savings due to decrease in fuel costs, as compared with the test year 1946.

Therefore a proper fuel cost adjustment clause uniformly applicable to all Pennsylvania customers is necessary to avoid an undue preference or discrimination among the Pennsylvania customers and between them, on the one hand, and the Baltimore Company, on the other.

In the case of the service to the Pennsylvania Railroad, the fuel cost adjustment clause must, of course, be applied in computing the cost of that service to be credited to Baltimore Company. Inasmuch as the rate to the Railroad is being left unreduced by the Commission, the cost of that service (instead of the revenues from the service, as in the case of the other Pennsylvania customers) will, under the Commission's previous orders and opinions, be used in computing the credit. (Otherwise, the non-reduction in the rates to the Railroad would be rendered nugatory to Penn Water, being offset by the greater reduction in the rates to Baltimore Company due to the larger credit.)

A fuel cost adjustment clause applicable to the portion of the kilowatt-hours sold as firm energy to the Pennsylvania customers which is supplied by Baltimore Company, based upon variations from the average cost of fuel per kilowatt-hour in the year 1946 at all stations (excluding Pratt Street) of Baltimore Company and calculated as follows, is reasonable and proper (the energy supplied from Baltimore Company's energy includes the part of its two-

thirds entitlement from Safe Harbor which is used to supply Pennsylvania customers):

$$\text{Total adjustment in dollars for fuel costs} = \frac{(A + B - C) \cdot S \cdot z}{A}$$

A=Total firm and net interchange energy sales to Pennsylvania customers in kilowatt-hours

B=Energy deliveries to Baltimore Company at Highlandtown in kilowatt-hours

C=Energy available to Penn Water, at points of delivery to others, from own generation and its entitlement to 1/3 Safe Harbor generation in kilowatt-hours

S=Firm energy sales to Pennsylvania customers in kilowatt-hours

z=Baltimore Company's average cost of fuel in dollars per kilowatt-hour in immediately preceding month minus the average cost in dollars of fuel per kilowatt-hour in the year 1946 (.003408 in 1946)

The cost of fuel per kilowatt-hour shall be computed from the amounts properly chargeable by Baltimore Company to Account 703 of the Uniform System of Accounts and the net generation of its fuel-burning stations (excluding Pratt Street Station).[6] For the year 1946, factor *z* would have been zero. The Federal Power Commission, by its Opinion No. 173 and order issued January 5, 1949, in the Matter of Pennsylvania Water & Power Company, Docket No. IT-5915, found that for the year 1946 factors A, B, and C, above, were as follows:

A=937,950 mwh
B=376,684 mwh
C=992,320 mwh

6. Omitted because its operation is determined by the need for steam to supply steam heating customers.

Special facilities charges in Penn Water's "tariff" differ from the costs of service allocable thereto as set forth in the Commission's opinions and orders and must therefore be rejected.

For the foregoing reasons, the Commission finds that "FPC Electric Tariff, Original Volume No. 1", filed by Penn Water on May 31, 1949, does not comply with the requirements of the Commission's Opinions Nos. 173 and 173-A and accompanying orders, and does not set forth rates which would be just, reasonable and not unduly discriminatory or preferential.

The Rkvah charges set forth in connection with the power factor clause in the several schedules of the "tariff", and the differentiations in charges for the several described classes of service to Metropolitan Edison, and the spinning reserve capacity charge, set forth in Schedule C of the "tariff", are not supported by evidence of record showing corresponding allocable costs for such elements of service or differentiations in service. In the absence of any protest, however, we think there is justification in the record for allowing some discretion to Penn Water on those aspects of the rates, subject to further order of the Commission if on protest or the Commission's own motion they shall be found in operation to be unduly discriminatory or preferential, or to produce revenues not effectuating the reduction contemplated by our prior orders and opinions. With this reservation we shall, therefore, adopt Penn Water's proposals on those aspects of the rates.

With that reservation, and with the changes necessary to eliminate the foregoing objections, the schedules hereinafter prescribed substantially conform to the proposals set forth in Penn Water's "tariff".

The Commission, upon further consideration of the record in the above-entitled proceedings, including the filing made in purported compliance with its orders and opinions and reports filed with the Commission pursuant

to the requirements of the Commission's stay order, further *finds*:

(1) The attached rate schedules, as hereinafter prescribed, effectuate the requirements of Opinions Nos. 173 and 173-A and accompanying orders and set forth rates which are just, reasonable, and not unduly discriminatory or preferential.

(2) Penn Water did not properly compute and segregate the difference between the payments received by Penn Water under existing rates or arrangements and those required under Commission Opinion No. 173 and order issued January 5, 1949, while the Commission's stay order remained in effect.

The Commission *orders*:

(A) The "FPC Electric Tariff, Original Volume No. 1" filed by Penn Water on May 31, 1949, be and the same is hereby rejected.

(B) The accompanying rate schedules, hereby made a part hereof by reference, are prescribed as the schedules of rates and charges for the indicated services by Penn Water, effective February 1, 1949, with the reservation hereinabove set forth with respect to the charges for Rkvah and spinning reserve and differentiated services to Metropolitan Edison, and subject to the terms and conditions of the stay order issued April 29, 1949, by the United States Court of Appeals for the District of Columbia Circuit in "Pennsylvania Water & Power Company, et al. v. Federal Power Commission, No. 10236," (of which we take notice for this purpose), the several schedules applying to service to the customers shown, respectively, as follows:

Designation	Customer
Pennsylvania Water & Power Company, FPC Prescribed Rate Schedule A	Baltimore Company
Pennsylvania Water & Power Company, FPC Prescribed Rate Schedule B	PP&L
Pennsylvania Water & Power Company, FPC Prescribed Rate Schedule C	Philadelphia Company
Pennsylvania Water & Power Company, FPC Prescribed Rate Schedule D	Metropolitan Company

(C) Within 120 days from the date of issuance of this order Penn Water shall file a statement showing a computation of the total amount by which the amounts earmarked, separately accounted for, and retained in a segregated reserve pursuant to the conditions of the Commission's stay order issued January 31, 1949, differed from the amounts representing the difference between the payments received by Penn Water under existing rates or arrangements and those which would have been received under the rate schedules hereinabove prescribed. Penn Water shall adjust such reserve to make it equal to the amount of the difference between payments actually received and those which would have been received under the rate schedules hereinabove prescribed while the Commission's stay order remained in effect, and shall file certified copies of the accounting entries effectuating such adjustment with its statement.

By the Commission.

Leon M. Fuquay,
Secretary.

Date of Issuance: October 27, 1949

PENNSYLVANIA WATER & POWER COMPANY

F. P. C. Prescribed Rate Schedule A

Effective on and after February 1, 1949, subject only to the terms and conditions of the stay order issued April 29, 1949, by the United States Court of Appeals for the District of Columbia Circuit, in "Pennsylvania Water & Power Company, et al., v. Federal Power Commission, No. 10236", the amount to be paid to Pennsylvania Water & Power Company (Penn Water) by Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) for power and energy service as heretofore rendered pursuant to Pennsylvania Water & Power Company Rate Schedule F. P. C. No. 1, as supplemented, and for transmission service as heretofore rendered by Penn Water and Susquehanna Transmission Company of Maryland to Baltimore Company pursuant to Article VII of Pennsylvania Water & Power Company, F. P. C. Rate Schedule No. 8, shall be the net sum of the following charges and credits:

(A) Gross annual charges:

(1) RETURN

Return shall be computed at 5¼% of the consolidated (Penn Water and Susquehanna Transmission Company of Maryland—Transmission Company—) net investment rate base, determined as of December 31, 1948, and as of each June 30 and December 31 thereafter for the succeeding six months' period, by adding to the actual legitimate investment ($33,113,148) determined by the Commission as of December 31, 1946, Opinion No. 173, the cost of additions of used and useful electric plant to the respective dates indicated less the cost of electric plant retired, and by deducting the consolidated depreciation reserves according to the books of the respective companies after a downward adjustment of $213,239.71 as determined by the Commission, Opinion No.

173, and by adding an allowance for working capital consisting of the average monthly balance of electric utility materials and supplies for the 12-month period immediately preceding the date as of which the computation is made and one-eighth of the necessary operating and maintenance expenses, exclusive of purchased power and taxes, for the same period; provided however, that in the case of a substantial addition to property which is put in service between the dates for determination of the rate base, Penn Water may petition the Commission to include the cost thereof in the rate base from the date of commercial operation.

(2) EXPENSES

Expenses shall be computed as the total of the following:

(a) The reasonable and necessary consolidated operation, maintenance, and general expenses.

(b) The cost of the electric power and energy purchased from Safe Harbor and from other sellers with whom Penn Water may now have contracts, or may hereafter contract for such purchase.

(c) Annual depreciation expense of Penn Water and Transmission Company computed in conformity with the Commission's Opinion No. 173 and order issued January 5, 1949, in the Matter of Pennsylvania Water & Power Company, Docket No. IT-5915.

(d) Taxes of Penn Water and Transmission Company, properly allocable to Account 507 of the Commission's Uniform System of Accounts applicable to their electric plant and operations, including income taxes, but not including any income taxes on revenues received from Pennsylvania Railroad in excess of the cost to serve

that Company as described in (B) (4) hereinafter.

(B) Gross annual credits:

(1) The Conowingo backwater payment.

(2) All of Penn Water's electric revenues, other than those derived from Pennsylvania Railroad (Railroad) and those derived under this rate schedule.

(3) $141,777 per year in adjustment of revenue received by Penn Water from Pennsylvania Railroad for special facilities provided by Baltimore Company as found in Opinion No. 173.

(4) The cost of the services rendered Railroad under a contract dated September 2, 1931, as amended by agreements dated August 15, 1934 and June 22, 1938 with Pennsylvania Railroad, computed as the sum of the following:

(a) 2.43 mills per kilowatt-hour multiplied by the annual energy supplied in Pennsylvania to the Pennsylvania Railroad.

(b) $16.66 per kilowatt per year times the portion of the total billing demand of the Pennsylvania Railroad supply under contracts referred to in paragraph (B) (4), which portion of the demand is to be the annual maximum among the products for each month of the year of the monthly billing demand and the ratio for that month of the energy supplied to the Pennsylvania Railroad in Pennsylvania to the total energy supplied to the Pennsylvania Railroad.

(c) $109,354 per year for special facilities provided by Penn Water.

(d) A debit or credit monthly adjustment in the 2.43 mill rate fixed in (a) above for variations from the average cost of fuel per kilowatt hour

in the year 1946 at all steam stations of Baltimore Company, excluding Pratt Street Station; applicable only to the portion of kilowatt-hours sold to Pennsylvania Railroad ((4) (a) above) in the current billing month supplied from Baltimore Company's energy, determined as indicated hereinafter (Baltimore Company's energy includes the part of its two-thirds entitlement from Safe Harbor which is used to supply Pennsylvania customers). The monthly adjustment shall be computed as follows:

$$\text{Total adjustment in dollars for fuel costs} = \frac{(A + B - C) \cdot s \cdot z}{A}$$

A=Total firm and net interchange energy sales to Pennsylvania customers in kilowatt-hours

B=Energy deliveries to Baltimore Company at Highlandtown in kilowatt-hours

C=Energy available to Penn Water, at points of delivery to others, from its own generation and its entitlement to 1/3 of Safe Harbor's generation in kilowatt-hours

s=Firm energy sales in kilowatt-hours to Pennsylvania Railroad computed as determined under (4) (a) above

z=Baltimore Company's average cost of fuel in dollars per kilowatt-hour in the immediately preceding month minus the average cost of fuel in dollars per kilowatt-hour in the year 1946 (.003408 in 1946).

The cost of fuel per kilowatt-hour shall be computed from the amounts properly chargeable

by Baltimore Company to Account 703 of the Uniform System of Accounts and the net generation of its fuel-burning stations, excluding Pratt Street Station. For the year 1946, factor z would have been zero. The Federal Power Commission, by its Opinion No. 173 and accompanying order, issued January 5, 1949, in the matter of Pennsylvania Water & Power Company, Docket No. IT-5915, found that for the year 1946 factors A, B and C, above, were as follows:

A=937,950 mwh

B=376,684 mwh

C=992,320 mwh.

The net annual billing to Baltimore Company shall be determined as the difference between the sum of the charges under (A), above, and the sum of the credits under (B), above. Settlement for the difference between annual charges and the annual credits shall be made on a monthly basis, using estimated data wherever necessary, with subsequent adjustment to the correct annual settlement effected by February 15 of the following year.

The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force.

PENNSYLVANIA WATER & POWER COMPANY

F. P. C. Prescribed Rate Schedule B

Effective on and after February 1, 1949, subject only to the terms and conditions of the stay order issued April 29, 1949, by the United States Court of Appeals for the District of Columbia Circuit, in "Pennsylvania Water & Power Company, et al., v. Federal Power Commission, No. 10236", the amount to be paid to Pennsylvania Water & Power Company by Pennsylvania Power & Light Company for firm power and energy service rendered to Pennsylvania Power & Light Company under agreement dated May 1, 1933, as amended by letter agreements dated June 11, 1934 and April 28, 1939, and as set forth in the service contract between Pennsylvania Water & Power Company and Edison Electric Company of Lancaster, Pennsylvania, dated October 9, 1912, as amended under date of October 19, 1923 to the extent that the provisions thereof are continued in effect by the foregoing service contract as amended, shall be the sum of the following charges:

Demand charge:

$1.38 per month per kw of Billing Demand as hereinafter defined

Energy charge:

2.5 mills per kwh for all kilowatt-hours except for 4,000 volt service at Holtwood, and

6.0 mills per kwh for 4,000 volt service at Holtwood, all subject to the fuel cost adjustment hereinafter provided.

Special facility charge:

$965 per month

Fuel cost adjustment:

The rates for energy are subject to monthly adjustment for variations from the average cost of fuel per kilowatt-hour in the year 1946 at all steam stations of

Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) except Pratt Street Station; but such adjustment shall apply only to the portion of kilowatt-hours sold hereunder in the current billing month which has been supplied from Baltimore Company's energy, determined as indicated hereinafter (Baltimore Company's energy includes the part of its two-thirds entitlement from Safe Harbor which is used to supply Pennsylvania customers). The adjustment shall be computed as follows:

$$\text{Total adjustment in dollars for fuel costs} = \frac{(A + B - C) \cdot s \cdot z}{A}$$

A=Total firm and net interchange energy sales to Pennsylvania customers in kilowatt-hours

B=Energy deliveries to Baltimore Company at Highlandtown in kilowatt-hours

C=Energy available to Penn Water, at points of delivery to others, from its own generation and its entitlement to 1/3 of Safe Harbor's generation in kilowatt-hours

s=Firm energy sales under this rate schedule in kilowatt-hours.

z=Baltimore Company's average cost of fuel in dollars per kilowatt-hour in the immediately preceding month minus the average cost of fuel in dollars per kilowatt-hour in the year 1946 (.003408 in 1946).

The cost of fuel per kilowatt-hour shall be computed from the amounts properly chargeable by Baltimore Company to Account 703 of the Uniform System of Accounts and the net generation of its fuel-burning stations, excluding Pratt Street Station. For the year 1946, factor *z* would have been zero. The Federal Power Commission, by its Opinion No. 173 and accompanying order, issued January

5, 1949, in the matter of Pennsylvania Water & Power Company, Docket No. IT-5915, found that for the year 1946, factors A, B and C, above, were as follows:

A=937,950 mwh
B=376,684 mwh
C=992,320 mwh

Billing Demand:

The Billing Demand in any month shall be the maximum power requirements of the services specified in the existing service contract (excluding the Excess Energy under Article IV of the Contract dated May 1, 1933 and excluding interchange service), measured on a clock one-hour integrated basis in units of 1,000 kilowatts (1,000 kwh per hour) during such month or the preceding eleven months. 4,000 volt service at Holtwood is excluded in the determination of Billing Demand.

Power Factor:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatt-hours of energy supplied under this rate schedule in that month.

The foregoing provisions supersede the rates and charges, together with any adjustments thereof, heretofore in effect under Article VI, Article XI and Appendix A of the aforementioned agreement of May 1, 1933, paragraph 7 of the aforementioned agreement of June 11, 1934, and paragraphs (5), (7), option B of (9) and (13) of the aforementioned agreement of April 28, 1939. All other provisions of the aforementioned agreements, not inconsistent with the rates and charges prescribed herein, shall remain in full force and effect.

PENNSYLVANIA WATER & POWER COMPANY

F. P. C. Prescribed Rate Schedule C

Effective on and after February 1, 1949, subject only to the terms and conditions of the stay order issued April 29, 1949, by the United States Court of Appeals for the District of Columbia Circuit, in "Pennsylvania Water & Power Company, et al., v. Federal Power Commission, No. 10236", the amount to be paid to Pennsylvania Water & Power Company by Philadelphia Electric Company, for firm power and energy service rendered to Philadelphia Electric Company under agreement dated August 1, 1933, as supplemented by agreement dated December 13, 1938, shall be the sum of the following charges:

Demand charge:

$1.38 per month per kw of Billing Demand as hereinafter defined

Energy charge:

2.5 mills per kwh, subject to the fuel cost adjustment hereinafter provided

Special facility charge:

$5,977 per month

Fuel cost adjustment:

The rate for energy is subject to monthly adjustment for variations from the average cost of fuel per kilowatt-hour in the year 1946 at all steam stations of Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) excluding Pratt Street Station; but such adjustment shall apply only to the portion of kilowatt-hours sold hereunder in the current billing month which has been supplied from Baltimore Company's energy, determined as indicated hereinafter. (Baltimore Company's energy includes the part of its two-thirds en-

titlement from Safe Harbor which is used to supply Pennsylvania customers). The adjustment shall be computed as follows:

$$\text{Total adjustment in dollars for fuel costs} = \frac{(A + B - C) \cdot s \cdot z}{A}$$

A=Total firm and net interchange energy sales to Pennsylvania customers in kilowatt-hours

B=Energy deliveries to Baltimore Company at Highlandtown in kilowatt-hours

C=Energy available to Penn Water, at points of delivery to others, from its own generation and its entitlement to 1/3 of Safe Harbor's generation in kilowatt-hours

s=Firm energy sales under this rate schedule in kilowatt-hours

z=Baltimore Company's average cost of fuel in dollars per kilowatt-hour in the immediately preceding month minus the average cost of fuel in dollars per kilowatt-hour in the year 1946 (.003408 in 1946).

The cost of fuel per kilowatt-hour shall be computed from the amounts properly chargeable by Baltimore Company to Account 703 of the Uniform System of Accounts and the net generation of its fuel-burning stations, excluding Pratt Street Station. For the year 1946, factor *z* would have been zero. The Federal Power Commission, by its Opinion No. 173 and accompanying order, issued January 5, 1949, in the matter of Pennsylvania Water & Power Company, Docket No. IT-5915, found that for the year 1946 factors A, B and C, above, were as follows:

A=937,950 mwh

B=376,684 mwh

C=992,320 mwh

Billing Demand:

The Billing Demand in any month shall be the maximum power requirements of the services specified in the existing service contract (excluding emergency supply under Article II, Section 2 of the contract dated August 1, 1933), measured on a clock one-hour integrated basis in units of 1,000 kilowatts (1,000 kwh per hour) during such month or the preceding eleven months.

Power Factor:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatt-hours of energy supplied under this rate schedule in that month.

The foregoing provisions supersede the rates and charges, together with any adjustments thereof, heretofore in effect under Sections 1, 2, 4 and 5 of Article III and Article V of the agreement of August 1, 1933 and the Supplement to Coatesville Power Supply Contract RE Night Service Rider dated August 1, 1933 and under the letter agreements dated February 8, 1944 and February 9, 1944. All other provisions of the aforementioned agreements, not inconsistent with the rates and charges prescribed herein, shall remain in full force and effect.

PENNSYLVANIA WATER & POWER COMPANY

F. P. C. Prescribed Rate Schedule D

Effective on and after February 1, 1949, subject only to the terms and conditions of the stay order issued April 29, 1949, by the United States Court of Appeals for the District of Columbia Circuit, in "Pennsylvania Water & Power Company, et al., v. Federal Power Commission, No. 10236", the amount to be paid to Pennsylvania Water & Power Company by Metropolitan Edison Company for firm power and energy service rendered to Metropolitan Edison Company under agreement dated November 15, 1945, shall be the sum of the following charges:

Demand charge:

$1.38 per month per kw of specified firm power
$0.40 per hour per 1,000 kw of spinning reserve capacity for each clock hour in which such capacity is provided

Energy charge:

(a) 3.5 mills per kilowatt-hour for energy supplied in any month in the portion of the customer's total requirements above its steam line,

(b) 2.75 mills per kilowatt hour for energy supplied in any month, between the hours of 7 a. m. and 9 p. m., Eastern Standard Time, or Daylight Saving Time when in effect, on all days except Sundays and holidays in the customer's specified area, in excess of energy billed under Section (a) above, and

(c) 2.0 mills per kilowatt hour for all additional energy supplied in any month in excess of energy billed under Sections (a) and (b) above,

all subject to the fuel cost adjustment hereinafter provided.

Special facility charge:

$3,567 per month

Fuel cost adjustment:

The rates for energy are subject to monthly adjustment for variations from the average cost of fuel per kilowatt-hour in the year 1946 at all steam stations of Consolidated Gas Electric Light and Power Company of Baltimore (Baltimore Company) excluding Pratt Street Station; but such adjustment shall apply only to the portion of kilowatt-hours sold hereunder in the current billing month which has been supplied from Baltimore Company's energy, determined as indicated hereinafter (Baltimore Company's energy includes the part of its two-

thirds entitlement from Safe Harbor which is used to supply Pennsylvania customers). The adjustment shall be computed as follows:

$$\text{Total adjustment in dollars} = \frac{(A+B-C) \cdot s \cdot z}{A}$$

A=Total firm and net interchange energy sales to Pennsylvania customers in kilowatt-hours

B=Energy deliveries to Baltimore Company at Highlandtown in kilowatt-hours

C=Energy available to Penn Water, at points of delivery to others, from its own generation and its entitlement to 1/3 of Safe Harbor's generation in kilowatt-hours

s=Firm energy sales under this rate schedule in kilowatt-hours

z=Baltimore Company's average cost of fuel in dollars per kilowatt-hour in the immediately preceding month minus the average cost of fuel in dollars per kilowatt-hour in the year 1946 (.003408 in 1946).

The cost of fuel per kilowatt-hour shall be computed from the amounts properly chargeable by Baltimore Company to Account 703 of the Uniform System of Accounts and the net generation of its fuel-burning stations, excluding Pratt Street Station. For the year 1946, factor *z* would have been zero. The Federal Power Commission, by its Opinion No. 173 and accompanying order, issued January 5, 1949, in the Matter of Pennsylvania Water & Power Company, Docket No. IT-5915, found that for the year 1946 factors A, B and C, above, were as follows:

A=937,950 mwh

B=376,684 mwh

C=992,320 mwh

Power Factor:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatt-hours of energy supplied under this rate schedule plus kilowatt hours use of spinning reserve capacity in that month.

The foregoing provisions supersede the rates and charges, together with any adjustments thereof, heretofore in effect under Sections 1, 2, 3, 4, 5, 6 of Article V and Article VI of the agreement of November 15, 1945. All other provisions of the aforementioned agreement, not inconsistent with the rates and charges prescribed herein, shall remain in full force and effect.

EXHIBIT D.

UNITED STATES OF AMERICA
FEDERAL POWER COMMISSION

In the Matter of

PENNSYLVANIA WATER & POWER COMPANY } Docket No. IT-5915

APPLICATION FOR REHEARING OF ORDER ISSUED OCTOBER 27, 1949

(Filed November 25, 1949)

Pennsylvania Water & Power Company (Penn Water), Respondent and Petitioner herein; being aggrieved on its own behalf by the Order issued by the Commission on October 27, 1949; and being separately and independently aggrieved by such Order as the owner of one-half of the Class B voting stock of Safe Harbor Water Power Corporation (Safe Harbor), said Safe Harbor being unable to intervene in this proceeding because of the deadlock in its Board of Directors as set forth in Petitioners' Application for Rehearing of the Commission's Order issued January 5, 1949, filed in this proceeding on January 28, 1949; and Penn Water being also separately and independently so aggrieved as agent for and on behalf of Safe Harbor under the provisions of certain contracts with Pennsylvania Power & Light Company (PP&L) and Philadelphia Electric Company (Philadelphia Company); and Susquehanna Transmission Company of Maryland (Transmission Company), Respondent and Petitioner herein, also being aggrieved by such Order; hereby apply to the Federal Power Commission (Commission) for a rehearing of said Order issued October 27, 1949, as provided by Section 313 (a) of the Federal Power Act (16 U. S. C. § 825-l (a); 49

Stat. 860) and of all of the matters presented or involved in this proceeding and covered or affected by said Order; and pray that the said Order be abrogated, vacated, set aside, and reversed because of the matters erroneously decided, the Commission's lack of jurisdiction and errors with respect thereto, and the objections of Petitioners to said Order to wit: Petitioners respectfully show that in and by said Order issued October 27, 1949, the Commission erroneously and without jurisdiction decided each and all of the following matters and committed each and all of the following errors, and Petitioners object to said Order because of each and all of said matters so decided and said errors for each and all of the following reasons:

STATUS OF THIS PROCEEDING

On January 5, 1949 the Commission, in its Docket No. IT-5915, issued its "Order Reducing Rates" and accompanying Opinion No. 173 pursuant to which Penn Water was required, among other things, to file new schedules of rates and charges for or in connection with its services to PP&L, Philadelphia Company and Metropolitan Edison Company to provide for the reductions specified in paragraph (C) of such Order and pursuant to which Penn Water was also required to file a new schedule of rates and charges for its services to Consolidated Gas Electric Light & Power Company of Baltimore (Baltimore Company) which, together with revenues from the Conowingo backwater payment, sales to PP&L, Philadelphia Company and Metropolitan Edison Company, and the alleged cost of service to the Pennsylvania Railroad, would provide a 5¼% return to Penn Water and Transmission C npany after operating expenses and depreciation, all as set forth in paragraph (D) of said Order.

On January 28, 1949 Penn Water and Transmission Company filed with the Commission their application for rehearing of the Commission's Order issued January 5, 1949.

On February 28, 1949 the Commission issued its Order and accompanying Opinion No. 173-A denying the Petitioners' application for rehearing of the Order issued January 5, 1949 and in addition amending its former Order in certain respects.

On March 11, 1949 Petitioners filed with the Commission their application for rehearing of the Commission's Order issued February 28, 1949 which was denied by the Commission by its Order issued on March 17, 1949.

On April 22, 1949 Petitioners filed in the Court of Appeals for the District of Columbia Circuit their petition for review of the Commission's Orders of January 5, 1949, January 31, 1949, February 28, 1949 and March 17, 1949.

On April 28, 1949 the Court of Appeals for the District of Columbia Circuit issued an Order staying the effectiveness of paragraphs (C) and (D) of the Commission's Order of January 5, 1949 but requiring Penn Water to file the rate schedules required by said paragraphs (C) and (D) of said Order.

On May 31, 1949 Penn Water filed certain rate schedules with the Commission in compliance with the said Order of the Court of Appeals.

On June 2, 1949 the Commission filed with the Court of Appeals for the District of Columbia Circuit the transcript of the record of the proceedings upon which its Orders were based.

On October 27, 1949, after exclusive jurisdiction to alter, amend, modify or set aside said Orders had vested in the Court of Appeals by reason of the filing of the transcript as provided in Section 313 (b) of the Federal Power Act (16 U. S. C. § 825-l (b); 49 Stat. 860), the Commission issued its Order rejecting the rate schedules filed by Penn Water and inaugurating its own rate schedules for Penn Water's services to PP&L, Philadelphia Company, Metropolitan Edison Company and Baltimore Company.

SPECIFICATIONS OF ERROR

Petitioners believe and, therefore, respectfully allege, that the Commission's Order of October 27, 1949 is issued in violation of its statutory authority and is, therefore, illegal, null and void pursuant to Section 313 (b) of the Federal Power Act, which vests exclusive authority in the Court of Appeals to alter, amend, modify or set aside the Commission's Orders in its Docket No. IT-5915 upon the filing of the record of the proceedings with said Court of Appeals, because said Order of October 27, 1949 amends and modifies the Commission's previous Orders in the following respects:

(1) It requires the rate schedule for services to Baltimore Company to include a credit to Baltimore Company in the amount of $141,777, which credit is not required by the Order of January 5, 1949 as amended by the Order of February 28, 1949.

(2) It requires that the rate schedule for services to Baltimore Company include a credit to Baltimore Company for fuel cost adjustment (Pennsylvania Railroad), which said credit was not required by the Order of January 5, 1949 as amended by the Order of February 28, 1949.

(3) It requires that the rate schedule to PP&L include a provision for fuel cost adjustment, which said provision is not required by the Order of January 5, 1949 as amended by the Order of February 28, 1949.

(4) It requires that the rate schedules for services to Philadelphia Company and Metropolitan Edison Company include a provision for fuel cost adjustment in accordance with a formula specified in said Order, which formula is not required by the Order of January 5, 1949 as amended by the Order of February 28, 1949.

Petitioners also believe and, therefore, respectfully allege, that the Commission's said Order of October 27, 1949

was erroneously issued for each and all of the reasons specified in Petitioner's application for rehearing of Order issued January 5, 1949 filed herein on January 28, 1949 and in Petitioner's application for rehearing of Order issued February 28, 1949 filed herein on March 11, 1949.

Petitioners also believe and, therefore, respectfully allege that assuming *arguendo* the Commission's authority to issue any order altering, amending or modifying its previous Orders in this proceeding, after the filing of the transcript of the record with the Court of Appeals for the District of Columbia Circuit, said Order of October 27, 1949 is further illegal, null and void in that it requires an adjustment of Penn Water's rate schedules and introduces new matters therein without prior notice to Penn Water and without affording Penn Water an opportunity to be heard thereon or to present evidence with respect thereto, in violation of Sections 20 (15 U. S. C. §§ 813; 41 Stat. 1073) and 206 (15 U. S. C. 824e; 49 Stat. 852) (to the extent, if any, that such section may be applicable to Penn Water) of the Federal Power Act, Sections 4 and 5 of the Administrative Procedure Act (5 U. S. C. §§ 1003, 1004; 60 Stat. 238, 239) and the Fifth Amendment to the Constitution.

Petitioners also believe and, therefore, respectfully allege that the rate schedules prescribed by said Order of October 27, 1949, insofar as the amount of $141,777 required to be credited to Baltimore Company is concerned, constitute an adjustment or revision of the divisional agreement between Penn Water and Baltimore Company for division of Pennsylvania Railroad revenues, without authority or jurisdiction in the Commission under the Federal Power Act to regulate such divisions.

Petitioners also believe and, therefore, respectfully allege that paragraph (B) of said Order of October 27, 1949 is unlawful in that it constitutes an attempt to prescribe a rate reduction in excess of that prescribed by the Commission's Order of January 5, 1949, effective retroactively to

February 1, 1949, without authority under the Federal Power Act.

Petitioners also believe and, therefore, respectfully allege that assuming *arguendo* the Commission's authority to issue any order altering, amending or modifying its previous Orders in this proceeding, after the filing of the transcript of the record with the Court of Appeals for the District of Columbia Circuit, said Order of October 27, 1949 is further illegal, null and void in that it is not based upon substantial evidence.

Petitioners file this application for rehearing of the Commission's Order of October 27, 1949 pursuant to Section 313 (a) of the Federal Power Act (16 U. S. C. § 825-l (a); 49 Stat. 860) without conceding the authority of the Commission to issue said Order and without prejudice to the rights of Petitioners to maintain that said Order is illegal, null and void and of no effect whatever inasmuch as said Order attempts to alter, amend or modify the previous Orders of the Commission in this proceeding after the filing of the transcript of the record with the Court of Appeals for the District of Columbia Circuit, upon which filing exclusive jurisdiction to take any action affecting the prior Orders of the Commission in this proceeding vested in said Court of Appeals pursuant to Section 313 (b) of the Federal Power Act (16 U. S. C. § 825-l (b); 49 Stat. 860).

In support of the foregoing allegations, Petitioners respectively submit their detailed specifications of error in respect of the findings and Order of the Commission issued October 27, 1949 and the statements in the accompanying opinion therewith.

I—Opinion of the Commission

Insofar as any of the preliminary statements in the Commission's Order issued October 27, 1949, purport to be definite findings of fact or conclusions, or anything more than mere illustrative explanations of the Commission's

conclusions in said Order of October 27, 1949, each and all of the following portions thereof are erroneous, unconstitutional, unlawful, arbitrary, capricious, contrary to the evidence of record, unsupported by any substantial evidence of record; and operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States, and constitute and result in exercise of authority in excess of statutory jurisdiction, authority, or limitations; and Petitioners seek rehearing on each and every one of the following portions thereof for the foregoing reasons and on the grounds as hereinafter stated:

(1) The statement of the Commission on page 2 of said Order as follows:

> "Consideration of Penn Water's 'FPC Electric Tariff' impels the conclusion that in many respects it fails to comply with the Commission's opinions and orders in this case; that it should be rejected; and that proper rate schedules should be prescribed by the Commission."

on the grounds that such statement is not supported by the record; that the FPC Electric Tariff filed herein by Penn Water effects the reduction in Penn Water's rates and charges required by paragraphs (C) and (D) of the Commission's Order issued January 5, 1949; that said FPC Electric Tariff does not fail to comply with any essential element of the requirements of the Commission as contained in paragraphs (A) to (I) of said Order and in fact follows the language and terms of the Commission's requirements as nearly as it is practicable to do so; and that such variances as there may be from the terms of said Order are matters of form and do not affect the dollar amounts involved.

(2) The statement of the Commission on pages 2 and 3 of said Order as follows:

"• • • the Commission ordered Penn Water (alone) to file the rate schedules for such sales [To PP&L, Philadelphia Company and Baltimore Company]. • • •.

"• • • Penn Water disregards the Commission's order that Penn Water (not Penn Water jointly with someone else not a party to the proceeding) file schedules of its rates for services the Commission has determined Penn Water alone renders, by filing, as one of purported joint sellers, schedules of joint rates for joint services."

on the grounds that such statements are not supported by the record; and paragraphs (A) to (I) of the Commission's Order issued January 5, 1949, do not prohibit or prevent Penn Water from filing rate schedules thereunder on behalf of itself and Safe Harbor subject to the voluntary concurrence of Safe Harbor applicable to service which Safe Harbor has an obligation to continue until relieved of such obligation in a lawful manner.

(3) The statements of the Commission on page 4 of said Order as follows:

"The schedules filed by Penn Water for service to PP&L and Philadelphia Company also violate the order of January 5, in that they provide for service only to 'the extent that there is available', capacity, energy and other services. By so limiting the availability of service under these rate schedules 'the present arrangements whereby sales to Pennsylvania customers are made on a firm basis' would be materially altered, contrary to the Commission's order which required that the obligation of Penn Water to these customers for firm supply of energy at the rates required by the Commission's rate reduction be continued in effect."

on the grounds that:

(a) Such statements are not supported by the record; and nothing in paragraphs (A) to (I) of the Commission's Order issued January 5, 1949, required that any obligations of Penn Water be continued in effect as its sole obligation, or could require Penn Water to file tariffs for services it might not physically be able to render alone; and

(b) The conditions, in the FPC Electric Tariff filed by Penn Water herein, as to availability of service limited to the resources of energy, capacity, and other services of the suppliers is a reasonable provision and essential to maintain the ability of Penn Water and Safe Harbor or Penn Water alone to render adequate service to their customers. The record shows by uncontradicted evidence that it is an impossibility for Penn Water, without the joint obligation of Safe Harbor, to meet the requirements of PP&L and Philadelphia Company, from the resources of energy, capacity, and other services available to it under existing contracts, and at the same time meet the requirements of its obligations to Metropolitan Edison Company and The Pennsylvania Railroad Company. Any requirement by the Commission that Penn Water assume the sole obligation of serving PP&L and Philadelphia Company, and relieving Safe Harbor of its joint obligation to such customers, without a qualification as to availability of service such as contained in Penn Water's FPC Electric Tariff herein, will of necessity impair its ability to render adequate service to its other customers, contrary to the provisions of Section 207 (to the extent said section may be applicable to Penn Water) of the Federal Power Act (16 U. S. C. § 841 f; 49 Stat. 853) and contrary to the Pennsylvania Public Utility Law.

(4) The statements of the Commission on pages 4 and 5 of said Order as follows:

"* * * the rate schedule for service to Baltimore Company * * * is not in accord with the requirements

> of the opinion and order because it fails to provide a credit to Baltimore Company in the net amount of $141,777 * * *. The allocation of costs of service for special facilities * * * and the rate reductions ordered by the Commission are predicated on this credit to Baltimore Company of $141,777 * * *."

on the grounds that such statements are not supported by the record; and nothing in paragraphs (A) to (I) of the Commission's Order issued January 5, 1949, required that any such credit be given Baltimore Company in computing the charges to be paid by Baltimore Company to Penn Water; nor were the allocations of costs of service for special facilities or the rate reductions ordered by such paragraphs in such Commission's Order predicated on such credit to Baltimore Company.

(5) The statements of the Commission on page 5 of said Order as follows:

> "As a result of improper computations, the proper amounts have not been segregated in the required reserve. The order herein, accordingly, requires Penn Water to compute the amounts correctly * * *."

on the grounds that such statements are not supported by the record; that Petitioner has segregated in the required reserve amounts representing not less than the difference between payments received by Penn Water under existing rates or arrangements and those which would have been received under the provisions of paragraphs (A) to (I) of the Commission's Order issued January 5, 1949; and that the amounts required by the Commission's Order issued October 27, 1949, to be computed and segregated in the required reserve are in excess of the amounts required to be segregated by the Commission's Order issued January 31, 1949 and by the Order of the Court of Appeals for the District of Columbia filed April 29, 1949.

(6) The statements of the Commission on pages 5 and 6 of said Order as follows:

"Although the Commission's opinions and orders will be searched in vain for any finding or order justifying or requiring a rate schedule to be filed by Penn Water, or Baltimore Company, for the supply of electric energy by Baltimore Company to Penn Water, Penn Water has purported to file rate schedule "E" as part of its tariff, 'on behalf of' Baltimore Company. * * *

"Under the presently existing service arrangements and pool operations, Baltimore Company's energy is used by Penn Water to meet its firm power obligations in Pennsylvania. * * * Such operations require Baltimore Company to generate energy in its steam electric plants for transmission to Pennsylvania. * * * No rate is, therefore, necessary for the supply of Baltimore Company's energy. * * *

"Penn Water's filing, in this respect, appears to be part of its effort to disrupt the presently coordinated operations of the pool, and certainly not an effort to comply with the Commission's decision. * * * Moreover, a fixed rate for such energy will tend to defeat the purposes of the pooling arrangements in that the most economical sources of energy may not be utilized to meet the over-all energy requirements of Penn Water's Pennsylvania customers."

on the grounds that such statements are not supported by any substantial evidence of record; that the Commission's Order of January 5, 1949 purported to regulate and fix the rates and charges for service by Baltimore Company to Penn Water and thus made necessary the filing of a schedule containing such rates and charges for the supply of such service by Baltimore Company; that unless such separate schedules for service by Baltimore Company to Penn Water are filed, any rate schedules required to be filed under the Commission's Order of January 5, 1949 for the combined services of Penn Water to Baltimore Company and Baltimore Company to Penn Water could result in

payments by Penn Water to Baltimore Company for service rendered by Penn Water to Baltimore Company; and that the provision of rate schedule "E", providing that energy supplied by Baltimore Company be delivered only upon request of Penn Water, would not disrupt coordinated operations and would not tend to defeat the purposes of any such arrangements, but on the contrary, is a necessary provision whereby Penn Water may obtain supplemental energy from the most economic or advantageous source in meeting the over-all energy requirements of its Pennsylvania customers.

(7) The statements of the Commission on pages 6 and 7 of said Order as follows:

"Finally, we find that no provision is made by Penn Water in its 'Tariff' for adjustment of rates for variations in the cost of fuel. * * *

"* * * The absence of any fuel cost adjustment clause in the contract with PP&L resulted in rates which were unduly preferential and discriminatory between PP&L and the other Pennsylvania customers.

"To the extent that the supply of Pennsylvania customers' energy requirements depends upon utilization of Baltimore Company's steam generation * * * proper fuel cost adjustment clauses in the rates charged those customers are necessary to avoid undue discrimination against Baltimore Company * * * and to avoid undue preference to Baltimore Company * * *.

"Therefore a proper fuel cost adjustment clause uniformly applicable to all Pennsylvania customers is necessary to avoid an undue preference or discrimination among the Pennsylvania customers and between them, on the one hand, and the Baltimore Company, on the other.

"In the case of service to the Pennsylvania Railroad, the fuel cost adjustment clause must, of course,

be applied in computing the cost of that service to be credited to Baltimore Company."

on the grounds that:

(a) such statements are not supported by any substantial evidence of record;

(b) nothing in the Commission's Order of January 5, 1949 required that any provision be made by Penn Water in its Tariff for adjustment of rates for variations in the cost of fuel;

(c) the differences in service requirements and characteristics between the various Pennsylvania customers, as shown by the evidence of record, justifies differences in rates, charges, and the regulations applicable thereto so that the presence or absence of fuel cost adjustments does not thereby result in unlawful preference or discrimination within the meaning of the Federal Power Act;

(d) the FPC Electric Tariff filed by Penn Water does not contain rates, charges or fuel cost adjustment clauses which are unduly preferential or discriminatory as between any of the Pennsylvania customers whose rates or charges the Commission purported to regulate by its Order of January 5, 1949 (except as required by the provisions of said Order); and nothing in such Tariff results in undue preference or discrimination as between such Pennsylvania customers and Baltimore Company (except as required by the provisions of said Order);

(e) there is no requirement for the application of a fuel cost adjustment in computing the cost of service to the Pennsylvania Railroad to be credited to Baltimore Company under paragraph (D) of the Commission's Order issued January 5, 1949; and such an adjustment results in the computation of the cost of service to be credited to Baltimore Company, under such paragraph, substantially in excess of the cost to be so credited without such adjustment.

(8) The statements of the Commission on pages 7 and 8 of said Order as follows:

"A fuel cost adjustment clause applicable to the portion of the kilowatt-hours sold as firm energy to the Pennsylvania customers which is supplied by Baltimore Company, based upon variations from the average cost of fuel per kilowatt-hour in the year 1946 at all stations (excluding Pratt Street) of Baltimore Company and calculated as follows, is reasonable and proper (the energy supplied from Baltimore Company's energy includes the part of its two-thirds entitlement from Safe Harbor which is used to supply Pennsylvania customers):

$$\text{Total adjustment in dollars for fuel costs} = \frac{(A + B - C) \cdot S \cdot z}{A}$$

A=Total firm and net interchange energy sales to Pennsylvania customers in kilowatt-hours

B=Energy deliveries to Baltimore Company at Highlandtown in kilowatt-hours

C=Energy available to Penn Water, at points of delivery to others, from own generation and its entitlement to 1/3 Safe Harbor generation in kilowatt-hours

S=Firm energy sales to Pennsylvania customers in kilowatt-hours

z=Baltimore Company's average cost of fuel in dollars per kilowatt-hour in immediately preceding month minus the average cost in dollars of fuel per kilowatt-hour in the year 1946 (.003408 in 1946)

"• • • For the year 1946, factor *z* would have been zero." on the grounds that such statements are not sup-

ported by any substantial evidence of record, and no opportunity was given Penn Water to present any evidence with respect to such formula or to object thereto; that such formula is in error because it is applicable to electric energy other than energy generated by Baltimore Company at its steam stations in Baltimore and transmitted to Pennsylvania; that such formula is not applicable to steam generated energy supplied from Penn Water's own or from other sources, which energy is used by Penn Water in meeting the requirements of its Pennsylvania customers; and that application of such formula on a monthly basis for 1946 shows that the factor z would not have been zero.

(9) The statement of the Commission on page 8 of said Order as follows:

> "Special facilities charges in Penn Water's 'tariff' differ from the costs of service allocable thereto as set forth in the Commission's opinions and orders and must therefore be rejected".

on the grounds that the differences in the special facilities charges contained in Penn Water's Tariff were necessary in order that the reductions in revenues to be received from each of the Pennsylvania customers under the schedules contained in such Tariff would be equal to the reductions ordered by paragrapn (C) of the Commission's Order of January 5, 1949; and, in particular, the revenues which would be received from Metropolitan Edison Company under the Penn Water Tariff are less than the amount of $641,361 cost found by the Commission to be allocable to Metropolitan Edison Company in its opinion accompanying its Order of January 5, 1949, by reason of the fact that included in such costs are the costs associated with the Violet Hill Substation, which was sold by Penn Water early in 1946.

(10) The statement of the Commission on page 8 of said Order as follows:

"For the foregoing reasons, the Commission finds that 'FPC Electric Tariff, Original Volume No. 1', filed by Penn Water on May 31, 1949, does not comply with the requirements of the Commission's Opinions Nos. 173 and 173-A and accompanying orders, and does not set forth rates which would be just, reasonable and not unduly discriminatory or preferential."

on each of the grounds stated in this paragraph I above.

II—The Findings of the Commission

The Commission's statements, findings, and conclusions in its Order issued October 27, 1949, as referred to below are contrary to the evidence, unsupported by any substantial evidence, unsupported by adequate subsidiary findings, are unlawful, erroneous, arbitrary, capricious, and unconstitutional and operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States, and constitute and result in the exercise of authority in excess of statutory jurisdiction, authority, or limitations; and Petitioners seek rehearing on each and every one of the following purported findings for the foregoing reasons and on the grounds hereinafter stated:

(1) Finding No. (1) on the grounds that:

(a) As stated in paragraph I above.

(b) The rate schedules prescribed by the said Order of October 27, 1949, if effective, would accomplish a further reduction in Penn Water's rates and charges for services to Baltimore Company, than that prescribed by the Commission's Order of January 5, 1949, in the following respects:

(i) Rate Schedule (A) for services to Baltimore Company provides for a reduction in Penn Water's annual charge to Baltimore Company to an amount which is $141,777 less than the annual charge ordered in the Com-

mission's Order of January 5, 1949. Said reduction in revenues is required under Rate Schedule (A) to be made in the form of a credit to Baltimore Company without provision for any offsetting credit to Penn Water for such taxes as may be payable by Penn Water on said amount of $141,777. If taxed at a Federal rate of 38%, Federal taxes alone would amount to over $53,000. Said reduction in revenues is not required by the Commission's Order of January 5, 1949, or in the findings and opinion issued in conjunction therewith.

(ii) Rate Schedule (A) also requires as a credit to Baltimore Company a fuel cost adjustment, pursuant to a formula therein set forth, for variations from the average cost of fuel per kilowatt hour in the year 1946 at steam stations of Baltimore Company, to be applicable to the kilowatt hours sold to The Pennsylvania Railroad Company. The amount of said credit so required to be made by Penn Water is estimated at $51,400 for the eleven months period ended December 31, 1949; which facts Petitioners hereby offer to prove. No provision for such monthly fuel cost adjustment is made in the Commission's Order of January 5, 1949 or in its findings and opinion issued in conjunction therewith.

(iii) Rate Schedule (B) for Penn Water's services to PP&L requires a fuel cost adjustment for variations from the average cost of fuel per kilowatt hour in the year 1946 at steam stations of Baltimore Company. For the eleven months period ended December 31, 1949, the increased cost to PP&L by reason of said fuel cost adjustment is estimated at $109,500, an amount equal to which will be credited to Baltimore Company; and Petitioners hereby offer to prove such facts. Said fuel cost adjustment is not required by the Commission's Order of January 5, 1949 or its findings and opinion issued in conjunction therewith.

(iv) Rate Schedules (C) and (D) for Penn Water's services to Philadelphia Company and Metropolitan Edison Company prescribe a formula, originated by the Commission for fuel cost adjustment. For the eleven months period ended December 31, 1949 the increased costs to Philadelphia Company and Metropolitan Edison Company by reason of said fuel cost adjustment are estimated at $34,000 and $22,800, respectively, amounts equal to which will be credited to Baltimore Company; and Petitioners hereby offer to prove such facts. Said formula is not required by the Commission's Order of January 5, 1949 or its findings and opinion issued in conjunction therewith.

(c) The effect of the rate schedules prescribed by the said Order of October 27, 1949 is to reduce Penn Water's revenues below the amount required by the Commission's Order of January 5, 1949 and its findings and opinion issued in conjunction therewith, by (i) the amount of $141,777 required to be credited annually to Baltimore Company as set forth in paragraph (b) (i) above, and (ii) an amount, estimated at $51,400 for the eleven months period ended December 31, 1949, to be credited to Baltimore Company on account of the additional fuel cost adjustment required in the alleged cost of service to The Pennsylvania Railroad Company in Pennsylvania, as set forth in paragraph (b) (ii) above.

(d) The rate schedules prescribed by said Order of October 27, 1949, insofar as the amount of $141,777 required to be credited to Baltimore Company is concerned, constitutes an adjustment or revision of the divisional agreement between Penn Water and Baltimore Company for division of Pennsylvania Railroad revenues, without authority or jurisdiction in the Commission under the Federal Power Act to regulate such divisions.

(2) Finding No. (2) on the grounds as stated in paragraph I (5) above.

III—The Commission's Order

The Commission's orders or requirements in its Order issued October 27, 1949, are erroneous in law and fact, are contrary to the evidence, and are unsupported by any substantial evidence, unsupported by findings, and are unlawful, erroneous, arbitrary, capricious, and unconstitutional, operate to deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States and constitute and result in an exercise of authority in excess of statutory jurisdiction, authority or limitations; and Petitioners seek rehearing on each and every one of said orders or requirements as follows:

(1) Paragraphs (A), (B) and (C) of the said Order on the grounds specifically set forth in this Application.

(2) Paragraphs (B) and (C) of the said Order constitute an unlawful attempt to amend and revise the Commission's Order of January 5, 1949, as amended by the Commission's Orders of January 31, 1949 and February 28, 1949, after the filing of Petitioners' Petition for Review in the United States Court of Appeals for the District of Columbia Circuit (No. 10,236) and after certification and filing with that Court of the transcript of the record upon which the order complained of was entered. The Commission was and is wholly without jurisdiction, power, or authority to amend or modify its Order of January 5, 1949, as amended, by reason of the provisions of Section 313 (b) of the Federal Power Act, which vest exclusive jurisdiction in the Court under such circumstances.

(3) The Commission's order of October 27, 1949 is further illegal, null and void by reason of the fact that the specified fuel cost adjustments and annual credit of $141,777 were ordered by the Commission without notice to Petitioners or the Pennsylvania customers and without affording Petitioners or the Pennsylvania customers any oppor-

tunity to be heard thereon or of presenting evidence with respect thereto in violation of Sections 20 and 206 (to the extent, if any that such section may be applicable to Penn Water) of the Federal Power Act, Sections 4 and 5 of the Administrative Procedure Act and the Fifth Amendment to the Constitution.

(4) Paragraph (B) of said Order of October 27, 1949 is unlawful in that it constitutes an attempt to prescribe a rate reduction in excess of that prescribed by the Commission's Order of January 5, 1949, effective retroactively to February 1, 1949, without authority under the Federal Power Act.

WHEREFORE, Petitioners respectfully pray that the Commission grant a rehearing in respect of its Order of October 27, 1949 and accompanying opinion and findings to the end that it forthwith enter an Order abrogating and annulling its said opinion and findings and Order in entirety.

Respectfully submitted,

Randall J. LeBoeuf, Jr.,

EXHIBIT E

UNITED STATES OF AMERICA
FEDERAL POWER COMMISSION

Before Commissioners: Nelson Lee Smith, Chairman; Thomas C. Buchanan and Claude L. Draper.

December 14, 1949

In the Matter of Pennsylvania Water & Power Company	Docket No. IT-5915

ORDER DENYING APPLICATION FOR REHEARING OF ORDER ISSUED OCTOBER 27, 1949

On November 25, 1949, Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland (hereinafter referred to as "Respondents"), filed an application for rehearing of the Commission's order issued October 27, 1949. That order rejected rate schedules proffered by Respondents on May 31, 1949, and prescribed rate schedules, which we found would effectuate the requirements of the Commission's order issued January 5, 1949, doing so subject to the terms and conditions of the stay order issued April 29, 1949, by the United States Court of Appeals for the District of Columbia Circuit.[1]

We have carefully reviewed Respondents' specifications of error of fact and of law and find nothing which warrants the granting of rehearing of the order issued October 27. We may, however, briefly notice several of the specifications of error.

Respondents allege that the rate schedules prescribed by our October 27 order effect reductions different from

1. This stay was issued in connection with the Petition for Review of the January 5 order filed by Respondents on April 22, 1949, in *Pennsylvania Water & Power Company, et al. v. FPC*, No. 10,236.

those contemplated by our January 5 order. This, it is alleged by Respondents, is accomplished by the inclusion in the rate schedule preseribed for service to Consolidated Gas Electric Light and Power Company of Baltimore ("Baltimore Company") of a credit of $141,777 to Baltimore Company, which, it is asserted, was not required by our January 5 order, and by the inclusion in the rate schedules of fuel cost adjustment clauses, whereas, it is asserted, the January 5 order contains no requirement therefor. Respondents allege that the Commission has thereby modified its January 5 order without authority since exclusive jurisdiction to affirm, modify or set aside the January 5 order vested in the Court of Appeals on June 2, 1949, when we filed with that Court the transcript of the record of the proceedings upon which the January 5 order was based (Section 313 (b), Federal Power Act).[2] Of course, it was not and is not our intention to modify the January 5 order in prescribing rate schedules.

The requirement, in the schedules prescribed by our order of October 27, 1949, that Penn Water credit to Baltimore Company the amount of $141,777 annually is necessary to effectuate our order of January 5, 1949, according to the terms of the January 5 order and the terms of our Opinion No. 173 which was incorporated as a part of that order.

As that opinion made plain, an error in the division between Penn Water and Baltimore Company of revenues received from the Pennsylvania Railroad, which previously had been of no importance, became important with our order of January 5, and required correction in the new rate schedules, in order to prevent evasion of the rate re-

2. On November 18, 1949, Respondents filed a motion in the Court to stay the order issued October 27, on the ground that it modified the order of January 5 in violation of Section 313(b) of the Federal Power Act for the reasons stated above. On November 25, 1949, we filed objections to that motion and, on November 29, 1949, Respondents filed a reply to our objections. Thereafter, on November 30, Respondents applied for oral hearing on their motion and, on December 1, 1949, we filed an answer to the motion for oral argument. The Court has yet taken no action on either motion.

duction we had prescribed. Under the arrangements prevailing prior to our order of January 5, Baltimore Company was entitled, in the computation of the payment to be made by it to Penn Water, to a credit for all other revenues received by Penn Water, including those for service to the Pennsylvania Railroad in Pennsylvania. That is to say, Baltimore Company paid to Penn Water whatever residual amount was necessary to bring Penn Water's total revenues up to the figure necessary to provide Penn Water with a contractually formulated total cost of service for all its operations. But, we found, Penn Water had been treating as revenue to it from the Railroad an amount which was excessive by $141,777. This excess was the amount paid by the Railroad for certain special facilities, the costs of which were borne by Baltimore Company and which we specifically held should be treated as revenue to Baltimore Company. The companies' assignment of this revenue to Penn Water had been the result of an improper division between Penn Water and Baltimore Company of the lump sum payments received from the Railroad for service rendered to it by Penn Water in Pennsylvania and by Baltimore Company in Maryland. This error in the division was, however, immaterial to the companies because of the fact we have referred to, that Baltimore Company only paid Penn Water for energy the residual amount necessary to bring its total revenues to the predetermined level. Thus the excess revenues mistakenly assigned to Penn Water were merely an additional amount deducted in determining the residual amount paid by Baltimore Company, and Baltimore Company's loss of $141,777 revenue from the Railroad was off-set by a $141,777 reduction in cost to it of its energy and power from Penn Water.

However, when we confined our inquiry to the rates Penn Water charges its resale customers, we could not consistently require that, in computing the charge to Baltimore Company, a credit be given that Company for all of Penn Water's revenues from the Railroad, because to do

so would deprive Penn Water of its excess revenues under the rates it charged the Railroad. "We then were faced with the necessity of leaving in Penn Water's hands the amount by which the charge to the Railroad exceeded the cost of serving it, and had to determine the proper amount of that excess to be left untouched. Accordingly in our order of January 5 (mimeographed opinion, p. 142), we made "an adjustment of revenues received for special facilities from Pennsylvania Railroad, in the amount of $141,777 * * * by adding the amount to revenues from Baltimore Company and deducting it from revenues from the Pennsylvania Railroad." As a result of this adjustment the excess revenues from the Railroad were found to be $222,475, and the excess revenues from Baltimore Company, $1,733,318 (*ibid.*, pp. 139, 142, 166), and we stated (*ibid.*, p. 167) that in "computing the power bill to Baltimore Company * * *, there shall be deducted * * * electric revenues received from others, * * * except the excess revenues, calculated at $222,475 for the year 1946, and income taxes associated therewith, from Pennsylvania Railroad." By thus excluding the $141,777 in computing Penn Water's excess revenues derived from the Railroad, we made it unmistakably clear that the $141,777 was not to be retained by Penn Water. Hence the provisions of our order of October 27, in prescribing schedules which prevent Penn Water from retaining that $141,777, did no more than effectuate the requirements of the January 5 order.

That our order of January 5 was plainly understood as requiring this result is manifest from Respondents' petition for court review of our January 5 order, for they there assign as one of the objections to that order that we had improperly made the division of revenues between Baltimore Company and Respondents for service to the Railroad which involves the $141,777 adjustment; also from Respondents' designation of Exhibit 433 for printing on that review, that exhibit relating solely to the nature and propriety of the $141,777 adjustment.

As to the inclusion of fuel cost adjustment clauses, if by their specifications of error Respondents mean to say that the January 5 order does not, in so many words, spell out the details of the rate schedules required to be filed in the first instance by Respondents, of course, that is the case. The order of January 5 did not undertake to spell out the details of the rate schedules. If it had, there would have been no need to afford Respondents an opportunity in the first instance to file the schedules. The design of rate schedules to effectuate the general level of revenues prescribed is a separate step of the rate making process which permits some latitude as to details, provided the resulting rate schedules effectuate the reduction in rate level on a just, reasonable, nondiscriminatory and not unduly preferential basis. Examples of such latitude are found in the provisions with respect to charges for Rkvah and for differentiation in charges for different categories of power supplied Metropolitan Edison Company, which Penn Water proposed in the rate schedules it filed and which we adopted in those we prescribed. Similarly, in prescribing a fuel cost adjustment clause formula we took as a basis for measuring changes in costs of fuel the average cost of fuel for the year 1946, and required an adjustment to reflect the amount by which average fuel cost in the billing month varied from the average for the year 1946.

Penn Water omitted from the schedules it filed fuel cost adjustment clauses which had existed in some of its prior rate schedules. Penn Water's proposals in this regard were rejected because they resulted in rate schedules which would be discriminatory and unduly preferential, as fully explained in the October 27 order. To eliminate discrimination and unfairness in effectuating the requirements of the January 5 order we included in the schedules we prescribed fuel cost adjustment clauses which would provide rates and charges on a nondiscriminatory and nonpreferential basis. Respondents have not alleged that the effect of the fuel cost adjustment clause would be to reduce the re-

turn on investment, after operating expenses, below the 5¼% which we prescribed for their business subject to our jurisdiction.

The Commission, therefore, *orders:*

The application for rehearing of the order issued October 27, 1949, be and the same is hereby denied.

By the Commission.

IN THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

APPENDIX TO MOTION TO POSTPONE DATE OF ORAL ARGUMENT, ETC.—Filed November 21, 1950

UNITED STATES COURT OF APPEALS FOR THE FOURTH CIRCUIT

No. 6102

PENNSYLVANIA WATER & POWER COMPANY, a Pennsylvania Corporation, and Pennsylvania Public Utility Commission, Appellants,

vs.

CONSOLIDATED GAS, ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a Maryland Corporation, and Public Service Commission of Maryland, Intervener, Appellees

Appeals from the United States District Court for the District of Maryland, at Baltimore, Civil

(Argued June 26, 1950. Decided September 30, 1950.)

Before Parker, Soper and Dobie, Circuit Judges

James Piper, Wilkie Bushby and Charles E. Thomas (R. Dorsey Watkins, William J. Grove and Lloyd S. Benja- [fol. 5384] min on brief) for Appellants, and Harry N. Baetjer, Alfred P. Ramsey and Charles D. Harris (G. Kenneth Reiblich, Norwood B. Orrick and John Henry Lewin on brief) for Appellee.

SOPER, Circuit Judge:

The subject matter of this suit is a wholesale electric power agreement between Consolidated Gas, Electric Light & Power Company of Baltimore, a Maryland utility corporation, and Pennsylvania Water & Power Company, a Pennsylvania utility corporation. Penn Water seeks a declaratory judgment that the agreement is not a valid contract principally on the grounds that it violates the federal anti-trust laws and is contrary to the public policy and the laws of Pennsylvania.

Differences between the parties led Consolidated on September 1, 1948 to invoke arbitration provisions contained in Article X of the contract. Shortly thereafter, Penn Water instituted this suit and asked the court to declare that Article X is unenforceable and to enjoin Consolidated from proceeding with the arbitration. During the course of the proceeding, Penn Water notified Consolidated that it had terminated the agreement because of breaches on the part of Consolidated, and filed an amended complaint asking that the agreement be struck down in its entirety and also that the arbitration be enjoined.

Penn Water notified Consolidated that it would immediately cease to receive from Consolidated and pay for any electric energy generated in Maryland or the District of Columbia and transmitted to Pennsylvania, and that its opera- [fol. 5385] tions would be changed to effect this purpose. It declared that it would receive energy via its transmission lines for the limited purpose of delivery to the Pennsylvania Railroad; and announced that these changes would have no effect on the amount of electrical services rendered by Penn Water to Consolidated. Thereupon Consolidated applied to the court for a restraining order and on February 9, 1949 the court restrained Penn Water, pending the final determination of the issues, from doing anything in respect to the generation, transmission and disposition of power covered by the agreement between the parties in any manner different from the procedure theretofore followed in the performance of the contract. Thereafter Consolidated answered the amended complaint denying that the agreement is invalid for any reason, or that it had broken the agreement in any way, and asserted that the alleged breaches were proper subjects of arbitration under the contract.

The attorney for the Public Service Commission of Maryland was granted leave to appear on behalf of the Commission as intervener, and filed an explanatory statement of its position in support of Consolidated. The Pennsylvania Public Utility Commission intervened and charged that the contract between the two utilities is invalid because it constitutes a surrender of the powers and franchises of Penn Water to Consolidated without the approval of the Commission.

The court held that the contract was valid and that the

parties should proceed to arbitration and continued the restraining order in effect until the decision of this court on appeal.

Penn Water is a Pennsylvania utility corporation which was incorporated in 1910. It is the owner of hydro [fol. 5386] and steam electrical generating plants, capable of producing 104,000 kilowatts and 30,000 kilowatts respectively, at Holtwood, Pennsylvania, on the Susquehanna River. It also owns transmission lines, including those owned by its subsidiary, Susquehanna Transmission Company of Maryland, which connect with other utilities in Pennsylvania, Maryland and the District of Columbia. The area between the Potomac River on the southwest and the Hudson River on the northeast and south of the Pennsylvania-New York State line is interlaced with electric transmission lines connecting various utility systems. Penn Water's lines are interconnected with these systems which include the systems of Consolidated in Maryland and the Potomac Electric Power Company in the District of Columbia.

In 1910 Penn Water built two transmission lines from Holtwood to Baltimore, and subsequently added various other lines. Today there are in addition a transmission line running northeasterly from Holtwood to Coatesville for the supply of power to the Chester Valley Electric Company, now merged with the Philadelphia Electric Company; a transmission line running northwesterly from Holtwood to York to supply power to the Edison Light & Power Company; a transmission line from the hydro-electric plant of the Safe Harbor Water Power Corporation* at Safe Harbor on the Susquehanna, ten miles above Holtwood, to the western part of Baltimore; and a transmission line from Safe Harbor to the eastern part of Baltimore; an extension of the westerly one of these lines from Ellicott City, Maryland, to a point near the District of Columbia, to supply Potomac Electric, which serves the District of Columbia; and a transmis- [fol. 5387] sion line from Safe Harbor to Perryville, Maryland, along the eastern shore of the Susquehanna River which supplies power to the Pennsylvania Railroad at Perryville. That portion of these lines which is in Maryland

* This plant was built and is controlled by Consolidated and Penn Water.

RECORD

P. 5325-5400

is owned by the Susquehanna Transmission Company of Maryland.

Penn Water sells its electric energy and services in bulk to five customers. It has a contract with Metropolitan Edison Company, which operates in the central and eastern part of Pennsylvania; a contract under which it supplies electric services to the Philadelphia Electric Company at Coatesville, which serves an area around Chester, Pennsylvania; a contract with Pennsylvania Power & Light Company for the supply of power in the Lancaster territory extending from the Maryland line north to Harrisburg and eastward to Reading. These three public utility companies are the Pennsylvania customers of Penn Water. In addition Penn Water has a contract with Consolidated to supply power and energy over transmission lines to Baltimore, and also in connection with another contract of the Pennsylvania Railroad. Most of the energy supplied to the Railroad is delivered from Safe Harbor to Perryville, but there is another source of supply to the Railroad in Washington. It will be seen that the greater part of the energy produced by Penn Water is sold at wholesale to four customers, while the remaining portion is sold at retail to the Pennsylvania Railroad as a consumer.

Prior to entering into the agreement in suit, Penn Water sold electricity at retail to the street system of Baltimore, which is now a customer of Consolidated; and also to an electric furnace company in Baltimore. The lines of Penn Water connect directly with those of Potomac Electric and it could sell and deliver electric power directly to Po- [fol. 5388] tomac Electric if it were not for its contract with Consolidated which now buys electric power from Penn Water and resells it to Potomac Electric.

Penn Water, in order to supplement its own supply of energy, buys energy generated by Consolidated, Metropolitan Edison, Pennsylvania Power & Light, and Philadelphia Electric for resale, and also buys through Consolidated energy generated by Potomac Electric.

Consolidated has four large steam generating plants with a capacity of 538,000 kilowatts and distribution facilities in and around Baltimore, and also has extensive transmission lines which connect with Penn Water's network of transmission lines and with the Bethlehem Steel Company's electric generating plant in the Baltimore area.

It thus appears that both Penn Water and Consolidated are engaged in the generation, transmission and sale of electric power and energy. Both companies have charter rights for the sale of electric energy to the public at wholesale or retail. Penn Water's charter rights are derived from the State of Pennsylvania, insofar as its lines in that state are concerned, and through the Susquehanna Transmission Company in Maryland it has similar charter rights to operate in Maryland, Consolidated has similar charter rights for the purchase and sale of electric energy in Maryland.

If it were not for the agreement between the parties which is the subject of this suit, the parties would be potential competitors in the generation and sale of electric energy through their present facilities or other facilities that might be constructed; and would also be potential competitors in the purchase of power from others for resale. The power re- [fol. 5389] quired by Potomac Electric to supply the wants of consumers in the District of Columbia could be purchased by Potomac Electric either from Consolidated or Penn Water and could be supplied by their present facilities or additional facilities that might be built, or by purchases from others. Similarly, Penn Water and Consolidated would be potential competitors for the supply of electric energy in and around Baltimore at wholesale or retail to customers with their present lines or an extension thereof to be approved by the public authorities.

The electric power which is now distributed in and near Coatesville, Pennsylvania, by Philadelphia Electric could be supplied from the facilities now owned or additional facilities to be built by Penn Water or could be supplied from the facilities of Consolidated.

The electric power which is now distributed in and near Coatesville, Pennsylvania, by Philadelphia Electric could be supplied from the facilities now owned or additional facilities to be built by Penn Water or could be supplied from the facilities of Consolidated.

Similarly, Penn Water and Consolidated would be potential competitors with respect to energy taken from Penn Water by Metropolitan Edison and Pennsylvania Fuel & Light which is used in York and Lancaster areas.

Penn Water and Consolidated would be potential competitors for the sale of power to Potomac Edison at Fred-

erick, Maryland, whose lines at that point are only a short distance from the lines of Penn Water so that they could easily be connected.

Free and unrestricted competition between the two utilities is, however, impossible by reason of their contractual relations. The basic agreement between them was made on June 1, 1931. For a number of years prior thereto Penn Water had supplied electricity to Consolidated. On December 31, 1927 the parties entered into an agreement covering the period from January 1, 1927 to December 31, 1970 for the cooperative use of their power resources and the sale of electric energy by Penn Water to Consolidated on [fol. 5390] a unit rate or calculated value of service basis. Thereafter the two companies cooperated in the financing and construction of a hydro-electric plant at Safe Harbor and on June 1, 1931 entered into two forty-nine year contracts. One of these contracts provided that Penn Water should buy one-third and Consolidated two-thirds of Safe Harbor's output. The other contract is the basic agreement in suit which altered substantially the prior arrangement between the parties. It provided that Consolidated should be entitled to all the electric capacity and energy available to Penn Water from its Holtwood plants and from Safe Harbor and not otherwise disposed of in the performance of existing contracts or new contracts entered into by Penn Water with Consolidated's approval or any obligation imposed upon Penn Water by its charter or by-laws. In return Consolidated agreed to pay to Penn Water an amount equal to the latter's operating expenses, a specified rate of return on existing facilities and a specified rate of return on the cost of new facilities, including an allowance for depreciation; and Consolidated was allowed a credit for the amount of the sales of energy by Penn Water to other persons. This agreement involved the payment by Consolidated of the annual sum of $2,832,259.75 for power and $355,146.73 for depreciation, which represented the revenue received by Penn Water in 1930 under the previous agreement, 10.25% per annum of the cost of plant additions between 1930 and 1938, and 9.5% per annum of the cost of additions after December 31, 1938. This annual payment was reduced by the sum of $600,000 under a supplemental agreement of September 29, 1939, pursuant to the request of the Public [fol. 5391] Service Commission of Maryland.

When this agreement was executed, Penn Water was receiving more than half of its revenue from consumers other than Consolidated and was selling them 40% of its energy. At the present time, more than 50% of this energy is sold to others than Consolidated and in 1948 Consolidated's payment amounted to less than 12% of Penn Water's operating revenue.

The restrictions which are imposed upon the activity of Penn Water by the agreement and give rise to the contention of invalidity are contained in Articles IV and V as follows:

> Article IV. So far as possible consistently with the performance of any duty or obligation to serve imposed on Power by its charter or otherwise by law, Power shall obtain the approval of Electric before entering into any agreement or agreements with any other person or corporation for the sale and/or purchase and/or interchange of electrical and hydraulic power and energy, or before making any substantial modifications in the existing contracts now in force between Power and its customers other than Electric.
>
> Article V. So far as possible consistently with the performance of any duty or obligation aforesaid, Power shall obtain the approval of Electric (1) before incurring any single commitment for investment (except for renewals or replacements) in excess of $50,000.00 on the basis of which Electric shall make payment under Article III(b) hereof, and (2) before alienating or disposing of in any one year any property, plant, or equipment, other than stores and construction equipment, having a total value in excess of $50,000.00 and included in the investments of [fol. 5392] Power and/or subsidiaries of Power in plant, property or power development devoted to the generation, transmission, or distribution of electrical power and energy.*

---

* Article VIII of the agreement declares that it is the intent of the parties to encourage the maximum utilization of the resources of the parties by joint use of their property and equipment and by avoiding duplication of investment and unnecessary operating costs. For this purpose it is pro-

The basic agreement was not submitted to or approved by the Public Utility Commission of either Pennsylvania or Maryland before its execution. It was made possible by the close relationship between the two utilities, which grew out of the fact that both corporations were controlled by a group of stockholders of whom John E. Aldred, an important figure in the utility field, was the dominating personality. He and his associates acquired control of both corporations in 1910. He became president of both and both continued under his direction until his resignation in 1938. Thereafter the same close cooperation between the two corporations persisted until the retirement in 1946 of the officials who had participated with him in the formulation of his policies; but disagreements subsequently arose which culminated in the present litigation.

The District Judge found and it is not disputed that the effect of the quoted provisions of Articles IV and V of the contract is to confer upon Consolidated the power to control (1) the prices at which Power may sell its product; (2) the extent to which Power may extend its plant; (3) the territory [fol. 5393] in which Power may sell its product; and (4) the amount of back feed energy which Power must purchase from Consolidated.

We are in agreement with this interpretation of the contract. It expressly forbids plant expansion or development by Penn Water without Consolidated's consent; and also forbids the sale of electric energy by Penn Water without Consolidated's approval, and accordingly empowers Consolidated to fix Penn Water's prices. Hence the effect of the contract was to divide between two large power companies a

---

vided that each party shall appoint one representative to serve on an operating committee to investigate and advise on operating matters and, in case of inability to agree, to submit the questions in dispute to the presidents of their respective companies.

Article X provides that if any dispute arises between the parties, it shall be referred to a Board of Arbitration consisting of one member to be chosen by each party and the third member to be chosen by the others with further provision for the selection of members of the Board of Arbitration in case of failure to act or disagreement, the determination of the Board to be final and conclusive.

trade territory wherein they would otherwise have been competitors; and to give one of them the power to fix prices for the other and to forbid plant expansion by the other, however beneficial to the other or to the public interest it might be.

Consolidated has actually exercised its restrictive powers in approving or disapproving Penn Water's contracts and by prohibiting Penn Water's proposals for plant expansion, notably, a proposal by Penn Water in 1948 for plant expansion at Holtwood whereby coal from the river could be salvaged and power economically produced. At the same time Consolidated erected a new steam plant for itself at Riverside, Maryland.

It follows that the contract is invalid because it violates Section I of the Sherman Act, 15 U.S.C.A. §1, which provides that every contract in restraint of trade or commerce among the several states is illegal. While the statute has been held to apply only to those restraints which are unreasonable in character, it has been repeatedly adjudged that price fixing agreements are unlawful *per se*. In *U. S.* v. *Socony-Vacuum Oil Co.*, 310 U. S. 150, 221, 222, the court said:

> "* * Any combination which tampers with price structures is engaged in an unlawful activity. [fol. 5394] Even though the members of the price-fixing group were in no position to control the market, to the extent that they raised, lowered, or stabilized prices they would be directly interfering with the free play of market forces. The Act places all such schemes beyond the pale and protects that vital part of our economy against any degree of interference. Congress has not left with us the determination of whether or not particular price-fixing schemes are wise or unwise, healthy or destructive. It has not permitted the age-old cry of ruinous competition and competitive evils to be a defense to price-fixing conspiracies. It has no more allowed genuine or fancied competitive abuses as a legal justification for such schemes than it has the good intentions of the members of the combination. If such a shift is to be made, it must be done by the Congress. Certainly Congress has not left us with any such choice. Nor has the Act created or authorized the creation of

> any special exception in favor of the oil industry. Whatever may be its peculiar problems and characteristics, the Sherman Act, so far as price-fixing agreements are concerned, establishes one uniform rule applicable to all industries alike."

In *U. S.* v. *Masonite Corp.*, 316 U. S. 265, 276, it was also said:

> "* * Since there was price-fixing, the fact that there were business reasons which made the arrangements desirable to the appellees, the fact that the effect of the combination may have been to increase the distribution of hardboard, without increase of price to the consumer, or even to promote competition between dealers, or the fact that from other points of view the arrangements might be deemed to have desirable consequences would be no more a legal justification for price-fixing than were the 'competitive [fol. 5395] evils' in the Socony-Vacuum case."

See also *U. S.* v. *Paramount Pictures*, 334 U. S. 131, 143; *U. S.* v. *Real Estate Boards*, 339 U. S. 485, 489; *Norfolk-Southern Bus Corp.* v. *Va. Trans. Co.*, 4 Cir., 159 F. 2d 306.

So also does an agreement violate the statute which forecloses competitors from a substantial market since the statute is broken as well by the prevention as by the destruction of competition. *International Salt Co.* v. *U. S.* 332 U. S. 392, 396; *American Federation of Tobacco Growers, Inc.* v. *Neal*, 4 Cir., (July 29, 1950).

Similarly illegal is any agreement for the division of territory between competitors which in this case was effectuated by permitting Consolidated to determine to what customers and in what territory Penn Water might sell. *U. S. v. Aluminum Co.*, 2 Cir., 148 F. 2d 416; *U. S. v. Addyston Pipe & Steel Co.*, 6 Cir., 85 F. 271, 291.

The agreement is also violative of the Third Section of the Clayton Act, 15 U.S.C.A. § 14, insofar as it requires Penn Water's purchases of power to be approved by Consolidated from whom it purchases back feed or supplemental energy in order to meet the requirements of its outstanding contracts. Thereby Penn Water is prohibited from purchasing power from Consolidated's competitors. See *Standard Oil Co.* v. *U. S.*, 337 U. S. 293.

The contract is not one which involves the acquisition in legitimate business expansion of the plant of a competitor, such as was upheld in *U. S.* v. *Columbia Steel Co.*, 334 U. S. 495, where the United States Steel Corporation acquired the assets of a large independent steel fabricator on the west coast. It was there found that the purchase would not unreasonably lessen competition and was not entered into with the [fol. 5396] intent to monopolize, and that therefore Sections I and II of the Sherman Act were not violated. The court held that so-called vertical integration is not illegal *per se*, but must be judged by its effect on competition, and the purpose for which the combination is entered into. The court said: (p. 522)

> "* * A restraint may be unreasonable either because a restraint otherwise reasonable is accompanied with a specific intent to accomplish a forbidden restraint or because it falls within the class of restraints that are illegal *per se*. For example, where a complaint charges that the defendants have engaged in price fixing, or have concertedly refused to deal with non-members of an association, or have licensed a patented device on condition that unpatented materials be employed in conjunction with the patented device, then the amount of commerce involved is immaterial because such restraints are illegal *per se*."

In view of these well established rules, it is idle to consider the contentions of Consolidated that the contract was beneficial to the public and to the stockholders of Penn Water since it enabled Penn Water to meet its contractual obligations by supplementing its water power product at Holtwood by Consolidated's steam produced energy, and by guaranteeing to Penn Water stockholders a return on their investment; or that Consolidated was entitled to exercise the restrictive powers in order to protect itself from the risks involved in the obligation which it assumed to pay Penn Water's running expenses; or that the agreement was expressly designed to encourage the maximum cooperative utilization of their power and energy resources to the end that the joint use of their property and equipment should give the greatest practical benefit to the public [fol. 5397] and avoid duplication of investment and un-

necessary costs of maintenance, and thus contribute toward the rendition of a high standard of service. The decisions we have cited conclusively demonstrate that the prohibitions of the statute apply even though the parties to a contract indulge the belief that the agreement may have beneficial results and actually show that in some respects the public is benefited thereby. Congress has determined that the greater good is served by the maintenance of free competition and its decision in the field of interstate commerce must control. See *U. S.* v. *Aluminum Co.*, 2 Cir. 148 F. 2d 416, 426; *U. S.* v. *Reading Co.*, 226 U. S. 324, 326, 358.

It has been suggested that although regulated industries are not *per se* exempt from anti-trust laws,* the statutes do not have the same application to publicly regulated industries as they do to private enterprises and that in the actual situation existing in this case, the statutes were not violated. It is urged that the parties to the basic contract are not competitors in the same field since Consolidated sells its product mainly at retail to customers, while Penn Water sells electric power primarily at wholesale to Consolidated and other retail distributors, and has only one retail customer, the Pennsylvania Railroad Company which buys in large quantities. It is said that each utility has a legal monopoly in its own field and that there is no proof that the purpose or effect of the agreement has been to raise or fix unreasonably the prices of electric energy in the area served by the parties or that the customers have been deprived of [fol. 5398] any of the advantages of free competition.

This argument cannot be sustained. It does not give sufficient weight to the decisions, in which the anti-trust acts have been applied to utilities, or to the potential services which Penn Water might render to the public if it were relieved of the contractual restrictions upon its activities. It was held in *Georgia* v. *Pa. R. R. Co.*, 324 U. S. 429, in accord with many previous decisions, that railroad carriers are subject to the anti-trust laws although their rates are controlled by the Interstate Commerce Commission; and hence an agreement by carriers to fix rates may be illegal although the rates are reasonable; and that the agreement of a carrier to subject rates to the control of other carriers is in-

* *U. S.* v. *Borden Co.*, 308 U. S. 188; *Georgia* v. *Pa. R. R. Co.*, 324 U. S. 439.

valid since it deprives the carrier of the power to perform the duty imposed upon it to initiate its own rates. That is precisely the vice of the present contract. Penn Water has surrendered the right to propose its own rates, to extend its own plant, and to enter into new fields of activity; and it is impossible to say that the public interest has not been or will not be jeopardized by its failure to perform the duty to furnish adequate services at reasonable rates involved in its charter privilege to operate.

In short, the grant of monopolistic privileges, subject to regulation by governmental bodies, does not carry an exemption, unless one be expressly granted, from the anti-trust laws, or deprive the courts of jurisdiction to enforce them. This principle of law has been applied not only to public carriers, see U. S. Terminal W. Ass'n, 224 U. S. 383; *U. S.* v. *Reading Co.*, 253 U. S. 26; but in the insurance field, *U. S.* v. *Southeastern Underwriters Ass'n*, 322 U. S. 533, 559, 561; in the telephone field, *U. S. Tel. Co.* v. *Central Union Tele-*
[fol. 5399] *phone Co.*, 6 Cir., 202 F. 66; and also in the field of gas and electric energy, In re American Fuel & Power Co., 6 Cir., 122 F. 2d 223.* **

On this appeal Consolidated presents for the first time in this case the contention that the District Court was without jurisdiction to decide whether the basic agreement violates the Sherman Act because exclusive primary jurisdiction to determine that question has been conferred upon the Federal Power Commission by the Federal Power Act,† 16 U.S.C.A. §§ 791 to 825. That question was submitted to the District Court not only by the complaint of Penn Water but also by the answer of Consolidated, and the court

---

* It may be noted in passing that the legal monopoly of a patent does not exempt the patentee from the provisions of the Sherman Act. *Williston on Contracts*, §1647; *Standard Sanitary Mfg. Co.* v. *U. S.*, 226 U. S. 20; See, *U. S.* v. *General Electric Co.*, 272 U. S. 476, 485; *Standard Oil Co.* v. *U. S.*, 283 U. S. 163, 169.

** Since we reach the conclusion that the basic agreement is invalid on its face, we have not found it necessary to consider certain excluded evidence offered by Penn Water which tended to show that the purpose and effect of the agreement was to bring about an unlawful restraint of trade. Much of the evidence is documentary in character and should have

[fol. 5400] took jurisdiction of the issue with the express approval of both parties. Nevertheless Consolidated now contends that exclusive primary jurisdiction to consider the question was lodged in the Federal Power Commission by the statute.

Penn Water is subject to the Federal Power Act as a licensee under Part I of the Act, 16 U.S.C.A. §§791 to 823, and as a public utility under Part II of the Act, 16 U.S.C.A. §§824 to 824h. Under Section 4(g) of Part I of the statute the Commission has power to investigate and issue orders in the public interest to conserve and utilize

---

been admitted insofar as it related to circumstances which occurred at or prior to the execution of the agreement, and tended to show its illegal purpose, or insofar as it pertained to acts of Consolidated which gave effect to that purpose. The evidence related to the period of Aldred's control. It tended to show that the purpose of the contract was to destroy the power of Penn Water to compete with Consolidated in case Penn Water should fall into unfriendly hands; that Consolidated refused to allow Penn Water to contract with the Potomac Electric Power Company in 1932 for the purchase and sale of power at wholesale; that in 1946, when differences between the parties occurred, Consolidated forbade Penn Water to enter into negotiations with the Philadelphia Electric Company for the extension of contracts between them; and in 1947 after Philadelphia Electric withdrew a notice of termination of its contract with Penn Water, Consolidated objected to the acceptance of this withdrawal; in 1947, when Metropolitan Electric was in need of larger supplies of power, Consolidated objected to Penn Water exercising an option to increase its power to furnish the supplies. Again in 1947 Consolidated directed Penn Water to terminate its contract with Pennsylvania Power & Light on the ground that the rates were too low. In 1947 Penn Water proposed an expansion of its transmission system to meet the needs of its Pennsylvania customers but Consolidated refused. During this period there was a great expansion of the facilities of other electric utility companies in the Pennsylvania area amounting to a total of $520,400,000 with no expansion by Penn Water or Safe Harbor at the same time.

†41 Stat. 1063, 49 Stat. 838.

power sites of the country. (16 U.S.C.A. §797(g)). It also has power under Section 4(e) to issue licenses upon certain conditions for the construction and maintenance of works for the development, transmission and utilization of power in bodies of water which are subject to the authority of Congress to regulate interstate commerce. (16 U.S.C.A. §797 (e)). These conditions are set out in Section 10, 16. U.S.C.A. §803 and include Section 10(h), 16 U.S.C.A. §803(h), which is as follows:

> *Monopolistic Combinations prohibited.*
>
> (h) Combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited.

Section 20 of the Act, 16 U.S.C.A. §813, provides that when power enters into interstate commerce, the rates charged and services rendered by a licensee shall be reasonable and non-discriminatory; and whenever any of the states directly concerned has not provided a commission to enforce [fol. 5401] this requirement within the state, or such states are unable to agree through their properly constituted authorities on the services to be rendered and the rates to be paid, jurisdiction is conferred upon the Commission to regulate and control services and rates.

Section 26, 16 U.S.C.A. §820, provides that the Attorney General may on request of the Commission or the Secretary of the Army proceed in equity in a District Court of the United States for the purpose of revoking any license for the violation of its terms or to prevent any act of commission or omission in violation of the statute; and the District Courts are expressly given jurisdiction over the proceedings.

Part II of the Act, Sections 201-209, 16 U.S.C.A. §824, authorizes the Commission to regulate the transmission of electric energy in interstate commerce and the sale of such energy at wholesale, provided such regulation shall extend only to those matters which are not subject to the regulation by the states. The duty is imposed upon the Commission to encourage the interconnection and coordination of facilities for the generation and sale of electric energy be-

tween regional districts which the Commission is empowered to set up; and the Commission may by order direct a public utility to establish physical connection of its facilities with the facilities of others engaged in the transmission or sale of electric energy. (Section 202(b), 16 U.S.C.A. §824a (b)). No public utility may sell, lease or dispose of facilities subject to the jurisdiction of the Commission without applying to it for authority so to do. (§203(a), 16 U.S.C.A. §824b(a)). All rates and charges for such transmission or sale of electric energy, as well as contracts which affect such rates or services subject to the jurisdiction of the Commis- [fol. 5402] sion, may be determined by the Commission. (§205(c), 16 U.S.C.A. §824d(c); (206(a), 16 U.S.C.A. §824e (a)).

Part III (§§300-320, 16 U.S.C.A. §825) relates to administrative and procedural matters. The Commission is given the duty to investigate complaints and power to investigate violations of the Act, and hold hearings. (§§307-8, 16 U.S.C.A. §§825 f, 825 g). It may issue orders and regulations to carry out the statutory provisions; (§309, 16 U.S.C.A. § 825 h); and persons aggrieved by any order may obtain judicial review in the Circuit Court of Appeals. (§313, 16 U.S.C.A. §825 L). Section 314, 16 U.S.C.A. §825 m, of the Act empowers the Commission to bring an action in the United States District Court to enjoin violations of the statute and to enforce compliance therewith, and further provides that the Commission may transmit evidence of illegal practices to the Attorney General who, in his discretion, may institute criminal proceedings under the Act. The District Courts of the United States are given exclusive jurisdiction of violations of the Act, or of rules or orders thereunder, and of all suits to enforce any duty created by the Act or enjoin any violation thereof. (§317, 16 U.S.C.A. §825 p).

It is contended that these enactments contemplate prior administrative determination by the Commission, and that until this action is taken, the District Courts do not have jurisdiction to revoke licenses under Section 26, 16 U.S.C.A. §820, or to restrain violations of the statute under Section 314, 16 U.S.C.A. §825m. It is also suggested that since public utilities like Penn Water were subject to the Sherman Act at the time that the Federal Power Act was passed, there could have been no other reason for the insertion of

[fol. 5403] the prohibitions of the Sherman Act in Section 10(h), 16 U.S.C.A. §803(h), except to shift the forum in which restraints of trade of public utilities could be ascertained and corrected, from the District Courts to the Commission.

The argument does not carry conviction. The prohibition against monopolistic combinations was included among the conditions upon which the Power Commission may issue licenses for the construction and maintenance of power projects—not to deprive the courts of jurisdiction to enforce the anti-trust acts, but to make it perfectly clear that no licensee can legally agree to limit output, restrain trade or fix prices. The condition was a reaffirmance of the Sherman Act and was designed to restrict rather than to enlarge the Commission's authority.

That the condition was not inserted in the Act to shift the forum for the trial of anti-trust questions affecting power companies from the District Courts to the Power Commission is shown by the failure of Congress to empower the Commission in Section 10(h), 16 U.S.C.A. §803(h), to entertain proceedings before it to enforce the condition against monopolistic combinations. This omission is in marked contrast with the authority expressly conferred upon the Commission in respect to all the other conditions of the license to take steps to make them effectual. For example, in Condition (a) which provides that the project shall be such as is best adapted in the judgment of the Commission to utilization and improve the waterway involved, the Commission is given authority to require modification of the plans and specifications.

It is true that Section 26, 16 U.S.C.A. §820, of the Federal Power Act empowers the Commission to take action when [fol. 5404] the terms of a license are violated, but the manner in which the Commission is directed to proceed makes it very clear in the light of decisions in analogous cases that Congress did not intend to oust the District Courts of jurisdiction over violations of the Sherman Act. The Commission's function is merely to request the Attorney General to institute suit to control the offending licensee and thereafter, if the Attorney General sees fit to act, the District Court has jurisdiction to determine whether the terms of the license have been violated and to apply the proper

remedy. This procedure, however, falls far short of making the jurisdiction of the District Court contingent upon prior administrative action of the Commission, and there is nothing in the section which contemplates that the Commission must first determine administratively whether the grounds of revocation exist before the Attorney General may institute proceedings against the offender. The Commission may request court action in a proper case and the Attorney General may comply or refuse in his discretion, but there is nothing to show that the Attorney General may not act upon his own motion precisely as he did before the statute was passed.*

The case is closely analogous to the decision in *U. S. Alkali Ass'n* v. *U. S.*, 325 U. S. 196, which related to the provisions of the Webb-Pomerene Act that exempted associations engaged in export trade from the prohibitions of the Sherman Act, provided the Association acted in accordance with [fol. 5405] certain conditions. The Federal Trade Commission was empowered to investigate if it had reason to believe that the activities of an export association were not in accordance with the provisos and, if violations of the Sherman Act were found, to make recommendations to the Association for readjustment of its business in accordance with law; and if the Association should fail to comply with the recommendations, to send the findings and recommendations of the Commission to the Attorney General for such action as he should deem proper. It was held that the exercise of these powers by the Commission was not a prerequisite to a suit by the United States against an export association to restrain violations of the Sherman Act. The court showed that the grant of power to the Commission did not repeal *pro tanto* the authority conferred upon the Attorney General by the Sherman Act to enforce its provisions and that although the Commission might render useful service by bringing violations to the attention of the Attorney General, the enforcement of the statute is in his hands and the Com-

---

* The power conferred upon the commission by Section 825m to bring suit on its own initiative in the District Court to enjoin violations of the Federal Power Act or enforce compliance therewith obviously does not deprive the District Court of jurisdiction to enjoin complaints instituted by the Attorney General or other parties.

mission's authority is exhausted when it refers its findings to him. The court took notice of the fact that the provisions of the Sherman Act with reference to enforcement through the Attorney General were not expressly repealed by the Webb-Pomerene Act as to export associations and emphasized the principle that repeals by implication are not favored.

In *U. S.* v. *Borden Co.*, 108 U. S. 188, a similar decision was made. An indictment against certain producers and distributors of milk for violation of the Sherman Act was sustained notwithstanding the provisions of the Capper-Volstead Act whereby dairymen were authorized to act in concert in marketing their goods, and the Secretary of Agri- [fol. 5406] culture was authorized to determine, subject to judicial review, whether a cooperative corporation restrained trade to such an extent that the price of the product was unduly enhanced, and if so, to issue a cease and desist order. This procedure was held not to replace or prevent a criminal prosecution under the Sherman Act without prior action by the Secretary of Agriculture. See also *Hinton* v. *Columbia River Packers Ass'n*, 9 Cir., 131 F. 2d 88, where a similar construction was given to the statutes respecting Fishermen's Cooperatives, which empowered the Secretary of the Interior to issue cease and desist orders to any association which should seek to monopolize trade in any aquatic project. In these cases the principle laid down in *Myers* v. *Bethlehem Corp.*, 303 U. S. 41, that one who seeks relief in equity must first exhaust his administrative remedy was held inapplicable.

The argument of the appellee completely ignores these decisions and rests principally upon *U. S. Navigation Co.* v. *Cunard S/S Co.*, 284 U. S. 474 and similar cases. That suit was brought by a shipping company in the United States District Court to enjoin a combination of shipping companies alleged to be engaged in monopolistic practices in violation of the anti-trust acts, and it was held that the court was without jurisdiction since Congress had afforded an exclusive remedy in a proceeding before the United States Shipping Board under the Shipping Act of 1916 and the Merchant Marine Act of 1920. Section 14(a) of the statute authorized the Shipping Board, upon its own initiative, or upon a complaint to determine whether any person had violated the prohibitions of the Act against rebates or un-

fair discrimination or the suppression of competition, and Section 22 empowered the Board to direct payment of repa- [fol. 5407] ration for injuries caused by violations of the Act. Jurisdiction to enforce the orders of the Board was conferred upon the District Courts by Sections 29 and 30. The court followed the line of decisions with respect to the preliminary jurisdiction of the Interstate Commerce Commission over carriers by rail and held that the case was remedied under the Shipping Act, and that the matter was within the exclusive primary jurisdiction of the Shipping Board and to that extent the anti-trust laws were superseded. Decisions in the kindred field of railroad transportation reach the similar result that complaints in respect to the rates and charges by carriers subject to the jurisdiction of the Interstate Commerce Commission must be submitted to the Commission for preliminary administrative action in order to give jurisdiction to the federal court. *Tex. & Pac. R. Co.* v. *Abilene Cotton Oil Co.*, 204 U. S. 426; *Keogh* v. *C. & N. W. Ry. Co.*, 260 U. S. 156; *Terminal Warehouse Co.* v. *Penn. R. Co.*, 297 U. S. 500.

A comparison of the provisions of the Interstate Commerce Act and the Shipping Act, on the one hand, with the provisions of the Federal Power Act, on the other, demonstrate that the present case is ruled by the line of decisions of which *U. S. Alkali Ass'n* v. *U. S., supra,* is a notable example, rather than by the cases last cited. The maintenance of uniformity of regulation and the control of the activities of an industry of national scope by a specialized body are as important in the field of electric power as in the field of transportation by rail or water; but the control of the Federal Power Commission over the power sites of the country and over the interstate transmission of electric energy is not disturbed by the retention of the jurisdiction of the courts to enforce the anti-trust acts. Indeed the Federal [fol. 5408] Power Commission itself has indicated that in its opinion it possesses the power to regulate the rates for the transmission of electric energy by Penn Water in Pennsylvania to Consolidated in Maryland, and to maintain the interconnection of their facilities, even if the basic contract between them is invalid.*

---

* Even if it should be held that the Federal Power Act requires a preliminary determination by the Federal Power

We are referred to four proceedings conducted by the Federal Power Commission in respect to the activities of Penn Water in which its relations to Consolidated and Safe Harbor were involved and the coordination of their facilities in the transmission of electric energy were approved. The first proceeding originated on September 2, 1938 in a show cause order of the Commission to compel Penn Water to take a license under Part I of the Act, and finally resulted in an issuance of the license after an unsuccessful appeal in *Penn. Water & Power Co.* v. *F.P.C.*, C.A.D.C., 123 F. 2d 155; see 2 F.P.C. 61, 4 F.P.C. 426. The basic agreement of 1931 had been on file with the Commission since January 13, 1936, as a rate schedule of Penn Water under Section 824d(c) of the Federal Power Act, but there was no mention of the agreement in the proceeding although the Commission in issuing the license stated that the project was best adapted to a comprehensive plan for developing the Susquehanna River for the use and benefit of interstate or [fol. 5409] foreign commerce.

The second and third proceedings involved investigations into the wholesale rates charged by Safe Harbor under a tripartite contract among Safe Harbor, Penn Water and Consolidated, which complemented the basic agreement of 1931. In the second proceeding the Commission issued an order reducing the Safe Harbor's rates, 2 F.P.C. 182; but the order was set aside on appeal in *Safe Harbor Water Power Corp.* v. *F.P.C.*, 3 Cir., 124 F. 2d 800, on the ground that the jurisdiction of the Commission was dependent upon the inability of the Maryland and Pennsylvania Utility Commissions to agree, which had not been shown. This

---

Commission in order to clothe a District Court with jurisdiction to entertain a suit to revoke a license or enjoin an act of a utility in violation of the anti-trust acts, it would not necessarily follow that such a determination is necessary to give jurisdiction to the District Court in a case of this kind. The instant suit was not brought to enforce the anti-trust acts, but to secure a judgment declaring that the basic agreement violates these acts and is therefore void. See the Declaratory Judgment Act, 28 U.S.C.A., Section 2201. However, in view of the conclusions stated in our opinion, it is not necessary for us to determine the weight to be given to this distinction.

defect was cured in the third proceeding, 5 F.P.C., 221, and on appeal the rate order of the Commission was upheld. *Safe Harbor Water Power Corp. v. F.P.C.*, 3 Cir., 179 F. 2d 179. The activities of the interconnected systems were commended by the Commission as producing electric energy at the lowest cost as well as insuring reliability of service. The Commission described the provisions of the basic agreement in regard to the right of the Maryland Company to all the electric capacity of Penn Water not otherwise disposed of, the right of Penn Water to a supply of steam generated energy from Consolidated and the agreement of Consolidated to reimburse the Pennsylvania Company for its operating expenses, as well as a return on its investment. The restrictive provisions of the agreement were not mentioned and their legal validity was not discussed.

The fourth proceeding was instituted by the Commission to investigate the reasonableness and legality of the charges of Penn Water for wholesale energy sold to Consolidated under the basic agreement. Consolidated and both state [fol. 5410] commissions intervened. On January 4, 1949 the Commission filed its opinion and order reducing the rates, *In the Matter of Pennsylvania Water & Power Co.*, F.P.C. Docket No. IT-5915, opinion No. 173. An appeal from this order is now pending in the Court of Appeals of the District of Columbia. Penn Water filed a petition for rehearing alleging amongst other reasons that the basic agreement was null and void in that it violated the Sherman Act and Section 803(h) of the Federal Power Act, but this application was denied in an opinion filed on February 28, 1949, *In the Matter of Pennsylvania Water & Power Co.*, Docket No. IT-5915, opinion No. 173 A. In this opinion the Commission referred to the economies resulting from the combined power requirements of the three companies and referred to the basic contracts in the following terms:

> "By the terms of those contracts the installation of additional facilities by Penn Water is subject to approval by Baltimore Company, to assure coordinated planning and investment to meet the growing power needs of the system as a whole with resulting additional economies and consumer benefits.
>
> "The regional integration and coordination of facilities, the resulting economies, and the utilization

and conservation of natural resources thus achieved are precisely what was sought to be encouraged and fostered by the Federal Power Act and established as a part of the criterion of the public interest to be served by regulation thereunder (cf. Section 202 (a)). *If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions.* In our opinion and order we took care to leave the continuation of the opera-
[fol. 5411] tion of the integrated and interconnected system in full effect, merely changing the rates, as shown by our statement wherein we specifically stipulated that 'The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. That arrangement will, therefore, be continued with, however, such modifications as are necessary to accomplish the reductions mentioned above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company.' (Italics supplied)

"Now, by the changes referred to in Penn Water's application for rehearing, all of the carefully built-up benefits of pool design, investment, construction and operation apparently are intended to be sacrificed by Penn Water. Penn Water's non-receipt of steam generated energy from outside Pennsylvania for sale to resale customers would destroy the pool economies under the established method of operation."

This view of expert government authority is entitled to respect and we do not venture to say that the physical connection of the facilities of the two utilities, and the interchange of electric power produced by water in Pennsylvania and by steam in Maryland is not a desirable utilization of their combined resources. Nor do we undertake to gainsay the view of the Commission that even if the restrictive con-

ditions of the basic contract are invalid, as to which the Commission expressed no opinion, it still has the duty and authority under the Federal Power Act to encourage and es-
[fol. 5412[tablish the interconnection of electrical facilities of regional districts if it finds that such action is necessary and appropriate in the public interest, and will not interfere with the lawful authority of the state commissions in respect to the generation and distribution of electrical energy in intrastate commerce. §§ 202, 202(a)(b), 16 U.S.C.A. §§ 824, 824a(a)(b).

We are brought by these considerations to the contention of the Pennsylvania Public Utility Commission, an intervener in this case, that the basic agreement is invalid not only because it violates the anti-trust acts but also because it disables Penn Water from performing its proper function as a public utility under the public utility laws of Pennsylvania. The regulation is based upon the provisions of Section 3 of the Public Service Company Law of Pennsylvania, approved July 26, 1913, Pamphlet Laws 1374,* which was in effect when the basic agreement was executed in 1931 and also upon Sections 202(d) and 202(e) of Public Utilities Law, approved May 28, 1936, 66 Purdon's Pennsylvania Statutes Ann. §1101 *et seq.* which are set out in the mar-
[fol. 5413] gin.**

---

* Section 3. Upon like approval of the commission first had and obtained, as aforesaid, and upon compliance with existing laws, and not otherwise, it shall be lawful * * *

(c) For any public service company to sell, assign, transfer, lease, consolidate or merge its property, powers, franchises, or privileges, or any of them, to or with any other corporation or person.

** Section 202. *Enumeration of Acts Requiring Certificates.* Upon approval of the commission, evidenced by its certificate of public convenience first had and obtained, and upon compliance with existing laws, and not otherwise, it shall be lawful * * *

(d) For any public utility to dissolve, or to abandon or surrender, in whole or in part, any service, right, power, franchise, or privilege * * *

(e) For any public utility, except a common carrier by railroad subject to the Interstate Commerce Act, to acquire

There can be no doubt that the freedom of action of Penn Water as a public utility of the State has been and is restricted by the provisions of Articles IV and V of the basic agreement whereby Penn Water is required to get the approval of Consolidated before making any agreement for the purchase or sale of electric power or making any investment or disposition of any property in excess of $50,000. In other words, Penn Water's power to propose prices and improvements and extend its services has been surrendered to Consolidated, and there can be no doubt that this surrender amounts to a transfer *pro tanto* of its powers and franchises to the Maryland utility without approval of the Pennsylvania Commission in violation of the Pennsylvania statute.

Indeed such restrictions upon the freedom of a public utility cannot be sustained irrespective of statutory prohibition. It was so held in *Gibbs* v. *Baltimore Gas Co.*, 130 U. S. 396, in considering a contract between two competing Baltimore gas companies which was made in 1884 prior not only to the Pennsylvania Public Utility Acts but also the Sherman Act of 1890. The companies agreed to sell their product at a fixed price which could not be changed except by mutual consent except that the larger company in case of competition on the part of another company might reduce its price. They also agreed that one of the companies should lay no more pipes for the supply of gas. In denying recovery upon the contract because of invalidity, the Supreme Court said (pp. 410-411):

> "It is also too well settled to admit of doubt and a corporation cannot disable itself by contract from performing the public duties which it has undertaken, and by agreement compel itself to make public [fol. 5414] accommodation or conveniences subservient to its private interests.
>
> "'Where,' says Mr. Justice Miller, delivering the opinion of the court in Thomas v. Railroad Co., 101

---

from, or to transfer to, any person or corporation, including a municipal corporation, by any method or device whatsoever, including a consolidation, merger, sale or lease, the title to, or the possession or use of, any tangible or intangible property used or useful in the public service." * * *

U. S. 71, 83, 'a corporation like a railroad company has granted to it by charter a franchise intended in large measure to be exercised for the public good, the due performance of those functions being the consideration of the public grant, any contract which disables the corporation from performing those functions, which undertakes without the consent of the State to transfer to others the rights and powers conferred by the charter, and to relieve the grantees of the burden which it imposes, is a violation of the contract with the State and is void as against public policy'."

See also *Central Transportation Co.* v. *Pullman's Car Co.*, 139 U. S. 24, 48, 51; *U. S. Tel. Co.* v. *Central Union Tel. Co.*, 6 Cir., 202 F. 66, 72, 73.

One of the most important duties of a public utility, inherent in its franchise to serve the public, is the duty to take the initiative in proposing reasonable rates and rendering adequate services, taking into account changing conditions; and the utility is not relieved from this duty because its activities are subject to governmental regulation, for a regulatory commission is not clothed with the responsibility or qualified to manage the utility's business.* The decisions in respect to this matter, both before and after the establishment of regulatory commissions, are in accord [fol. 5415] with the principles laid down in *Gibbs* v. *Baltimore Gas Co., supra.* See *Arizona Grocery Co.* v. *A. T. & S. Fe Ry. Co.*, 284 U. S. 370, 384; *Ga.* v. *Pa. R. Co.*, 324 U. S. 439, 458-460; *U. S. Tel. Co.* v. *Cent. Union Tel. Co.*, 6 Cir., 202 F. 66, 71-2; see also *Magaha* v. *City of Hagerstown*, 95 Md. 62. The conclusion is inescapable that the contractual restrictions upon the power of Penn Water to perform its functions as a utility under the Pennsylvania statute are invalid.

---

* "It must never be forgotten that while a State may regulate, with a view to enforce reasonable rates and charges, it is not the owner of the property of public utility companies and is not clothed with the general power of management incident to ownership." *S. W. Tel. Co.* v. *Pub. Serv. Comm.*, 262 U. S. 276, 289. See also *N. Pa. Power Co.* v. *Pa. P. U. C.*, 132 Pa. Super., 178, 333 Pa. 265.

This conclusion is not avoided by the fact that Penn Water is a public utility under Part II of the Federal Power Act, and subject as such to the regulation of the Federal Power Commission. There is, however, a limitation upon the jurisdiction of the Federal Power Commission over public utilities subject to Part II of the Federal Act, §§ 201 to 209, which is set forth as follows in Section 201(b), 16 U.S.C.A. 824(b), as follows:

> "(b) The provisions of sections 824-824h of this title shall apply to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce, but shall not apply to any other sale of electric energy or deprive a State or State commission of its lawful authority now exercised over the exportation of hydroelectric energy which is transmitted across a State line. The Commission shall have jurisdiction over all facilities for such transmission or sale of electric energy, but shall not have jurisdiction, except as specifically provided in sections 824-825r of this title, over facilities used for the generation of electric energy or over facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or over facilities for the transmission of electric energy consumed wholly by the trans-
> [fol. 5416] mitter."

This langauage has been held to mean what it says. *Connecticut Light & Power Co.* v. *Power Commission*, 324 U. S. 515, 527; cf. *Jersey Cent. Power & Light Co.* v. *F.P.C.*, 319 U. S. 61; and hence there is a field in which the Pennsylvania Utility Commission is qualified to act. The evidence in this case shows that Penn Water is engaged in the production and local distribution of electrical energy to local utilities which distribute power to consumers in Pennsylvania, and in respect to this business, it seems clear that the state commission possesses regulatory power. The restrictive provisions of the basic agreement apply to all of the activities of Penn Water, including not only the transmission and sale of electric energy interstate but the local distribution within the State of Pennsylvania, and the surrender to Consolidated of Penn Water's duties obviously affects its local

as well as its interstate activities. Viewed in this light it is clear that the contention of the Pennsylvania Commission as to the invalidity of the basic agreement is well founded.

It is not our function in this case to decide how far the activities of Penn Water and Consolidated under the basic contract are subject to the regulations of the Federal Power Commission or the Pennsylvania Public Utility Commission, either or both. It has been held that the purchase by one Pennsylvania utility of the securities of another must be approved by both commissions. See *N. Pa. Power Co.* v. *Pa. P.U.C.*, 132 Pa. Super. 178, 333 Pa. 265. It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued [fols. 5417-5457] by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania. That question is not before us. We hold merely that the benefits that have heretofore flowed from the basic contract do not protect it from the impact of the Sherman Act; and that the contract is invalid since it violates that statute and disables Penn Water from performing its proper function as a public utility under the public utility laws of Pennsylvania; and that the District Court had jurisdiction in the premises.

In view of these conclusions we have not found it necessary to consider the contentions of Penn Water that the basic agreement was beyond the powers of Penn Water under the Pennsylvania law, or that Penn Water has properly terminated the agreement because of breaches thereof by Consolidated.

The case will be remanded to the District Court with instructions to enter a declaratory judgment in accordance with this opinion.

Reversed and Remanded.

[fol. 5459] [File endorsement omitted]

UNITED STATES OF AMERICA, ss:
The President of the United States of America:

[SEAL — UNITED STATES COURT OF APPEALS FOR THE FOURTH CIRCUIT]

To the Honorable Judge of the United States District Court for the District of Maryland.

GREETING:

WHEREAS, lately in the United States District Court for the District of Maryland, before you or some of you, in a cause between Pennsylvania Water & Power Company, A

Pennsylvania Corporation, 16th Floor Lexington Building, Lexington and Liberty Streets, Baltimore, Maryland, Plaintiff, and Consolidated Gas, Electric Light and Power Company of Baltimore, A Maryland Corporation, 19th Floor Lexington Building, Lexington and Liberty Streets, Baltimore, Maryland, Defendant; Civil No. 4179; wherein the Pennsylvania Public Utility Commission and Public Service Commission of Maryland were allowed to intervene; and wherein the judgment and order of the said District Court, entered in the said cause on the 18th day of March, 1950, as in the words following, to-wit:

"This Court by its order of September 20, 1949 made pursuant to this Court's opinion rendered the same day, having determined (1) that the only question subject to determination by this Court was the validity of the so-called basic agreement of June 1, 1931 and (2) that if the basic agreement is valid, then all other questions raised by the Amended and Supplemental Bill of Complaint are subject to arbitration under Article X of the agreement; and the issues of validity having subsequently been heard in open [Vol. 5460] court and considered upon the evidence, oral argument and briefs, now, for the reasons and upon the findings of fact and conclusions of law set forth in the Court's written opinion filed February 28th, 1950, it is

"ORDERED AND ADJUDGED, this 18th day of March, 1950, that:

"1. The Agreement between Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water and Power Company which is made up of the following instruments:

"Agreement as of December 31, 1927, Supplemental Agreement as of December 27, 1928, Supplemental Agreement as of June 1, 1931 (the Basic Agreement), and Supplemental Agreement as of September 29, 1939,

is a valid contract in accordance with its terms.

"2. The parties shall in due course proceed to arbitration of the issues listed in the Defendant's Notice of Arbitration of September 1, 1948.

"3. All prayers for relief contained in the Amended and Supplemental Complaint are denied and said Amended and Supplemental Complaint is dismissed; however, the temporary restraining order granted by this Court on February 9, 1949, shall remain in full force and effect until the final determination of the questions raised by the Amended and Supplemental Bill of Complaint, that is, until the final appellate decision with respect to this order and to all other orders of this Court heretofore passed in this proceeding and from which an appeal has been or shall be preferred and until the final determination of the issues listed in Defendant's Notice of Arbitration as of September 1, 1948, and which by its order passed on the 20th of September, 1949, this Court held to be subject to arbitration, including the final appellate decision with re-
[fol. 5461] spect to any appeal, if an appeal there be and it be prosecuted, from the award of the arbitrators. And it is further ordered that the right is hereby reserved to any party to this cause to make application for a further order modifying, supplementing or dissolving said restraining order.

WILLIAM C. COLEMAN
Chief Judge
U. S. District Court."

as by the inspection of the record of the said District Court, which was brought into the United States Court of Appeals for the Fourth Circuit, by virtue of the appeals of the said Pennsylvania [illegible]er & Power Company, A Pennsylvania Corporation, [illegible]Pennsylvania Public Utility Commission, agreeably to the act of Congress, in such case made and provided, fully and at large appears.

AND WHEREAS, in the term of June, in the year of our Lord one thousand nine hundred and fifty, the said cause came on to be heard before the said United States Court of Appeals for the Fourth Circuit, on the said record, and was argued by counsel.

ON CONSIDERATION WHEREOF, It is now here ordered, adjudged and decreed by this Court that the judgment and order of the said District Court appealed from, in this cause be, and the same is hereby, reversed with costs; and that

this cause be, and the same is hereby, remanded to the United States District Court for the District of Maryland, [fols. 5462-5583] at Baltimore, with instructions to enter a declaratory judgment in accordance with the opinion of the Court filed herein.

JOHN J. PARKER
Chief Judge, Fourth Circuit.
MORRIS A. SOPER
U. S. Circuit Judge.
ARMISTEAD M. DOBIE
U. S. Circuit Judge.

Endorsed:

"Filed and Entered
September 30, 1950.
Claude M. Dean Clerk,
U. S. Court of Appeals for
the Fourth Circuit."

You, therefore, are hereby commanded that such further proceedings be had in said cause, in accordance with the opinion and the decree of this Court, as according to right and justice, and the laws of the United States, ought to be had, the said appeals notwithstanding.

WITNESS the Honorable FRED M. VINSON, Chief Justice of the United States, the 14th day of December, in the year of our Lord one thousand nine hundred and fifty.

CLAUDE M. DEAN
Clerk of the U. S. Court of
Appeals for the Fourth Circuit.

PARTIAL REPLY TO ANSWERS TO PETITIONERS' MOTION TO SET ASIDE ORDERS OF THE FEDERAL POWER COMMISSION, ETC.—Filed January 15, 1951

To the Honorable the Judges of the United States Court of Appeals for the District of Columbia:

In the Court's Order of December 19, 1950, fixing times for the Petitioners to file motions and supporting briefs and for Respondent and Intervenors to answer and for

other purposes, no provision was made for the service by Petitioners of reply briefs in connection with [fol. 5885] such motion. Consequently, counsel will on oral argument make such reply as seems appropriate to the arguments contained in the brief of the Staff of the Federal Power Commission, Respondent, and the joint brief of the Public Service Commission of Maryland and the Consolidated Gas Electric Light and Power Company of Baltimore, Intervenors.

However, in such briefs, counsel for Respondent and Intervenors interpret the Opinion of the United States Court of Appeals for the Fourth Circuit in the Case 6102, *Pennsylvania Water & Power Company* v. *Consolidated Gas Electric Light and Power Company of Baltimore, et al.*, as holding invalid only Articles IV and V of the contract between those Companies, dated June 1, 1931. On a Motion to Interpret Mandate, decided, with Opinion, on January 10, 1951, the Court of Appeals directed the District Court to issue a declaratory judgment, among other things, "declaring that the agreements of December 31, 1927, June 1, 1931 and September 29, 1939 are void and of no effect". In view of the fact that this Opinion disposes of the question of interpretation of said contract as urged by counsel for Respondent and Intervenors and that the Opinion will not be available in the official reports at the time of the argument in these proceedings, a copy of such Opinion as transmitted to counsel by the Clerk of the Court is printed and filed herewith.

Respectfully submitted,

RANDALL J. LEBOEUF, JR.,
CRAIGH LEONARD,
WILKIE BUSHBY,
RAYMOND SPARKS,
Counsel for Petitioners.

January 15, 1950.

UNITED STATES COURT OF APPEALS FOR THE FOURTH CIRCUIT

No. 6102

PENNSYLVANIA WATER & POWER COMPANY,
a Pennsylvania Corporation,

and

PENNSYLVANIA PUBLIC UTILITY COMMISSION,
Appellants,

versus

CONSOLIDATED GAS, ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a Maryland Corporation,

and

PUBLIC SERVICE COMMISSION OF MARYLAND, *Intervener,*
Appellees.

APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MARYLAND, AT BALTIMORE.

ON MOTION OF APPELLANTS TO INTERPRET MANDATE—Filed January 15, 1951

(Argued January 6, 1951. Decided January 10, 1951.)

Before PARKER, SOPER and DOBIE, Circuit Judges.

Wilkie Bushby and Charles E. Thomas (James Piper, R. Dorsey Watkins, William J. Grove and Lloyd S. Benjamin on brief), for Appellants, and Alfred P. Ramsey, Harry N. Baetjer and Charles D. Harris (G. Kenneth Reiblich, Norwood B. Orrick and John Henry Lewin on brief), for Appellees.

[fol. 5587] SOPER, Circuit Judge:

By a decision rendered upon the appeal in this case on September 30, 1950, we reversed the judgment of the District Court and held that an agreement for the sale and delivery of electric energy by Pennsylvania Water and Power Company, a Pennsylvania corporation, to Consolidated Gas, Electric Light & Power Company of Baltimore, a Maryland corporation, is invalid in that it violates the federal anti-

trust laws and is contrary to the public policy and laws of Pennsylvania; and the case was remanded to the District Court to enter a declaratory judgment in accordance with our opinion. Thereafter a controversy arose in the District Court as to whether the invalidation of the agreement revived an earlier agreement between the parties for the interstate sale and delivery of electric energy and entitled Consolidated to continued deliveries by Penn Water, in accordance with the terms set forth therein; and by motion of Penn Water we were asked to interpret the mandate of this court and settle the controversy. The matter was accordingly set for hearing, briefs were filed and counsel for the parties were heard at length.

The invalid agreement, which has been called the "basic agreement" throughout this litigation was executed on June 1, 1931. In effect it superseded an earlier agreement of December 31, 1927 for the sale of electric energy from January 1, 1927 to December 31, 1970, which Consolidated now desires to reinstate. There were in fact four agreements in this series between the parties as follows: Agreement of December 31, 1927; Supplemental Agreement of December 27, 1928; Supplemental Agreement of June 1, 1931; and Supplemental Agreement of September 29, 1939. Little need be said of the agreement of December 27, 1928 and the agreement of September 29, 1939, since they have no bear- [fol. 5588] ing on the point in issue. The agreement of December 27, 1928 transferred title to nine cables in Baltimore City from Penn Water to Consolidated in consideration of the payment of $105,000. This transaction was finally settled and closed and there is no attack upon its legality. The agreement of September 29, 1939, which was made at the request of the Public Service Commission of Maryland, reduced by $600,000 the annual payments of Consolidated to Penn Water under the 1931 agreement, as well as the amounts to be paid by Consolidated with respect to plant additions by Penn Water after December 31, 1938. There is no controversy about these provisions and the agreement throws no light upon the matter in dispute.

Attention may therefore be confined to the 1927 and 1931 agreements. The 1931 agreement is spoken of as supplemental to that of 1927, but in fact the later agreement took the place of the earlier one so completely that it has governed the relations between the parties for the past twenty

years and has been uniformly considered and called herein the "basic agreement" between the parties. It is of great significance that prior to the decision of this court on appeal and the refusal of certiorari by the Supreme Court it never occurred to any one to suggest that if the 1931 agreement were stricken down, the 1927 agreement would spring into life. Indeed the opposite assumption has been made. Heretofore Consolidated at no time made the contention that even if the 1931 contract were invalidated the 1927 agreement would remain in effect; and no such contention was made in the District Court, as appears from the concluding paragraph of its opinion where it was suggested that the invalidation of the basic agreement would enable Penn Water to withdraw completely from the interstate transportation and sale of electric energy.
[fol. 5589] It is obvious that this common assumption of the parties rather than the afterthought of Consolidated presents the true situation prevailing between the parties and the only reasonable answer to the question before the court. A comparison of the provisions of the two agreements clearly shows the correctness of this conclusion, because the 1931 agreement made such fundamental changes that thereafter it completely dominated the interparty transactions. In 1927 Penn Water agreed to sell approximately 400,000,000 kwh of 25 cycle electricity annually to Consolidated until 1970, and Consolidated agreed to pay for it on a unit rate basis. It was an ordinary utility contract for the supply of capacity and energy on a unit rate basis and placed no restrictions on Penn Water's operations.

The 1931 agreement, on the other hand, provided that Consolidated should be entitled to all the electric capacity and energy available to Penn Water and not otherwise disposed of in the performance of existing contracts, and in consideration thereof, Consolidated agreed to pay Penn Water an amount equal to its operating expenses, a specified rate of return on existing facilities, and on the cost of new facilities less depreciation, and Consolidated was allowed a credit for the amount of the sales of energy by Penn Water to other persons. Closely associated with these provisions were the illegal restrictions on the future activities of Penn Water which resulted in the invalidation of the whole contract. Therein Penn Water was required to obtain the approval of Consolidated before entering into any agree-

ment for the sale or purchase of electric power and energy and to obtain the approval of Consolidated before making any investment or disposing of its property having a value in excess of $50,000. These restrictive conditions were included in order to safeguard Consolidated in the perform-
[fol. 5590] ance of its promises and it is conceded that without them the contract would have been impracticable and would not have been made. When the sweeping nature of these changes is considered with the fact that they have controlled the business transactions between the parties for twenty years, it is easy to understand why the contract of 1931 has been treated as the basic agreement and the 1927 agreement has been given little thought.*

It is true that the 1931 contract grew out of the prior contractual relationship between the parties and in that sense was supplemental to the 1927 agreement. Indeed the latter document contains the seed from which the subsequent illegal transaction has grown. It recited the prior sales of electric energy to Consolidated and the express purpose to broaden the scope of the cooperative use of the resources and facilities of the parties so as to benefit the public and avoid unnecessary duplication of investment, and it declared that no major investments affecting facilities should be undertaken by either party without informing the other and granting it under equal conditions the position of preferred customer or seller, as the case may be.

The 1931 agreement referred to those recitals and declared it to be the intent of the parties to accomplish a more complete coordination by the sale to Consolidated of all Penn Water's power and energy available for sale and by paying therefor on the basis of an annual charge sufficient to yield an equivalent revenue to that theretofore received by Power plus a reasonable income on its additional investments there-
[fol. 5591] after made. Obviously it was the intent of the parties to abandon the old relationship and to accept a new

---

* The 1931 agreement states that it supplements the agreement of 1927 and reaffirms the consistent provisions thereof; but a comparison of the documents shows that all of the substantial parts of the earlier agreement have been supplanted in the latter leaving only incidental provisions that do not affect the conclusions herein reached.

one and in furtherance of this purpose, to consolidate and merge the two agreements in one, the later agreement supplanting the earlier in all substantial respects and becoming the guide for their future actions. Unfortunately, in carrying out this purpose, Penn Water gave up its independent status as a producer and seller of electric energy and subjected itself so completely to the dominance of Consolidated as to violate the controlling statutes and hence the 1931 agreement must be stricken down. With it must also go the 1927 contract even though it be assumed to be lawful in its inception, for it is obvious that the parties never intended in any event to go back to their early relation. Indeed it would be unjust after the long lapse of time to require them to do so. Consolidated, having broken the law, is in no position to ask the relief of this court. See Virginia Dare Transp. Co. v. Norfolk Southern Bus Corp., 4 Cir., 176 F. 2d 354; Reynolds Metals Co. v. Metals Disintegrating Co., 3 Cir., 176 F. 2d 90; Duane v. Merchants Legal Stamp Co., 231 Mass. 113, cert. denied 249 U. S. 613.

The case here is not one where there has been merely an invalid amendment of a prior valid contract. If it were, there would be force in the suggestion that the declaration of invalidity of the amendment leaves the original contract in force. Here the prior contract has been merged in and its nature changed by the subsequent unlawful agreement, and as so changed, it has resulted in an unlawful relationship which has continued for twenty years. When the illegality of such relationship is declared, it is idle to contend that the court can withdraw the original contract from the illegal relationship and give it validity, certainly after it [fol. 5592] has been buried therein for so long a period. It must perish along with the relationship of which it has been made an inseparable part.

We repeat, as we said in our opinion, that it is not our function to decide how far the activities of Penn Water and Consolidated are subject to the regulations of the Federal Power Commission or the Pennsylvania Public Utility Commission. "It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and

will not offend either the anti-trust laws or the utility laws of Pennsylvania."

Throughout the trial of this case and in the argument of the pending motion, Penn Water has reiterated its desire to continue to supply electric energy to Consolidated; and in view of the close relationship between the parties, the existence of interconnecting equipment and the control over its rates by the regulatory bodies, there is no reason to fear that the interests of consumers of electricity in Maryland will suffer through the invalidation of the existing contract between the two utilities.

The District Court should issue a declaratory judgment (1) setting aside its judgment and order of March 18, 1950; (2) declaring that the agreements of December 31, 1927, June 1, 1931 and September 29, 1939 are void and of no effect; and (3) dissolving the restraining order of February 9, 1949.

IN UNITED STATES COURT OF APPEALS

EXHIBIT "A"—TO MOTION FOR PERMISSION TO FILE A SUPPLEMENTAL BRIEF, ETC.—Filed July 6, 1951

IN THE
UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF MARYLAND

Civil 5253

PENNSYLVANIA WATER AND POWER CO.
et al

v.

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER CO. *et al*

MEMORANDUM BY THE COURT

Pattern for decision here is prescribed by Pennsylvania Water & Power Co. v. Consolidated Gas Electric Light and Power Co., 4 Cir. 184 F. 2d 552, from which it follows that

summary judgment must go for the plaintiffs on their motion. The instant or 3-party contract of June 1, 1931, designs a restraint violative of the Sherman Act, 15 USCA 1 *et seq.*, and in the process breaks the Pennsylvania laws by reducing Safe Harbor Water Power Corporation from a public utility to an impotent agency of the other parties. This conclusion is reached from an examination of the agreement in the light of the following indisputable and environing facts: that generation of electricity for wholesale is the business of each of the parties; that the geographical and relative location of their generating plants, of Penn's and [fol. 5614] Consolidated's transmission lines and inter-connections, and of the territory and patrons served by all of them, are as shown upon the map now in the record; and that the 2-party agreement, Safe Harbor's corporate papers, its certificate of convenience, the orders of the Pennsylvania Utility Commission thereon, and the pertinent statutes of that State, are as pleaded.

I. Two of the contracting parties, Penn and Consolidated, are conclusively found to be potential competitors in the Penn Water Case, *supra*. That the third party, Safe Harbor, is also a latent competitor is manifest from the location of its plant in reference to Penn Water's, from the easy deliverability of its power to the customers of Consolidated, notably in the Washington area, as well as to the patrons of Penn Water, albeit at present needing the transmission lines of the latter for such purposes. The opinion in the Penn Water Case recounts the routing of all their generated power, including Safe Harbor's, and thereby clearly proves its competition with the current of the others.

It might almost be said that the judgment in the Penn Water Case struck down the 3-party agreement as well as the 2-party contract, so closely are the agreements tied together by their terms. The nexus is declared amain by the recitals in the second and third paragraphs of the 2-party agreement, virtually avowing the 2-party to be the master agreement operating the 3-party contract. Article II expressly incorporates Safe Harbor power as an item of the 2-party agreement. The supplement, dated August 1, 1932, to the 3-party contract reaffirms the terms of the latter but in its section Fourth adopts some of the terms of the 2-party agreement. As will be evident upon their discussion, the play of the restrictive covenants in the 3-party agreement

reveals this contract as a furtherance of the 2-party plan, [fol. 5615] extending the 2-party circumscription to the source of the Safe Harbor energy. Nevertheless the Court will construe the 3-party agreement *de novo*.

Examining the agreement, we find its affront to the Act consists of the investiture of Penn and Consolidated with the absolute power to restrict the other, in the use and enjoyment by such other, of its rightful entitlement in Safe Harbor's production, as well as to restrict Safe Harbor in its freedom of contract and action generally. The principal restrictions are contained in Articles III and IV.

Under Article III(a) "additional machinery or equipment" shall be installed by Safe Harbor at the request of Consolidated or Penn at the expense and for the use of the requesting party, but only with the consent of the other. By the same Article no current from "additions" to the Safe Harbor Plant may be supplied to anyone other than Penn and Consolidated without the consent of both of them. As an over-all restraint, Article IV forbids Safe Harbor to "enter into other agreements with either receiving company without the approval of the other."

These stipulations are strangulations. They choke each of the recipients in its full exercise of its ownership in the power purchased of Safe Harbor; they choke Safe Harbor too. They do not merely limit one party from impinging the other's rights; their reach is more than defensive.

No mechanical appliances, if and when available, could be furnished by Safe Harbor for Penn Water, though at Penn Water's expense, say to multiply, preserve or improve Penn Water's share, without Consolidated's approval, or vice versa. By forbidding the sale of power from such additions to anyone else, plant additions by Safe Harbor are effectually banned unless approved by *both* of the other two—even an addition for the benefit, and at the cost, of only one of them.

[fol. 5616] As Safe Harbor may not contract *in any manner* as to the generation and supply of energy, with Penn or Consolidated without the assent of the other, neither Penn nor Consolidated could establish any other outlets, than those originally fixed at the plant to draw off its purchase of power, without the nod of the other. Consolidated having no direct connection with Safe Harbor could never obtain one if Penn objected. Article XII fixes the points of delivery from

the Safe Harbor plant and makes any change dependent on the approval of both Penn and Consolidated. The supplemental agreement of August 1, 1932, exemplifies the enforcement of Article XII.

Penn or Consolidated could not by its sole direction release any part of its contract share to allow any portion to be sold and diverted elsewhere by Safe Harbor, notwithstanding Article III(c) contemplates such sales.

Similarly Safe Harbor is barred from selling any power to others, assuming such power to become available through expansion of its plant, because under the contract it cannot sell, save to Penn and Consolidated, energy derived from additions.

Threat of injury to the public from a contract of this kind is obvious, without reference to legislation, such as the Sherman Act, outlawing restraints.

Of similar stipulations in the Penn Water Case the Court of Appeals declared their effect "forbids plant expansion or development," prevents the sale of electric energy by one corporation without the approval of the other, and thereby empowers the one to fix the prices of the other. 184 F. 2d 557, 558. No other authority is requisite to justify the conclusion that the instant stipulations *per se* violate the Sherman Act and are not saved by the "rule of reason." [fol. 5617] It is no answer to argue that in fact additions are not possible at Safe Harbor and the contract restriction thereof is consequently only of academic interest. When the contract was executed, and that is the time as of which its validity must be judged, expansion was admittedly practicable. Indeed, the supplemental agreement of November 22, 1939, authorized such an extension and at the same time evinced the parties' familiarity with the assailed restriction. It is dangerous to prophesy what science may do towards expansion. However, no factual issue is here presented—on the feasibility of additions—because the restriction is by its breadth and sweep condemning in and of itself. Then, too, the restraint includes "additional machinery or equipment" as well as "additions to its plant" and the possibility of its installation is surely not moot.

The enumerated consequences of Articles III(a) and IV are not hypercritical suppositions of remote possibilities; they are the immediate potentialities of those stipulations.

No less objectionable are the restrictions when the ar-

rangement devised by the contract is viewed as solely a plan for joint ownership and operation of the Safe Harbor plant by the Penn Water and Consolidated, that is, if Safe Harbor Corporation be treated as merely an instrument for holding and operating the plant for the other two. If this were legally possible, or if the joint ownership and operation had been accomplished without the intervention of another corporation, the restrictions of the contract would be just as obnoxious. They would still enable each corporation unwarrantably to control the use and enjoyment by the other of its share of the joint product.

That the plan was simply one of joint ownership and operation is refuted by the actualities. The parties saw fit to adopt the present means. They have brought into the [fol. 5618] scheme a live, separate, and independent public service corporation, the Safe Harbor Water Power Corporation. The latter is a real party to the contract, with definite obligations and liabilities. Consolidated and Penn Water may not now ignore its reality. Schenley Corp. *v.* U. S., 326 U. S. 432, 437. It is not a wholly owned subsidiary of either. Its individuality at once appears when we recall that its capital stock may at any time become the property of others than Penn Water and Consolidated, or that the stockholders might disagree, as apparently they have now. Safe Harbor's independence is starkly accentuated in the realization that it owes important duties to the public, for which it must account through the appropriate governing bodies of the State of Pennsylvania. But, even so, the status of Safe Harbor is not decisive of this case; it may be classed as a non-entity, a subsidiary of the other parties, or their creature, *n'importe*, and yet the agreement would still be vitiated by the mutually constricting covenants between Penn and Con.

II. Again, the agreement in suit as plainly transgresses the laws of the State of Pennsylvania as did the 2-party contract in the Penn Water Case, *supra*. Just as the agreement there disabled Penn Water from the performance of its public duties, so here the present contract, through the restraints effected by Articles III and IV in the manner already pointed out, has caused Safe Harbor to contravene the Pennsylvania statutes proscribing the surrender to another, without the approval of its Public Utility Commission, of any of its powers, franchises or privileges. Judge

Soper's discussion of this subject fully and featly disposes of it. Pp. 566-568.

The aim of the 3-party agreement is to place the internal control of Safe Harbor in the hands of Penn Water and Con- [fol. 5619] solidated. It does so not only by the restrictions of Articles III and IV but also through the Operating Committee established by Article XIV. This Article constitutes the Committee as both advisory and regulatory of Safe Harbor. The board of directors of Safe Harbor are deposed from their place of guidance and responsibility. In few, the contract destroys the corporate virility of Safe Harbor and subjugates it as a mandate of Penn Water and Consolidated, depriving Safe Harbor of the discretion and initiative necessary to respond and be alive to its public obligations. This is intolerable under the common law and statutes of the State of Pennsylvania.

In the briefs and oral argument the defendants, while insisting that the restrictions of the contract were not invalid, urged that they were severable from the contract, and if unlawful, they could be stricken without violence to the remainder of the agreement. Whether or not contract provisions are separable must be determined from the face of the agreement where the agreement is clear and complete. Study of the 3-party contract convinces the Court that the objectionable provisions cannot be severed from the whole; that the agreement is entire and indivisible, its covenants dependent; and that the restrictive terms are of the warp and weft of the agreement and, if taken out, the residual could not be said to represent the agreement of the parties. U. S. *v.* Bethlehem Steel Corp., 315 U. S. 289, 298.

The Court has no doubt of its jurisdiction of this case, and its right to consider the non-federal ground of the cause of action; that there is no genuine issue of fact in the foundation upon which the motion for summary judgment is made; and that it is an appropriate instance for the entry of a summary declaratory judgment.

Finally, the Court observes that in determining whether the contract violates the Sherman Act or the common [fols. 5620-5694] and statute law of Pennsylvania, it must be read objectively and impersonally, and must be measured against the public interest evidenced by the Sherman Act, the public utility laws of Pennsylvania, and the policy of the common law; if *in posse* it is offensive to either, the contract

must fall, irrespective of the pure intention or good faith of the parties.

After submission to opposing counsel for comment as to form, counsel for the plaintiffs will present a decree declaring invalid and inoperative the 3-party agreement of June 1, 1931 with its two supplements.

No. 10531

PENNSYLVANIA WATER & POWER COMPANY, a Corporation, and SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, a Corporation, *Petitioners*

v.

FEDERAL POWER COMMISSION, *Respondent.*

On Petition for Review of Orders of the Federal Power Commission and on Motions to Set Aside Orders of the Federal Power Commission.

OPINION

Decided July 3, 1951

Mr. Randall J. LeBoeuf, Jr., with whom *Messrs. Craigh Leonard, Wilkie Bushby, Raymond Sparks, F. G. Awalt, Preston C. King, Jr.*, and *Daryal S. Myse* were on the brief,

for petitioners Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland.

Mr. Charles E. Thomas, Counsel, Pennsylvania Public Utility Commission, *pro hac vice*, by special leave of Court, [fol. 5696] with whom *Mr. Thomas M. Kerrigan*, Assistant Counsel, Pennsylvania Public Utility Commission, was on the brief, for petitioner Pennsylvania Public Utility Commission.

Messrs. Howard E. Wahrenbrock, Assistant General Counsel, Federal Power Commission, and *Reuben Goldberg*, Attorney, Federal Power Commission, with whom *Mr. Bradford Ross*, General Counsel, Federal Power Commission, was on the brief, for respondent.

Mr. Charles D. Harris, General Counsel, Public Service Commission of Maryland, for intervenor Public Service Commission of Maryland.

Messrs. G. Kenneth Reiblich and *Alfred P. Ramsey* for intervenor Consolidated Gas Electric Light and Power Company of Baltimore.

Before WILBUR K. MILLER, BAZELON and FAHY, Circuit Judges.

BAZELON, *Circuit Judge:* In 1944, the Federal Power Commission received two petitions—one from the Mayor and City Council of Baltimore and others, the other from the Public Service Commission of Maryland—requesting that it institute an investigation of the justness and reasonableness of the rates and charges of Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland[1] with regard to such of their sales or transmission of electric energy as are subject to the Federal Power Act. By orders issued in September and October of 1944, the Commission assumed jurisdiction and began its investigation of petitioners' rates and charges. Intervention was requested by the Pennsylvania Public Utilities Commission, the Maryland Commission, and Consolidated Gas Electric Light and Power Company of Baltimore,[2] all of whom were permitted to and did participate in the hearings before the Commission. Those hearings, which began on April 15, 1946, and continued until July 16, 1947, were

---

[1] Hereinafter referred to as petitioners or Penn Water.

[2] Hereinafter referred to as Baltimore Company.

extensive in nature and produced a voluminous record. In January 1949, the Commission issued its order requiring Penn Water to reduce its rates and charges in accordance with the Commission's findings. The revised schedules submitted in an attempt to comply with the Commission's order were considered unsatisfactory and, on October 27, 1949, the Commission prescribed its own schedules for Penn Water's services. Petitioners seek review of both the January and the October orders, as does the Pennsylvania Public Service Commission which intervened before the Commission. In addition, the same parties have moved to set aside the orders or to obtain appropriate alternative relief.

The various proceedings before the Commission present a picture of petitioners' operations which is essential to an understanding of the issues now before us. Penn Water owns and operates both a hydroelectric and a steam generating plant at Holtwood, Pennsylvania, which is on the Susquehanna River, some nine miles north of the Pennsylvania-Maryland border. In addition, Penn Water and the Transmission Company together constitute an interconnected interstate transmission system—with Penn Water owning and operating that part of the system which is located in Pennsylvania and Transmission Company, its wholly-owned affiliate, operating the Maryland facilities. A [fol. 5697] third company, Safe Harbor Water Power Corporation,[3] owns and operates a hydroelectric development at Safe Harbor, Pennsylvania, the transmission facilities of which also interconnect with Penn Water and Transmission Company.

The interest of Baltimore Company in these proceedings stems from certain system foundation contracts which have, for the past twenty years, tied its operations to those of petitioners and of Safe Harbor. Under these contracts, Penn Water is required to provide Baltimore Company at all times with the capacity and energy available at its hydro and steam plants, beyond that part of it which is needed to fulfill its own commitments to customers. Those customers must, however, have been previously approved by Baltimore Company. Baltimore Company is also entitled, by contract,

---

[3] Hereinafter referred to as Safe Harbor. This company is affiliated with Penn Water and Baltimore Company, each of which owns fifty per cent of its voting stock.

to receive two thirds of Safe Harbor's output and such part of the remaining one third which is left after Penn Water's needs are satisfied. In turn, Penn Water is entitled to receive from Baltimore Company steam energy to the extent that it is available after Baltimore Company's requirements have been met. Nor do the contractual entitlements of Baltimore Company necessarily represent power used by it. Its hydro entitlement is at the disposal of the entire system in order to permit the lowest incremental cost energy to be used as needed at the various parts thereof. In return for the rights granted it under its contract with Penn Water, Baltimore Company assures Penn Water of revenues sufficient to cover all of its operating expenses and a specified return on its investment. Similarly, both Penn Water and Baltimore Company assure Safe Harbor of a combined annual payment which yields a specified return above operating expenses. The function of these contracts and of the interconnection of facilities which they accomplish is, in the words of the Commission, to achieve operations which are "closely integrated and coordinated as a matter of economy, efficiency, flexibility, and maximum utilization of hydro capabilities * * *"[4] of a river which has a very variable flow.[5]

I

Before considering the various challenges to the Commission's rate order, we will address ourselves to petitioners' motions to set aside and annul that order. These were filed with us on December 29, 1950, shortly after the United States Court of Appeals for the Fourth Circuit had issued a judgment declaring certain phases of the contractual arrangements between Penn Water and Baltimore Company illegal under the federal antitrust laws and the laws of Pennsylvania.[6] The illegality of these system foundation contracts was first raised by petitioners in their petition for rehearing of the January 1949 order, about nineteen months before the

[4] Opinion No. 173 of the Federal Power Commission, Appendix to Petitioners' Brief, p. 43.

[5] See discussion, *infra*, pp. 11-12.

[6] *Pennsylvania W. & P. Co.* v. *Consolidated G., E. L. & P. Co.*, 184 F. 2d 552 (4th Cir., 1950), cert. denied 340 U. S. 906 (1950).

Fourth Circuit decision was handed down. The Commission denied the request for rehearing, ruling *inter alia,* that the [fol. 5698] validity of the Commission's order is not dependent upon the legality of the contracts under the antitrust laws. Petitioners' position here is that the Fourth Circuit's decision requires us to invalidate the Commission's rate order.

The problem raised by the motions is one of the interrelation of two statutory schemes—each of which reflects different historical pressures and different conceptions of the public interest. The Sherman Act and related laws represent an attempt to keep the channels of competition free so that prices and services are determined by the workings of a free market. They derive from the conviction that the greatest good to the greatest number will be attained by preventing monopoly, monopolizing and combinations in restraint of trade. In marked contrast is a statute such as Part II of the Federal Power Act.[7] It evidences congressional recognition that competition can assure protection of the public interest only in an industrial setting which is conducive to a free market and can have no place in industries which are monopolies because of public grant, the exigencies of nature, or legislative preference for a particular way of doing business. In place of competition as a generalized and indirect regulator of prices and services in the field of interstate transmission of electric energy at wholesale, Congress has substituted a regulatory agency authorized to supervise almost every phase of the regulated company's business.[8] Rates charged by such utilities, as well as the services and contractual provisions affecting them, must be "just and reasonable." And what is "just and reasonable"

---

[7] 15 U.S.C. §§ 824 *et seq.*

[8] "In the relationship of government to most private businesses competition is relied upon to control prices in the interests of consumers, but such is not the case with private electric utilities. Competition implies two or more sellers offering their products or services to the same public, and two sellers of electricity in the same territory would mean duplication and wasteful investment. Regulation, therefore, in a general sense may be said to act as a substitute for competition." Twentieth Century Fund, *Electric Power and Government Policy* 45 (1948).

is not determined by the pressures of competition but by the adequacy of the service to the public, the fairness of the return allowed upon the investment in the company, and the degree to which the congressional objective of efficient use of the nation's power resources is served. Nor was Congress unmindful of the problems of undue concentration of power in this field, characterized as it is by local monopolies. In the Public Utility Holding Company Act, it provided antitrust-like remedies to assure that integration of power companies be limited in scope and confined to an efficient power area.[9]

These contrasting objectives indicate that the antitrust laws can have only limited application to industries regulated by specific statutes. Those laws, though quite properly viewed as having been intended "to make of ours * * * a competitive business economy,"[10] are not constitutional mandates which freeze all aspects of our economic system for all time into the pattern of "laissez-faire." We think it obvious that they may not be extended beyond that part of the economy which Congress intended to leave to the operation of the free market. "Certainly what Congress has forbidden [fol. 5699] by the Sherman Act it can modify. * * * [It] is not impotent to deal with what it may consider to be dire consequences of laissez-faire."[11]

Courts have given effect to considerations such as those outlined above by confining the operation of the antitrust laws to those matters which are not the product of state action or which fall outside the reach of power vested in a regulatory agency. Thus, Congress or the states may authorize arrangements among producers even though such action without governmental sanction and enforcement would violate the antitrust laws.[12] Similarly, states may au-

thorize monopolies[13] and Congress may substitute direct price fixing by a public agency for competition.[14] But when the practice complained of is not protected by legislative sanction, either directly or by being committed to a commission empowered to deal with it, the antitrust laws have been relied upon as a minimal means of protecting the public interest. The net effect of what we have already said is that, though regulated industries are not *per se* exempt from the antitrust laws and repeals by implication are not favored, the antitrust laws are superseded by more specific regulatory statutes *to the extent* of the repugnancy between them.[15] That is not to say that competitive considerations may not be components of the public interest sought to be served by a particular regulatory statute, and hence a guide to a commission's exercise of its authority when the question is properly before it. Thus, it has been said that the Federal Communications Act "recognizes that the field of broadcasting is one of free competition. The sections dealing with broadcasting demonstrate that Congress has not, in its regulatory scheme, abandoned the principle of free competition, as it has done in the case of railroads, in respect of which regulation involves the suppression of wasteful practices due to competition, the regulation of rates and charges, and other measures which are unnecessary if free competition is to be permitted."[16] But where a statute provides for compre-

C. —, 180 F. 2d 28 (1950). But cf. *Mackay Radio & Tel. Co.* v. *Federal Communications Commission*, 68 App. D. C. 336, 338, 97 F. 2d 641, 643 (1938); ("Though the Communications Act forbids the licensing of concerns which violate the anti-

hensive and detailed regulation of a particular industry, as do the Interstate Commerce Act and the Federal [fol. 5700] Power Act [17] there is, as we have indicated, only a limited area for application of antitrust considerations to Commission decisions.[18]

Applying those general propositions to the problem before us, we find that the Fourth Circuit's decision,[19] like that of the Supreme Court in *Georgia* v. *Pennsylvania R. Co.*,[20] seeks to assure public utility companies of freedom to exercise their private initiative in promulgating rates, services and changes therein. This limited freedom of action is an important condition precedent to proper operation of the rate-making process. Without it, the rates proposed and approved may tend to find themselves in the upper reaches of the zone of reasonableness within which rates may properly fall. The antitrust laws have been the means of assuring that such initiative remains unchecked by conspiracies or other illegal arrangements with which the regulatory commission is powerless to deal.[21] That is not to say, however, that if otherwise illegal arrangements are permitted or required by a valid statute, they are not shorn of their illegality to that extent.

We construe the Fourth Circuit's decision as having done no more than declare illegal under the antitrust laws cer-

---

trust laws, it does not apply to the radiotelegraph business the policy of free competition, but a contrary policy. Free competition means that all are free to compete. The Communications Act forbids competition by all who cannot prove that their entry will serve the 'public interest, convenience or necessity'."); *Yankee Network* v. *Federal Communications Commission*, 71 App. D. tain restraints exercised by Baltimore Company upon Penn Water—such as requiring its approval before it could take on new customers or expand generating facilities. Those restraints had been privately agreed upon by the parties and submitted to the Commission as an accomplished fact. The court was careful to avoid using language which might be interpreted in such fashion as to affect any rate proceeding then in process. This approach followed the lead of the Supreme Court in *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. at 461-462. It was pointed out in the *Georgia* case that issuance of an injunction under the antitrust laws against the conspiracy there charged would in no way affect any rate proceedings. It would merely enable the parties to exercise their initiative with regard to future rate proceedings.

In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligation under the Federal Power Act to continue the then-existing services and rates. It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order. "A rate is not necessarily illegal because it is the result of a conspiracy in restraint of trade in violation of the Anti-Trust Act. What rates are legal is determined by" the regulatory statute.[22] The validity of Commission action in this proceeding must be determined in light of the criteria furnished by the Federal Power Act, as applied to the operations and arrangements under scrutiny. If jurisdiction was properly assumed by the Commission, if its rate order is "just and reasonable" within the meaning of the Federal Power Act,[23] and if its findings are [fol. 5701] supported by substantial evidence,[24] Penn Water can have no complaint and our review is at an end. If petitioners, as a result of the Fourth Circuit's decision, wish to make any changes in operations, contracts, arrangements, etc., within the jurisdiction of the Federal Power Commission, they must do so in accordance with the Federal Power

---

[22] *Keogh* v. *Chicago & N. W. Ry. Co.*, 260 U. S. 156, 162 (1922).

[23] Federal Power Act, § 205(a), 16 U.S.C. 824(a).

[24] Section 313(b), 16 U.S.C. § 825 l (b).

Act.[25] Under § 205(d) thereof, "Unless the Commission otherwise orders, no change shall be made by any public utility in any such rate, charge, classification, or service, or in any rule, regulation, or contract relating thereto, except after thirty days' notice to the Commission and to the public."[26] Pursuant to that section, petitioners may submit new arrangements and rates based thereon to the Commission. And the Commission "either upon complaint or upon its own initiative without complaint" may "enter upon a hearing concerning the lawfulness of such rate, charge, classification, or service * * *."[27] If Penn Water feels itself aggrieved after such proposed changes have been acted upon by the Commission, it may at that time bring a new petition for review. In short, a "rate established in the mode prescribed should be deemed the legal rate and obligatory alike upon carrier and shipper until changed in the manner provided" by the statute.[28]

To grant petitioners' motions and set aside the order at this time would be to substitute antitrust criteria for those of the Federal Power Act, a substitution which would be at cross-purposes with the intent of Congress. It would result in the reopening of a rate proceeding begun in 1944 because of an issue raised for the first time on rehearing in 1949 and a decision handed down in a suit between private parties under a non-controlling statute in 1951. In view of this chronology, we think the Supreme Court's statement in *Interstate Commerce Commission* v. *Jersey City*, 322 U. S. 503, 514 (1944), is especially pertinent: "If upon the coming down of the order litigants might demand rehearings as a matter of law because some new circumstance has arisen, some new trend has been observed, or some new fact discovered, there would be little hope that the administrative process could ever be consummated in an order that would not be subject to reopening."[29] The effect of granting peti-

tioners' motions would be to disrupt a pattern of regulation which was carefully drawn to meet the problems of a complex industry.

Petitioners rely for their position not only on the effect of the antitrust laws upon a regulated industry but also upon the fact that Penn Water, as a licensee under Part I of the Federal Power Act,[30] is subject to § 10(h) which is [fol. 5702] said to incorporate Sherman Act standards into the Federal Power Act.[31] Section 10(h) does indeed virtually restate the Sherman Act. But it is found only in Part I of the Federal Power Act, which deals with water-power licensees, and not in Part II, dealing with public utilities selling electric energy in interstate commerce at wholesale. This fact alone would indicate that Congress did not intend to make licensees which are also Part II companies, such as Penn Water,[32] subject to § 10 (h).

But there is a more fundamental reason for holding § 10 (h) inapplicable to Part II companies. The very thing which that section prohibits, the combination of licensees with others to limit the output of electrical energy, is made one of the primary objectives of Part II. Section 202(a)[33] thereof imposes the duty upon the Commission to encourage public utilities to combine for the interconnection of facilities. Under certain circumstances, the Commission may even order such interconnections and regulate the rates and contractual arrangements involved therein.[34] The end thus sought to be achieved and, in the Commission's view,

---

[30] Penn Water was ordered to apply for a license under Part I in 1939. See *Pennsylvania Water & P. Co.* v. *Federal Power Commission*, 74 App. D. C. 351, 123 F. 2d 155 (1941). According to the Commission's opinion here, no license has yet been issued. See Opinion No. 173, Federal Power Commission, Appendix to Petitioners' Brief P. 58, n. 21.

[31] That section, 16 U.S.C. § 803(h), provides: "Combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited."

[32] See Discussion, *infra*, pp. 8-11.

[34] *Id.* § 824a(b).

served by the present arrangement between Penn Water and Consolidated, is the most efficient use of the nation's resources consistent with the public interest in cheap power and in conservation. We are unable to accept the proposition that Congress intended to have § 10(h) prevent that which is contemplated by Part II, a statute which is later in time and more specific in application. Our view is supported by the fact that § 10(h) is found in that part of the Act which establishes a limited federal regulatory scheme—one which does not come into play unless (1) the state in which the licensee is located has no regulatory commission, or (2) the state commissions involved are unable to agree upon rates for interstate sales.[35] It seems entirely likely that Congress believed that, in the absence of detailed federal regulation such as that in Part II, licensees should be required to adhere to antitrust standards. This is, in effect, saying no more than what we have already said about the antitrust laws and regulated industries. The prohibitions of § 10(h) would apply to a licensee which is also regulated under Part II only to the extent that the prior statute is not repealed by the clear repugnancy between it and the later statute.

The motions to set aside or remand the Commission's orders on the basis of the Fourth Circuit's decision and the other points referred to above are denied.

II

The Federal Power Commission assumed jurisdiction of petitioners' rates and services pursuant to both Parts I and II of the Act. Petitioners challenge this assumption of jurisdiction on the ground that licensees may be regulated only under Part I and that the Commission's finding that [fol. 5703] the states involved are unable to agree, which is a condition precedent to federal jurisdiction under Part I, is not supported by the evidence.

Part I applies to all federal water-power licensees, whether operating in intra- or interstate commerce. It makes Federal Power Commission regulation of the interstate operations dependent upon either (1) the non-existence of a state regulatory commission in the licensee's state,

---

[35] Federal Power Act, §§ 19, 20, 16 U.S.C. §§ 812, 813.

or (2) the inability of the states involved in the licensee's interstate activities to agree.[36] Part II is not so qualified. It confers broad authority upon the Commission to regulate the rates, services, etc., of all public utilities which own and operate facilities engaged in the "transmission of electric energy in interstate commerce" and in "the sale of electric energy at *wholesale* in interstate commerce."[37]

If the Commission is correct in its view that petitioners' present operations are interstate in nature and involve the transmission and sale of electric energy at wholesale, a question we will discuss *infra*,[38] then they are drawn within the express language of Part II unless the existence of Part I requires that we read an implied exception for licensees into Part II. Such a construction might appear more plausible if § 201(f)[39] of Part II did not specify those to whom that Part was not intended to apply. That section conspicuously makes no reference to Part I licensees. It seems unlikely that Congress would not have included so important a group as federal water-power licensees among the specific exceptions to Part II if it had actually intended to except them.

The only judicial utterances cited to us in this regard are to the effect that "'Part II, as added in 1935, gives the Commission jurisdiction over the transmission and sale of electricity at wholesale in interstate commerce, whether or not by licensees'"[40] and that the Safe Harbor Company "is not only a *licensee* under Part I but it is also a *public utility* under Part II."[41] Neither *Alabama Power Co.* v. *Federal Power Commission*[42] nor *Niagara Falls Power Co.* v. *Federal Power Commission*,[43] both of which contain language which might be thought to run counter to Part II jurisdic-

tion over a licensee, was a rate case. Neither involved Part II and the possibility of conflict between Parts I and II was not discussed.

Legislative history bearing directly on the point also supports application of Part II to licensees. For example, Representative Rayburn, Chairman of the House Committee reporting the bill, pointed out that there was no need to make certain prohibitions contained in § 305(a), 16 U. S. C. § 825d(a), specifically applicable to licensees because they had already been made applicable to "public utilities" generally. He said, "The Senate bill includes licensees within the provisions of this section, but inasmuch as such [fol. 5704] licensees when interstate operating public-utility companies will be subject to the provisions of the section in any event, licensees have been omitted from the bill as reported, because of the lack of public interest in those companies which are not public utilities."[44]

We consider Part II to have occupied the field with regard to interstate wholesale rates of electric companies. It filled a gap in state regulation of electric companies which had been created by the Supreme Court's decision in the *Attleboro* case.[45] That case made it clear that interstate wholesale rates, as distinguished from interstate retail rates,[46] were beyond the reach of state regulatory Commissions.[47] The new legislation required to bring such rates under federal control, Part II, was drawn in 1935 with an eye to the peculiar problems of wholesale electric companies and in light of the considerable experience with such companies which had been gleaned in the fifteen years since the Federal Water Power Act had been drafted in 1920. It was

[47] See discussions in *Illinois Gas Co.* v. *Public Service Co.*, 314 U. S. 498, 504-505 (1942); *Panhandle Pipe Line Co.* v. *Federal Power Commission*, 332 U. S. 507, 514-515 (1947).

apparent to Congress that application of this later scheme of regulation to the interstate wholesale rates of non-licensees alone would have created disparate regulatory treatment of licensees and non-licensees engaged in similar activities. Since this would have conflicted with the objective of Part I, which places primary emphasis upon state regulation in order to make treatment of licensees as much like that of ordinary state public service companies as possible, Congress conferred authority upon the Federal Power Commission to occupy the entire field of regulation of interstate wholesale rates, whether those of licensees or non-licensees. All other rates of licensees, whether engaged solely in intrastate activities or in interstate retail selling, were left to the regulatory scheme provided in Part I. Thus, even if Part I was intended to confer jurisdiction upon the states or the Federal Power Commission to regulate interstate wholesale rates, it was to that extent repealed by Part II.

The only problem suggested to us which may arise from such a construction is that, in the event of recapture by the United States of the site awarded to a licensee, which is also a public utility, payment would have to be made pursuant to a valuation formula contained in Part I, which is said to differ from that used for rate-making in Part II. We hardly think that the intention of Congress to reach all public utilities, whether licensees or non-licensees, under Part II can be ignored in order to eliminate the possibility that there may some day be an occasion for valuation of the property in a manner different from that provided for in Part II. The applicability of Part II to licensees would create no greater effect than would the usual pre-Part II situation, under which a state commission would ordinarily have been regulating the licensee's activities under its own regulatory statute prior to recapture.[48] We note, how-
[fol.5705] ever, that the Third Circuit has pointed out the essential sameness of the valuation formulas of Parts I and II.[49]

In view of our position with regard to the applicability of Part II, it is unnecessary for us to examine the sufficiency of the evidence in the record to support the Commis-

---

[48] See *Safe Harbor Water Power Corp. v. Federal Power Commission*, 179 F. 2d at 187.

[49] *Id.* at 188.

sion's finding under Part I that the Maryland and Pennsylvania commissions are unable to agree. But in the event that the Part I question should arise on appeal from our decision, we note that we have examined the record and find substantial evidence to support the Commission's finding on this point.

III

Rejection of petitioners' view that Part I furnishes the sole authority for federal regulation of their operations brings us to the contention that all or almost all their sales are intrastate in nature and hence may not be regulated under Part II. It is said that (1) Penn Water's sales to its Pennsylvania customers for resale are sales of electric energy produced and sold in Pennsylvania; (2) the back-feed energy generated by Baltimore Company to Penn Water and sold by it to its Pennsylvania customers loses its interstate character when it is received by Penn Water and commingled with the Pennsylvania-produced energy. Even if these sales of back-feed are considered interstate, it is suggested that they constitute so negligible a portion of Penn Water's total sales to Pennsylvania customers that they cannot furnish the basis of federal regulation, or that federal regulation may extend only to an allocable portion of interstate sales.

Section 201(b) of the Federal Power Act[50] makes Part II applicable.

> * * * to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce, but shall not apply to any other sale of electric energy or deprive a State or State commission of its lawful authority now exercised over the exportation of hydro-electric energy which is transmitted across a State line. The Commission shall have jurisdiction over all facilities for such transmission or sale of electric energy, but shall not have jurisdiction, except as specifically provided in sections 824-825r of this title, over facilities used for the generation of electric energy or over facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or

[50] 16 U.S.C. § 824(b).

over facilities for the transmission of electric energy consumed wholly by the transmitter.

We are convinced from an examination of the voluminous materials submitted to us that the Commission properly found Penn Water to be part of an "integrated and coordinated interstate electric system."[51] Energy generated at Safe Harbor and Holtwood flows south to Baltimore and, at times, Baltimore-generated energy moves north along the same line to Safe Harbor and Holtwood where it, together with energy generated there, is delivered to Penn Water's Pennsylvania customers. This movement to and fro is made necessary by the varying electric loads which [fol. 5706] must be supplied at various times of the day. The flow of the Susquehanna River, which is the source of Penn Water's hydro power, is too irregular to carry unaided the large utility loads it is often called upon to handle. Thus, during the river's low periods, hydro power is scarce and Baltimore Company's steam generators are used to "firm up" or keep constant the output of the hydro plants. At such times, the hydroelectric generators are operated only at the peak of the load and, during off-peak hours, the river flow is impounded in plant reservoirs for subsequent use at peak periods. Conversely, during the periods when the river is high, Penn Water's hydroelectric plants are used to supply the heavy loads in both Pennsylvania and Maryland which would otherwise have to be supplied by the more expensive steam generation.

As a result of the carefully coordinated operations of the participants in this interstate energy pool, Penn Water reaps the benefit of Baltimore's considerable and constantly available steam capacity while Baltimore Company enjoys the benefits of the cheaper hydro-electric energy. The activities of each are so meshed that the peak demands of the customers of each can be met easily at all times and with the most economic source of power then available. As the Commission has pointed out, the arrangements now in existence have been "carefully worked out" to meet the needs of the interstate system "as to firm energy requirements, while operations involving firm, interchange and emergency en-

[51] Opinion No. 173, Federal Power Commission, Appendix to Petitioners' Brief, p. 51.

ergy are conducted at all times by a dispatching system controlled by a dispatcher's office in coordination with various operating committees. * * * the constituent companies of this interconnected system plan and coordinate far in advance steam maintenance schedules which are based largely upon the predicted flows of the Susquehanna River and the determination of the availability of hydro energy during periodic steam maintenance outages."[52] Because such an energy pool, drawing upon the extensive steam and hydro capacities of Penn Water, Safe Harbor and Baltimore Company now exists, both Penn Water and Baltimore Company have been able to satisfy commitments which would otherwise be outside their individual capacities, as they are now constituted. Given such interconnected and integrated interstate wholesale operations, there can be no such thing as assigning a particular sale solely to operations within Pennsylvania. Each sale is in effect a pool sale drawn from the integrated interstate system and hence interstate in nature.

The same conclusion was reached by the Third Circuit with regard to another of the participants in this pool, Safe Harbor. The court pointed out that Safe Harbor is "part of a large integrated interstate electric system" and that its electric output "must be treated as an integrated whole."[53] In the second *Safe Harbor* case, the court again held that Safe Harbor's sales "constitute in fact wholesale sales in interstate commerce" because they are delivered to an integrated interstate electric system."[54]

[fol. 5707] We find substantial evidence in the record to support the Commission's factual findings with regard to the interstate nature of Penn Water's sales. It is the nature of the operations underlying the sales which furnishes the basis for Commission action rather than legalistic niceties of

---

title and place of sale.[55] Those operations bring petitioners' rates and services within the reach of Part II of the Federal Power Act. The Commission did not assume jurisdiction over any direct consumer sales. It "was meticulous to take in only territory which this Court had held the States could not reach"[56]—interstate sales at wholesale.

IV

Penn Water challenges the Commission's determination of rate of return and its calculations of the rate base on both legal and evidentiary grounds. Ever since *Hope Natural Gas*[57] was decided, such challenges have become increasingly difficult to sustain. That case established the proposition that the Federal Power Commission is "'not bound to the use of any single formula or combination of formulae in determining rates,' so long as the 'total effect,' 'impact' or 'end result' of the rate order 'cannot be said to be unjust or unreasonable.' The limits set by the Court are deliberately broad, resulting both from notions of special competence and the conception of rate-making as a primarily legislative process. So long as the public interest—i.e., that of investors and consumers—is safeguarded, it seems that the Commission may formulate its own standards."[58] The "Commission may adopt any method of valuation for rate base purposes so long as the end result of the rate order 'cannot be said to be unjust and unreasonable'."[59] If a rate order produces "adequate revenues above operating expenses (including depreciation), to pay interest on the bonds, dividends on the stock and, in general, maintain the

[59] *Id.* at p. 18.

financial integrity of the enterprise,"[60] it will not be disturbed. It still remains for us, however, to examine the theory upon which the Commission purported to act and to assure that its action was within the realm of allowable discretion and supported by substantial evidence.

a. Rate of return

Turning first to that part of Penn Water's petition which is addressed to rate of return, we find it argued that the 5¼ per cent allowed by the Commission on that part of the bonds and stock representing actual investment does not satisfy the test established in *Hope* and referred to above. Determination of the fairness of a rate of return requires "a study of the capital costs of the business, such as service on the debt and dividends on the stock, in the light [fol. 5708] of returns on investments in other enterprises having a similar risk factor. Only upon such evidence can the Commission determine what is required 'to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital'."[61] This "standards of finance resting on stubborn facts"[62] was satisfied by 324 U. S. 581, 605 (1945).
the Commission which carefully investigated Penn Water's position in relation to that of other utilities and concluded that it was less subject to risk than are most other utility companies. The assurance it receives from Baltimore Company, under presently existing arrangements, of revenues sufficient to cover operating expenses and a fair return on its investment removes much of even the small amount of risk ordinarily found in public utility companies. To refer, as Penn Water does, to the extraordinary risk involved in the abatement of Baltimore Company's payments to it if it fails to deliver energy because of acts of God is to illustrate how carefully insulated Penn Water really is from any substantial risk. Nor is the variability of the flow of the Susquehanna a substantial risk factor at present since Baltimore Company's payments to Penn Water are not dependent upon the latter company's output.

---

[60] *Id.* at p. 15.
[61] *Id.* at p. 16.
[62] *Colorado Interstate Co.* v. *Federal Power Commission*,

It does not prove Penn Water's case to point to the higher than 5¼ per cent return earned by the average utility. Safe Harbor, for example, was allowed only a five per cent return by the Commission. On review, the Third Circuit said, "* * * It would be difficult to conceive of a more secure hydroelectric project"[63] and affirmed the rate order. In view of the similarity of their market and financial arrangements, it would seem that Penn Water's risks approximate Safe Harbor's more than they do those of the "average" utility. "Each utility presents an individual problem."[64] Stability of market and income, proximity of the company to the capital markets, a long history of satifactory earnings—all these are factors which go into the complex of fair return. Under the circumstances of this company, the Commission thought a 5¼ per cent return applied to the rate base and designed to provide 3.17 per cent for bonds, 5.21 per cent for preferred stock and 8.64 per cent for common stock and surplus was "fair." We think the Commission had substantial evidence before it to support its findings of fact on this phase of the case and that the rates allowed meet the test laid down in the *Hope* case. Nor do we think that a rate of return based upon the historical cost of capital or petitioners' milder approximation thereof, the competitive cost of capital, is a necessary part of that test. We think it sufficient to point out that cost of capital studies such as the one presented to the Commission have withstood judicial review in too many cases for us to reject the one now before us as a proper criterion of rate of return.

b. Rate base.

Petitioners contend that the Commission improperly excluded more than two million dollars from the amount found fol. 5709] by it to be the gross investment in property used and useful in the public service. Commission deduction of the reserve for depreciation from the gross investment in arriving at the net investment rate base is also challenged. The propriety of such a deduction under a regulatory formula like that in Part II is too well settled to warrant our discussing it at this time. Nor would Part I, if applicable,

[64] *Driscoll* v. *Edison Co.*, 307 U. S. 104, 119-120 (1939).

require a different conclusion.[65] As to the items excluded from the rate base, we think the Commission acted properly and upon substantial evidence. We will discuss only the more important of them:

1. *Flashboard development costs*—The Commission included in the rate base the cost incurred in 1911 and 1912 in connection with the original installation of the project flashboard system but excluded almost $50,000 expended from 1913 to 1921. Such expenditures were for renewal of flashboards or for experimentation and testing in regard to improvement of flashboards, which experiments were ultimately abandoned. The record discloses that flashboards must be replaced so often, as a result of being carried away in whole or in part by high water, that expenditures in connection therewith are properly treated as operating expense and hence not includible in the rate base. Nor need the Commission include in the rate base abandoned experiments which do not manifest themselves in property useful in the public service.[66] There is ample evidence in the record to demonstrate that these experiments neither were necessary to nor contributed to the flashboard improvement ultimately adopted.

2. *Interest during construction*—The Commission allowed 6 per cent interest on construction costs during the period of construction to be included in the rate base on the theory that "during the period of construction 'there is no operating income available with which to meet these necessary charges incident to construction'."[67] But Penn Water disputes the finding that there was a cessation of construction for 22 months during the more than six year period of construction and the attendant exclusion from the rate base of interest for that period, amounting to over $700,000. Penn Water also objects to exclusion of other losses found by the Commission to be traceable to the cessation of construc-

[66] *Pennsylvania Power & Light Co.* v. *Federal Power Commission*, 139 F. 2d 445, 452 (3d Cir., 1944).

[67] *Puget Sound Power & Light Co.* v. *Federal Power Commission*, 78 U. S. App. D. C. 143, 144, 137 F. 2d 701, 702 (1943).

tion. "To justify allowance of interest during construction as part of the cost of the project it must appear that the licensee carried out his obligation * * * to prosecute the construction with due diligence'."[68] Here, the cessation of construction was due to the inability of Penn Water to obtain funds after it found that its financing was inadequate. Even if it be conceded that the financial market at the time of cessation of construction was as unsettled as Penn Water says, it does not follow that rate payers should now bear the burden of its failure to provide adequate financing in advance of construction to sustain the entire project. Such losses are as much due to a risk of the business as were the losses excluded from the rate base in the *Puget Sound* case. [fol. 5710] We agree with the Commission's view, expressed in its brief, that "Interest on the idle investment and other losses due to financial inability to go into operation as soon as the physical conditions of normal construction would permit are no more to be recouped from rate payers in later years than past losses in operation * * *."[69]

3. *Claimed costs from issuance of common stock for properties*—Twenty thousand shares of common stock in Penn Water's predecessor, McCall Ferry Power Company, were issued as part payment for certain properties. These shares are said to represent $500,000 in plant cost which should be included in the rate base. There was substantial evidence to support the Commission's conclusion that almost all the shares were acquired by one Hutchinson in a transaction which was not at arm's length and represented a profit beyond the cost of the properties to him. Hutchinson was part of a group which pooled properties and banking services necessary for the project and issued stock to itself beyond what the Commission found to be proper compensation for properties and services. Under such circumstances, especially since "neither party had any interest to reduce the nominal capitalization,"[70] the stock represented paper capitalization of anticipated profits rather than actual corporate assets. Commission exclusion of the 20,000 shares

resulting from this transaction was merely an elimination of the water in the stock as measured by the estimated original cost of the plant.

4. *Expenditures previously charged to operating expense or to depreciation reserve*—These expenditures total almost $100,000. They were properly excluded from the rate base because they have already been recovered by investors in the form of annual charges to operating expenses and depreciation reserve.[71]

V

The Commission found that Baltimore Company was entitled to $1,733,318 of the total rate reduction of $1,954,261 ordered by it, based on 1946 operations. This allocation is challenged by petitioners who argue, *inter alia*, that it is based upon (1) an incorrect reading of certain governing contract provisions; (2) an incorrect measure of the cost of steam generated energy and capacity supplied by Baltimore Company and Penn Water; (3) an improper overstatement of revenues due to Baltimore Company from Penn Water. In view of what we have already said about the effect of the Fourth Circuit decision upon this rate proceeding, *supra*, pp. 3-8, there is no need to consider whether the various contracts involved herein are part of an arrangement declared illegal under the antitrust laws.

(1) Penn Water's generating capacity alone is inadequate to meet its commitments to its Pennsylvania customers. It makes up the deficiency in part through use of its contractual entitlement to one third of Safe Harbor's output and, to the extent of a deficiency thereafter, by diversion of part of Baltimore's two-thirds entitlement to Safe Harbor's output. The Commission included this diversion from [fol. 5711] Baltimore Company's entitlement as energy supplied by Baltimore to Penn Water for which Baltimore was entitled to a credit against Penn Water's cost of services to it. Penn Water argues, however, that the 2:1 entitlement to Safe Harbor's output does not arise until *after* Safe Harbor has met obligations, which it shares *jointly* with Penn Water, to certain of Penn Water's Pennsylvania customers.

---

[71] See *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 591 (1942); *Washington Gas Light Co.* v. *Baker*, 188 F. 2d at 20.

Such a reading of the contract would mean that the energy said to be diverted from Baltimore Company by Penn Water to satisfy those customers was not Baltimore's at all and hence that no credit would be due to it. Penn Water's view proceeds from its assumption that since Safe Harbor is a party to the contracts referred to, it is obligated thereunder and that such contracts are obligations "to serve imposed on [it] * * * by law" which are specifically exempted from the 2:1 entitlement arrangement.

We think the evidence before the Commission amply disclosed that Safe Harbor was merely a nominal party to the contracts with the Pennsylvania companies and that it was made such as part of a short-lived attempt to obtain certain tax advantages. That attempt was never brought to fruition. If it had been, it would have resulted in a change of the three-way contract to provide that Baltimore and Penn Water "would purchase the *balance* of the Safe Harbor output in the proportion of two-thirds and one-third respectively." This contemplated change, which was never made, would have accomplished what Penn Water would like us to do even without the change. The three-way contract has consistently been interpreted by Safe Harbor and Penn Water in reports to stockholders and to various regulatory agencies as making a 2:1 division of Safe Harbor's entire output between Baltimore Company and Penn Water. And the same construction of the contract was referred to in the second *Safe Harbor* case when the court said, "Safe Harbor's output is delivered to an integrated interstate electric system under the terms of the so-called '1931 contract,' two-thirds of the energy being sold to the Maryland Company [Baltimore Company] and the remaining one-third going to the Pennsylvania Company [Penn Water]."[72]

The materials before the Commission were hardly consistent with the interpretation now sought by Penn Water. They pointed instead to the view, adopted by the Commission, that Baltimore Company had a two-thirds entitlement from Safe Harbor which was diverted by Penn Water in order to satisfy its Pennsylvania commitments.

(2) Penn Water contends that, even if Baltimore Company's energy was diverted by it for use in fulfilling its

---

[72] 179 F. 2d at 184-185 n. 9.

Pennsylvania commitments, the Commission erred in the basis used by it for computing the resultant credit owing from Penn Water to Baltimore. Pointing to Article VII of Safe Harbor's Rate Schedule, Penn Water says that the credit should be based upon Safe Harbor's hydro costs rather than Baltimore Company's steam generated costs. We agree with the Commission's view that Article VII does not apply to voluntary diversions of energy such as are involved here. It applies only to failure of Penn Water, through impairment of its transmission facilities, to transmit Safe Harbor energy to Baltimore Company. There was no such impairment here but instead, there was a diversion at Penn Water's request and with Baltimore's consent, of [fol. 5712] part of the latter company's entitlement. If Penn Water's view were to prevail and it were to pay Baltimore only the hydro costs, Baltimore Company would have no incentive to permit diversion of its hydro entitlement. Such diversion requires it to use its more expensive steam generating facilities, a use for which it is compensated by Penn Water's payment of the cost of such steam generation to the extent it replaces Baltimore's hydro entitlement. This arrangement benefits Penn Water because it is enabled to satisfy commitments it could not otherwise undertake by paying the cost of the least expensive steam energy available at the time of need. Similarly, it is beneficial to Baltimore Company because it brings the less expensive hydro power into its system. The conclusions of the Commission on this point are proper and are supported by substantial evidence.

(3) The Commission included as part of Penn Water's cost of service to Baltimore Company the cost of energy sold by Penn Water as economy interchange—energy generated at a lower cost plant and used to replace generation at a higher cost plant—to certain of its Pennsylvania customers. And as part of what Penn Water owed to Baltimore Company, the excess revenues derived from such sales "for Baltimore's account" were included. The evidence supports the Commission's view that Baltimore Company is entitled to all of Penn Water's output and of Penn Water's one-third Safe Harbor entitlement remaining after Penn Water's firm power obligations to its Pennsylvania customers are met. The sales of interchange energy were sales of energy diverted from Baltimore Company's entitlement

and, as such, Baltimore was entitled to the revenues therefrom less, as we have indicated, payment to Penn Water for its cost of service.

VI

Penn Water raises many other points which, in its view, constitute error requiring us to reverse in part or to remand. Many of these points involve just the sort of weighing of evidence and making of pragmatic adjustments which fall within the special competence of an expert agency and which should not be interfered with by a court unfamiliar with day-to-day operations and complex technological and financial materials. Our review is designed to leave to the Commission the flexibility which is necessary if it is satisfactorily to discharge its function of protecting the public interest, and yet to prevent arbitrary action outside the scope of the Commission's authority. We have examined all the points raised and are convinced that the Commission's treatment of each one was within the range of its statutory authority and was supported by substantial evidence.

The motions to set aside or to remand the Commission's orders are denied and those orders are

Affirmed.

Before Wilbur K. Miller, Bazelon and Fahy, Circuit Judges

ORDER—Filed July 6, 1951

On consideration of the motion of the petitioners, Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland, for leave to file a memorandum decision of the United States District Court for the District of Maryland, for leave to file a supplemental brief, and for oral hearing on the contentions urged in said supplemental brief, of the response of the respondent, of the answer of the intervenors, and of the replies thereto, it is

ORDERED by the Court as follows:

(1) That the motion for leave to file a memorandum decision be granted, and that the Clerk be, and he is hereby, directed to file forthwith the memorandum decision heretofore lodged with him;

(2) That the motion for leave to file a supplemental brief be, and it is hereby, denied;

(3) That the motion for oral hearing be, and it is hereby, denied.

Per Curiam.

Dated: July 6, 1951.

Civil Action

No. 4179

JUDGMENT AND ORDER ON MANDATE

Appeals having heretofore been taken to the United States Court of Appeals for the Fourth Circuit by the plaintiff, Pennsylvania Water & Power Company, and the intervener, Pennsylvania Public Utility Commission, from the judgment and order made in the United States District Court for the District of Maryland on the 18th day of March, 1950, dismissing the amended and supplemental complaint in this action; and said appeals having been duly heard by said Court of Appeals and that Court having on September 30, 1950 made and entered its judgment reversing said judgment and order appealed from with costs in favor of the plaintiff, Pennsylvania Water & Power Company, and of intervener, Pennsylvania Public Utility Commission, and [fol. 5741] with instructions to this Court to enter a declaratory judgment in accordance with the opinion and judgment of said Court of Appeals; and an order having been entered by the United States Court of Appeals, upon motion of the defendant, on October 26, 1950, staying the mandate and execution and enforcement of said judgment pending application by defendant to the Supreme Court of the United

States for a writ of certiorari within thirty days thereof, and such petition having been filed, and a petition for certiorari also having been filed by the Public Service Commission of Maryland, and said petitions for certiorari having been denied by the Supreme Court on December 11, 1950; and said Court of Appeals having duly issued its mandate on the 14th day of December, 1950, commanding that such proceedings be had in this cause, in conformity with the opinion and judgment of said Court of Appeals, as according to right and justice, and the laws of the United States, ought to be had, and said mandate having been duly filed in the office of the Clerk of this Court on the 15th day of December, 1950; and said Court of Appeals having filed an opinion on January 10, 1951, interpreting its said mandate;

Now, upon said appeal and all the papers and proceedings with respect thereto, and upon said mandate, it is

ORDERED AND ADJUDGED in favor of the plaintiff, Pennsylvania Water & Power Company, and the intervener, Pennsylvania Public Utility Commission, and against the defendant, Consolidated Gas Electric Light and Power Company of Baltimore, and the intervener, Public Service Commission of Maryland, this 17th day of January, 1951, that:

1. Said judgment and order of March 18, 1950, be, and the same hereby is, reversed and set aside, with costs, to be taxed by the Clerk;

[fol. 5742] 2. The following agreements between the plaintiff, Pennsylvania Water & Power Company, and the defendant, Consolidated Gas, Electric Light and Power Company of Baltimore:

Agreement as of December 31, 1927,
Supplemental Agreement as of June 1, 1931, and
Supplemental Agreement as of September 29, 1939,

are declared to be void and of no effect.

3. The temporary restraining order granted herein on February 9, 1949 is hereby dissolved.

Chief Judge,
U. S. District Court.

[fol. 5743] In United States Court of Appeals for the District of Columbia Circuit

Exhibit "B"—To Petition For Rehearing—Filed July 18, 1951

In the United States District Court for the District of Maryland—

Civil No. 5253

Pennsylvania Water & Power Company, *Plaintiff*,
Pennsylvania Public Utility Commission,
Plaintiff-Intervenor

v.

Consolidated Gas Electric Light and Power Company of Baltimore and Safe Harbor Water Power Corporation,
Defendants,

Public Service Commission of Maryland, *Defendant-Intervenor*

Judgment

This action having come on for hearing on April 20, 1951 on motion of plaintiffs Pennsylvania Water & Power Company and Pennsylvania Public Utility Commission for summary judgment declaring that the agreement between Pennsylvania Water & Power Company, Consolidated Gas Electric Light and Power Company of Baltimore and Safe Harbor Water Power Corporation dated June 1, 1931, and the agreements supplementary thereto dated August 1, 1932 and November 22, 1939, are illegal and invalid under the antitrust laws and the laws of Pennsylvania covering public utilities and are contrary to public policy and *ultra vires* Safe Harbor Water Power Corporation, and coun-[fol. 5743] sel for the parties having been heard, and due consideration having been given, and the Court having filed its memorandum opinion herein dated May 3rd, 1951, it is this 21st day of May, 1951, by the United States District Court for the District of Maryland,

Ordered and Adjudged, that:

1. Plaintiffs' motion for summary judgment is hereby granted; and

2. The agreement between Pennsylvania Water & Power Company, Consolidated Gas Electric Light and Power Company of Baltimore and Safe Harbor Water Power Corporation dated June 1, 1931, and the agreements supplementary thereto dated August 1, 1932 and November 22, 1939, are on their face invalid and illegal; said agreements contain restrictive and other provisions which are *per se* in violation of the Sherman Anti-Trust Act; said agreements violate the laws of Pennsylvania governing public utilities and are therefore illegal; said agreements are contrary to public policy, and the common law and therefore invalid; and said agreements place the internal control of Safe Harbor Water Power Corporation in the hands of others and destroy the corporate virility of said Corporation and are therefore *ultra vires* and invalid; and accordingly said agreements are hereby declared to be void and of no effect.

/s/ Albert V. Bryan,
United States District Judge,
Specially Designated to Sit in a District
Court for the District of Maryland.

Norfolk, Va.

STIPULATION

IT IS HEREBY STIPULATED AND AGREED by and between counsel for the respective parties in the above entitled cause that:

For the purpose of the petition for a writ of certiorari, and in the event the petition be granted, for the purpose of hearing and determining the case on the merits, the printed record shall consist of the following:

1. Joint Appendix, Vols. 1 to 15, inclusive, Docketed September 19, 1950, as printed for use in the court below.

2. Index to Joint Appendix (1 volume), Docketed September 19, 1950, as printed for use in the court below.

3. Appendix to Petitioners' brief, Docketed September 19, 1950, as printed for use in the court below.

4. Supplemental Appendix to Petitioners' brief, Docketed September 19, 1950, as printed for use in the court below.

5. Appendix attached to Petitioners' motion to postpone date of oral argument and to postpone time for filing reply brief, Docketed November 21, 1950.

6. Exhibit to Petitioners' motion to set aside order of the Federal Power Commission and for further or alternative relief, Docketed December 29, 1950.

[fol. 5835] 7. Petitioners' partial reply to objection to motion to set aside orders of the Federal Power Commission, Docketed January 15, 1951.

8. Exhibit to Petitioners' motion for leave to file a supplemental brief and for further relief, Docketed May 8, 1951.

9. Opinion by Circuit Judge Bazelon, Circuit Judge Miller dissenting, Docketed July 3, 1951.

10. Judgment affirming orders of the Federal Power Commission, Docketed July 3, 1951.

11. Per Curiam order directing Clerk to file memorandum decision of United States District Court for the District of Maryland and denying motion of Petitioners for leave to file supplemental brief and denying Petitioners' motion for oral hearing, Docketed July 6, 1951.

12. Exhibits A and B to Petitioners' petition for rehearing, Docketed July 18, 1951.

13. Order denying Petitioners' petition for rehearing, Docketed September 6, 1951.

IT IS FURTHER STIPULATED AND AGREED that any of the parties may refer in their briefs and argument to the record filed in the Supreme Court of the United States, including any part thereof which has not been printed.

Counsel for Petitioners also stipulate that they will move in the United States Court of Appeals for the District of Columbia Circuit to have the original transcript of record (74 volumes), docketed in that court on June 2, 1949, sent to the Supreme Court.

On Petition for Review of Orders of the Federal Power Commission and on Motions to Set Aside Orders of the Federal Power Commission.

Dissenting Opinion by Circuit Judge Wilbur K. Miller to Opinion of Court Filed July 3, 1951

Filed October 4, 1951

WILBUR K. MILLER, Circuit Judge, *dissenting*: It is my view that this court should have granted petitioners' motions to annul the rate reduction orders of the Federal

Power Commission. The decision of the United States Court of Appeals for the Fourth Circuit, which held null and void the contractual arrangement between Pennsylvania Water & Power Company and Consolidated Gas [fol. 82] Electric Light and Power Company of Baltimore, to which the orders were intended to apply prospectively, imperatively required that the case before us be remanded to the Commission to work out with the utilities some different plan for interchange of energy which would not violate any state or federal law and which would not be contrary to public policy. This should have been done because the Commission's orders stood in a vacuum after the Fourth Circuit held the contract invalid; the only service to which they can have application may not lawfully be continued.

But the Commission has ordered the two companies to continue to observe and be governed by all the provisions of the old contract which are "in and of themselves lawful," —a qualification which overlooks the fact that the Fourth Circuit condemned the contract in its entirety. And the majority of this court apparently hold that the Power Commission has authority to cause the *whole* contract to remain in effect, since they conclude that federal anti-trust laws do not apply to utilities regulated under Part II of the Federal Power Act. Relying on that theory, my brethren say,

> "The motions to set aside or to remand the Commission's orders on the basis of the Fourth Circuit's decision and the other points referred to above are denied."

It is thus clear that, despite the voluminous record in this case,[1] the numerous and sometimes lengthy briefs, and three days of oral argument, the basic issue is a simple one. Has the Federal Power Commission authority to order a combination of these two utilities under terms and conditions which, if arranged by private contract between them,

[1] The Power Commission filed with us a transcript in 75 volumes containing an aggregate of 26,876 pages. Appendices prepared by the parties abbreviated that bulk to 17 volumes containing 5,338 printed pages.

would clearly violate the federal anti-trust laws and the public utility laws of Pennsylvania? If the Commission has such power, the majority have correctly denied the motions to annul and remand. If not, then those motions should have been granted. Before discussing what I regard as the basic question, it may be well to review somewhat in detail the proceeding before the Power Commission and the litigation in the Fourth Circuit.

I

The Commission instituted in September, 1944, an investigation of the rates and charges of Penn Water, following which it entered an order on January 5, 1949, requiring a large reduction in Penn Water's annual revenue. The major portion of the reduction was allocated to Consolidated; indeed, the reduction ordered in Penn Water's charges against that company exceeded by approximately $500,000 the sum which Consolidated had paid Penn Water during the "test year" of 1946. The Commission interpreted the 1931 contract as entitling Consolidated to all Penn Water's energy except that required to meet its firm commitments to other customers; as a result of that interpretation the Commission concluded that very substantial sales by Penn Water to others had really been for the account of Consolidated, and allocated the reduction accordingly.

The rate order was accompanied by a lengthy opinion which makes it clear that the Commission assumed the [fol. 83] continuance of the 1931 contract and based its order, which was to operate prospectively, upon the relationship created by that instrument as it construed it.

For example: (a) The Commission's jurisdictional findings as to the use of Penn Water's facilities for the transmission of electric energy at wholesale in interstate commerce were based upon the assumption that the method of operation required by the contract of 1931 would continue. (b) The allocation of cost of service which the Commission made was premised upon its interpretation of Consolidated's entitlements and Penn Water's obligations under the 1931 contract. (c) The rate of return which the Commission allowed Penn Water was largely based upon the

financial security which the Commission thought Penn Water enjoyed under the 1931 contract. Moreover, the form of rate schedule later prescribed followed the residual-entitlement, specified-return formula of the 1931 contract.

Having observed the patent fact that the rate reduction order was based upon, and applied only to, the combination of facilities and interchange of energy set up by the 1931 contract, Penn Water applied to the Power Commission on January 28, 1949, for a rehearing. It sought to show that the order ought not to be premised upon a contractual relation which it regarded as illegal and which, if judicially found unlawful, could not continue to exist.

Among other things, Penn Water pointed out to the Commission that on December 20, 1948, after the record in the Commission's proceeding had been closed, it had terminated the 1931 contract by notice to Consolidated; and that it had sued Consolidated in the United States District Court for the District of Maryland for a declaration that the contract was invalid and unenforceable.[2] Apparently this was

---

[2] In the course of its application for rehearing, Penn Water stated to the Commission:

> "(c) Since the record in the proceeding has been closed the purported contract referred to as supplemented, has been terminated by notice dated December 20, 1948; and if given the opportunity on rehearing Petitioners hereby offer to prove:
>
> "(i) The fact of such termination;
>
> "(ii) The contract was null, void, and unenforceable because the basic agreements were made at a time when Penn Water and Baltimore Company [Consolidated] were affiliated through substantial ownership by Baltimore Company of Penn Water stock and by interlocking directors and officers; the basic agreements were never approved or ratified by the stockholders of Penn Water; the effect of Articles IV and V of the supplemental agreement of June 1, 1931, particularly as construed in practice by Baltimore Company, made the contract *ultra vires* and contrary to public policy; and such supplemental agreement constituted an agreement

[fol. 84] the first time the Federal Power Commission had been officially informed that Penn Water had given notice of termination of what the Commission calls the "system foundation contracts," and that Penn Water considered them violative of the anti-trust laws and the utility laws of Pennsylvania and had sued for a declaration to that effect.

On February 26, 1949, the Power Commission denied the application for rehearing and filed an opinion in response to it, in the course of which it said:

". . . If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions. In our opinion and order *we took care to leave the continuation of the operation of the integrated and interconnected system*[3] *in full*

---

in unreasonable restraint of trade and in unreasonable restriction of competition in the generation and sale of electrical services, and unreasonably limited the output of electrical energy contrary to the laws of the United States, including Section 1 of the Sherman Anti-trust Act of July 2, 1890 (15 U. S. C. 1946 ed. § 1; 26 Stat. 209, 50 Stat. 693), Section 5 of the Federal Trade Commission Act of September 26, 1914 (15 U. S. C. 1946 ed. § 45; 38 Stat. 719), and Section 10(h) of the Federal Power Act (16 U. S. C. 1946 ed. § 803(h); 41 Stat. 1068, 49 Stat. 842), and to the laws of Maryland and Pennsylvania.

"(iii) Baltimore Company committed material breaches of the contract which justified its termination; and

"(iv) The foregoing matters are now in litigation between Penn Water and Baltimore Company on complaint of Penn Water for declaratory and other relief, before the United States District Court for the District of Maryland, Civil Action No. 4179."

[3] This refers, of course, to the two sets of facilities as operated under the contract.

effect, merely changing the rates, as shown by our statement wherein we specifically stipulated that

"'The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most particable under the circumstances. *That arrangement will, therefore, be continued* with, however, such modifications as are necessary to accomplish the reductions mentioned above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company.'" (My emphasis.)

Later in 1949—on October 27—the Commission prescribed a rate schedule for Penn Water's service to Consolidated which was designed to effectuate the reduction in Penn Water's revenue which it had ordered on January 5. The last paragraph of the October order is as follows:

"The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force."

The revenue reduction order of January 5, 1949, and the rate order of October 27, 1949, are those which this court was asked to review.

II

While the proceeding before the Power Commission, which has just been described, was in progress, the litigation in the Fourth Circuit began. As of June 1, 1931, Penn [fol. 85] Water and Consolidated, which were then under common dominance, had drastically amended a previously existing contract between them so as to form a combination

of their utility facilities under terms which made Penn Water a virtual vassal of Consolidated. Fifteen years later the two corporations ceased to be under common control and thereafter each was managed independently. But the basic contract of 1931, burdensome and restrictive as to the Pennsylvania company, not only continued to define and govern the relationship between the two utilities, but by its terms was to endure until 1980,—a bleak prospect indeed for Penn Water.

Due to differences and disputes which developed, Consolidated invoked the arbitration provisions of the contract on September 1, 1948. Shortly thereafter, Penn Water instituted suit in the United States District Court at Baltimore, asking that the arbitration provisions be declared unenforceable and that Consolidated be enjoined from proceeding thereunder. It gave notice of termination to Consolidated and in an amended complaint asked that the 1931 agreement be struck down in its entirety.

Thereupon Consolidated applied to the District Court for a restraining order and on February 9, 1949, the court restrained Penn Water, pending final determination of the issues, from doing anything in respect to the generation, transmission and disposition of power covered by the 1931 agreement in any manner different from the procedure theretofore followed in the performance of the contract. The District Court filed an opinion [4] on February 29, 1950, declaring the 1931 contract valid, and directing arbitration to proceed.

Penn Water appealed to the United States Court of Appeals for the Fourth Circuit and that court, on September 30, 1950, handed down an exhaustive opinion [5] reversing the judgment of the District Court. The appellate court held the 1931 contract invalid as contrary to public policy and as violative of the Sherman and Clayton Acts and the

[5] *Pennsylvania Water & Power Co.* v. *Consolidated Gas, Electric Light & Power Co.*, 184 F. (2d) 552.

public utility laws of Pennsylvania. In the course of the opinion, the Fourth Circuit said (at page 568):

> ". . . It may well be, although the *present arrangement* between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania." (Emphasis supplied.)

Consolidated's petition for *certiorari* was denied by the Supreme Court on December 11, 1950,[6] as a result of which the case went back to the District Court for entry of a declaratory judgment in accordance with the opinion of the Court of Appeals for the Fourth Circuit. After the remand, a controversy arose in the District Court as to [fol. 86] whether the invalidation of the 1931 agreement had revived an agreement of 1927 between the parties for the interstate sale and delivery of electric energy so that Consolidated was enttiled to continued deliveries by Penn Water, in accordance with the terms set forth therein, regardless of the invalidity of the amendatory contract of 1931. In response to a motion by Penn Water that the Fourth Circuit interpret its mandate and settle the controversy, that court delivered a second opinion on January 10, 1951.[7]

The court held the earlier agreement of 1927 was not revived when the amendatory contract of 1931 was declared illegal, and reiterated in unmistakeable terms its former holding that the 1931 contract was invalid in its entirety. In the course of the opinion, the Fourth Circuit said (186 F.

---

[6] *Consolidated Gas Electric & Power Co.* v. *Pennsylvania Water & Power Co.* and *Hessey et al., Constituting the Public Service Commission of Maryland* v. *Pennsylvania Water & Power Co.* (two cases), 340 U. S. 906.

[7] *Pennsylvania Water & Power Co.* v. *Consolidated Gas, Electric Light & Power Co.*, 186 F. (2d) 934.

(2d) at 937) that by entering into the amendatory contract

"... Penn Water gave up its independent status as a producer and seller of electric energy and subjected itself so completely to the dominance of Consolidated as to violate the controlling statutes and *hence the 1931 agreement must be stricken down.*

"... Here the prior contract has been merged in and its nature changed by the subsequent unlawful agreement, and as so changed, it has resulted in *an unlawful relationship which has continued for twenty years.* When the illegality of such relationship is declared, it is idle to contend that the court can withdraw the original contract from the illegal relationship and give validity, certainly after it has been buried therein for so long a period. *It must perish along with the relationship* of which it has been made an inseparable part.

* * * * * * *

"Throughout the trial of this case and in the argument of the pending motion, Penn Water has reiterated its desire to continue to supply electric energy to Consolidated; and in view of the close relationship between the parties, the existence of interconnecting equipment and the control over its rates by the regulatory bodies, there is no reason to fear that the interests of consumers of electricity in Maryland will suffer through *the invalidation of the existing contract* between the two utilities.

"The District Court should issue a declaratory judgment (1) setting aside its judgment and order of March 18, 1950; (2) *declaring that the agreements of December 31, 1927, June 1, 1931 and September 29, 1939 are void and of no effect;* and (3) dissolving the restraining order of February 9, 1949." (Emphasis supplied.)

Presumably the District Court at Baltimore then entered a judgment declaring the agreements between Penn Water and Consolidated to be void and of no effect, as it had been directed to do. There was no equivocation or limitation in the Fourth Circuit's directive. It did not simply hold

void the restrictive provisions, but condemned the 1931 agreement in its entirety. This was obviously because the [fol. 87] court considered that the whole arrangement depended upon the restrictions which fettered Penn Water and that the paragraphs containing the restrictions, therefore, were not severable from the remainder of the contract. This appears from the following excerpt from the Fourth Circuit's opinion (186 F. 2d) at 936):

> "The 1931 agreement, on the other hand, provided that Consolidated should be entitled to all the electric capacity and energy available to Penn Water and not otherwise disposed of in the performance of existing contracts, and in consideration thereof, Consolidated agreed to pay Penn Water an amount equal to its operating expenses, a specified rate of return on existing facilities, and on the cost of new facilities less depreciation, and Consolidated was allowed a credit for the amount of the sales of energy by Penn Water to other persons. Closely associated with these provisions were the illegal restrictions on the future activities of Penn Water which resulted in the invalidation of the whole contract. Therein Penn Water was required to obtain the approval of Consolidated before entering into any agreement for the sale or purchase of electric power and energy and to obtain the approval of Consolidated before making any investment or disposing of its property having a value in excess of $50,000. These restrictive conditions were included in order to safeguard Consolidated in the performance of its promises and it is conceded that without them the contract would have been impracticable and would not have been made."

Although a final judgment of a court of competent jurisdiction had thus invalidated the entire contract between Penn Water and Consolidated, the Federal Power Commission still regarded it as desirable and in the public interest that the facilities of the two companies be operated as one integrated and interconnected system. Being of that opinion, the Commission was understandably anxious that the co-operative use of facilities and interchange of energy be continued. I think it should have called the parties in and

required them to work out immediately a new contract in conventional form which would accord with the opinions of the Court of Appeals for the Fourth Circuit. The Commission thought, however, that the Fourth Circuit meant only to condemn the two paragraphs of the 1931 agreement which prohibited Penn Water from selling or buying energy and from increasing or reducing its plant investment without Consolidated's consent. It reasoned that it could require the continuance of the old contract if those paragraphs were eliminated. This would leave in effect the contractual definition of Consolidated's residual entitlements and the residual payment type of rate. But the Fourth Circuit said those provisions were so closely associated with the illegal restrictions on the future activities of Penn Water that the whole contract was invalid. The court's opinions make abundantly clear its intention to strike down the entire arrangement,—not just the restrictive provisions.

It is significant that Penn Water and Consolidated conceded that, without the unlawful restraints on the former, the 1931 contract would have been impracticable and would not have been made. That was an admission that the restrictions and the remainder of the contract were so "closely associated" that illegality of the restrictions resulted in complete invalidity. Even if the unlawful paragraphs of the agreement were severable, the remaining provisions [fol. 88] would be incompatible with the Fourth Circuit's decision because under them free and unrestrained competition would still be impossible. Welding the facilities of the two companies into one integrated system—the Commission's objective—is not conducive to competition.

III

After the "system foundation contracts" had been held null and void, Penn Water entered a motion in this court on December 29, 1950, asking that we

> ". . . set aside, annul and dismiss the orders of the Commission sought to be reviewed in these proceedings, or, in the alternative, remand these proceedings to the Commission with instructions to annul and set aside its orders herein sought to be reviewed . . ."

The Pennsylvania Public Utility Commission also moved this court on December 29, 1950,

> "To annul and dismiss the orders of the Federal Power Commission sought to be reviewed in Case No. 10,239 on the ground that the decision of the United States Court of Appeals for the Fourth Circuit in *Pennsylvania Water & Power Company and Pennsylvania Public Utility Commission* v. *Consolidated Gas Electric Light and Power Company of Baltimore and Public Service Commission of Maryland*, 184 F. 2d 552 (1950), *cert.* denied December 11, 1950, renders invalid, null, void and of no effect the orders of the Federal Power Commission and the proceedings before it pursuant to which said orders were issued."

The question presented by these motions was what I have called the basic issue: can the Federal Power Commission lawfully establish between Penn Water and Consolidated a relationship which constituted a violation of the anti-trust statutes when established by contract between them? One who considers that question should bear in mind three indisputable propositions: 1. Regulated industries are not *per se* exempt from the Sherman Act. 2. Part II of the Power Act does not give the Commission power to lift the ban of the anti-trust laws. 3. As repeals by implication are not favored, only a clear repugnancy between the old law and the new results in the former giving way and then only *pro tanto* to the extent of the repugnancy. *Georgia* v. *Pennsylvania Railroad Company*, 324 U. S. 439; 456-7 (1945); *United States* v. *Borden Company*, 308 U. S. 188, 198 *et seq.* (1939).

In denying the motions and holding that the Commission has such power, the majority of the court necessarily first concluded that Part II of the Federal Power Act had impliedly repealed or superseded the anti-trust statutes so as to exempt from their prohibitions the combination between Penn Water and Consolidated which the Commission ordered to continue.

In order to show in bold relief the thinking of my brothers

of the majority which led them to that conclusion, I have skeletonized the pertinent portion of their opinion:

"The problem raised by the motions is one of the interrelation of two statutory schemes—each of which reflects different historical pressures and different con- [fol. 8] ceptions of the public interest. The Sherman Act and related laws represent an attempt to keep the channels of competition free so that prices and services are determined by the workings of a free market. . . . In marked contrast is a statute such as Part II of the Federal Power Act. It evidences congressional recognition that competition can assure protection of the public interest only in an industrial setting which is conducive to a free market and can have no place in industries which are monopolies because of public grant. . . .

"These contrasting objectives indicate that the anti-trust laws can have only limited application to industries regulated by specific statutes. . . .

". . . The net effect of what we have already said is that, though regulated industries are not *per se* exempt from the anti-trust laws and repeals by implication are not favored, the anti-trust laws are superseded by more specific regulatory statutes *to the extent* of the repugnancy between them . . . where a statute provides for comprehensive and detailed regulation of a particular industry, as do the Interstate Commerce Act and the Federal Power Act, there is, as we have indicated, only a limited area for application of anti-trust considerations to Commission decisions."

These generalities boil down to the thesis that Part II of the Federal Power Act is repugnant to the anti-trust laws and therefore supersedes them to the extent of the repugnancy; and that the repugnancy extends so far as to exempt from the anti-trust laws the combination of utilities ordered by the Commission which is otherwise clearly illegal under those statutes.

The majority do not point out with particularity the repugnancy upon which they rely. They seem to find it in the "contrasting objectives" of the anti-trust acts and

Part II of the Power Act, saying the first was designed to obtain the benefit of free competition, and the other to eliminate competition as having no place in the utility field and to substitute for it a regulatory agency. This being the only repugnancy suggested by the majority, their holding necessarily is that the anti-trust laws are superseded by Part II of the Power Act to the extent that the *objectives* of the two forms of legislation are in contrast. Let us see if there is really any repugnancy between the Sherman Act and Part II of the Power Act.

The first section of the former, which is 15 U. S. C. § 1, declares illegal every contract, combination or conspiracy in restraint of trade or commerce. The 1931 contract between Penn Water and Consolidated was held violative of that section.

Section 202, found in Part II of the Power Act, empowers the Commission to require the interconnection and co-ordination of the facilities of the two utilities. But neither that section nor any other section of Part II authorizes the Commission to require interconnection and co-ordination of facilities under terms and conditions which will result in a violation of the Sherman Act. The Commission can exercise its power under § 202 and under all of Part II without setting up an arrangement which is unlawful under anti-trust statutes. The Fourth Circuit intimated as much when it suggested that the interconnection of facilities and interchange of energy be continued "by [fol. 90] some method which would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania." The majority opinion does not suggest any reason why that cannot be done by the Commission.

Since the Power Commission can perform all its functions under Part II without creating a violation of the Sherman Act, there is no repugnancy between the two statutes, and no room for the court to say that Part II superseded the anti-trust statutes.

I have said, as did the Fourth Circuit, that neither Part I nor Part II of the Federal Power Act purports to suspend the anti-trust statutes with respect to licensees and utilities regulated thereunder. On the contrary, § 1 of the Sherman

Act is substantially repeated in § 10(h), found in Part I of the Power Act, 16 U. S. C. § 803(h), which is as follows:

> "Combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited."

Penn Water is a licensee under Part I of the Act and so is subject to the prohibitions of § 10(h). The majority considers that the omission of that section from Part II not only repealed § 10(h) but also amounted to a repeal of the prohibitions of the Sherman Act as far as regulated companies are concerned. That amounts to saying that the anti-trust laws do not apply to any regulated industry unless their provisions are substantially repeated in the regulatory statute. Just the opposite is true: the anti-trust laws apply to regulated industries unless exemption therefrom is expressly provided in the regulatory statute, or must inevitably be implied from provisions of the regulatory act which are clearly repugnant to anti-trust prohibitions.

It must be noted, too, that Penn Water does not lose its status as a licensee under Part I simply because it is regulated also under Part II. It continues, nevertheless, to be a licensee and so continues to be forbidden by § 10(h) to engage in the combinations or arrangements made illegal thereby. It follows that, when the Commission required Penn Water and Consolidated to remain in the combination which had been condemned by the courts, it not only did not act under the authority of Part II which gives it no such power, but also affirmatively violated § 10(h) of its own basic act.

The majority opinion says, however, that when a Part I licensee is also a Part II company, as Penn Water is, it is no longer subject to the anti-trust provisions of § 10(h), simply because the language of that section does not appear in Part II. Then the notion that § 10(h) was repealed by Part II is thus stated in the opinion:

> ". . . The prohibitions of § 10(h) would apply to a licensee which is also regulated under Part II only to

the extent that the prior statute is not repealed by the clear repugnancy between it and the later statute."

I suppose the court meant to say that Part II is clearly repugnant to § 10(h) because it does not contain similar language and therefore repealed that section by implication. But Part II is not repugnant to § 10(h) for the same reasons that it is not repugnant to the anti-trust laws: it is [fol. 91] not necessary for the Commission to cause a violation of § 10(h) in order fully to exercise its regulatory power under Part II over a Part I licensee which is subject to Part II regulation.

One other phase of the portion of the court's opinion which denies the motions remains to be noticed. It is that in which the court purports to give another reason for denying the motions to annul, in addition to the fallacious theory that the anti-trust laws do not apply to regulated industries. On examination, however, the additional ground is seen to rest upon the same erroneous idea. It is thus stated in the opinion:

"To grant petitioners' motions and set aside the order at this time would be to substitute antitrust criteria for those of the Federal Power Act, . . ."

By this the court meant that it would be improper to annul the Commission's orders on the mere ground that "a decision handed down in a suit between private parties under a non-controlling statute" had destroyed the only arrrangement to which they could possibly have application. If Penn Water "wishes," because of the Fourth Circuit's decision, to make some change in the old contractual arrangement which the Commission has ordered to be retained, the majority say the only thing it can do is to submit its proposed new arrangement. Then, after the Commission has disposed of the proposal, Penn Wafer can file a new petition for review if it feels aggrieved. That would be true if Penn Water wanted to change an existing *legal* arrangement.

The key error in the court's reasoning is revealed by its allusion to the decision of the Fourth Circuit as one "handed

down in a suit between private parties under a non-controlling statute." It shows that in assigning this additional reason for denying the motions to annul, the court is still assuming that the Commission can lawfully require these utilities to form a combination which they cannot legally form by their own contract.

I think I have shown sufficiently already that the Sherman Act *is* the controlling statute which the Commission is not empowered to override. That the judgment invalidating the existing arrangement was handed down in a suit between private parties is, of course, immaterial. It is binding on those private parties, yet this court has required them to disobey it. It has done so upon the erroneous idea that the Sherman Act has been superseded by Part II of the Federal Power Act and so is not the "controlling statute."

In the portion of the majority opinion now being discussed, the court says it is the existing "services and rates, reflecting underlying operations, which were the subject of the Commission's orders." The implication is that all the Commission has done is to prescribe rates for service actually being rendered; that if the rates are just and reasonable for that service, and if the Commission's findings in that respect are supported by substantial evidence, "our review is at an end." I suggest that the "underlying operations" were the subject of the Commission's orders and therein lies the vice in them. They did not deal with rates alone but ordered the contractual "underlying operations" to continue.

It is a boot-strap argument to say that, because the Commission has power to prescribe rates for existing service so [fol. 92] long as it is being rendered, it can therefore require continued rendition of the service no matter if it is unlawful.

For the reasons given, I think the motions to annul the Commission's order should have been granted, and so I dissent. My brothers of the majority, having denied the motions, then proceeded to explore the merits of the rate reduction order and the implementing rate schedule which the Commission prescribed, and affirmed those orders. I dissent also from that action, as I think the orders should have

been set aside as improper. But I do not prolong this dissent by discussing the merits of the orders, as I think it perfectly clear that they should have been set aside as being without basis or applicability after the Fourth Circuit's judgment became final.

QUESTIONS PRESENTED 17

REASONS FOR GRANTING THE WRIT AND ARGUMENT..... 18

I. As to Question I: The decision of the D. C. Circuit holding that the FPC may, under the guise of a rate order, direct continuance of, and base its orders on, contractual arrangements held illegal under the Federal antitrust laws is in direct conflict with the decision of the Fourth Circuit and is erroneous..... 18

(a) There is no Exemption from the Antitrust Laws Unless Expressly Provided for by Congress 19

(b) Section 10(h) of the Federal Power Act, Reaffirming the Antitrust Laws, Was Not Impliedly Repealed by Part II of such Act 24

(c) The Specified Return Formula Provided for in the Contracts is Illegal Under the Antitrust Laws 25

(d) The D. C. Majority Misconstrued the Decision of the Fourth Circuit..... 28

II. As to Question II: The decision of the D. C. Circuit holding that the FPC may, under the guise of a rate order, direct continuance of, and base its orders on, contractual arrangements which destroy Penn Water's independent corporate character by surrender to Consolidated of its managerial functions and initiative in violation of public policy and in excess of the power given it under the organic laws of its State of incorporation, is in direct conflict with the decision of the Fourth Circuit and is erroneous..... 30

PAGE

III. As to Question III: The decision of the D. C. Circuit holding that Part II of the Federal Power Act repeals by implication provisions of Part I and is applicable to Penn Water as a licensee under Part I conflicts with statements of the Second Circuit and another panel of the D. C. Circuit, and is erroneous 32

MISCELLANEOUS.

Report on Chain Broadcasting, F. C. C., May 2, 1941 22

S. 2796, Section 203(a), 74th Cong., 1st Sess. (1935), (Federal Power Act, sec. 203(a), in form sent to Senate-House conference) 20

U. S. Attorney General Opinion (Vol. 40, p. 335, Opinion No. 85) 22

PETITION FOR WRIT OF CERTIORARI.

Petitioners, Pennsylvania Water & Power Company, a Pennsylvania corporation (Penn Water), and its wholly owned subsidiary, Susquehanna Transmission Company of Maryland, a Maryland corporation (Transmission Company), pray that a writ of certiorari be issued to review the judgment and orders of the United States Court of Appeals for the District of Columbia Circuit (D. C. Circuit) entered in these cases on July 3 and 6, and September 6, 1951 (Printed Record (R.) Vol. 18, pp. 73, 74 and 78). The judgment and orders denied motions to set aside or remand, and instead affirmed, orders of the Federal Power Commission (FPC) directing continuance of, and premised on, substantive provisions of two power contracts which have been adjudged illegal. Such judgment and orders of the D. C. Circuit were entered on the decisions of a divided Court and were in direct conflict with the unanimous decision of the United States Court of Appeals for the Fourth Circuit (R., Vol. 18, p. 1) as to which this Court denied certiorari,* and the related decision of the United States District Court for Maryland (R., Vol. 18, p. 40),** declaring illegal the same two power contracts and holding that the FPC had no authority to validate them by the orders here involved.

Opinions Below.

The opinions and orders of the FPC of January 5, 1949, February 28, 1949 and October 27, 1949 are found at R., Vol. 16, pp. 39, 372 and Vol. 17, p. 46. The majority opinion of the D. C. Circuit (R., Vol. 18, p. 46) per Bazelon, Circuit Judge, in which Fahy, Circuit Judge, joined (the D. C. majority), and the dissenting opinion of Wilbur K. Miller,

** *Pennsylvania Water & Power Co., Pennsylvania Public Utility Commission* v. *Consolidated Gas Electric Light & Power Co., Safe Harbor Water Power Corporation, Public Service Commission of Maryland*, 97 F. Supp. 952 (May 3, 1951) and Docket No. 5253 (Op. March 12, 1951 and Order March 19, 1951).

Circuit Judge, are not yet officially reported. The dissenting opinion, filed October 4, 1951, too late to be printed in the record, appears as Appendix B hereto. The order denying rehearing, to which Judge Miller also dissented, is found at R., Vol. 18, p. 78.*

Jurisdiction.

The jurisdiction of this Court is invoked under Section 1254(1) of the Judicial Code (62 Stat. 928, 28 U. S. C. §1254) and Section 313(b) of the Federal Power Act (49 Stat. 860, 16 U. S. C. §825 l).**

State Statutes Involved.

The pertinent state corporate statutes are set forth in Appendix C and the pertinent state utility laws are set forth in the Appendix to the petition of the Pennsylvania Commission.***

Statement.

The primary issue raised by this petition is whether the FPC (in the absence of any express authority in the

---

* While there was a voluminous record below, the basic issue here is a simple one as Judge Miller said (App. B., p. 2a), and all that is needed are the power contracts (R., Vol. 15, pp. 4554-4603, 4606-4621), opinions of the Fourth Circuit (R., Vol. 18, pp. 1, 35), and District Court for Maryland (R., Vol. 18, p. 40), judgments entered on such opinions (R., Vol. 18, pp. 75, 77), opinions of the D. C. Circuit (R., Vol. 18, p. 46, and Appendix B hereto,) and portions of the opinions and orders of the FPC (R., Vol. 16, pp. 39-59, 146-191, 372-388; Vol. 17, pp. 46-71); Petitioners were, however, unable to obtain from respondents' counsel a stipulation thus limiting the printed record.

** The judgment of the D. C. Circuit was entered on July 3, 1951 (R., Vol. 18, p. 73). Petitioners' motion for rehearing was denied September 6, 1951 (R., Vol. 18, p. 78). Application for a stay of certification to the FPC of the opinion and judgment (in lieu of mandate) of the D. C. Circuit pending application to this Court for a writ of certiorari was duly made, and the order granting the stay was entered (Transcript of Record (Tr.) p. 5750) and the stay extended to and including November 16, 1951.

*** The Pennsylvania Commission is also petitioning for certiorari to review the judgment and orders of the D. C. Circuit. Petitioners herein adopt the points in that petition.

Federal Power Act such as is found in certain other Federal regulatory statutes) may compel electric utilities to perform, and may base its rate orders upon continued performance of, contracts which have been adjudged by the courts to violate Federal antitrust laws, public policy and the laws of the utilities' state of incorporation.

The FPC orders, which the D. C. Circuit affirmed, were issued in proceedings to determine the rates to be charged for the services of Penn Water (and Transmission Company) to intervenor, Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated) and three other electric utility customers located in Pennsylvania.* Penn Water's rates to Consolidated were contained in an illegal contract between Penn Water and Consolidated (the Baltimore contract)** which was linked to a companion contract (the Safe Harbor contract)**, also illegal, between Penn Water, Consolidated and Safe Harbor Water Power Corporation, a Pennsylvania electric generating utility (Safe Harbor). The FPC by these orders not only required a reduction in such rates but also required the continuance of substantive provisions of the illegal Baltimore contract, and based the critical features of the orders (such as the amount and allocation of the reduction, and the determination of jurisdiction over Penn Water's wholesale sales in Pennsylvania) upon the assumed existence and continuance of the illegal Baltimore and Safe Harbor contracts. The FPC termed these contracts the "system foundation contracts" (R., Vol. 16, pp. 45, 376).

---

* Pennsylvania Power & Light Company (PP&L), Philadelphia Electric Company (PE) and Metropolitan Edison Company (ME).

** The Baltimore contract consisted of three agreements dated December 31, 1927, June 1, 1931 and September 29, 1939 between Penn Water and Consolidated (R., Vol. 15, pp. 4577-4603, 4606-4621). The Safe Harbor contract consisted of three agreements dated June 1, 1931, August 1, 1932 and November 22, 1939 between Safe Harbor, Consolidated and Penn Water (R., Vol. 15, pp. 4554-4576). In the case of each contract the basic agreement was the one dated June 1, 1931.

The Baltimore contract was held illegal by unanimous decision of the Fourth Circuit, Parker, Soper and Dobie, JJ. (R., Vol. 18, p. 1). The Safe Harbor contract was held illegal in a subsequent related case by the District Court for Maryland, Bryan, J. (R., Vol. 18, p. 40). Those Courts held the two contracts illegal and void *ab initio* in their entirety under the Federal antitrust laws, Pennsylvania statutes, common law and public policy. Those Courts also held that the FPC had no authority to validate such contracts and that the FPC orders did not have that effect. This Court denied certiorari from the decision of the Fourth Circuit.

The contract litigation in the Fourth Circuit, begun December 21, 1948,* shortly prior to the first FPC order (January 5, 1949) here involved, was formally brought to the attention of the FPC in a petition for rehearing thereof (January 28, 1949),** but the FPC held that even if the courts determined the contracts to be illegal, such illegality would be immaterial to its orders. The decision of the Fourth Circuit, with certiorari denied by this Court, and the decision of the District Court for Maryland, were both rendered while the review of the FPC orders was pending in the D. C. Circuit. They were brought to the attention of that Court by formal motions, but the D. C. majority denied the motions and affirmed the FPC orders despite the decisions in the Fourth Circuit.

As was pointed out both to the FPC and the D. C. Circuit, Penn Water's objectives in the cases in the Fourth Circuit were (1) to be free to compete with Consolidated, particularly as regards sales and purchases at wholesale, without the illegal restrictive controls by Consolidated and illegal pooling of revenues provided for in the contracts, and (2) to have its policies, contracts and expansion, and the exercise of initiative with respect to its rates, services, operating economies and new business, controlled by its

---

* The litigation was precipitated by Consolidated refusing to permit Penn Water, by letter of November 23, 1948 given under the Baltimore contract, to build a new steam electric generating plant.

** Thus Penn Water called the contract litigation to the attention of the FPC at the earliest practicable moment and while the rate case was still pending before it.

own Board of Directors as required by the laws of its state of incorporation.*

The Fourth Circuit held that the antitrust laws apply to Penn Water in the absence of an *express* statutory provision for exemption, and that the application of the antitrust laws was reaffirmed by reenactment in 1935 of Section 10(h) (16 U. S. C. §803(h))** of the Federal Power Act, but the D. C. majority held that the antitrust laws and Section 10(h) were *impliedly* repealed by the simultaneous enactment in 1935 of Part II of the Federal Power Act.

The Fourth Circuit held that the interchange of electricity must be by some method which "will not offend either the [Federal] anti-trust laws or the utility laws of Pennsylvania," (R., Vol. 18, p. 28) but the D. C. majority held in effect that "antitrust criteria" (R., Vol. 18, p. 55) do not apply to orders of the FPC, and that the FPC could order continuance of contractual arrangements judicially declared illegal and could base the critical features of its orders thereon. The D. C. majority did not even refer to the adjudicated invalidity of the contracts under state law and public policy or to any authority in the FPC to grant exemption therefrom.

The D. C. dissenting opinion agreed with the Fourth Circuit on all these points including the requirement of compliance with state law.

---

* Contrary to assertions which have been made in these cases by Penn Water's opponents, the record is clear, as the Fourth Circuit said in a passage quoted in the D. C. dissenting opinion (App. B., p. 9a), that Penn Water is not trying to stop electric service to Consolidated and thereby to withdraw from interstate commerce and thus escape from whatever regulatory system Congress has imposed on such interstate electric business. What Penn Water seeks is to require the FPC to make its decisions as to rates and jurisdictional matters on the basis of physical deliveries of power and not on the basis of illegal and therefore non-existent contracts.

** "Section 10. All licenses issued under this Part shall be on the following conditions: * * *

"(h) That combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited."

The decision of the D. C. majority is in direct conflict, on important questions of Federal law, with the unanimous decision of the Fourth Circuit and other courts and, if it should stand, would mean that all Federal regulatory bodies, even in the absence of express Congressional authority such as is given to the Interstate Commerce Commission, could claim authority to exempt transactions from any Federal or State laws.

The D. C. Circuit also held, contrary to statements made by the Court of Appeals for the Second Circuit* and another panel of the D. C. Circuit,** that a licensee (such as Penn Water) subject to regulation under Part I of the Federal Power Act, is also subject to the different regulatory system of Part II of that Act. The asserted applicability of Part II was, in turn, essential to the D. C. Circuit's holding that the antitrust laws were repealed by implication.

The Contracts.

The invalidated Baltimore and Safe Harbor contracts provided until 1980 for payments by Consolidated for power, not on the basis of a unit rate for capacity and energy, but on a basis which would provide for the sellers' operating expenses including taxes and a specified return on investment, regardless of the amount of power delivered or services rendered, with a credit to Consolidated for revenues received from sales of power to others. This is nothing more than a *revenue* pooling arrangement,*** a type of provision which has always been deemed illegal under the antitrust laws and public policy because it removes incentive to compete, obtain new business or effect operating economies. This type of arrangement similarly violates applicable Pennsylvania statutes. The contracts contained closely associated provisions providing for control by Consolidated over the contracts, sales, purchases, prices, output

---

* *Niagara Falls Power Co.* v. *FPC*, 137 F. 2d 787, 792, 793 (1943).

** *Alabama Power Co.* v. *FPC*, 128 F. 2d 280, 293 (1942).

*** Petitioners are not here referring to pooling of power resources which results from interconnection.

and expansion of both Penn Water and Safe Harbor. The contracts were made at a time when Consolidated and Penn Water were under the common control of banking interests headed by J. E. Aldred (R., Vol. 18, p. 8).*

The contracts surrendered control of Penn Water and Safe Harbor to Consolidated, stifled their initiative with respect to rates, services, operating economies and new business and destroyed the independent corporate character of these Pennsylvania corporations, making Penn Water a "virtual vassal of Consolidated" (App. B, p. 6a) and Safe Harbor an "impotent agency" (R., Vol. 18, p. 41). For example, the provisions of the contracts had been used by Consolidated to interfere with Penn Water's and Safe Harbor's contracts with Pennsylvania customers** and, in 1948, to prohibit Penn Water from building a large new steam electric generating plant using coal deposited in the Susquehanna River (free but for the cost of dredging and processing) which would otherwise go to waste and from which plant power could have been economically produced this year, when power is greatly needed (R., Vol. 18, p. 914).***

The Corporations Involved and Their Businesses.

Penn Water and Safe Harbor are Pennsylvania electric utility corporations owning hydroelectric generating plants on the Susquehanna River. Penn Water also owns a steam electric generating plant and transmission lines in Pennsylvania and, through Transmission Company, transmission lines in Maryland. The present business of such companies is the sale and transmission of electric energy at wholesale and in bulk. Penn Water and Safe Harbor are licensees under Part I of the Federal Power Act.

---

* There is at the present time no common control of Penn Water and Consolidated (R., Vol. 18, p. 8; App. B., p. 6a).

** PP&L, PE and ME. The contracts with these customers are all on the customary unit rate basis, i.e., payment based on amount of capacity or energy supplied and without managerial control by any purchaser over the seller.

*** The program, including attendant transmission lines and other facilities, involved about $20,000,000.

Consolidated is a Maryland electric utility corporation with steam electric generating, transmission and distribution facilities in and around the City of Baltimore, Maryland. Consolidated has generating capacity several times that of Penn Water or Safe Harbor and is in the business of selling electric energy at wholesale and in bulk as well as at retail.

Power generated by Penn Water, Safe Harbor and Consolidated is in competition or potential competition everywhere in the region, as held by the Fourth Circuit and the District Court for Maryland (R., Vol. 18, pp. 5-6, 9 and 41).*

The FPC Orders Required Continuance of Contractual Arrangements Adjudged Illegal.

In its opinion denying rehearing (Feb. 28, 1949, R., Vol. 16, p. 372) the FPC stated that it was immaterial to its rate orders that the Baltimore and Safe Harbor contracts might be illegal and directed continuance of illegal arrangements of the Baltimore contract as follows:

> "In our opinion and order we took care to leave the continuation of the integrated and interconnected system in full effect, merely changing the rates, as shown by our statement wherein we specifically stipulated that
>
> > "'The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company [Consolidated] takes what is left and assures Respondents [Penn Water and Transmission Company] of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. *That arrangement will, therefore, be continued* * * *'" (R., Vol. 16, pp. 378-9). (Italics and matter in brackets added.)

---

* The location of the generating plants and transmission lines of these companies and other companies in the region is shown on a map attached hereto as Appendix A.

This requirement was also contained (as indicated in the quotation above) in the FPC's first opinion (Jan. 5, 1949), (R., Vol. 16, p. 175), and in finding 37 and par. (D) of its first order (R., Vol. 16, pp. 188, 189).

The first FPC opinion (No. 173) was incorporated in, and made a part of, its first order (Jan. 5, 1949), and the second order (Feb. 28, 1949) did the same with the second opinion (No. 173A) (R., Vol. 16, pp. 177, 386).

In paragraph (11) of its first order the FPC said:

> "The contracts referred to in (6) and (7) above [the Baltimore and Safe Harbor contracts], facilitate the achievement of those objectives *particularly by the methods of payment which they provide,* and by reason of the fact that generation of energy is directed by the coordinated action of load dispatchers in the City of Baltimore, representing the three system companies." (R., Vol. 16, p. 181). (Italics supplied).

It is thus clear that the FPC specifically ordered the continuance of the illegal revenue pooling provisions of the Baltimore contract.

While the Fourth Circuit did not specifically refer to these provisions in declaring the contract illegal, it did declare the entire contract invalid, and these provisions *are* illegal as shown in Point I (c) below. Furthermore, in directing their continuance the FPC apparently contemplated that the closely associated illegal restrictive provisions* which *were* specifically alluded to by the Fourth Circuit would be continued since (a) the FPC opinions and

---

* The Fourth Circuit, in its second opinion, 186 F. 2d 934, 936 (R., Vol. 18, p. 37), holding that the invalidation of the 1931 Baltimore agreement did not reinstate the prior 1927 agreement, stated that the restrictions of the Baltimore contract were "closely associated" with the revenue pooling provisions, pointing out that it was conceded that without the restrictions the 1931 agreement would have been impracticable and would not have been made. The District Court for Maryland, holding that the restrictions of the Safe Harbor contract were inseparable from the remainder of that contract, stated, 97 F. Supp. 952, 955 (R., Vol. 18, p. 45), that they were the "warp and weft" of the contract. Both the Baltimore and Safe Harbor contracts were invalidated in their entirety.

orders are clearly based on that assumption (R., Vol. 16, pp. 45, 53-56, 179-180, 376-382), and (b) *the FPC stated in its brief (filed October, 1951 in the Fourth Circuit, attempting to intervene on appeal from the Maryland District Court's decision invalidating the companion Safe Harbor contract) that "the Commission's order prescribed the June 1, 1931, contract, as supplemented [the Safe Harbor contract], including the terms which the District Court viewed as in restraint of trade."* In the Penn Water rate orders and opinions the FPC praised and commended *all* of the restrictive provisions of the Penn Water contract.

For example, in its opinion denying rehearing, the FPC said:

> "By the terms of those contracts the installation of additional facilities by Penn Water is subject to approval by Baltimore Company[2] [fn. 2 quotes in full Article V of the Baltimore contract, the provision for restraint on plant expansion expressly held illegal by the Fourth Circuit], to assure coordinated planning and investment to meet the growing power needs of the system as a whole with resulting additional economies and consumer benefits." (R., Vol. 16, p. 378).

In that opinion the FPC further said:

> "In this case refusal of Penn Water to receive energy originating outside of Pennsylvania from Baltimore Company would not be merely a termination of the purchase and sale of that energy (i. e., a cancellation subject to Section 35.5 of the Rules) but would constitute a change in rates and service in several aspects which cannot be accomplished except in compliance with requirements prescribed under Section 205 of the Federal Power Act." (R., Vol. 16, p. 380).

Here the FPC is referring to the power of Consolidated under Article IV of the Baltimore contract (R., Vol. 15, p. 4612), which the Fourth Circuit specifically held to be in violation of Section 3 of the Clayton Act (R., Vol. 18, p. 10), to require Penn Water to purchase needed supple-

mental energy from Consolidated by prohibiting Penn Water from purchasing such energy from others.

Again, in its order of October 27, 1949, the FPC (rejecting rate schedules filed by Penn Water pursuant to the first FPC order) prescribed allegedly proper rate schedules which called for the residual specified return formula contained in the Baltimore contract. In addition the FPC stated:

> "The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force." (R., Vol. 17, p. 62.)

FPC counsel has claimed that the phrase "in and of themselves lawful" in this paragraph is a qualification limiting the continued provisions to such as are legal, but these rate schedules were prescribed by the FPC (October, 1949) before even the trial court decision was rendered (February, 1950) and months before the Fourth Circuit decision declaring the Baltimore contract illegal (September, 1950). The phrase could not therefore have had any relation to the Fourth Circuit decision. Others have argued that the phrase is an affirmance of the FPC's opinion that all of the provisions of the contract are lawful. It is to be noted that the FPC, in its opinion denying rehearing referred to above, commended the restrictive provisions and also stated (R., Vol. 16, p. 378) "If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions." Furthermore the FPC expressly stated in its brief in the court below that the rate schedule which it

prescribed for Penn Water "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's facilities" (Tr., p. 5574).*

In any event, since the D. C. majority has upheld the FPC orders on the ground that "antitrust criteria" are not applicable,** the FPC may use the decision to claim that it has, even in the absence of express statutory provision, the authority to ignore the antitrust and other laws.

---

* The ambiguity of the requirement that the provisions of the Baltimore contract "in and of themselves lawful" should be observed is further indicated by the fact that the restrictive provisions of the contracts are not isolated ones but are reaffirmed and reflected throughout the contracts. Thus, in addition to the specific provisions requiring Consolidated's approval of substantial plant additions and contracts of Penn Water and Safe Harbor (R., Vol. 15, pp. 4557-9, 4612-3), there were additional provisions (R., Vol. 15, pp. 4567, 4613-4) preventing any action with respect to operating, engineering and accounting matters without the concurrence of a representative of Consolidated; and the payment provisions themselves (R., Vol. 15, pp. 4560, 4608-12) as already indicated, removed any incentive to take action without the concurrence of Consolidated.

** The D. C. majority attempted to distinguish the decision of the Fourth Circuit as to the illegality of the Baltimore contract by stating that the Fourth Circuit held illegal only certain restraints imposed upon Penn Water by Consolidated under the Baltimore contract. But it nowhere states that the FPC orders do not require continuance of the contractual arrangements under which these restraints were imposed. In fact it refers to the scope of the FPC's action as governing "the operations and arrangements under scrutiny" and states (making no exception as to the restrictive provisions) that Penn Water can only change its operations, contracts, arrangements, etc., in accordance with the Federal Power Act and with the consent of the FPC (R., Vol. 18, pp. 54-55).

The FPC Based Critical Features* of its Orders Upon the Assumed Existence and Continuance of the Illegal Contracts.

A. The prescribed rate of return was based on the assumption that Penn Water would receive the "stabilized income" provided by the Baltimore contract until 1980.

The FPC, prospectively, (i.e., from and after February 1, 1949, the specified operative date of the FPC orders), reduced the amounts payable by Penn Water's utility customers, for the purpose of limiting Penn Water's rate of return to only 5¼% per annum, on the express basis that "The contract with Baltimore Company [Consolidated] assures Respondents [Penn Water and Transmission Company] of a stabilized income" (R., Vol. 16, p. 147). The Baltimore contract gave Penn Water a "stabilized income" until 1980, irrespective of the periods of low flow in the Susquehanna River when Penn Water might not be able to generate and sell a normal amount of electricity. Without such long term continuing contractual obligation there was obviously no basis for the low return allowed. The D. C. majority states (R., Vol. 18, p. 66) that the FPC had "substantial evidence before it to support its findings" with respect to rate of return, but the central aspect of the "evidence" referred to by the D. C. Circuit (R., Vol. 18, p. 65) was that Penn Water is "insulated" from any "substantial risk" by the illegal Baltimore contract. Since the Baltimore contract has been adjudicated illegal there is no obligation whatsoever of Consolidated to Penn Water to continue to take or pay for any power at all. For example, Consolidated could stop taking power and paying a fixed rate at the end of a period of high flow when a large amount of power had been generated and delivered, leaving Penn Water to sell the relatively small amount of power coming from the river in low flow as best it could, thus receiving

* The dissenting opinion points out (App. B, p. 3a) that each of the critical features of the FPC's orders (discussed in paragraphs A, B and C below), namely (a) the rate of return, (b) the jurisdictional findings and (c) the allocation of cost of service is based respectively upon the financial security, operations, entitlements and obligations provided for by the Baltimore contract and the assumed continuance thereof until 1980.

much less than the allowed return. The fact is that the FPC order, in fixing the abnormally low rate of return, was clearly not based on operations as FPC counsel like to assert, but on the assumed contractual obligations of Consolidated to pay Penn Water a specified return until 1980. From operations there could be no "stabilized income".

B. The FPC held it had jurisdiction over intrastate services on the assumption that the illegal and non-existent contracts would continue.

The FPC also held that, because the companies were tied together under the illegal Baltimore and Safe Harbor contracts (R., Vol. 16, pp. 53-54) the services of Penn Water to the three Pennsylvania electric utilities, although rendered by Penn Water entirely within Pennsylvania, were interstate in character and subject to regulation by it*. Here again the D. C. majority attempted to minimize the effect of the contracts upon the decision of the FPC. But the decision of the D. C. majority is based upon its own assertion (R., Vol. 18, p. 63) that "Each sale [of Penn Water in Pennsylvania] is in effect a pool sale drawn from the integrated interstate system and hence interstate in nature." The existence of this so-called interstate pool depends upon the illegal contracts tying the companies together under the control of Consolidated and upon the illegal revenue pooling provisions thereof. The other basis of jurisdiction over Penn Water's sales in Pennsylvania asserted by the FPC (R., Vol. 16, pp. 54-55) was the purchase by Penn Water of some energy generated by Consolidated in Maryland to fulfill Penn Water's Pennsylvania contracts. Such purchases from Consolidated were compelled by a provision of the Baltimore contract (Art. IV, R., Vol. 15, p. 4612) which was held by the Fourth Circuit to be illegal under Section 3 of the Clayton Act (R., Vol. 18, p. 10). Without such contract Penn Water would not have been under such compulsion to purchase such supplemental energy outside of Pennsylvania. Obviously, this

* Lack of FPC jurisdiction over this Pennsylvania business would not mean that it would be unregulated but merely that regulation thereof would be by the Pennsylvania Public Utility Commission.

phase of the FPC orders rests on assumed continued existence of these contractual provisions, held illegal by the Fourth Circuit.

C. The allocation of the rate reduction between customers was based upon the alleged "entitlements" of Consolidated provided for under the illegal and non-existent contracts.

The FPC allocated the reduction between Consolidated and the three Pennsylvania electric utility customers of Penn Water, giving 89% of the reduction to Consolidated (R., Vol. 16, pp. 174-175), such allocation being determined on the basis of alleged "entitlements" (R., Vol. 16, pp. 172-3) of Consolidated under the Baltimore and Safe Harbor contracts and not on the basis of the power actually delivered. Without the illegal contracts such "entitlements" would be non-existent. As the dissenting opinion points out (App. B, pp. 2a-3a) " * * as a result of that interpretation [of the Baltimore contract] the Commission concluded that very substantial sales by Penn Water to others had really been for the account of Consolidated, and allocated the reduction accordingly". An allocation on a delivered power basis (that is, on actual operations) would have given the Pennsylvania utilities a much greater share of the rate reduction. The D. C. majority (R., Vol. 18, p. 69) plainly recognized that its affirmance of the allocation of the reduction provided for by the rate orders depended upon its decision that the FPC may exempt the Baltimore and Safe Harbor contracts from the antitrust laws and accordingly base its allocation upon the artificial entitlements created thereby rather than upon the actual deliveries of power.

Ultimate Relief Sought by Petitioners.

Petitioners request this Court to review this case and set aside the orders of the FPC, or in the alternative remand the case to the FPC with directions to it to limit itself (1) to a determination of the reasonable rates for power sold by Penn Water and Transmission Company to Consolidated from and after February 1, 1949 on the usual unit

rate basis and on the basis of the amount of capacity and energy actually supplied,* at a rate commensurate with the absence of any "stabilized income", and with allocations of any reduction in rates based on cost of service actually rendered and not on fictitious "entitlements," and (2) to a determination of whether, upon elimination of the illegal contracts from consideration, there is any basis for the exercise by the FPC of jurisdiction over Penn Water's services in Pennsylvania to the three Pennsylvania electric utility customers. By orders of the FPC and the D. C. Circuit, the rate orders have been stayed, and revenues in excess of the amounts prescribed in the rate orders are segregated and in suspense for the period from and after February 1, 1949, the specified operative date of the first FPC order if it becomes effective. Thus, the Courts and the FPC remain in a position to adjust rates properly for the entire period involved.** This should have been done by the FPC

---

* Penn Water and the Transmission Company filed new rate schedules for service to Consolidated on that basis on February 6, 1951 immediately after the District Court (Coleman, J.) injunction requiring Penn Water to perform the Baltimore and Safe Harbor contracts had been vacated pursuant to mandate of the Fourth Circuit, but such rate schedules were rejected February 15, 1951 (Tr., pp. 5628-30) on the ground, among others, that to file new schedules, Penn Water "must recognize" the existing FPC orders, thus possibly barring itself from continuing to appeal from these orders in the Courts.

** Accordingly, there is no basis for the statement of the D. C. majority (R., Vol. 18, pp. 55-56) that "granting petitioners' motions would be to disrupt a pattern of regulation". Any delay of the FPC in rendering its decision in 1949 in a proceeding begun in 1944, with hearings concluded in 1947, was certainly not due to petitioners. The D. C. majority suggests (R., Vol. 18, p. 55) that Penn Water submit new arrangements to the FPC and appeal from any decision of the FPC thereon by which it feels itself aggrieved. This obviously is no answer to petitioners' contentions that in *these proceedings* the FPC has improperly directed continuance of, and based its orders upon, illegal contractual arrangements. Furthermore, a decision in any new proceeding could not remedy the excessive reduction and improper allocation thereof which the FPC has ordered for the period from and after February 1, 1949 and which would in the absence of modification on appeal be effective until the effective date of new orders in a new proceeding. Similarly, unless Penn Water is given relief in these proceedings, it would be required to continue illegal arrangements (held by the Fourth Circuit to be a violation of criminal law) which have been ordered continued by the FPC, until final determination (probably after several appeals) of such new proceeding.

on the petition for rehearing, or after the decision of the Fourth Circuit. As the dissenting opinion points out (App. B, p. 1a), "the Commission's orders stood in a vacuum after the Fourth Circuit held the contract invalid; the only service to which they can have application may not be lawfully continued".

The Baltimore and Safe Harbor contracts were properly stricken down by the Courts. They should not in any respect be maintained through the guise of FPC rate orders. Four Court of Appeals Judges have so decided (the three Judges of the Fourth Circuit and the dissenting Judge of the D. C. Circuit), whereas only two Court of Appeals Judges, the D. C. majority, have decided to the contrary.

Questions Presented.

I. Has the FPC authority, as the D. C. Circuit held contrary to the Fourth Circuit, (a) to require and approve contractual arrangements between electric utility companies specifically adjudged by the Fourth Circuit and District Court for Maryland to violate the Federal antitrust laws, and (b) to premise the critical provisions of its rate orders (which would otherwise have no basis) upon the existence and continuance of such illegal contractual arrangements?

II. Has the FPC authority, as the D. C. Circuit held contrary to the Fourth Circuit, (a) to compel a state utility corporation to maintain contractual arrangements which provide for surrender to another corporation of managerial functions and initiative, thus destroying its independent corporate character, and specifically adjudged by the Fourth Circuit and District Court for Maryland to be in violation of the statutes of the state of its incorporation and the common law and public policy, and (b) to premise the critical provisions of rate orders (which would otherwise have no basis) upon the existence and continuance of such illegal contractual arrangements?

III. Does Part II of the Federal Power Act repeal by implication regulatory provisions of Part I of the Act; and is a corporation which is subject to regulation under Part I

of the Federal Power Act as a licensee under contract with the Federal Government also subject to the different regulatory scheme of Part II of the Act, as the D. C. Circuit held contrary to statements of the Court of Appeals for the Second Circuit and another panel of the D. C. Circuit?

All the above described holdings are specified as errors to be urged.

REASONS FOR GRANTING THE WRIT AND ARGUMENT.

As to Question I: The decision of the D. C. Circuit holding that the FPC may, under the guise of a rate order, direct continuance of, and base its orders on, contractual arrangements held illegal under the Federal antitrust laws is in direct conflict with the decision of the Fourth Circuit and is erroneous.

The Fourth Circuit held specifically that the Baltimore contract is invalid under the Federal antitrust laws and that any new arrangement between the parties must be such as would not violate the antitrust laws, saying (R., Vol. 18, p. 28):

> "It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the [Federal] anti-trust laws or the utility laws of Pennsylvania."

And again (R., Vol. 18, p. 20):

> "The maintenance of uniformity of regulation and the control of the activities of an industry of national scope by a specialized body are as important in the field of electric power as in the field of transportation by rail or water; but the control of the Federal Power Commission over the power sites of the country and over the interstate transmission of electric energy is not disturbed by the retention of the jurisdiction of the courts to enforce the anti-trust acts."

The D. C. majority, on the other hand, affirmed the FPC's rate orders, stating (R., Vol. 18, p. 55) that it would be "at cross-purposes with the intent of Congress" for that Court "to substitute antitrust criteria for those of the Federal Power Act" and that therefore (R., Vol. 18, p. 69) "there is no need to consider whether the various contracts involved herein are part of an arrangement declared illegal under the antitrust laws."

(a) There Is No Exemption from the Antitrust Laws Unless Expressly Provided for by Congress.

The Fourth Circuit stated (R., Vol. 18, p. 13) "In short, the grant of monopolistic privileges, subject to regulation by governmental body, does not carry an exemption, unless one be *expressly* granted, from the anti-trust laws, or deprive the courts of jurisdiction to enforce them." (Italics supplied.)

The D. C. majority, on the other hand, held (R., Vol. 18, p. 52) that "the antitrust laws are superseded by more specific regulatory statutes to the extent of the repugnancy between them,"* and found such repugnancy merely in certain general regulatory provisions of Part II of the Federal Power Act, none of which provide for exemption from the antitrust laws.

The D. C. majority decision is also in conflict with controlling decisions of this Court which were relied upon by the Fourth Circuit in holding the antitrust laws applicable to regulated industries (R., Vol. 18, pp. 12-13). *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439 (1945); *U. S.* v. *Ter-*

* The cases cited by the D. C. majority for this proposition do not support it. *U. S. Nav. Co.* v. *Cunard S. S. Co.*, 284 U. S. 474 (1932), and *U. S.* v. *Borden Co.*, 308 U. S. 188 (1939), both involved regulatory statutes containing provisions for express exemptions from the antitrust laws. *Terminal Warehouse* v. *Penn. R. Co.*, 297 U. S. 500 (1936), and *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439 (1945), hold that regulated industries are subject to the antitrust laws even though their rates and services are subject to the exclusive jurisdiction of regulatory bodies. *U. S. Alkali Ass'n.* v. *U. S.*, 325 U. S. 196 (1945), held that the Webb-Pomerene Act giving the F. T. C. the power to investigate violations of the Sherman Act did not give the F. T. C. power to enforce the Sherman Act or in any way repeal the enforcement provisions of the Sherman Act.

minal R. Ass'n, 224 U. S. 383 (1912); *U. S.* v. *Reading Co.*, 253 U. S. 26 (1920); *U. S.* v. *South-Eastern Underwriters Ass'n*, 322 U. S. 533 (1944).*

The Federal Power Act does not contain, as do some Federal regulatory acts,** any provisions for obtaining exemptions from the antitrust laws, nor does the D. C. majority refer to any provision of that or any other act permitting the FPC to grant such exemptions or even to deal with antitrust law questions.*** In fact, the Federal Power Act makes it a condition of licenses granted thereunder that licensees are prohibited from entering into agreements "to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service" (Section 10(h)).

---

* See also *U. S.* v. *Southern Pacific Co.*, 259 U. S. 214 (1922) and *U. S.* v. *Union Pacific R. Co.*, 226 U. S. 61 (1912).

** Interstate Commerce Act, 49 U. S. C. §§5(11) and 5b(9); Communications Act, 47 U. S. C. §§221(a) and 222(c)(1); Civil Aeronautics Act, 49 U. S. C. §§492 and 494. The ICC, FCC and CAB are also, unlike the FPC, given express authority under Section 11 of the Clayton Act (15 U. S. C. §21) to enforce compliance with Sections 2, 3, 7 and 8 thereof (15 U. S. C. §§13, 14, 18 and 19). Under the Federal Power Act (§26 (16 U. S. C. §820)) it is the Attorney General of the United States rather than the FPC who enforces the antitrust laws.

*** The only provision granting any exemption upon approval of the FPC is found in a recent amendment (December 29, 1950) of Section 7 of the Clayton Act (15 U. S. C. §18) exempting acquisitions of stock or assets approved by the FPC and other specified commissions. This amendment clearly shows that specific enactment of Congress is necessary to give any exemption from the antitrust laws. The amendment (after the Fourth Circuit decision and the denial of certiorari) also clearly shows the correctness of the Fourth Circuit holding that the antitrust laws were not superseded by Part II of the Federal Power Act. Moreover, the fact that in such amendment Congress did not provide that FPC approval should exempt any other arrangements from any of the antitrust laws clearly shows that no other exemption is intended. In addition, the fact that Congress did not intend by the Federal Power Act of 1935 to give the FPC any power to grant exemptions from the antitrust laws is also evident from the fact that a provision in the 1935 bill (S. 2796, Sec. 203 (a)), as passed by the House, that dispositions of facilities, consolidations, acquisitions or control, approved by the FPC, should be exempted from any other Federal Acts making them unlawful, was dropped in conference.

The D.C. majority likened the Federal Power Act to the Interstate Commerce Act (R., Vol. 18, p. 53).* But, so far as the application of the antitrust laws to the fields covered by those Acts is concerned, there is no similarity. The Interstate Commerce Act contains *express provisions* (49 U. S. C. §§5(11) and 5b(9)), authorizing the Interstate Commerce Commission to approve, and thereby exempt, certain specified transactions, including revenue pooling arrangements (49 U. S. C. §5(1)), from the antitrust laws.**

Even express provisions for exemption from the antitrust laws of transactions approved by a regulatory body have been strictly construed, and the Courts have enforced the antitrust laws in respect of transactions other than those expressly authorized to be exempted, in the fields covered by the regulatory statutes involved. *Georgia* v. *Pennsylvania R. Co.*,*** *supra; U. S.* v. *Borden Co.*, 308 U. S. 188 (1939); *U. S.* v. *Socony-Vacuum Oil Co.*, 310 U. S. 150, 226-227 (1940); and *Norfolk Southern Bus Corp.* v. *Virginia Dare Transp. Co.*, 159 F. 2d 306 (4th Cir. 1947) cert. den. 331 U. S. 827.

This Court has frequently held that there is no implied repeal of, or exemption from, the antitrust laws. *Georgia* v. *Pennsylvania R. Co., supra,* 324 U. S. at pages 456-457; *U. S.* v. *Borden Co., supra,* 308 U. S. at pages 198 and 201; *U. S. Alkali Ass'n.* v. *U. S., supra,* 325 U. S. at

---

* *Northwestern Pub. Serv. Co.* v. *Montana-Dakota Util. Co.*, 181 F. 2d 19, 22 (8th Cir. 1950), cited by the D. C. majority, did not involve any question under the antitrust laws or the power of either Commission to grant any exemption therefrom. It only was concerned with the similarity of the *rate regulation* jurisdiction of the ICC and the FPC.

** Prior to enactment of such express provisions, this Court held transactions of the kind subsequently exempted thereby to be illegal; *U. S.* v. *So. Pacific Co.*, 259 U. S. 214 (1922), *U. S.* v. *Lehigh Valley R. Co.*, 254 U. S. 255 (1920), *Georgia* v. *Pennsylvania R. Co., supra.*

*** Following this decision Congress enacted the Reed-Bulwinkle Act of 1948 (49 U. S. C. §5b (9)) specifically exempting certain railroad price fixing agreements when approved by the Interstate Commerce Commission.

page 209; *U. S.* v. *South-Eastern Underwriters Ass'n.*, *supra*, 322 U. S. at page 561.

The Attorney General, in an opinion to the Secretary of State dated October 31, 1944 (Vol. 40, p. 335, Op. No. 85), advised that a regulatory commission has no authority to exempt agreements from the antitrust laws except to the extent Congress has specifically so provided, and that statutory provisions granting such authority must be strictly complied with in order to be effective.

Both the Interstate Commerce Commission and the Federal Communications Commission recognize that they have no power to grant any exemption from the antitrust laws in the absence of express Congressional enactment.*

Sections 202** and 205 of Part II of the Federal Power Act (16 U. S. C. §§824a and 824d) from which the D. C. majority concludes that the FPC has authority to exempt the contractual arrangements between Penn Water, Safe Harbor and Consolidated from the Federal antitrust laws do not support such a conclusion. These are ordinary regulatory provisions which contain no provision for exemptions from the antitrust laws, and clearly do not destroy the specific mandate contained in Section 10(h) and the antitrust laws, which the FPC is given no power to waive.*** Furthermore, that Congress by enactment of such general regulatory provisions did not intend to authorize granting exemption from the antitrust laws is evident from the fact that it has, in some regulatory statutes, specifically authorized the granting of such exemptions in certain selected instances and with attendant specific limitations, conditions and safeguards.

There is clearly no "repugnancy" between the Federal antitrust laws and the sections of the Federal Power Act cited by the D. C. majority. On the contrary, as the Fourth

** The rate orders under review were not issued under this section which was not in any way involved in the proceedings.

*** The dissenting opinion is in accord (App. B., p. 15a).

Circuit stated, the FPC is required to effectuate the policies of the Federal Power Act in a manner consistent with other laws including the Federal antitrust laws. In *Southern Steamship Co.* v. *N. L. R. B.*, 316 U. S. 31 (1942) (reversing an order of the Board directing reinstatement of employees who had been discharged because of a strike held to be in violation of the Federal laws regarding mutiny*), this Court said (p. 47):

> "Frequently the entire scope of Congressional purpose calls for careful accommodation of one statutory scheme to another, and it is not too much to demand of an administrative body that it undertake this accommodation without excessive emphasis upon its immediate task."

Clearly, if there is no power even to condone violations of other laws, as in that case, there is no authority to grant exemptions, or require violations, as the FPC has attempted to do here.**

This Court's decision in *Parker* v. *Brown*, 317 U. S. 341, 350-352, cited by the D. C. majority (R., Vol. 18, p. 51) does not support the D. C. majority decision.*** That case merely held that the antitrust laws were not applicable to the State of California acting through its own agents. The FPC, however, is not a state but a Federal agency affected

---

* Sections 292 and 293 of the Criminal Code (35 Stat. 1146 (1909), 18 U. S. C. §483-4 (1940)).

** Even where regulatory agencies have authority to give contractual arrangements exemption from the antitrust laws they should (as held in *McLean Trucking Co.* v. *U. S.*, 321 U. S. 67, 80 (1944), and *Georgia* v. *Pennsylvania R. Co., supra*, 324 U. S. at page 456, both cases arising under a statute where provision for such exemption is made) give consideration and weight to the policies of the antitrust laws when doing so. This the FPC expressly refused to do, when by its order of February 28, 1949, it denied petitioners' petition for rehearing.

*** The *Sunshine*, *Rock Royal* and *Borden* cases cited by the D. C. majority (R., Vol. 18, p. 51) for the proposition that *Congress* may authorize arrangements which would otherwise violate the Federal antitrust laws are not in point. They all involved statutes which, unlike the Federal Power Act, contained express provisions for exemption from the Federal antitrust laws.

by all Federal laws, including the antitrust laws, as indicated in the *Southern Steamship* case, *supra*. In *Parker* v. *Brown*, this Court itself expressly stated (pp. 351 to 352) that the State could not give immunity to private parties to violate the antitrust laws. See also *Schwegmann Bros.* v. *Calvert Corp.*, 341 U. S. 384, 389 (1951). In the present case the FPC is apparently seeking authority to permit private parties to continue illegal arrangements.

The case of *Keogh* v. *Chicago & N. W. Ry. Co.*, 260 U. S. 156, 162 (1922), which the D. C. majority cites (R., Vol. 18, p. 54) for the proposition that a rate is not necessarily illegal because it is a *result* of a conspiracy in restraint of trade in violation of the antitrust laws is not in point. In that case the attack was solely on the amount, that is, the rate specified in an order of the Interstate Commerce Commission, and the Commission's order did not incorporate or embody the illegal conspiracy or arrangement alleged to exist. Here the FPC order under attack, while it purports to be only a rate order, does embody illegal arrangements, requires their continuance, and bases its critical features on the assumed existence and continuance thereof.*

(b) Section 10(h) of the Federal Power Act, Reaffirming the Antitrust Laws, Was Not Impliedly Repealed by Part II of such Act.

The D.C. majority, conceding (R., Vol. 18, p. 56) that "Section 10(h) does indeed virtually restate the Sherman Act", held that it, like the antitrust laws, is repealed *pro tanto* by implication by the provisions of Part II of the Federal Power Act discussed above stating:

---

* Furthermore, in the *Keogh* case, the Court simply held that a rate already established by the Interstate Commerce Commission in one proceeding could not be attacked in a court in another proceeding. Here we have an appeal from the orders issued in the very proceeding in which the rates were prescribed, in which the appellate courts have statutory authority either to set aside the orders or to require that they be modified in the light of the established illegalities of the contractual situation. There is no attack here on a commission order which has gone into effect. The Courts are now determining whether the orders shall go into effect.

> "The very thing which that section [10(h)] prohibits, the combination of licensees with others to limit the output of electrical energy, is made one of the primary objectives of Part II."

The Fourth Circuit on the other hand held that the retention of Section 10(h) (which, along with other provisions of Part I of the Federal Power Act, was *reenacted* (49 Stat. 842, 844) in 1935 when Part II was added) indicates that the intention of Congress was to reaffirm the antitrust laws as applicable to electric utilities. The Fourth Circuit said (R., Vol. 18, p. 17):

> "The prohibition against monopolistic combinations was included among the conditions upon which the Power Commission may issue licenses for the construction and maintenance of power projects—not to deprive the courts of jurisdiction to enforce the anti-trust acts, but to make it perfectly clear that no licensee can legally agree to limit output, restrain trade or fix prices. The condition was a reaffirmance of the Sherman Act and was designed to restrict rather than to enlarge the Commission's authority."

The contrary statement of the D. C. majority is obviously incorrect since Section 202(a) (16 U. S. C. §824a (a)) expressly includes as the first purpose of Part II "the purpose of assuring an abundant supply of electric energy". The D. C. majority concedes (R., Vol. 18, p. 52) that "repeals by implication are not favored", but fails to point to any provision for express repeal.

(c) The Specified Return Formula Provided for in the Contracts Is Illegal Under the Antitrust Laws.

The FPC orders concededly did direct continuance of the provisions of the contracts containing the specified return formula. These provisions are in violation of the antitrust laws because they are in effect provisions for the pooling and division of earnings. Since they provide that Penn Water and Safe Harbor shall receive a specified return regardless of the services rendered, and credit Consolidated with revenue from other customers, they stifle the incentive

of Penn Water and Safe Harbor to compete, either with Consolidated or with others, and rob them of any initiative to obtain more customers and effect operating economies.*

In *U. S.* v. *Paramount*, 334 U. S. 131, 149 (1948), this Court held such arrangements for the pooling and division of earnings to be in violation of the antitrust laws stating "Clearer restraints of trade are difficult to imagine." Such arrangements were also held illegal in *U. S.* v. *Reading Co.*, 253 U. S. 26, 48 (1920); *Northern Securities Co.* v. *U. S.*, 193 U. S. 197, 327-328 (1904); *Norfolk Southern Bus Corp.* v. *Va. Dare Transp. Co., supra*, 159 F. 2d at 309-10; *Lee Line Steamers, Inc.* v. *Memphis, Helena & Rosedale Packet Co.*, 277 Fed. 5, 8 (6th Cir. 1922); *Chicago, M. & St. P. R. Co.* v. *Wabash, St. L. & P. R. Co.*, 61 Fed. 993, 997 (8th Cir. 1894).

The basic evil, so far as the Federal antitrust laws are concerned, in revenue pooling arrangements (as found in each of the foregoing cases) is the fact that they remove incentive to compete by providing that earnings shall be apportioned on some arbitrary basis unrelated to services rendered. It is therefore obvious that in the case of a two-party agreement such as the Baltimore contract, even though the incentive to compete is removed from only one of the parties, in this case Penn Water, and is not removed as to the other, Consolidated, the agreement is just as illegal as though the incentive of both were removed, because the elimination of competition on the part of one is sufficient to eliminate competition completely. Actually in the present instance, through the companion Baltimore and Safe Harbor contracts, the elimination of incentive to compete on the part of both Penn Water and Safe Harbor leaves Consolidated free of competition from either.

The FPC, in its brief attempting to intervene in the Fourth Circuit in October 1951 in the case relating to the

---

* It should be pointed out here that in fixing the rates Penn Water was to receive there was no necessity of directing continuance of the illegal revenue pooling arrangements. The rates could have been fixed in a normal way on the usual unit rate basis customarily employed between utilities with payments based on the amount of capacity and energy actually supplied.

Safe Harbor contract, asserts (p. 14) that this payment plan prevents "setting up an economic interest upon his [the seller's] part," and argues (pp. 33, 34) that the restrictions on the seller are valid because, due to the payment plan, "its interests are not adversely affected" by the manner in which it is operated.

The fact that the rates and services of the parties to a revenue pooling arrangement are regulated does not excuse its invalidity under the antitrust laws any more than it excuses the invalidity thereunder of other restraints of trade. The decisions in the *Reading* and *Norfolk Southern Bus* cases related to utilities whose rates were regulated. Where Congress desired to permit (with adequate conditions, limitations and safeguards) the execution of revenue pooling arrangements by regulated companies it has specifically provided, in the applicable regulatory statutes, for their exemption from the antitrust laws.*

Regulation of rates (i.e., the amount to be charged) upon the basis of a return found reasonable, does not, as do the revenue pooling arrangements of the Baltimore and Safe Harbor contracts, insure the receipt of such return irrespective of whether or not the utility fails to render adequate service or loses business through a policy of non-competition.** The specified return provisions of the Baltimore and Safe Harbor contracts provide for payment even if no power at all is delivered.

The contention that a Federal regulatory agency may, pursuant to its authority to regulate rates, insure that a specified return will be received (or, in other words, regulate on the basis of a cost-plus subsidy plan) has been rejected by the Civil Aeronautics Board under the Civil

---

* *Cf.* Section 5(1) and (11) of the Interstate Commerce Act (49 U. S. C. §5(1) and (11)); Section 15 of the Shipping Act (46 U. S. C. §814); and Sections 412(a) and 414 of the Civil Aeronautics Act (49 U. S. C. §§492(a) and 494).

** "A rate established as reasonable, whether by the company or the commission, is not guaranteed by the commission or the public. Whether it will actually yield more or less than a fair return during its continuance is a risk of the business." *Georgia Ry.* v. *R. R. Comm.*, 278 Fed. 242, 247 (N. D. Ga. 1922), aff'd. 262 U. S. 625 (1923).

Aeronautics Act. *Pennsylvania-Central Airlines Corp., et al., Motions*, 8 C. A. B. 685, 696 (1947). That Act, moreover, unlike the Federal Power Act, specifically authorizes the Board to exempt arrangements for the pooling and division of earnings from the antitrust laws (49 U. S. C. §§492, 494). *The Pennsylvania-Central* decision was affirmed by this Court in *T. W. A.* v. *C. A. B.*, 336 U. S. 601 (1949) which held that the normal method of rate regulation by prescribing the *amount* to be charged "forces carriers within a given class to compete in securing revenue and in reducing or controlling costs" (pp. 606-7).*

In a recent decision** the Interstate Commerce Commission stated with regard to its express power to exempt revenue pooling arrangements from the antitrust laws:

> "The object of pooling arrangements is ordinarily the restraint of competition, the statute directing that we find, in approving the arrangement, that such restraint shall not be undue."

(d) The D. C. Majority Misconstrued the Decision of the Fourth Circuit.

The D. C. majority attempted to distinguish the decision of the Fourth Circuit by stating (R., Vol. 18, pp. 53-54) that the Fourth Circuit only declared illegal certain "restraints exercised by Baltimore Company upon Penn Water" under the provisions of the Baltimore contract, implying that the Fourth Circuit's opinion did not apply to other parts of the

---

* See also *United-Western, Acquisition Air Carrier Property*, 8 CAB 298, 321 (1947), in which the CAB stated: "the established policy of this Board * * * recognizes that differences in the return may accrue to different carriers operating under the same rates and * * * permits management to retain the profits of its economies as an incentive toward the accomplishment of decreased costs and increased revenues. The incentive which the Board's rate policy holds out to air carriers to profit from economies which produce a better-than-average return upon investment itself invalidates the assumption that the rate-making process is an instrument of precision which produces a mathematically precise rate of return."

** *Application of Pullman Co. under Sec. 5(1), I. C. C. Act*, 259 I. C. C. 41, 43-5 (1944).

contract. However, the Fourth Circuit declared the *entire contract*, not merely the restrictive provisions thereof, to be void and of no effect (R., Vol. 18, pp. 9, 28, 37, 40), both Penn Water and Consolidated having taken the position that the restrictive provisions thereof were an inseparable part of the contract.* The District Court for Maryland also expressly held that the entire Safe Harbor contract was invalid, not merely the restrictive provisions thereof. In so holding it rejected the argument of Consolidated that the restrictive provisions were separable (Consolidated having taken a different position with respect to the separability of the Safe Harbor contract than it did with respect to the separability of the Baltimore contract), and the District Court for Maryland called these restrictive provisions "the warp and weft of the agreement" (97 F. Supp. 952, 955) (R., Vol. 18, p. 45). The specific restraints on contracts for purchase and sale of power and on plant expansion are not only inseparable from the other parts of the contracts, but are reaffirmed throughout the contracts as for example, in the provisions permitting representatives of Consolidated through the Operating Committee (R., Vol. 18, pp. 7-8) to veto any action on operating, engineering and accounting matters and in the payment provisions which remove any incentive to compete with Consolidated.

The courts in the Fourth Circuit therefore clearly held invalid and void *ab initio* in their entirety contracts upon which the FPC determinations as to the amount of the rate reduction, the allocation thereof and its jurisdiction over sales in Pennsylvania were based.

The misinterpretation by the D. C. majority of the scope of the Fourth Circuit's opinion would in itself be a sufficient reason for granting certiorari because such misinterpretation produces a direct conflict between two Courts of Appeal which this Court alone is in a position to rectify. More-

---

* Consolidated has also stated in the Safe Harbor contract litigation that the restrictive provisions of the Baltimore contract were essential (Tr., p. 5689).

over, the D. C. majority itself clearly doubted the validity of its attempted distinction of the Fourth Circuit opinion, finding it necessary to hold, contrary to the Fourth Circuit, that it "would be at cross-purposes with the intent of Congress" (R., Vol. 18, p. 55) to deny the FPC power to override the prohibitions of the antitrust laws.

As to Question II: The decision of the D. C. Circuit holding that the FPC may, under the guise of a rate order, direct continuance of, and base its orders on, contractual arrangements which destroy Penn Water's independent corporate character by surrender to Consolidated of its managerial functions and initiative in violation of public policy and in excess of the power given it under the organic laws of its State of incorporation, is in direct conflict with the decision of the Fourth Circuit and is erroneous.

The D. C. majority ignored the decision of the Fourth Circuit on this public policy and state law point without discussion and, by affirming the FPC orders, indicated that public policy and state law were intended to be superseded by the Federal Power Act. The Fourth Circuit held directly to the contrary, pointing out (R., Vol. 18, p. 28) that the FPC should approve some method of sale of electric energy between Penn Water and Consolidated which "will not offend either the anti-trust laws *or the utility laws of Pennsylvania*" (italics supplied). This objective can be accomplished by employing the type of unit rate for capacity and energy schedule generally in use between utilities throughout the United States.

The Baltimore and Safe Harbor contracts are not only invalid under the Pennsylvania statutes and public policy, as pointed out in the petition of the Pennsylvania Commis-

sion, but are also *ultra vires*,* as held by the District Court for Maryland (R., Vol. 18, pp. 77-78) in that they "destroy the corporate virility" of the seller by depriving its board of directors of the powers of management in violation of the corporate laws of Pennsylvania.**

The revenue pooling provisions of the contracts which the FPC *unquestionably* directed to be continued, are, like the other restrictive provisions, illegal under Pennsylvania law, and public policy, as well as under the antitrust laws, because of their destructive effect upon initiative with respect to rates and services. See the *Chicago, Milwaukee & St. Paul Railway* case, *supra*, 61 Fed. at p. 997.

The extraordinary authority to compel a state corporation to carry out a contract which destroys its independent corporate character and which violates the law of the sovereign which has created it cannot be found in, or even implied from any provision of, the Federal Power Act. On the contrary, Section 201(a) provides that the Federal regulation authorized thereunder is "to extend only to those matters which are not subject to regulation by the States."

Where Congress intended to permit a Federal regulatory body to modify the powers of a state corporation it has specifically so provided; Interstate Commerce Act, Sections 5(11) and 20b(5) (49 U. S. C. §§5(11), 20b(5)). Even under such provisions there would be no authority to require a state corporation to continue an arrangement such as the Baltimore contract which destroys its inherent corporate character in violation of the law of its state of incorporation. Any attempt to grant such authority would

---

* Decisions holding contracts which deprive corporate directors of management powers to be *ultra vires* and void are: *Sherman & Ellis* v. *Indiana Mutual Casualty Co.*, 41 F. 2d 588 (7th Cir. 1930), cert. den. 282 U. S. 893; *Dubbs* v. *Kramer*, 302 Pa. 455, 153 Atl. 733, 734 (1931); *Severance* v. *Heyl & Patterson, Inc.*, 123 Pa. Super. 533, 187 Atl. 53, 58 (1936); *Rosenthal* v. *Light*, 185 App. Div. 702, 173 N. Y. S. 743 (1919); *Smith* v. *California Thorn Cordage, Inc.*, 129 Cal. App. 93, 18 P. 2d 393 (1933); *Long Park, Inc.* v. *Trenton-New Brunswick Theatres Co.*, 297 N. Y. 174, 77 N. E. 2d 633 (1948).

** The Pennsylvania corporate statutes involved are set forth in Appendix C hereto.

constitute an unconstitutional encroachment upon states' rights under the Tenth Amendment.*

There are no such provisions in the Federal Power Act and they are not needed for regulation by the FPC of the rates which have been placed within its jurisdiction.

As to Question III: The decision of the D. C. Circuit holding that Part II of the Federal Power Act repeals by implication provisions of Part I and is applicable to Penn Water as a licensee under Part I conflicts with statements of the Second Circuit and another panel of the D. C. Circuit, and is erroneous.

While the decision of the D. C. Circuit is consistent with a decision of the Third Circuit** involving Safe Harbor in so far as it holds Part II applicable to licensees, these decisions are in conflict with statements of the Court of Appeals for the Second Circuit*** and of another panel of the D. C. Circuit itself,† both of which recognized that Part II was not applicable to licensees. The decision of the D. C. Circuit moreover is in conflict with the decision of the Third Circuit referred to above, and another earlier decision of the Third Circuit,‡ also involving Safe

---

* Thus, an attempt under the Federal Government's fiscal powers to give, by statute, a state banking corporation the power which it did not otherwise have to convert itself into a Federal corporation was rejected as unconstitutional in *Hopkins Federal Savings and Loan Association* v. *Cleary*, 296 U. S. 315 (1935). An attempt under the bankruptcy power of the Federal Government to revive a state corporation which had been dissolved under state law was similarly rejected in *Chicago Title & Trust Co.* v. *41-36 Wilcox Bldg. Corp.*, 302 U. S. 120 (1937). It would not appear that the Federal Government has greater power under the Commerce Clause of the Constitution.

Harbor, in so far as it holds that Part II repealed by implication certain regulatory provisions of Part I of the Act, whereas both these Third Circuit decisions held that licensees were subject to regulation under Part I (the later decision holding them subject to regulation under both Parts I and II).

If Part II is not applicable, then clearly there is no basis for the D. C. Circuit's decision that the regulatory features of Part II repeal, by implication, Section 10(h) of Part I and the antitrust laws and permit the FPC to require perpetuation of arrangements illegal thereunder.

Part II was not intended to be applicable to electric utilities licensed under Part I because (a) Part I contains within itself a complete set of provisions for the governance of licensees, including their rights and obligations with respect to the licensor-government and regulatory provisions applicable to both wholesale and retail sales, and was reenacted in 1935 when Part II first became law, (b) careful distinction is drawn between "licensees" under Part I and "public utilities" under Part II in the use of these terms throughout Parts I, II and III, (c) there are essential differences in the regulatory schemes provided in Parts I and II, and (d) the Federal Water Power Act of 1920 (reenacted as Part I of the Federal Power Act) was designed to stimulate and encourage private investment in hydroelectric projects,* and provided that no amendment should affect the rights of any license-holder, so that it is clear that Congress did not intend to change the situation of licensees by enactment of Part II.

It is respectfully submitted that the petition should be granted.

APPENDIX B

Dissenting Opinion of Wilbur K. Miller, District of Columbia Circuit Judge.

Filed October 4, 1951.

WILBUR K. MILLER, Circuit Judge, *dissenting:* It is my view that this court should have granted petitioners' motions to annul the rate reduction orders of the Federal Power Commission. The decision of the United States Court of Appeals for the Fourth Circuit, which held null and void the contractual arrangement between Pennsylvania Water & Power Company and Consolidated Gas Electric Light and Power Company of Baltimore, to which the orders were intended to apply prospectively, imperatively required that the case before us be remanded to the Commission to work out with the utilities some different plan for interchange of energy which would not violate any state or federal law and which would not be contrary to public policy. This should have been done because the Commission's orders stood in a vacuum after the Fourth Circuit held the contract invalid; the only service to which they can have application may not lawfully be continued.

But the Commission has ordered the two companies to continue to observe and be governed by all the provisions of the old contract which are "in and of themselves lawful,"—a qualification which overlooks the fact that the Fourth Circuit condemned the contract in its entirety. And the majority of this court apparently hold that the Power Commission has authority to cause the *whole* contract to remain in effect, since they conclude that federal anti-trust laws do not apply to utilities regulated under Part II of the Federal Power Act. Relying on that theory, my brethren say,

"The motions to set aside or to remand the Commission's orders on the basis of the Fourth Circuit's decision and the other points referred to above are denied."

It is thus clear that, despite the voluminous record in this case,[1] the numerous and sometimes lengthy briefs, and three days of oral argument, the basic issue is a simple one. Has the Federal Power Commission authority to order a combination of these two utilities under terms and conditions which, if arranged by private contract between them, would clearly violate the federal anti-trust laws and the public utility laws of Pennsylvania? If the Commission has such power, the majority have correctly denied the motions to annul and remand. If not, then those motions should have been granted. Before discussing what I regard as the basic question, it may be well to review somewhat in detail the proceeding before the Power Commission and the litigation in the Fourth Circuit.

I.

The Commission instituted in September, 1944, an investigation of the rates and charges of Penn Water, following which it entered an order on January 5, 1949, requiring a large reduction in Penn Water's annual revenue. The major portion of the reduction was allocated to Consolidated; indeed, the reduction ordered in Penn Water's charges against that company exceeded by approximately $500,000 the sum which Consolidated had paid Penn Water during the "test year" of 1946. The Commission interpreted the 1931 contract as entitling Consolidated to all Penn Water's energy except that required to meet its firm

---

[1] The Power Commission filed with us a transcript in 75 volumes containing an aggregate of 26,876 pages. Appendices prepared by the parties abbreviated that bulk to 17 volumes containing 5,338 printed pages.

commitments to other customers; as a result of that interpretation the Commission concluded that very substantial sales by Penn Water to others had really been for the account of Consolidated, and allocated the reduction accordingly.

The rate order was accompanied by a lengthy opinion which makes it clear that the Commission assumed the continuance of the 1931 contract and based its order, which was to operate prospectively, upon the relationship created by that instrument as it construed it.

For example: (a) The Commission's jurisdictional findings as to the use of Penn Water's facilities for the transmission of electric energy at wholesale in interstate commerce were based upon the assumption that the method of operation required by the contract of 1931 would continue. (b) The allocation of cost of service which the Commission made was premised upon its interpretation of Consolidated's entitlements and Penn Water's obligations under the 1931 contract. (c) The rate of return which the Commission allowed Penn Water was largely based upon the financial security which the Commission though Penn Water enjoyed under the 1931 contract. Moreover, the form of rate schedule later prescribed followed the residual-entitlement, specified-return formula of the 1931 contract.

Having observed the patent fact that the rate reduction order was based upon, and applied only to, the combination of facilities and interchange of energy set up by the 1931 contract, Penn Water applied to the Power Commission on January 28, 1949, for a rehearing. It sought to show that the order ought not to be premised upon a contractual relation which it regarded as illegal and which, if judicially found unlawful, could not continue to exist.

Among other things, Penn Water pointed out to the Commission that on December 20, 1948, after the record in the Commission's proceeding had been closed, it had terminated the 1931 contract by notice to Consolidated; and that it had sued Consolidated in the United States District

Court for the District of Maryland for a declaration that the contract was invalid and unenforceable.[2]

Apparently this was the first time the Federal Power Commission had been officially informed that Penn Water had given notice of termination of what the Commission calls the "system foundation contracts," and that Penn Water considered them violative of the anti-trust laws and the

---

[2] In the course of its application for rehearing, Penn Water stated to the Commission:

> "(c) Since the record in the proceeding has been closed the purported contract referred to as supplemented, has been terminated by notice dated December 20, 1948; and if given the opportunity on rehearing Petitioners hereby offer to prove:
>
> "(i) The fact of such termination;
>
> "(ii) The contract was null, void, and unenforceable because the basic agreements were made at a time when Penn Water and Baltimore Company [Consolidated] were affiliated through substantial ownership by Baltimore Company of Penn Water stock and by interlocking directors and officers; the basic agreements were never approved or ratified by the stockholders of Penn Water; the effect of Articles IV and V of the supplemental agreement of June 1, 1931, particularly as construed in practice by Baltimore Company, made the contract *ultra vires* and contrary to public policy; and such supplemental agreement constituted an agreement in unreasonable restraint of trade and in unreasonable restriction of competition in the generation and sale of electrical services, and unreasonably limited the output of electrical energy contrary to the laws of the United States, including Section 1 of the Sherman Antitrust Act of July 2, 1890 (15 U. S. C. 1946 ed. § 1; 26 Stat. 209, 50 Stat. 693), Section 5 of the Federal Trade Commission Act of September 26, 1914 (15 U. S. C. 1946 ed. § 45; 38 Stat. 719), and Section 10(h) of the Federal Power Act (16 U. S. C. 1946 ed. § 803(h); 41 Stat. 1068, 49 Stat. 842), and to the laws of Maryland and Pennsylvania.
>
> "(iii) Baltimore Company committed material breaches of the contract which justified its termination; and
>
> "(iv) The foregoing matters are now in litigation between Penn Water and Baltimore Company on complaint of Penn Water for declaratory and other relief, before the United States District Court for the District of Maryland, Civil Action No. 4179."

utility laws of Pennsylvania and had sued for a declaration to that effect.

On February 26, 1949, the Power Commission denied the application for rehearing and filed an opinion in response to it, in the course of which it said:

> ". . . If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions. In our opinion and order *we took care to leave the continuation of the operation of the integrated and interconnected system*[3] *in full effect, merely changing the rates,* as shown by our statement wherein we specifically stipulated that
>
> "'The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. *That arrangement will, therefore, be continued* with, however, such modifications as are necessary to accomplish the reductions mentioned above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company.'" (My emphasis.)

Later in 1949—on October 27—the Commission prescribed a rate schedule for Penn Water's service to Consolidated which was designed to effectuate the reduction in Penn Water's revenue which it had ordered on January 5. The last paragraph of the October order is as follows:

> "The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by

---

[3] This refers, of course, to the two sets of facilities as operated under the contract.

> Penn Water and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force."

The revenue reduction order of January 5, 1949, and the rate order of October 27, 1949, are those which this court was asked to review.

II

While the proceeding before the Power Commission, which has just been described, was in progress, the litigation in the Fourth Circuit began. As of June 1, 1931, Penn Water and Consolidated, which were then under common dominance, had drastically amended a previously existing contract between them so as to form a combination of their utility facilities under terms which made Penn Water a virtual vassal of Consolidated. Fifteen years later the two corporations ceased to be under common control and thereafter each was managed independently. But the basic contract of 1931, burdensome and restrictive as to the Pennsylvania company, not only continued to define and govern the relationship between the two utilities, but by its terms was to endure until 1980,—a bleak prospect indeed for Penn Water.

Due to differences and disputes which developed, Consolidated invoked the arbitration provisions of the contract on September 1, 1948. Shortly thereafter, Penn Water instituted suit in the United States District Court at Baltimore, asking that the arbitration provisions be declared unenforceable and that Consolidated be enjoined from proceeding thereunder. It gave notice of termination to Consolidated and in an amended complaint asked that the 1931 agreement be struck down in its entirety.

Thereupon Consolidated applied to the District Court for a restraining order and on February 9, 1949, the court restrained Penn Water, pending final determination of the issues, from doing anything in respect to the generation, transmission and disposition of power covered by the 1931 agreement in any manner different from the procedure theretofore followed in the performance of the contract. The District Court filed an opinion[4] on February 29, 1950, declaring the 1931 contract valid, and directing arbitration to proceed.

Penn Water appealed to the United States Court of Appeals for the Fourth Circuit and that court, on September 30, 1950, handed down an exhaustive opinion[5] reversing the judgment of the District Court. The appellate court held the 1931 contract invalid as contrary to public policy and as violative of the Sherman and Clayton Acts and the public utility laws of Pennsylvania. In the course of the opinion, the Fourth Circuit said (at page 568):

> "... It may well be, although the *present arrangement* between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania." (Emphasis supplied.)

Consolidated's petition for *certiorari* was denied by the Supreme Court on December 11, 1950,[6] as a result of which

---

[4] *Pennsylvania Water & Power Co.* v. *Consolidated Gas Electric Light & Power Co.*, 89 F. Supp. 452.

[5] *Pennsylvania Water & Power Co.* v. *Consolidated Gas, Electric Light & Power Co.*, 184 F. (2d) 552.

[6] *Consolidated Gas Electric Light & Power Co.* v. *Pennsylvania Water & Power Co.* and *Hessey et al., constituting the Public Service Commission of Maryland* v. *Pennsylvania Water & Power Co.* (two cases), 340 U. S. 906.

the case went back to the District Court for entry of a declaratory judgment in accordance with the opinion of the Court of Appeals for the Fourth Circuit. After the remand, a controversy arose in the District Court as to whether the invalidation of the 1931 agreement had revived an agreement of 1927 between the parties for the interstate sale and delivery of electric energy so that Consolidated was entitled to continued deliveries by Penn Water, in accordance with the terms set forth therein, regardless of the invalidity of the amendatory contract of 1931. In response to a motion by Penn Water that the Fourth Circuit interpret its mandate and settle the controversy, that court delivered a second opinion on January 10, 1951.[7]

The court held the earlier agreement of 1927 was not revived when the amendatory contract of 1931 was declared illegal, and reiterated in unmistakable terms its former holding that the 1931 contract was invalid in its entirety. In the course of the opinion, the Fourth Circuit said (186 F. (2d) at 937) that by entering into the amendatory contract

> ". . . Penn Water gave up its independent status as a producer and seller of electric energy and subjected itself so completely to the dominance of Consolidated as to violate the controlling statutes and *hence the 1931 agreement must be stricken down.*
>
> ". . . Here the prior contract has been merged in and its nature changed by the subsequent unlawful agreement, and as so changed, it has resulted in *an unlawful relationship which has continued for twenty years.* When the illegality of such relationship is declared, it is idle to contend that the court can withdraw the original contract from the illegal relationship and give validity, certainly after it has been buried therein for so long a period. *It must perish*

---

[7] *Pennsylvania Water & Power Co.* v. *Consolidated Gas, Electric Light & Power Co.*, 186 F. (2d) 934.

along with the relationship of which it has been made an inseparable part.

* * * * * *

"Throughout the trial of this case and in the argument of the pending motion, Penn Water has reiterated its desire to continue to supply electric energy to Consolidated; and in view of the close relationship between the parties, the existence of interconnecting equipment and the control over its rates by the regulatory bodies, there is no reason to fear that the interests of consumers of electricity in Maryland will suffer through *the invalidation of the existing contract* between the two utilities.

"The District Court should issue a declaratory judgment (1) setting aside its judgment and order of March 18, 1950; (2) *declaring that the agreements of December 31, 1927, June 1, 1931 and September 29, 1939 are void and of no effect;* and (3) dissolving the restraining order of February 9, 1949." (Emphasis supplied.)

Presumably the District Court at Baltimore then entered a judgment declaring the agreements between Penn Water and Consolidated to be void and of no effect, as it had been directed to do. There was no equivocation or limitation in the Fourth Circuit's directive. It did not simply hold void the restrictive provisions, but condemned the 1931 agreement in its entirety. This was obviously because the court considered that the whole arrangement depended upon the restrictions which fettered Penn Water and that the paragraphs containing the restrictions, therefore, were not severable from the remainder of the contract. This appears from the following excerpt from the Fourth Circuit's opinion (186 F. (2d) at 936):

"The 1931 agreement, on the other hand, provided that Consolidated should be entitled to all the electric capacity and energy available to Penn Water and not

otherwise disposed of in the performance of existing contracts, and in consideration thereof, Consolidated agreed to pay Penn Water an amount equal to its operating expenses, a specified rate of return on existing facilities, and on the cost of new facilities less depreciation, and Consolidated was allowed a credit for the amount of the sales of energy by Penn Water to other persons. Closely associated with these provisions were the illegal restrictions on the future activities of Penn Water which resulted in the invalidation of the whole contract. Therein Penn Water was required to obtain the approval of Consolidated before entering into any agreement for the sale or purchase of electric power and energy and to obtain the approval of Consolidated before making any investment or disposing of its property having a value in excess of $50,000. These restrictive conditions were included in order to safeguard Consolidated in the performance of its promises and it is conceded that without them the contract would have been impracticable and would not have been made."

Although a final judgment of a court of competent jurisdiction had thus invalidated the entire contract between Penn Water and Consolidated, the Federal Power Commission still regarded it as desirable and in the public interest that the facilities of the two companies be operated as one integrated and interconnected system. Being of that opinion, the Commission was understandably anxious that the co-operative use of facilities and interchange of energy be continued. I think it should have called the parties in and required them to work out immediately a new contract in conventional form which would accord with the opinions of the Court of Appeals for the Fourth Circuit. The Commission thought, however, that the Fourth Circuit meant only to condemn the two paragraphs of the 1931 agreement which prohibited Penn Water from selling or buying energy and from increasing or reducing its plant investment without Consolidated's consent. It reasoned that it could require

the continuance of the old contract if those paragraphs were eliminated. This would leave in effect the contractual definition of Consolidated's residual entitlements and the residual payment type of rate. But the Fourth Circuit said those provisions were so closely associated with the illegal restrictions on the future activities of Penn Water that the whole contract was invalid. The court's opinions make abundantly clear its intention to strike down the entire arrangement,—not just the restrictive provisions.

It is significant that Penn Water and Consolidated conceded that, without the unlawful restraints on the former, the 1931 contract would have been impracticable and would not have been made. That was an admission that the restrictions and the remainder of the contract were so "closely associated" that illegality of the restrictions resulted in complete invalidity. Even if the unlawful paragraphs of the agreement were severable, the remaining provisions would be incompatible with the Fourth Circuit's decision because under them free and unrestrained competition would still be impossible. Welding the facilities of the two companies into one integrated system—the Commission's objective—is not conducive to competition.

III.

After the "system foundation contracts" had been held null and void, Penn Water entered a motion in this court on December 29, 1950, asking that we

> "... set aside, annul and dismiss the orders of the Commission sought to be reviewed in these proceedings, or, in the alternative, remand these proceedings to the Commission with instructions to annul and set aside its orders herein sought to be reviewed ...."

The Pennsylvania Public Utility Commission also moved this court on December 29, 1950,

> "To annul and dismiss the orders of the Federal Power Commission sought to be reviewed in Case

No. 10,239 on the ground that the decision of the United States Court of Appeals for the Fourth Circuit in *Pennsylvania Water & Power Company and Pennsylvania Public Utility Commission* v. *Consolidated Gas Electric Light and Power Company of Baltimore and Public Service Commission of Maryland*, 184 F. 2d 552 (1950), *cert.* denied December 11, 1950, renders invalid, null, void and of no effect the orders of the Federal Power Commission and the proceedings before it pursuant to which said orders were issued."

The question presented by these motions was what I have called the basic issue: can the Federal Power Commission lawfully establish between Penn Water and Consolidated a relationship which constituted a violation of the anti-trust statutes when established by contract between them? One who considers that question should bear in mind three indisputable propositions: 1. Regulated industries are not *per se* exempt from the Sherman Act. 2. Part II of the Power Act does not give the Commission power to lift the ban of the anti-trust laws. 3. As repeals by implication are not favored, only a clear repugnancy between the old law and the new results in the former giving way and then only *pro tanto* to the extent of the repugnancy. *Georgia* v. *Pennsylvania Railroad Company*, 324 U. S. 439, 456-7 (1945); *United States* v. *Borden Company*, 308 U. S. 188, 198 *et seq.* (1939).

In denying the motions and holding that the Commission has such power, the majority of the court necessarily first concluded that Part II of the Federal Power Act had impliedly repealed or superseded the anti-trust statutes so as to exempt from their prohibitions the combination between Penn Water and Consolidated which the Commission ordered to continue.

In order to show in bold relief the thinking of my brothers of the majority which led them to that conclusion, I have skeletonized the pertinent portion of their opinion:

"The problem raised by the motions is one of the interrelation of two statutory schemes—each of which reflects different historical pressures and different conceptions of the public interest. The Sherman Act and related laws represent an attempt to keep the channels of competition free so that prices and services are determined by the workings of a free market. . . . In marked contrast is a statute such as Part II of the Federal Power Act. It evidences congressional recognition that competition can assure protection of the public interest only in an industrial setting which is conducive to a free market and can have no place in industries which are monopolies because of public grant. . . .

"These contrasting objectives indicate that the antitrust laws can have only limited application to industries regulated by specific statutes. . . .

" . . . The net effect of what we have already said is that, though regulated industries are not *per se* exempt from the antitrust laws and repeals by implication are not favored, the antitrust laws are superseded by more specific regulatory statutes *to the extent* of the repugnancy between them. . . . where a statute provides for comprehensive and detailed regulation of a particular industry, as do the Interstate Commerce Act and the Federal Power Act, there is, as we have indicated, only a limited area for application of antitrust considerations to Commission decisions."

These generalities boil down to the thesis that Part II of the Federal Power Act is repugnant to the anti-trust laws and therefore supersedes them to the extent of the repugnancy; and that the repugnancy extends so far as to exempt from the anti-trust laws the combination of utilities ordered by the Commission which is otherwise clearly illegal under those statutes.

The majority do not point out with particularity the repugnancy upon which they rely. They seem to find it

in the "contrasting objectives" of the anti-trust acts and Part II of the Power Act, saying the first was designed to obtain the benefit of free competition, and the other to eliminate competition as having no place in the utility field and to substitute for it a regulatory agency. This being the only repugnancy suggested by the majority, their holding necessarily is that the anti-trust laws are superseded by Part II of the Power Act to the extent that the *objectives* of the two forms of legislation are in contrast. Let us see if there is really any repugnancy between the Sherman Act and Part II of the Power Act.

The first section of the former, which is 15 U. S. C. §1, declares illegal every contract, combination or conspiracy in restraint of trade or commerce. The 1931 contract between Penn Water and Consolidated was held violative of that section.

Section 202, found in Part II of the Power Act, empowers the Commission to require the interconnection and co-ordination of the facilities of the two utilities. But neither that section nor any other section of Part II authorizes the Commission to require interconnection and co-ordination of facilities under terms and conditions which will result in a violation of the Sherman Act. The Commission can exercise its power under §202 and under all of Part II without setting up an arrangement which is unlawful under anti-trust statutes. The Fourth Circuit intimated as much when it suggested that the interconnection of facilities and interchange of energy be continued "by some method which would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania." The majority opinion does not suggest any reason why that cannot be done by the Commission.

Since the Power Commission can perform all its functions under Part II without creating a violation of the Sherman Act, there is no repugnancy between the two statutes, and no room for the court to say that Part II superseded the anti-trust statutes.

I have said, as did the Fourth Circuit, that neither Part I nor Part II of the Federal Power Act purports to suspend the anti-trust statutes with respect to licensees and utilities regulated thereunder. On the contrary, §1 of the Sherman Act is substantially repeated in §10(h), found in Part I of the Power Act, 16 U. S. C. §803(h), which is as follows:

> "Combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited."

Penn Water is a licensee under Part I of the Act and so is subject to the prohibitions of §10(h). The majority considers that the omission of that section from Part II not only repealed §10(h) but also amounted to a repeal of the prohibitions of the Sherman Act as far as regulated companies are concerned. That amounts to saying that the anti-trust laws do not apply to any regulated industry unless their provisions are substantially repeated in the regulatory statute. Just the opposite is true: the anti-trust laws apply to regulated industries unless exemption therefrom is expressly provided in the regulatory statute, or must inevitably be implied from provisions of the regulatory act which are clearly repugnant to anti-trust prohibitions.

It must be noted, too, that Penn Water does not lose its status as a licensee under Part I simply because it is regulated also under Part II. It continues, nevertheless, to be a licensee and so continues to be forbidden by §10(h) to engage in the combinations or arrangements made illegal thereby. It follows that, when the Commission required Penn Water and Consolidated to remain in the combination which had been condemned by the courts, it not only did not act under the authority of Part II which gives it no such power, but also affirmatively violated §10(h) of its own basic act.

The majority opinion says, however, that when a Part I licensee is also a Part II company, as Penn Water is, it is no longer subject to the anti-trust provisions of §10(h), simply because the language of that section does not appear in Part II. Then the notion that §10(h) was repealed by Part II is thus stated in the opinion:

> ". . . The prohibitions of §10(h) would apply to a licensee which is also regulated under Part II only to the extent that the prior statute is not repealed by the clear repugnancy between it and the later statute."

I suppose the court meant to say that Part II is clearly repugnant to §10(h) because it does not contain similar language and therefore repealed that section by implication. But Part II is not repugnant to §10(h) for the same reasons that it is not repugnant to the anti-trust laws: it is not necessary for the Commission to cause a violation of §10(h) in order fully to exercise its regulatory power under Part II over a Part I licensee which is subject to Part II regulation.

One other phase of the portion of the court's opinion which denies the motions remains to be noticed. It is that in which the court purports to give another reason for denying the motions to annul, in addition to the fallacious theory that the antitrust laws do not apply to regulated industries. On examination, however, the additional ground is seen to rest upon the same erroneous idea. It is thus stated in the opinion:

> "To grant petitioners' motions and set aside the order at this time would be to substitute antitrust criteria for those of the Federal Power Act, . . ."

By this the court meant that it would be improper to annul the Commission's orders on the mere ground that "a decision handed down in a suit between private parties under a non-controlling statute" had destroyed the only arrangement to which they could possibly have application.

If Penn Water "wishes," because of the Fourth Circuit's decision, to make some change in the old contractual arrangement which the Commission has ordered to be retained, the majority say the only thing it can do is to submit its proposed new arrangement. Then, after the Commission has disposed of the proposal, Penn Water can file a new petition for review if it feels aggrieved. That would be true if Penn Water wanted to change an existing *legal* arrangement.

The key error in the court's reasoning is revealed by its allusion to the decision of the Fourth Circuit as one "handed down in a suit between private parties under a non-controlling statute." It shows that in assigning this additional reason for denying the motions to annul, the court is still assuming that the Commission can lawfully require these utilities to form a combination which they cannot legally form by their own contract.

I think I have shown sufficiently already that the Sherman Act *is* the controlling statute which the Commission is not empowered to override. That the judgment invalidating the existing arrangement was handed down in a suit between private parties is, of course, immaterial. It is binding on those private parties, yet this court has required them to disobey it. It has done so upon the erroneous idea that the Sherman Act has been superseded by Part II of the Federal Power Act and so is not the "controlling statute."

In the portion of the majority opinion now being discussed, the court says it is the existing "services and rates, reflecting underlying operations, which were the subject of the Commission's orders." The implication is that all the Commission has done is to prescribe rates for service actually being rendered; that if the rates are just and reasonable for that service, and if the Commission's findings in that respect are supported by substantial evidence, "our review is at an end." I suggest that the "underlying operations" were the subject of the Commission's orders and therein lies the vice in them. They did not deal with rates alone but ordered the contractual "underlying operations" to continue.

It is a boot-strap argument to say that, because the Commission has power to prescribe rates for existing service so long as it is being rendered, it can therefore require continued rendition of the service no matter if it is unlawful.

For the reasons given, I think the motions to annul the Commission's order should have been granted, and so I dissent. My brothers of the majority, having denied the motions, then proceeded to explore the merits of the rate reduction order and the implementing rate schedule which the Commission prescribed, and affirmed those orders. I dissent also from that action, as I think the orders should have been set aside as improper. But I do not prolong this dissent by discussing the merits of the orders, as I think it perfectly clear that they should have been set aside as being without basis or applicability after the Fourth Circuit's judgment became final.

APPENDIX C

TEXT OF PERTINENT PENNSYLVANIA LAWS GOVERNING CORPORATIONS

(EXCERPTS)

Section Five of Corporation Act of 1874.*

The business of every corporation created hereunder, or accepting the same, shall be managed and conducted by a president, a board of directors or trustees, a secretary or clerk, a treasurer, and such other officers, agents and factors as the corporation authorizes for that purpose, * * *. The members of said corporation may, at a meeting to be called for that purpose, determine, fix or change the number of directors or trustees that shall thereafter govern its affairs, and a majority of the whole number of such directors or trustees shall be necessary to constitute a quorum * * *.

Section one of Act of May 31, 1887, P. L. 281 (No. 166).

SECTION 1. *Be it enacted, &c.,* That it shall be lawful, from and after the passage of this act, for any corporation, chartered or existing by or under any law of this State, to determine, by the vote of its stockholders holding a majority in interest of all of its stock, at a meeting duly called for the purpose, the time of holding the annual meeting for the election of officers of the corporation, and the number of directors that shall thereafter govern its affairs: *Provided,* That the number of directors so determined shall not be less than three nor more than fifteen, and that at least one third of the directors of every corporation shall be and remain, during their term of service, residents of the State of Pennsylvania: * * *.

---

* As amended by Act of May 14, 1891, P. L. 61, and Act of May 6, 1927, P. L. 828 (No. 417).

Clayton Act, Section 3 (15 U. S. C. §14)	8
Federal Power Act	3, 4, 16

REPLY ON BEHALF OF PETITIONERS.

The clear conflict between the Fourth and D. C. Circuits, on the question of the FPC's authority to validate contractual arrangements violative of the anti-trust laws and state law, places Penn Water in the position of having been told by the Fourth Circuit that its contractual arrangements violate criminal law and by the D. C. Circuit that those same arrangements are legally required. Unless the conflict is resolved by this Court, this dilemma can confront not only Penn Water but every utility which is subject to Federal Power Commission regulation, as well as companies subject to the jurisdiction of other Federal regulatory agencies.

Government counsel in their "Memorandum for the Federal Power Commission" (Gov. Mem.) do not oppose the granting of a writ of certiorari in respect of the principal question (set out in Penn Water's Questions I and II) presented by Petitioners, saying only that "this Court may not deem this an appropriate case in which to consider that question" (Gov. Mem., p. 32). They admit the direct conflict between the opinions of the D. C. majority and the Fourth Circuit and concede the importance of the question (Gov. Mem., p. 21). They do not attempt to support the opinion of the D. C. majority that the FPC has authority to validate arrangements violative of the anti-trust laws and state law.*

Instead, government counsel, as do the Intervenor-Respondents (Consolidated and the Maryland Commission), in order to avoid an outright confession of error on the part of the FPC and the D. C. majority, have invented a specious and attenuated argument that the conflicting hold-

* To have supported the D. C. majority on this point would be in direct conflict with the traditional position taken by the government (as illustrated in a case now pending in this Court, *Far Eastern Conference et al.* v. *U. S.*, October Term 1951, No. 15 Misc.) to the effect that an administrative body has authority to grant exemption from the antitrust laws only to the extent expressly empowered to do so in its organic act, and that federal regulatory statutes do not impliedly exclude activities subject to their provisions from the antitrust laws. (Government brief in opposition to certiorari in that case, p. 5.)

ings on the authority of the FPC to exempt from the anti-trust laws and state laws were not necessary to the decision below or to the Fourth Circuit decisions and were therefore *dicta*. Such contentions are refuted by the whole course of the proceedings below and in the Fourth Circuit, by the arguments and briefs of counsel and by the opinions of the Courts.

Respondents Consolidated and Maryland Commission also assert that this case presents a collateral attack on rate orders of the FPC and that Penn Water* should start another rate proceeding before the FPC in order to present the issues already raised in this case. On the contrary, this case represents a direct appeal from FPC rate orders which have not yet gone into effect. This Court should determine whether the rate orders shall stand or shall be reversed or modified, particularly because the rate orders disregard the illegality of the contractual arrangements on which they are based.

These evasive attempts to prevent this Court from resolving the admitted conflict between Circuits is in furtherance of the program by which Consolidated has sought to keep the relatively smaller Penn Water a captive and prevent competition from it by maintaining control over the latter's expansion and sales of power to others, while at the same time compelling purchases of power from Consolidated on its own terms, all of which the Fourth Circuit held illegal.

The 97 pages of briefs filed by the Respondents are largely devoted to discussion of matters other than the central points.** These irrelevancies are devoted principally to making this Court think that to upset or modify the FPC rate order would impair Penn Water's generation, transmission and delivery of electricity to its present customers. But it is plain that what is involved in this case is

---

* References to Penn Water in this brief will include Susquehanna unless otherwise stated.

** In these briefs Respondents call attention to the size of the printed record technically before this Court at their insistence. Substantially all of it is wholly irrelevant to the points at issue on the petition, as Penn Water pointed out in its petition, fn., p. 2.

only the contractual structure and the question whether Consolidated shall continue to dominate Petitioners under an arrangement which, as asserted in the FPC brief below (Tr. 5574), was prescribed by the FPC and "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's facilities," a situation which the Fourth Circuit condemned.

The Respondents no more than mention and do not discuss the point (also ignored by the D. C. Circuit) that the contractual arrangements have been held by the Courts in the Fourth Circuit to violate the laws of Penn Water's and Safe Harbor's state of incorporation, Pennsylvania, destroy their corporate virility and are *ultra vires;* nor do they point to any provision of the Federal Power Act even purporting to authorize the FPC to override such laws. This is not a mere matter of conflict between Federal and State rate regulation. (See Penn Water's petition, pp. 30-32.)

The Respondents have wholly failed to refute the point made in the petition of the Pennsylvania Public Utility Commission (No. 429, pp. 21-25) that the D. C. majority's decision is contrary to the decisions of this Court in *Peoples Gas Co.* v. *Public Service Commission,* 270 U. S. 550 (1926) and *Lone Star Gas Company* v. *Texas,* 304 U. S. 224 (1938). Those cases clearly establish that the energy produced and sold in Pennsylvania is in intrastate commerce regardless of whether mingled with energy from another state. The respondents do not dispute the Pennsylvania Commission's statement as to the principle established by these cases but merely contain vague statements to the effect that they are distinguishable because of what the FPC calls the "unique characteristics" of the Penn Water operations.

As to the question of applicability of Part II to a licensee under Part I, the Respondents ignore the fact that this point is basic to the holding of the D. C. majority that Part II repealed by implication Section 10(h)* of Part I.

---

* This section expressly reaffirms the applicability of the antitrust laws to Part I licensees.

This holding raises the same question as the D. C. majority's holding that Part II repealed by implication other provisions of the antitrust laws. Both these holdings were basic to the asserted authority of the FPC to absolve contractual arrangements from the Federal antitrust laws, and clearly both holdings should be reviewed if certiorari is granted.

(1) The point of law on which the D. C. majority and the Fourth Circuit admittedly conflict was the basis of the decision below. The issue as to the authority of the FPC to compel, and base its rate orders upon, continued performance by an electric utility of arrangements which have been adjudged to violate the antitrust laws, public policy and state laws, was a focal point of the decision below, and was the point upon which the D. C. majority and minority split.

No one can read the majority opinion below without seeing that the majority realized that, so far as concerns the antitrust laws and state law, it could not uphold the FPC rate orders based on the patently illegal foundation contracts without first holding that the FPC had authority under the Federal Power Act to absolve such contracts from the operation of such laws. This is proved by the fact that the D. C. majority opinion sustains various features of the rate orders by reference to the *"obligations and entitlements"* contained in, and only in, the fonndation contracts, after having devoted five pages to upholding the authority of the FPC to absolve the contracts from their illegality. Moreover, this was expressly recognized by Bazelon, J., in the opinion below, when he stated that to uphold Pennwater's position "would be to substitute antitrust criteria for those of the Federal Power Act" (R., Vol. 18, p. 55).

The other member of the D. C. majority (Fahy, J.) expressed himself to the same effect when, in a subsequent decision, he said:

> "In our recent decision in *Pennsylvania Water & Power Company, et al.* v. *Federal Power Commission*, U. S. App. D. C. F. 2(d) ; decided July 3, 1951; we dealt with the power of the Commission,

> acting within the policy and provisions of the Federal Power Act, to require the continuance of arrangements which, without the sanction of valid public authority, would violate the antitrust laws." *Maryland and Virginia Milk Products Association* v. *U. S.*, F. 2d (D. C. Cir., Nov. 8, 1951).

The dissenting Judge in the D. C. Circuit characterized "the basic issue", as follows (R., Vol. 18, pp. 82-83):

> "Has the Federal Power Commission authority to order a combination of these two utilities under terms and conditions which, if arranged by private contract between them, would clearly violate the Federal antitrust laws and the Public Utility laws of Pennsylvania?"

He then devoted the whole of his 18-page opinion to a discussion of the point.

The FPC and the other respondents have elsewhere repeatedly conceded and asserted that the decision of the D. C. majority herein is a holding that the FPC has authority to absolve these contractural arrangements from the impact of the antitrust laws and state law.

The FPC, in its brief (pp. 36, 43, 44, 45, 47) in the recent case before the Fourth Circuit regarding the Safe Harbor contract, cites the majority decision at least six times to that effect in urging the Fourth Circuit for that reason to hold the Safe Harbor contract valid in its entirety.

In the same case in the Fourth Circuit, Consolidated in its brief (pp. 65, 66, 80) and the Maryland Commission in its brief (pp. 9, 14) cited the D. C. majority opinion herein in a similar manner and for a similar purpose.

Furthermore, in the Court below in this case the FPC's brief, contrary to its present assertion that it has not entered any order prescribing or premised upon the arrangements adjudged unlawful, stated that the rate schedule which it prescribed for Penn Water "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's facilities" (Tr., p. 5574).

In view of these representations made by respondents to other Courts, it is difficult to see how they can make the contrary argument to this Court that the majority decision below does not constitute a holding that the FPC has authority to exempt contractual arrangements otherwise illegal from the antitrust laws and state law.

(2) The point of law on which the D. C. majority and the Fourth Circuit admittedly conflict was also a basis of decision in the Fourth Circuit. In the Baltimore contract case the Fourth Circuit decided (a) that the contract was illegal under the antitrust laws, state law and public policy and (b) that prior approval by the Federal Power Commission of such contract would not absolve it from such illegalities. The second point as well as the first was necessary to the decision of the Fourth Circuit, because Consolidated and the Maryland Commission had argued at length in their briefs (Consol. Br., pp. 25-54; Md. Comm. Br., pp. 6-11)* that the contract had been approved by the Federal Power Commission and was therefore exempt from the operation of the antitrust laws and state law and that the Court had no jurisdiction to invalidate the contract on the basis of such laws. This point was then necessarily dealt with at length in Penn Water's reply brief in that case (pp. 15-24).

The claim of the authority of the Federal Power Commission to absolve the contract was one of the principal points in the petitions of Consolidated and the Maryland Commission in this Court for a writ of certiorari to the Fourth Circuit in the Baltimore contract case. This Court denied certiorari, 340 U. S. 906 (1950).

Similarly, the same question of the authority of the FPC was presented in the subsequent case in the Fourth Circuit involving the Safe Harbor contract, and the Fourth Circuit followed its decision on this point in the prior

* How then can Consolidated say in its brief in this Court (p. 7) that the point was not passed upon by the Fourth Circuit in that case?

case* citing its prior opinion, quoting with approval the dissenting opinion in the D. C. Circuit herein and stating expressly that it disagreed with the holding of the D. C. majority on the point (Pamphlet Op., pp. 18-19).**

As already indicated, all the Respondents herein argued the point in the Fourth Circuit in briefs and orally. There is nothing to the claim that the FPC was not a party to these cases in the Fourth Circuit, for as stated by the Fourth Circuit (Pamphlet Op., p. 3) FPC counsel were present in all courts in both cases and were given full opportunity to brief the point and argue it orally. The FPC brief consisted of 52 pages.

In its recent decision the Fourth Circuit reiterates the statement in its previous opinion that the FPC should approve some different contractual arrangement for the sale of power between these utilities which "will not offend either the antitrust laws or the utility laws of Pennsylvania".

There could not be a more direct conflict between two courts, not merely on the principle of law involved but on the application of that principle to the same subject matter.

(3) It is clear from the FPC orders themselves that a holding that the FPC had authority to absolve the contracts from the antitrust laws and state law was necessary if such orders were to be sustained. The FPC opinions and orders themselves also show that they are without basis unless the contractual arrangements are valid and continuing by reason of the FPC approval. Nevertheless, the Respondents now contend that the rate orders are based on physical operations as they were found to be conducted without regard to any contractual arrangements between the

---

* *Consolidated Gas Electric Light and Power Company et al.* v. *Pennsylvania Water & Power Company et al.*, Fourth Cir., January 3, 1952, a copy of which opinion was filed with this court in pamphlet form (Pamphlet, Op.).

** In this decision the Fourth Circuit expressly confirmed Penn Water's position regarding the conflict stating (Pamphlet Op., p. 18) "We are constrained to differ from this conclusion [of the D. C. Circuit] for the reasons set out in our opinion in Penn Water v. Consolidated, 184 F. 2d, 552, * * *."

parties, and that the FPC neither contemplated nor ordered continuance of the arrangements.

Penn Water has already shown in its Petition (pp. 8-15) (and Respondents' argument nowhere answers) (a) how the critical features of the FPC rate orders rest on the assumed continued existence of the illegal "foundation contracts," (b) how Penn Water was required to purchase power from Consolidated at Consolidated's behest under a contractual clause held to be in direct violation of Section 3 of the Clayton Act, (c) how a provision of the contract which was held *per se* violative of the Sherman Act made installation of additional facilities by Penn Water subject to approval by Consolidated, (d) how the FPC ordered the contractual method of payment continued notwithstanding that it is a pooling of revenues clearly illegal under the Sherman Act,* (e) how the low rate of return allowed by the FPC was based solely on the continuing contractual obligation of Consolidated until 1980 to take electric service, and pay therefor a fixed rate of return, regardless of the amount of power furnished,** (f) how the FPC's deci-

---

* Respondents claim that the Fourth Circuit did not hold the revenue pooling arrangement illegal, notwithstanding that the revenue arrangement is basic to the Baltimore and Safe Harbor contracts, and that such contracts were held illegal in their entirety by the Fourth Circuit. In its first opinion in the *Penn Water* case, the Fourth Circuit, having found some illegal features of the contract, expressly refrained from going on and passing on other features. But in the *Safe Harbor* case, contrary to the assertion of government counsel (fn. p. 23) and Consolidated (Br., p. 23), the Fourth Circuit expressly enumerates (Pamphlet Op., pp. 6-7) the revenue provision among the illegal provisions. Furthermore, the provision for payment of operating expenses and a fixed return, regardless of services rendered, with a credit for any revenue received from others, clearly stifles initiative to get business and to compete, and to effect operating economies, and is illegal under the established decisions of this Court discussed in Penn Water's Petition (pp. 25-28). The Respondents have not attempted to distinguish those cases or to cite any contrary authority.

** The government Memorandum in this Court concedes (p. 16) that the sole basis of the rate of return is that "Penn Water was assured a stabilized income as in the past," "under the arrangements with Consolidated which the FPC directed be continued". The claim of Consolidated (Br., p. 24) that the FPC asserted that the rate of return was "independently bottomed" is simply not correct. The reference is not to any order of the FPC but simply to *ex post facto* statements of counsel.

sion that the sale by Penn Water in Pennsylvania of power generated in Pennsylvania to Pennsylvania utilities comes under the jurisdiction of the FPC was based solely on the contractual arrangements including the contractual compulsion, violative of Section 3 of the Clayton Act, that Penn Water purchase power generated by Consolidated in Maryland, and (g) how the allocation of the rate reduction primarily to Consolidated was based solely on the contractual "entitlements" of Consolidated and not on actual operations. The entitlements used by the FPC as a basis for its allocation of the rate reduction were the entitlements to the amount of power provided in the contract, not the amounts of power actually delivered, which were far less. Obviously, a tariff, as differentiated from a contract, could not properly provide for such artificial entitlements, and the statement of Consolidated (Br. p. 25) that the entitlements are those provided for by a tariff is simply unfounded.*

Government counsel in their Memorandum in effect admit that the orders are based on the assumed continuance of the illegal control provisions of the contracts, stating (p. 27) that the output of the "integrated and coordinated interstate electric system" upon the existence of which the orders are assertedly based "is peculiarly the interstate product of the integrated system, *functioning as a single multi-state, electric and economic unit*" (italics added). The operation of the three companies in this manner could only be achieved by the contractual arrangements condemned by the Fourth Circuit.

In its brief in the recent Fourth Circuit case (p. 19) the FPC (as well as the other two Respondents) expressly

---

* The government Memorandum also concedes (p. 25) that the finding of the FPC that the Pennsylvania business was interstate and its finding regarding allocation of the rate reduction "were based on the continuance of the arrangements as to power pooling and the residual-payment type of rate." The claim of Consolidated (Br., pp. 24-25) that the FPC has asserted that the Commission's jurisdictional findings were based on actual operations, and not upon the existence of any assumed contractual obligation, is also entirely incorrect. There is no such statement by the FPC but only *ex post facto* statements of counsel.

stated that it had approved and prescribed *all* the provisions of the Safe Harbor contract, "including the terms which the District Court viewed as in restraint of trade," and urged upon the Fourth Circuit that, for that reason, the Fourth Circuit should hold *all* the provisions of that contract exempt from the operation of the anti-trust laws and state law and therefore valid. Yet here the FPC (like the other Respondents) takes the position before this Court that the FPC has not approved or prescribed any of the illegal contractual provisions upon which its rate orders depend.

Respondent Consolidated's assertion in its brief in this Court (pp. 7-8) that the FPC's orders related only to "service" provisions of the contracts and do not include the illegal restrictive provisions, is directly contrary to the representations made by Consolidated to the Fourth Circuit in the Baltimore contract case and to this Court in its petition for certiorari in the Baltimore contract case. In its brief to the Fourth Circuit (pp. 35, 39) Consolidated stated that "all of the terms" of the contract were directly involved and that all the provisions were "terms of sale" and "inextricably interdependent," and constituted the tariff on file. Similarly in its petition to this Court for certiorari (p. 20) it stated that "the Commission necessarily approved every provision of the Basic Agreement except the pecuniary amount of the rates."*

Regarding the contention of Government counsel that by the phrase "in and of themselves lawful" in its order of October 27, 1949, the FPC intended to exclude from the continuing arrangement provisions which might be held

---

* The Respondents nowhere explain how there is any business reality under their present theory of the situation created by the FPC orders and the Fourth Circuit decisions. The Penn Water contract, absent Articles IV and V, is not a rational business arrangement, as asserted by Consolidated itself in affidavits and briefs submitted to the Fourth Circuit and in its brief to this Court (p. 18). Counsel for the government here concede (Govt. Mem., p. 23) that the entire agreement was stricken down because its illegal provisions were inseparable parts of a contract that could not operate as a contract between the parties without these provisions. How could the arrangement operate any better as a rate schedule between the parties in the absence of these provisions?

to be illegal, we refer the Court to Penn Water's petition (pp. 11-12) and to the fact that it seems disingenuous to contend that an administrative body like the FPC was directing continuance of an arrangement indefinite in scope and dependent on subsequent decisions which might be rendered by courts in other cases, either the Penn Water contract case or the Safe Harbor contract case or some other case, none of which had then been decided.

(4) The FPC Orders Authorize Private Parties to Violate the Antitrust Laws. The D. C. majority cited *Parker* v. *Brown*, 317 U. S. 341 (1943), as indicating that a state or governmental body might commit acts which would be in violation of the antitrust laws if committed by private parties and there is an obscure reference to the case in the government Memorandum here (p. 21).

However, the case has no application to the present situation, as the Fourth Circuit directly held (Pamphlet Op., p. 20) and as Penn Water pointed out in its petition (pp. 23 and 24). In *Parker* v. *Brown* the State of California fixed production quotas for producers of raisins. It was held that this was the act of the State and that the acts of a State were not within the purview of the federal antitrust laws. However, this Court pointed out that it would have decided otherwise if the State had purported to authorize private individuals to violate the antitrust laws, i.e., to fix quotas for themselves and other producers.

The latter is the situation here. The FPC orders authorize a private party (Consolidated) to violate the antitrust laws.

As the Fourth Circuit pointed out (R. Vol. XVIII, pp. 8-9) Consolidated has consistently exercised its powers in disregard of the interests of both Penn Water and the public. The FPC had no authority to prevent or to supervise such actions by Consolidated and has never attempted to assert any such authority.*

---

* Even if such authority existed in the FPC, the contractual arrangements, as the Fourth Circuit pointed out (Pamphlet Op., pp. 15-16) deprived Penn Water of the right to initiate proceedings before regulatory bodies with respect to matters affecting its business and the public interest.

On this important matter of the applicability of *Parker* v. *Brown* to the present situation, the D. C. majority (R. Vol. 18, p. 51) and the Fourth Circuit (Pamphlet Op., p. 20) are in direct conflict.

(5) There Is No Question in This Case of a Failure to Exhaust Administrative Remedies or of Any Collateral Attack on FPC Rate Orders. Respondents Consolidated and the Maryland Commission make the unfounded claim that the Petitioners have not exhausted their administrative remedies and that this appeal represents a collateral attack upon FPC rate orders. *It is significant that Government counsel for the FPC make no such claim in their Memorandum to this Court.*

Far from failing to employ their administrative remedies, Petitioners have followed exactly the procedure prescribed by the Federal Power Act, namely, petitions to the Court of Appeals to review the FPC orders and petitions for certiorari to this Court, all after having raised the points involved before the FPC itself and after rejection of such points by the FPC in the orders here sought to be reviewed.*

There is here no collateral attack on an effective FPC rate order, and the authorities cited in the briefs of Consolidated and the Maryland Commission relating to such collateral attacks are simply not in point.

For these reasons we cannot understand the suggestion made by these two Respondents, and also in the D. C.

---

* The FPC, in its brief below in opposition to Petitioners' motions to annul or remand, expressly states (Tr. 5552) that the arguments advanced by Penn Water "are not new, having been urged upon the Commission and considered by it and having been repeatedly urged in this proceeding before this Court." How then can the Maryland Commission in its brief in this Court say (Br., pp. 12-13) that statements in the Petition are "calculated to mislead this Court to believe that such an issue had been raised in the proceeding before the Commission, had been ruled upon by the Commission," or (Br., pp. 22-23) that "this question is simply not presented by the record, was not before the Court below," or (Br., p. 33) that the question of the interrelation of the Sherman Act and the Federal Power Act "had not been presented to the Commission and hence could not have been covered by its Orders"? Consolidated makes the same unfounded statements in its brief in this Court (pp. 6-7).

majority opinion, that Penn Water should be forced to accept the present rate orders, although being properly reviewed under the statute; that in order to make the points made in its petition, Penn Water must file with the FPC new schedules embodying a new arrangement; and that in the new proceeding it must again make the same points already urged in this case. In such new proceeding Respondents would undoubtedly claim that the sustaining of the present orders was a precedent* and the points were being made too late.**

The Maryland Commission's brief in this Court (p. 34) asserts that the granting of certiorari would reopen the rate orders after protracted hearings and cause delay; but the filing of new tariffs and the starting of a new proceeding would obviously cause even greater delay.

(6) The Voluminous Arguments of Respondents as to the Economic Desirability of the Continuance of These Contractual Arrangements are Irrelevant and Unfounded. Counsel for the Respondents in their briefs argue at length regarding the economic desirability of the continuance of the contractual arrangements. It is difficult to see what bearing that can have on the granting or denial of the petition for *certiorari*, but since so much space is devoted to these arguments, we shall deal with them briefly.

The main argument of the Respondents as to the desirability of the continuance of the contractual arrangements seems to be that embodied in the FPC brief below that the arrangement "permits Penn Water's facilities to be

---

* As pointed out in Penn Water's petition (fn., p. 16), the commencement of such a new proceeding could not correct the wrongful orders of the FPC on review herein. As also there pointed out, Penn Water filed new rate schedules on a new basis, but such rate schedules were rejected by the FPC on the ground, among others, that before doing so Penn Water "must recognize" the existing FPC orders with all the adverse implications arising from such recognition.

** Respondent Consolidated claims in its brief in this Court (p. 4) that the questions are not ripe for determination, *i. e.*, that they are made too early.

operated as though they were under common ownership with Baltimore Company's facilities" (Tr. 5574), so that there shall not be set up in the subservient company "an economic interest upon its part" (Brief of FPC before Fourth Circuit, p. 14) and so that the subservient company's interests are not affected by the exercise of the dominant power over it (same Brief, pp. 33-34).

There is no valid reason given why Penn Water should be tied as a captive to any of the utility companies with which it is interconnected; and *a fortiori* no sensible reason why it should be made captive to Consolidated, any more than to one of the three companies with which it is interconnected in the north, Metropolitan Edison Company, Pennsylvani Power & Light Company or Philadelphia Electric Company (see map on back cover of petition). There is nothing in the Federal Power Act which shows the intention of Congress to give the FPC authority to deliver one company over as a captive to another. Nothing to support the Respondents' contention flows from the fact that Consolidated has a larger steam capacity than Penn Water. The other utilities referred to also have larger steam capacity.

Furthermore, there is no shred of claim that Penn Water's interconnections to the north do not provide as good service to customers there under the normal unit rate contracts approved by the same FPC orders, without controls by one company over another, as does Penn Water's interconnection with Consolidated with the illegal revenue pooling, restraints and controls. Nor is there any claim that Penn Water's utility customers to the north are not just as dependent on Penn Water's power as Consolidated.

It is common knowledge that the companies to the north, as in other geographical areas in the country, are interconnected and interchange power and constitute efficient power pools without contractual arrangements of the type here involved.

This argument of the Respondents simply serves to prove in their own words that the revenue arrangement stifles all economic incentive on the part of Penn Water.

It leaves Penn Water with no motivation (a) to sell more power, (b) to obtain more customers, (c) to improve its service, or (d) to effect economies. These have been the negative vicious products of the contractual arrangements.

The affirmative vicious products have been (1) Consolidated's interference with Penn Water's power contracts with other utilities, (2) Consolidated's prevention of any expansion of the generating and transmission facilities of Penn Water when every other utility company including Consolidated was installing needed new facilities, and (3) Consolidated's dictation to Penn Water of purchases of power from Consolidated on Consolidated's terms rather than from other utilities on terms negotiated between Penn Water and them.

As the Fourth Circuit said in its recent decision (Pamphlet Op. p. 15): "These restrictions which tied the parties together and stifled individual initiative for the period of fifty years were made to promote the advantage of the persons in control and not primarily in the interest of the public."

(7) Respondents' argument, that the decision below as to the applicability of Part II to licensees under Part I is not in conflict with the decisions of other circuits, is unsound. It should be pointed out again that the question whether Part II of the Federal Power Act is applicable to a licensee under Part I and in what manner and to what extent, (a) has never been decided by this Court, and (b) is squarely presented by the D. C. majority's holding that Part II impliedly repealed portions of Part I (particularly Section 10(h), which reaffirmed the antitrust laws) and gave the FPC authority to grant exemption from such laws.

If for no other reason than this, if this Court grants certiorari on the questions of the authority of the FPC to exempt contractual arrangements from the antitrust laws and state laws, this Court should also grant certiorari on this question of the relationship between Part I and Part II. In considering the other questions this Court would

not want to be in a position of inability to deal with this point which underlies the reasoning of the D. C. majority.

Moreover, the decision of the D. C. majority is in direct conflict with the decisions of other Circuits on this matter and this Court should grant certiorari for that reason also. Respondents concede that the opinion of the D. C. majority on this point conflicts with opinions of the Court of Appeals for the Second Circuit in *Niagara Falls Power Co.* v. *F. P. C.*, 137 F. 2d 787, 792, 793 (1943), and of another panel of the D. C. Circuit in *Alabama Power Co.* v. *F. P. C.*, 128 F. 2d 280, 293 (1942), simply arguing that the latter two opinions did not have the question directly involved. However that may be, these conflicting opinions certainly leave the matter in serious doubt until this Court determines it.

In addition to the above conflict, it is clear that the D. C. majority opinion is in direct conflict with the decision of the Third Circuit* and the Fourth Circuit decisions on an important aspect of the question. The Third Circuit held that while Part II was applicable to licensees under Part I, there was no inconsistency between the two parts of the Act and based its decision regarding applicability primarily on that reasoning. The Fourth Circuit, in both the Penn Water and Safe Harbor contract cases, also held that Section 10(h) of Part I, having been reenacted at the same time that Part II was enacted, was not repealed by Part II.** Contrary to both other Circuits, the D. C. majority holds that Part II is inconsistent with, and repeals important provisions of, Part I, particularly Section 10(h). This Court should remove

---

* *Safe Harbor Water Power Corp.* v. *F. P. C.*, 179 F. 2d 179, 185 (1949), cert. den. 339 U. S. 957 (1950).

** The position taken by the Fourth Circuit is the position taken by the government in its brief in this Court in *Isbrandtsen* v. *United States*, October Term, 1951, Nos. 134, 135, to the effect that an administrative body cannot sanction under one section of an act what Congress has flatly forbidden in some other section (Brief on Appeal in that case, pp. 17, 48).

the uncertainty on this important question of the interrelation of the two Parts of the Act in regard to licensees, as well as the question whether Part II is applicable at all.

It is respectfully submitted that the petition should be granted in all respects.

ERRORS TO BE URGED	19
SUMMARY OF ARGUMENT	20
ARGUMENT:	
I. The FPC has no authority to direct continuance of or base its orders on contractual arrangements adjudged illegal *per se* under the Federal antitrust laws	24
A. A regulatory body has no power to override the antitrust laws unless expressly authorized by Congress to do so	26
1. The pattern of Federal regulatory statutes with reference to the antitrust laws	27
2. Applicable decisions of this Court	30

PAGE

3. Pertinent rulings of other Federal regulatory agencies and the Attorney General 33

4. The provisions of the Act* relied on by the D. C. majority do not support its decision 35

5. The cases relied on by the D. C. majority do not support its decision 37

6. No question of exhaustion of administrative remedy is involved 40

B. Section 10(h) of the Act, reaffirming the antitrust laws, was not impliedly repealed by Part II of such Act and there is no repugnancy between these provisions 43

C. The FPC clearly ordered continuance of or based its orders upon, contractual provisions which are illegal *per se* 47

1. Pertinent Provisions of the FPC Orders 47

(a) The FPC orders required continuance of contractual arrangements adjudged illegal 48

(b) The FPC based critical features of its orders upon the assumed existence and continuance of the illegal contracts 52

2. The FPC orders clearly required continuance of or were based on illegal contractual arrangements regardless of Articles IV and V of the Baltimore contract 58

(a) The antitrust law illegalities are not merely contained in Articles IV and V of the contract but permeate the entire arrangement 59

* The Federal Power Act.

PAGE

(b) The FPC admits that it required continuance of the specified return method of payment, which is illegal *per se* 63

(c) The FPC admits that it required continuance of the entire Safe Harbor contract, which is also a foundation of the Penn Water rate orders 67

II. The FPC has no authority to direct continuance of or base its orders on contractual arrangements of a state utility corporation adjudged illegal under the laws of its state of incorporation 68

III. A licensee subject to regulation under Part I of the Act is not also subject to the different regulatory provisions of Part II 76

A. The language of the Act 77

B. The contractual nature of a license issued under Part I 83

C. The legislative history 86

IN THE

Supreme Court of the United States

OCTOBER TERM, 1951.

No. 428

PENNSYLVANIA WATER & POWER COMPANY and SUSQUEHANNA TRANSMISSION COMPANY of MARYLAND,
Petitioners,

v.

FEDERAL POWER COMMISSION, and CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE and PUBLIC SERVICE COMMISSION OF MARYLAND, Intervenors,
Respondents.

BRIEF FOR THE PETITIONERS.

Preliminary Statement.

This cause is before this Court on a writ of certiorari to review the judgment and orders of the United States Court of Appeals for the District of Columbia Circuit (D. C. Circuit), entered by a divided Court July 3 and 6, and September 6, 1951 (Printed Record (R.), Vol. 18, pp. 5394, 5395, 5399).

The judgment and orders denied motions to set aside, and instead affirmed, orders of the Federal Power Commission (FPC) issued under the Federal Power Act (the Act*) directing continuance of or premised on provisions of two power contracts (Baltimore and Safe Harbor contracts) which have been adjudged illegal in two

* For references to U. S. C. citations of sections, see table of citations.

unanimous decisions of the United States Court of Appeals for the Fourth Circuit (R., Vol. 18, p. 5322 and Opinion in Case No. 6315, January 3, 1952*) as violative of the Federal antitrust laws, Pennsylvania statutes, common law and public policy, the Fourth Circuit having held that the FPC had no authority to validate the contracts by the orders here involved.**

Opinions Below.

The majority opinion (R., Vol. 18, p. 5367) of the D. C. Circuit, per Bazelon, J., in which Fahy, J., joined (D. C. majority), and the dissenting opinion (R., Vol. 18, p. 5402) of Wilbur K. Miller, J., are reported at 193 F. 2d 230. The opinions and orders of the FPC of January 5, 1949, February 28, 1949, March 17, 1949, October 27, 1949 and December 15, 1949, which were affirmed by the D. C. majority, are found at R., Vol. 16, pp. 4845, 5178, 5220 and Vol. 17, pp. 5267, 5315.

Jurisdiction.

The petition for a writ of certiorari was granted February 4, 1952 (R., Vol. 18, p. 5419).*** The jurisdiction of this Court rests on Section 1254(1) of the Judicial Code

---

* Pamphlet opinion furnished Court on petition for certiorari (Pamphlet op.).

** *Pennsylvania Water & Power Co., Pennsylvania Public Utility Commission* v. *Consolidated Gas Electric Light & Power Company of Baltimore, Public Service Commission of Maryland*, 184 F. 2d 552 (1950), cert. den. 340 U. S. 906 (1950), relating to the Baltimore contract; *Pennsylvania Water & Power Co., Pennsylvania Public Utility Commission* v. *Consolidated Gas Electric Light & Power Co., Safe Harbor Water Power Corporation, Public Service Commission of Maryland*, No. 6315, January 3, 1952, affirming District Court for Maryland, 97 F. Supp. 952 (May 3, 1951) and Docket No. 5253 (Op. March 12, 1951 and Order March 19, 1951), relating to the companion Safe Harbor contract.

*** Certification to the FPC of the opinion and judgment (in lieu of mandate) of the D. C. Circuit has been stayed (Transcript of Record (Tr.) 5750) and the stay was extended and is still in effect pending final decision of this Court. The FPC orders are expressed

(62 Stat. 928, 28 U. S. C. §1254(1) and Section 313(b) of the Act (49 Stat. 860, 16 U. S. C. §825(l)).*

Issues Presented.**

The primary issue in this case is whether the FPC (in the absence of any express authority in the Act such as is found in certain other Federal regulatory statutes) may compel electric utilities to perform, and may base its rate orders upon continued performance of, contracts which have been adjudged by the courts to be *per se* illegal and therefore void in their entirety as violative of the Federal antitrust laws, the laws of the utilities' state of incorporation and public policy.

This issue will be dealt with under Point I, relating to the Federal antitrust laws (the antitrust laws), and under Point II, relating to state law and public policy.

There is a further issue, discussed in Point III, whether a licensee subject to regulation under Part I of the Act, is also subject to the different regulatory system of Part II

---

to be operative from and after February 1, 1949, but their effect was stayed by order of the FPC, and by order of the D. C. Circuit, and revenues collected by Penn Water from its four electric utility customers in excess of the amounts allowed by the FPC orders have been segregated to await the final determination of the case.

---

* This Court also granted certiorari to review the judgment and orders of the D. C. Circuit on a petition filed by the Pennsylvania Public Utility Commission (No. 429). Both cases have been set down for hearing on the same date during the week of March 31, 1952.

** While there was a voluminous record below, the basic issue here is a simple one as Judge Miller said (R., Vol. 18, p. 5403). All that is needed are the power contracts (R., Vol. 15, pp. 4554-4603, 4606-21), opinions of the Fourth Circuit (R., Vol. 18, pp. 5322, 5356 and Pamphlet Op.), judgments entered on such opinions (R., Vol. 18, pp. 5396, 5398), opinions of the D. C. Circuit (R., Vol. 18, pp. 5367, 5402), and portions of the opinions and orders of the FPC (R., Vol. 16, pp. 4845-65, 4952-97, 5178-94; Vol. 17, pp. 5267-92). Petitioners were, however, unable to obtain from respondents' counsel a stipulation thus limiting the printed record.

of the Act. The asserted applicability of Part II was in turn basic to the D. C. majority's holding that the antitrust laws were repealed by implication by Part II and, particularly, that Section 10(h)* of Part I, reaffirming the antitrust laws, was so repealed.

Statement.

The two power contracts which are the basis of the FPC orders under review, and which were adjudged illegal by the Fourth Circuit are: (1) The Baltimore contract between Pennsylvania Water & Power Company (Penn Water) as, seller and Intervenor, Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated) as buyer; and (2) The Safe Harbor contract between Safe Harbor Water Power Corporation (Safe Harbor), as seller, and Penn Water and Consolidated as buyers.** They were termed by the FPC the "foundation contracts" of its orders (R., Vol. 16, p. 4859). The FPC orders on review directed continuance of illegal contractual arrangements contained in the Baltimore contract, and substantive provisions of such orders were based on the assumed continuance of both contracts.

---

* Section 10(h) of Part I was reenacted in 1935 when Part II of the Act was first enacted. It reads as follows:

"Section 10. All licenses issued under this Part shall be on the following conditions: * * *

"(h) That combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited."

** The Baltimore contract consisted of three agreements dated December 31, 1927, June 1, 1931 and September 29, 1939 (R., Vol. 15, pp. 4577-4603, 4606-21). The Safe Harbor contract consisted of three agreements dated June 1, 1931, August 1, 1932 and November 22, 1939 (R., Vol. 15, pp. 4554-76). In the case of each contract the basic agreement was the one dated June 1, 1931.

The Corporations Involved in the Illegal Contracts.

Penn Water is a Pennsylvania electric utility corporation owning a hydroelectric generating plant at Holtwood, Pennsylvania, on the Susquehanna River. Penn Water also owns a steam electric generating plant and transmission lines in Pennsylvania and, through Susquehanna Transmission Company of Maryland (Transmission Company)*, transmission lines in Maryland. The present business of such companies is the generation and sale and transmission of electric energy at wholesale and in bulk. Penn Water also purchases electric energy for resale. Penn Water, directly and through Transmission Company, has charter rights for the sale of electric energy to the public at retail in Pennsylvania and Maryland. Although it has at the present time no retail distribution system, Penn Water has one large retail customer, the Pennsylvania Railroad.** Penn Water is a licensee under Part I of the Act.

Safe Harbor is a Pennsylvania electric utility corporation owning a hydroelectric generating plant at Safe Harbor, Pennsylvania, on the Susquehanna River, about eight miles above the Penn Water hydroelectric plant at Holtwood. It has no transmission lines or retail distribution system. Its business is the sale of electric energy at wholesale and in bulk. Safe Harbor is a licensee under Part I of the Act.***

---

* References to Penn Water will include Susquehanna Transmission Company of Maryland, its wholly-owned subsidiary, except where inappropriate.

** The Railroad is supplied under a contract made jointly with Safe Harbor, Consolidated and Potomac Electric Power Co., but the FPC did not assert jurisdiction over this contract, the energy sold thereunder not being for resale.

Penn Water also sold electricity at retail to the street railway system in Baltimore until Consolidated took the business (R., Vol. 18, p. 5325).

*** The voting stock of Safe Harbor is owned one-half by Penn Water and one-half by Consolidated. Consolidated also owns an equal number of shares of non-voting stock.

Consolidated, one of the large utility companies in the United States, is a Maryland electric utility corporation with steam electric generating, transmission and distribution facilities in and around Baltimore, Maryland. Consolidated has generating capacity several times that of Penn Water or Safe Harbor and is in the business of selling electric energy at wholesale and in bulk as well as at retail and of purchasing energy for resale. Consolidated is also in the business of manufacturing and distributing gas and has a steam heating business. Consolidated's financial structure ($313,000,000 gross assets) is many times the size of that of Penn Water ($63,000,000 gross assets).

The plants of Penn Water and Safe Harbor are physically connected through the transmission lines of Penn Water. These plants are also physically connected through those lines (a) in Pennsylvania, with neighboring utilities Pennsylvania Power & Light Company (PP&L) near Lancaster, Philadelphia Electric Company (PE) in Coatesville, and Metropolitan Edison Company (ME) in York, and (b) in Maryland, with Consolidated near Baltimore and with Potomac Electric Power Company (PEPCO), which serves Washington, D. C. Like Consolidated, each of these four other utilities has substantial generating capacity, as well as transmission lines and retail distribution facilities.*

Except for the illegal contracts, power generated by Penn Water, Safe Harbor and Consolidated would be in competition or potential competition everywhere in the region, as held by the Fourth Circuit. The Fourth Circuit said:

---

* The locations of the generating plants and transmission lines of these companies and other companies in the region are shown on the map attached to the back cover of this brief.

"If it were not for the agreement between the parties which is the subject of this suit, the parties would be potential competitors in the generation and sale of electric energy through their present facilities or other facilities that might be constructed; and would also be potential competitors in the purchase of power from others for resale. The power required by Potomac Electric to supply the wants of consumers in the District of Columbia could be purchased by Potomac Electric either from Consolidated or Penn Water and could be supplied by their present facilities or additional facilities that might be built, or by purchases from others. Similarly, Penn Water and Consolidated would be potential competitors for the supply of electric energy in and around Baltimore at wholesale or retail to customers with their present lines or an extension thereof to be approved by the public authorities.

"The electric power which is now distributed in and near Coatesville, Pennsylvania, by Philadelphia Electric could be supplied from the facilities now owned or additional facilities to be built by Penn Water or could be supplied from the facilities of Consolidated.

"Similarly, Penn Water and Consolidated would be potential competitors with respect to energy taken from Penn Water by Metropolitan Edison and Pennsylvania Fuel [Power] & Light which is used in York and Lancaster areas.

"Penn Water and Consolidated would be potential competitors for the sale of power to Potomac Edison at Frederick, Maryland, whose lines at that point are only a short distance from the lines of Penn Water so that they could easily be connected" (R., Vol. 18, pp. 5326-7).

The Fourth Circuit made a similar statement regarding Safe Harbor (Pamphlet Op., p. 8).

The Fourth Circuit Decisions Adjudging the Baltimore and Safe Harbor Contracts Illegal *Per Se*.

Since the illegality of the Baltimore and Safe Harbor contracts has been established in other proceedings in the Fourth Circuit (and the question here is the authority of the FPC to perpetuate illegal arrangements or base its rate orders thereon), it is not necessary to discuss the illegalities in detail. It will suffice to summarize the Fourth Circuit decisions.

The Fourth Circuit (Parker, Soper and Dobie, JJ.) unanimously held the Baltimore and the Safe Harbor contracts to be illegal on their face and void in their entirety, as in violation of the Federal antitrust laws, the statutes of Pennsylvania, common law and public policy.

The Fourth Circuit held that the contracts surrendered control of Penn Water and Safe Harbor to Consolidated, stifled their initiative with respect to rates, services, operating economies and new business and destroyed their independent corporate character as Pennsylvania corporations. By giving control to Consolidated over their contracts, sales, purchases, prices, territories, markets, output and expansion, the contracts made Penn Water a "virtual vassal of Consolidated" (R., Vol. 18, p. 5408) and Safe Harbor an "impotent agency" (R., Vol. 18, p. 5362). Not only did the contracts by their express terms confer these restrictive control powers on Consolidated, but the very method of payment provided for effectively prevented competition by stifling all incentive of Penn Water and Safe Harbor to compete.*

---

* The Safe Harbor contract was substantially similar to the Baltimore contract, except that Safe Harbor's power not sold to others under contracts approved by Consolidated was to be sold two-thirds to Consolidated and one-third to Penn Water (instead of all to Consolidated) and Consolidated and Penn Water divided

Under the contracts Penn Water and Safe Harbor (sellers) were to be paid for power, not on the customary basis of a rate specified in advance per unit of capacity and energy actually furnished, but, regardless of the amount of power delivered, on the unusual basis of annual payments equal to all of the sellers' operating expenses, including taxes, and a specified percentage return on plant investment, with a credit for revenues received by the sellers from sales of power to others made with Consolidated's approval, and (in the case of Penn Water) with a charge for amounts paid by Penn Water for power purchased by it under contracts made with Consolidated's approval.

Such an arrangement is not in effect in the various power pools around the country and is virtually unheard of in the power industry, except in the case of a parent and a wholly-owned subsidiary where the subsidiary is merely an incorporated "vest pocket" of the parent.

The payment provisions of the Baltimore and Safe Harbor contracts do not provide for rates in the ordinary sense at all. They merely set up a series of debits and credits designed to bring the sellers out at a specified overall rate of return on plant investment unrelated to actual operations or deliveries of power. The amount of charges either in total dollars or per unit of supply cannot even be

---

the residual payments to be made to Safe Harbor therefor on a two-thirds-one-third basis (instead of the entire residual payment being made by Consolidated). As counsel for Consolidated stated in the District Court in the Baltimore contract case (Ct. Tr., p. 422, Oct. 5, 1949) "the contract is substantially the same * * *. It is almost identical language." However, Consolidated refused to concede the illegality of the Safe Harbor contract following the Fourth Circuit decision on the Baltimore contract and this Court's denial of certiorari, and Penn Water therefore brought a declaratory judgment action in respect of the Safe Harbor contract similar to its action in respect of the Baltimore contract.

computed except retroactively, on an annual basis, long after the rendering of the service. This is not the accepted concept of fixed and definite rates and charges, such as, for example, public utilities under Section 205(c) of the Act are required to keep on file, for public inspection, with respect to every sale of electricity.*

This arrangement can even work out so that for a given year Consolidated will not only not pay Penn Water for a large amount of power received from it but will actually have a credit at the expense of the other customers. If the orders had been in effect for 1946, on the basis of the FPC test figures for that year, instead of Consolidated paying Penn Water for power, Penn Water would have had to pay Consolidated $616,000 (R., Vol. 16, pp. 4958, 4979). This is obviously an improper preference to Consolidated and discrimination against customers paying on a unit rate basis such as the three Pennsylvania utilities.**

Penn Water's contracts with its three other electric utility customers, (PP&L, PE and ME) are power contracts of the usual type, specifying in advance rates per unit of capacity and energy actually delivered. These contracts

---

* Where charges for services are on a unit-rate basis any customer, by inspection of the tariffs, can see what any other customer is paying per unit of power and make comparisons with its own payments. In the case of Penn Water, none of its customers can ever know at any given time what Consolidated is paying for its service from Penn Water. Furthermore, the price per unit of supply can change substantially either up or down without any necessity for filing new schedules or obtaining commission approval as is normally necessary before any change can be made in unit rates. Payments are even adjusted years later by reason of such items as tax refunds or extra assessments.

** The specified return method of payment adopted in the FPC order of October 27, 1949 (R., Vol. 17, pp. 5279-83) should be contrasted with the usual unit rates in the schedules provided in the order with respect to services to the three Pennsylvania customers (R., Vol. 17, pp. 5284-92).

are also normal in that they do not have managerial controls by one company over the other.*

In its decisions on the Baltimore and Safe Harbor contracts, the Fourth Circuit mentioned particularly the following among the *per se* violations of the Sherman and Clayton Acts: (a) The prevention of competition between Penn Water, Safe Harbor and Consolidated, (b) the restraints on sales of power by Penn Water and Safe Harbor, (c) the restraints on installations of new facilities by Penn Water and Safe Harbor and (d) the restraints on purchases of power by Penn Water.**

The Fourth Circuit also held that the restraints in the contracts deprived Penn Water and Safe Harbor of the initiative each was required to exercise in respect of services and rates under the Pennsylvania statutes, and that the crippling effect of the contract on each company and its Board of Directors, even in the absence of the statutes, was violative of common law and public policy as laid down in decisions of this Court.*** In other words, the Fourth

---

* These three contracts were entered into with the approval of Consolidated under the Baltimore contract, and Safe Harbor executed the contracts with PP&L and PE jointly with Penn Water, with the approval of Consolidated. The FPC orders also dealt with the rates in these three contracts.

** The Fourth Circuit, in the Baltimore contract case, also listed among the restrictive provisions the provision for an Operating Committee, giving Consolidated a veto over managerial decisions of Penn Water, and the arbitration article (R., Vol. 18, pp. 5328-9). The Fourth Circuit, in the Safe Harbor contract case, specifically enumerated among the restrictive provisions of the Safe Harbor contract (Pamphlet Op., p. 7) the payment provision, which was in all pertinent respects like the specified return method of payment provision in the Baltimore contract, and the provision for an Operating Committee giving Consolidated a veto over managerial decisions of Safe Harbor.

*** One of the cases cited by the Fourth Circuit to support the proposition was *Gibbs* v. *Consolidated Gas Company of Baltimore*, 130 U. S. 396 (1889), where this Court had condemned similar contractual arrangements attempted by Consolidated (or a predeces-

Circuit held the contractual arrangements to be violative of the fundamental organic law of Penn Water's and Safe Harbor's state of incorporation, common law and public policy, and not mere violations of some regulation imposed by Pennsylvania or its Public Utility Commission.*

The Fourth Circuit in the Baltimore contract case also decided an issue as to the FPC's authority, injected into the case by Consolidated for the first time on appeal, holding that the approval of the contract by the FPC orders here under review did not validate the contract, that the FPC had no authority to exempt the contract from the antitrust laws or oust the courts from jurisdiction to enforce those laws, and that the antitrust laws had not been impliedly repealed by the Act, but that Section 10(h) of Part I reaffirmed the antitrust laws.

The Fourth Circuit concluded that some new arrangement would be necessary, saying

> "It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania" (R., Vol. 18, p. 5349).

---

sor) in the gas field as violative of common law and public policy. In its brief in the Baltimore contract case Consolidated conceded that that contract was "vicious" and was unable to distinguish its essence from the present Baltimore contract.

---

* Having decided that the Baltimore contract was illegal on the grounds mentioned, the Court in the Baltimore contract case expressly stated it was not passing on further questions of illegality such as *ultra vires*, although it later did so in the Safe Harbor contract case, where it held the contract *ultra vires*, by adopting the District Court decree (R., Vol. 18, p. 5398) to that effect in *haec verba* in its mandate.

In their petitions for certiorari in the Baltimore contract case, Consolidated and the Maryland Public Service Commission stressed the contention that the FPC had authority under the Act to validate the contract and had done so. This Court denied certiorari, 340 U. S. 906 (December, 1950).*

The decision of the Fourth Circuit on the Safe Harbor contract was simply a sequel to its previous decision on the Baltimore contract and followed it, finding that the effects of the Safe Harbor contract were essentially similar to those of the Baltimore contract. This was the only new issue in the Safe Harbor contract case. The Fourth Circuit reiterated its holding that the FPC had no authority to override the antitrust laws and state law and validate the contract and quoted with approval the dissenting opinion of the D. C. Circuit (Pamphlet Op. pp. 18-19). Both Fourth Circuit decisions follow established lines of decisions handed down by this Court.**

The Baltimore and Safe Harbor contracts were made for a term of 50 years at a time (June 1, 1931) when Penn

---

* The Maryland Commission intervened in the District Court and Court of Appeals in both contract cases, asking that the contracts be upheld. The Pennsylvania Commission also intervened in both cases, asserting that the contracts violated the laws of Pennsylvania and public policy. Counsel for the FPC were present in the District Court and Court of Appeals in both these cases, and were furnished at their request with all the Penn Water briefs in those cases. They sought to intervene by formal petition at the last minute in the Court of Appeals in the second case to urge the claim that the FPC has authority to validate the contract. The FPC was denied intervention because the application was not timely (Pamphlet op. p. 3), but the FPC was allowed to file a 55-page brief and to take part in the argument.

** Consolidated and the Maryland Commission filed petitions for certiorari in the Safe Harbor contract case, February 23, 1952. There is no more reason for granting these petitions than there was in the Baltimore contract case, which was simply reaffirmed by the Safe Harbor contract decision. The newly filed certiorari petitions will, therefore, be opposed.

Water, Safe Harbor and Consolidated were under the common control of J. E. Aldred and associates, which control began in 1910 and extended at least through 1946 (R., Vol. 18, p. 5329). The contracts were left-overs of the era of private banking house and holding company control of utilities. At the present time, however, there is no common control of Penn Water and Consolidated, and Penn Water has over 6,000 stockholders.

As the Fourth Circuit said with respect to the contracts:

> "These restrictions which tied the parties together and stifled individual initiative for the period of 50 years were made to promote the advantage of the persons in control and not primarily in the interest of the public." (Pamphlet Op., p. 15).

The oppressive contract powers had actually been used by Consolidated (R., Vol. 18, pp. 5330, 5334-5). Consolidated had required Penn Water to purchase power from it. Consolidated had interfered with Penn Water's contracts with the Pennsylvania customers. Consolidated had forbidden Penn Water in 1947 to expand its transmission system in Pennsylvania to meet the needs of the Pennsylvania customers. By December 1948 Consolidated had withheld over $900,000 of payments due to Penn Water. In November 1948 Consolidated prohibited Penn Water from building a large new steam electric generating plant at Holtwood.* This new plant could have produced economical power beginning in this year of heavy power demand by using coal deposited in the Susquehanna River (free but for the cost of dredging and processing) which would otherwise go to waste. Instead Consolidated insisted not only on preventing this source of competition from Penn Water but also on building a new steam plant of its own in

* At a cost, including attendant facilities, of about $20,000,000.

Baltimore, to be fueled with the more expensive bituminous coal bought in the market (R., Vol. 18, p. 5330).

It was this refusal of Consolidated under the Baltimore contract to permit Penn Water to proceed with a new steam plant, and this withholding of over $900,000, that caused Penn Water to begin the contract litigation on December 21, 1948.*

The Proceedings Before the FPC and the D. C. Circuit.

In September, 1944 the FPC by order initiated a proceeding to examine into Penn Water's rates. No hearings were begun until 1946. Hearings were completed in July, 1947. The first FPC order was issued eighteen months later (January 5, 1949). Consolidated, the Maryland Commission and the Pennsylvania Commission intervened in the proceeding.

The FPC assumed jurisdiction over not only Penn Water's rates to Consolidated but also over the rates for Penn Water's services in Pennsylvania to PP&L, PE and ME.

The FPC (1) directed continuance of illegal contractual arrangements including Consolidated's restraints and vetoes over managerial decisions and the illegal method of payment; and (2) based substantive provisions of its orders upon the assumed existence and continuance of the illegal contracts (a) by computing the amount of the total reduction in Penn Water's revenues so as to lower Penn Water's return to the abnormally low rate of 5¼% per annum (and then by a subsequent order to 4¾%) of

* Almost immediately Consolidated applied for and obtained from the District Court for Maryland (Coleman, J.) a preliminary injunction requiring Penn Water to perform the Baltimore and Safe Harbor contracts. The injunction remained in force until dissolved pursuant to order of the Fourth Circuit, January 17, 1951, after this Court had denied certiorari.

depreciated original cost upon the express basis of the "guaranteed fixed return" supposedly assured by the illegal long-term Baltimore contract, (b) by basing its jurisdiction over rates for Penn Water's services in Pennsylvania to the three Pennsylvania customers upon the existence of an alleged single interstate system (the facilities of Consolidated, Penn Water and Safe Harbor) created by the two illegal contracts, and upon interstate purchases of power by Penn Water from Consolidated required by an exclusive dealing provision in the Baltimore contract adjudged illegal *per se* under Section 3 of the Clayton Act, and (c) by basing the allocation of the reduction predominantly to Consolidated, as against the three Pennsylvania customers of Penn Water, on the assumed "entitlements" and "obligations" created solely by the two illegal contracts.

The FPC in its orders assumed jurisdiction over the rates of Penn Water under Part II of the Act as well as under Part I* and applied the regulatory system of Part II to Penn Water. As a result, Penn Water, a licensee under Part I, is in the impossible situation of being subjected to two conflicting regulatory systems.

The first FPC order was not issued until January 5, 1949, shortly after the contract litigation had been begun. The illegalities of the contracts, as raised by the contract litigation, were immediately brought to the attention of the FPC in a petition for rehearing, January 28, 1949. But the FPC denied rehearing, February 28, 1949, and held that, even if the Courts determined the contracts to be illegal, such illegalities would be immaterial to its orders (R., Vol. 16, p. 5184).

---

* Jurisdiction under Part I was asserted on the basis of the alleged inability of the Maryland Commission to agree with the Pennsylvania Commission.

Again the FPC reiterated this position when, on October 27, 1949, it entered an order, without notice or hearing, and, although exclusive jurisdiction of the proceeding had vested in the D. C. Circuit pursuant to Section 313(b) of the Act (the transcript of the record having been previously filed with the D. C. Circuit). By that order the FPC rejected rate schedules filed by Penn Water pursuant to the first FPC order, and prescribed new rate schedules, again based on and including the illegal contractual provisions, making substantive changes in its previous orders, including a further reduction of Penn Water's rate of return from 5¼% to 4¾%, and the addition of fuel rate adjustments in the Pennsylvania customer contracts.*

The petitions to the D. C. Circuit to review the FPC orders brought to the attention of that Court the illegalities of the Baltimore and Safe Harbor contracts, raised in the contract litigation, as grounds for setting aside the orders (R., Vol. 16, pp. 4807, 4813-14; R., Vol. 17, pp. 5222, 5230).

Prior to the completion of the filing of briefs in the D. C. Circuit in the present case, and after the Fourth Circuit decision invalidating the Baltimore contract, Penn Water moved (November 21, 1950) in the D. C. Circuit for leave to present that decision to the D. C. Circuit as a basis for setting aside the FPC orders on the ground that they were founded on the illegal Baltimore contract. When this Court denied certiorari in the Baltimore contract case, leave was granted by the D. C. Circuit and the matter was briefed and argued. While the decision was pending below, and immediately following the decision of the District Court for Maryland invalidating the Safe Harbor contract, Penn

* The position was reiterated when the FPC, by order of December 15, 1949, (R., Vol. 17, p. 5315) denied Penn Water's third petition for rehearing in which the contract illegality was again formally brought to the attention of the Commission.

Water moved (May 8, 1951) in the D. C. Circuit for leave to argue that the FPC orders should be set aside on the further ground that they were founded also on the illegal Safe Harbor contract.

The motions to set aside the FPC orders were denied by the D. C. majority which affirmed the FPC orders in all respects.

Penn Water's objectives in the cases in the Fourth Circuit were (1) to be free to compete with Consolidated, particularly as regards sales and purchases at wholesale, without the illegal restrictive controls by Consolidated and illegal pooling of revenues provided for in the contracts, and (2) to have its policies, contracts and expansion, and the exercise of initiative with respect to its rates, services, operating economies and new business, controlled by its Board of Directors as required by the laws of its state of incorporation.*

The FPC admitted that control by Consolidated over Penn Water is perpetuated by the FPC rate orders when it said in its brief below (Tr. 5574) that the arrangement prescribed by the FPC rate orders "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's facilities."

Obviously this is a situation which the antitrust laws and the regulatory acts enacted in the 1930's were designed to prevent, *i.e.*, the exercise of controls and stifling of com-

---

* Contrary to assertions which have been made in these cases by Penn Water's opponents, the record is clear, as the Fourth Circuit said in a passage quoted in the D. C. dissenting opinion (R., Vol. 18, p. 5410), that Penn Water is not trying to stop electric service to Consolidated and thereby to withdraw from interstate commerce and thus escape from whatever regulatory system Congress has imposed on such interstate electric business.

petition by a large utility corporation such as Consolidated. The Federal Power Act itself is one of those acts, and is a reaffirmation of such principles, witness Section 10(h). This section was reenacted in 1935 as a portion of Part I of the Act, the whole of which (Parts I, II and III) was enacted as Title II of the Public Utility Act of 1935.

As the dissenting opinion points out (R., Vol. 18, pp. 5411-12, 5403) after the decision in the Fourth Circuit, the FPC "should have called the parties in and required them to work out immediately a new contract in conventional form which would accord with the opinions of the Court of Appeals for the Fourth Circuit," and "the Commission's orders stood in a vacuum after the Fourth Circuit held the contract invalid; the only service to which they can have application may not be lawfully continued."

The Baltimore and Safe Harbor contracts were properly stricken down by the Court. They should not in any respect be maintained through the guise of FPC rate orders.

Errors To Be Urged.

The D. C. Circuit erred in:

(1) Holding that the FPC had authority to direct continuance of contractual arrangements adjudged illegal under the antitrust laws and base critical features in its orders thereon.

(2) Holding that the FPC had authority to order continuance of contractual arrangements adjudged illegal under fundamental state laws and base critical features in its orders thereon.

(3) Holding that a licensee subject to the regulatory system of Part I of the Federal Power Act is also subject to the different regulatory system of Part II thereof.

(4) Holding that, regardless of whether Part II is generally applicable to licensees under Part I, the enactment of Part II repealed by implication portions of Part I, such as Section 10(h) and the provisions giving licensees a net investment rate base.

(5) Denying motions to set aside, but instead affirming, the orders of the FPC, including orders of October 27, 1949 and December 15, 1949, which were issued (a) after the D. C. Circuit had exclusive jurisdiction of the case under Section 313(b) of the Act, and (b) without notice and without opportunity for hearing in violation of the Fifth Amendment of the Constitution of the United States.

Summary of Argument.

I. The FPC has no authority to direct continuance of or base its orders on contractual arrangements adjudged illegal *per se* under the Federal antitrust laws.

The holding of the D. C. majority that the Federal Power Act repealed *by implication* the antitrust laws (which are specifically reaffirmed by Section 10(h) of the Federal Power Act itself), and empowered the FPC to require continuance of, and base important features in its orders on, contractual arrangements specifically adjudged illegal *per se* and void under the antitrust laws, is contrary to the decisions of this Court in *U. S.* v. *Borden Co.*, 308 U. S. 188 (1939), *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439 (1945), *U. S. Alkali Export Assn.* v. *U. S.*, 325 U. S. 196 (1945) and many other cases.

Congress has followed a clear and consistent pattern in regulatory legislation, of expressly specifying and narrowly confining any power intended to be conferred on a regulatory body to override the antitrust laws. Limited power of this character as to specified types of transac-

tions has been given to certain agencies but not to others. The only type of transaction as to which the FPC has been given such power is that given by the December 1950 amendment to Section 7 of the Clayton Act in connection with acquisitions of stock or assets.

This Court has repeatedly held that there is no implied repeal of, or exemption from, the antitrust laws and that even express statutory authorization to regulatory bodies to grant such exemption must be strictly construed and limited to the precise transactions specified in the authorization. Other Federal regulatory agencies (contrary to the FPC), and the Attorney General have recognized and carefully observed this basic principle.

The D. C. majority, however, held the antitrust laws and Section 10(h) of Part I of the Federal Power Act impliedly repealed by mere general regulatory provisions of Part II of the Act. The FPC clearly can, and is required, to administer these regulatory provisions without approving, as it did here, contractual arrangements which stand adjudicated as illegal under the antitrust laws. Under the system of unit-rates for capacity and energy, universally recognized as to electric utilities, it is neither necessary nor appropriate to allow one independent company to exercise managerial control over another or to stifle its initiative and incentive by illegal revenue pooling and other restrictive controls. See *U. S.* v. *Paramount*, 334 U. S. 131 (1948); *U. S.* v. *Reading Co.*, 253 U. S. 26 (1920); *Carter* v. *Carter Coal Co.*, 298 U. S. 238 (1936), and other Supreme Court and Courts of Appeals cases. The illegal contractual arrangements are basic to every important feature of the FPC rate orders here involved, including their provisions as to jurisdiction, rate of return, method of payment and allocation of the rate reduction among customers.

Basic to the argument of the D. C. majority that Section 10(h) of Part I and the antitrust laws were impliedly

repealed is ~~the asserted~~ applicability of Part II of the Act to licensees under Part I, such as Penn Water. That Part II is not applicable to such licensees is shown in Point III herein. However, even if it is applicable, there is nothing in Part II which impliedly repeals Section 10(h) of Part I and the antitrust laws, as shown in Point I herein.

II. The FPC has no authority to direct continuance of or base its orders on contractual arrangements of a state utility corporation adjudged illegal under the laws of its state of incorporation.

The D. C. majority completely ignored that the contractual arrangements on which the FPC orders are based stand adjudicated as violating not only the antitrust laws but also the corporation and public utility statutes and common law of Pennsylvania (the state of incorporation of Penn Water and Safe Harbor) and as being against public policy. As adjudicated by the Fourth Circuit, the contracts destroy the initiative of such corporations as to rates and services, give managerial control of Pennsylvania electric utility corporations to another, and are *ultra vires*. Thus, the illegalities are not in the field of utility "regulation", but involve violations of the fundamental organic laws of Pennsylvania.

Unlike some Federal regulatory statutes, the Federal Power Act contains no provision whatever for overriding state laws but on the contrary affirmatively states the policy of Congress even in the field of regulation only to supplement the authority of states where necessary to regulate transactions beyond the reach of the states.

Not only has Congress not authorized the FPC to approve or require violations of state laws such as are involved here, but it could not constitutionally do so because of the requirements of the Fifth and Tenth Amendments to the Constitution. *Chicago Title & Trust Co.* v. *41-36 Wilcox Building Corp.*, 302 U. S. 120 (1937); *Hopkins Federal Sav-*

ings & Loan Ass'n. v. *Cleary*, 296 U. S. 315 (1935); *Carter* v. *Carter Coal Co.*, 298 U. S. 238 (1936).

III. A licensee subject to regulation under Part I of the Act is not also subject to the different regulatory provisions of Part II.

Penn Water, as a licensee under Part I of the Act, is subject to the separate and different regulatory system provided for licensees under Part I. The D. C. majority's holding that Part II of the Act repealed Part I by implication (despite the reenactment of Part I at the time Part II was enacted) is untenable and contrary to the canons of construction as laid down by this Court in *United States* v. *Jackson*, 302 U. S. 628 (1938).

As confirmed by other Courts of Appeals decisions (*Niagara Falls Power Co.* v. *Federal Power Commission*, 137 F. 2d 787 (1943) and *Alabama Power Co.* v. *Federal Power Commission*, 128 F. 2d 280 (1942)), interstate sales of licensees are subject only to regulation under Part I (by the states involved unless one of them has no regulatory authority or the regulatory authorities of the states are unable to agree, in which case regulation is by the FPC) and Part II merely provides for FPC regulation of electric utilities other than licensees as to transactions which this Court had held could not be reached by State regulation in *Public Utilities Commission* v. *The Attleboro Steam and Electric Co.*, 273 U. S. 84 (1927).

The D. C. majority's holding would subject licensees to two conflicting systems of regulation, since the regulatory system of Part I differs from that of Part II, for example as to the regulatory authority (i.e. State instead of Federal) and as to the nature of the rate base to be used in fixing rates.

Both the language and the legislative history of the Act show that Congress enacted Part II "entirely as a

supplement to, and not a substitute for, State regulation." Moreover, under the express terms of Part I, the license is a contract which cannot be altered (by amendment of the Act or otherwise) without the licensee's consent.

Argument.

I. The FPC has no authority to direct continuance of or base its orders on contractual arrangements adjudged illegal *per se* under the Federal antitrust laws.

The contractual arrangements which are basic to the FPC orders here involved are not of a type which may be lawful or unlawful depending upon whether the facts disclose a "reasonable" or "unreasonable" restraint of trade. Instead, they stand adjudicated as illegal on the basis of contractual restraints on competition of the type which this Court has repeatedly held so vicious as to be illegal *per se*, including price fixing, restrictions on plant expansion, division of territory, exclusive dealing provisions and pooling of revenues. The Fourth Circuit, in the decision as to which this Court denied certiorari, expressly held the contractual arrangements illegal *per se* and stated that regardless of considerations of reasonableness or of intended or actual beneficial result, such contractual arrangements were void on their face in their entirety.* In so holding, the Fourth Circuit was following

*The D. C. majority opinion contains a statement that the Fourth Circuit decision is construed as "having done no more than declare illegal under the antitrust laws certain restraints exercised by Baltimore Company upon Penn Water—such as requiring its approval before it could take on new customers or expand generating facilities" (R., Vol. 18, pp. 5374-5). This was an obvious misconstruction, since the Fourth Circuit's opinions expressly held the contracts illegal and void in their entirety as vio-

controlling decisions of this Court.* Under those decisions the Rule of Reason is not applicable to restraints of the type involved here, as the Fourth Circuit pointed out (R., Vol. 18, pp. 5332-3).

Despite the *per se* illegality of the arrangements, the D. C. majority affirmed the FPC orders, holding the antitrust laws inapplicable to those orders on the ground that general regulatory provisions contained in Sections 202 and 205 of Part II of the Act have impliedly repealed the antitrust laws and Section 10(h) of Part I of the Act (which the D. C. majority conceded virtually restates the Sherman Act).**

This holding is in error since there is no authority in any regulatory body to override the antitrust laws in the absence of express provision therefor by Congress (Sec-

---

lative of the antitrust laws, state law and public policy. Respondents themselves have made no attempt to uphold the D. C. majority's misconstruction of the Fourth Circuit decision, having admitted in their briefs relating to the petition for certiorari that the contracts were invalidated in their entirety. Under the circumstances it is unnecessary to discuss the point at length in this brief.

S. 827; *Lee Line Steamers, Inc.* v. *Memphis, Helena & Rosedale Packet Co.*, 277 Fed. 5, 8 (6th Cir., 1922).

** The respondents' contention in connection with the petition for certiorari, to the effect that this holding was dictum, is without the slightest foundation. The D. C. majority clearly realized that it could not uphold the FPC orders without finding FPC power

tion A of this Point), and Section 10(h) of the Act, expressly reenacted in 1935 simultaneously with the enactment of Part II, specifically reaffirms the applicability of the antitrust laws to electric utilities which are licensees under the Act such as Penn Water and Safe Harbor (Section B of this Point).

The FPC clearly ordered continuance of or based its orders upon contractual provisions which are illegal *per se*. (Section C of this Point.)

A. A Regulatory Body Has No Power to Override the Antitrust Laws Unless Expressly Authorized by Congress To Do So.

The D. C. majority concedes (R., Vol. 18, p. 5373) that "repeals by implication are not favored" and refers to no provision of the Act or of any other act providing for exemption of electric utilities from the antitrust laws or permitting the FPC to override such laws. The Act does not contain, as do some Federal regulatory acts, any provision authorizing the FPC to override the antitrust

---

to absolve illegal contracts from the antitrust laws. Judge Bazelon's opinion, devoting five pages to that subject, stated that to uphold Penn Water's position would be "to substitute antitrust criteria for those of the Federal Power Act" (R., Vol. 18, p. 5376), and sustained various features of the FPC orders by reference to the "obligations" and "entitlements" contained in the illegal contracts (R., Vol. 18, pp. 5390-5393). The concurring Judge (Fahy, J.) stated in a subsequent case that in the *Penn Water* case the Court had dealt with the FPC's power to require continuance of arrangements violating the antitrust laws. *Maryland & Virginia Milk Producers' Association* v. *U. S.*, CCH Trade Reg. Rep. (9th ed.) ¶62,940 (D. C. Cir., 1951). The dissenting Judge below also stated that that was "the basic issue" and devoted his entire 18-page opinion to the point (R., Vol. 18, pp. 5042-5419). Prior to the certiorari proceedings herein the respondents had asserted that the D. C. majority decision was a holding that the FPC has authority to absolve the illegal contracts from the antitrust laws and state law. In the face of all this, any suggestion that the D. C. majority's holding as to the "implied repeal" of the antitrust laws was mere dictum cannot be taken seriously.

laws or granting exemptions from the antitrust laws.* In fact, the Act makes it a condition of all licenses granted thereunder that licensees are prohibited from entering into agreements "to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service" (Section 10(h)).

1. The pattern of Federal regulatory statutes with reference to the antitrust laws.

Congress in enacting regulatory statutes has followed a clear and consistent pattern of giving to certain administrative agencies specific and narrowly confined authority to disregard and grant exemptions from the antitrust laws. The scope of the power varies from agency to agency, and from time to time as to the same agency, but always relates to specific types of transactions. No administrative agency has been given blanket power of this character in its field of regulation. This is clearly illustrated in Appendix A to this brief, which tabulates the nature and dates of enactment of the powers which Congress has from time to time assigned to various Federal administrative bodies in relation to the antitrust laws. Nor has any administrative agency, until the decision below, been held to possess *any* power to override or grant exemptions from the antitrust

---

* See, for example, Interstate Commerce Act, 49 U. S. C. §§5(11) and 5b(9); Communications Act, 47 U. S. C. §§221(a) and 222(c)(1); and Civil Aeronautics Act, 49 U. S. C. §§492 and 494.

The ICC, FCC and CAB are also, unlike the FPC, given express authority under Section 11 of the Clayton Act (15 U. S. C. §21) to enforce compliance with Sections 2, 3, 7 and 8 thereof (15 U. S. C. §§13, 14, 18 and 19). The CAB was given this power in 1938 when Part II of the Federal Power Act was in effect and the FPC in existence. Clearly, if Congress had wished to give the FPC similar powers it would have followed similar procedure. Under the Federal Power Act (§26 (16 U. S. C. §820)) it is the Attorney General of the United States rather than the FPC who enforces by suit in court the condition incorporated in licenses pursuant to Section 10(h), which reaffirms the antitrust laws.

laws as an implied incident of even the most comprehensive general regulatory authority.

The only statutory provision granting any exemption upon approval of the FPC is found in a recent amendment (December 29, 1950) of Section 7 of the Clayton Act (15 U. S. C. §18) exempting acquisitions of stock or assets approved by the FPC and other specified commissions. This narrow grant of authority would have been unnecessary, so far as the FPC is concerned, if the FPC already had general authority to disregard or give exemptions from the provisions of the antitrust laws. It also clearly shows that a special legislative enactment was necessary to empower the FPC to give such exemptions even with respect to a subject matter (the acquisition of stock or assets) as to which the FPC already had regulatory jurisdiction under Section 203(a) of the Act.

The enactment of this amendment clearly shows the error of the D. C. majority's holding that the antitrust laws were superseded by Part II of the Act. Moreover, the fact that in such amendment Congress did not provide that FPC approval should exempt any arrangements, other than acquisitions of stock or assets, from any of the antitrust laws clearly shows that no such exemption was intended.

The fact that Congress did not intend by the Act to give the FPC authority to disregard or grant exemptions from the antitrust laws is further manifest from the fact that a provision of the 1935 bill (S. 2796, Sec. 203(a)) as passed by the House (see House Report No. 1318, 74th Congress, First Session) permitting the FPC to grant exemptions from other Federal acts, was dropped in conference. Section 203(a) of the bill as finally enacted in the present Act precludes any public utility from selling, leasing or otherwise disposing of its facilities, or merging or consolidating or acquiring the securities of another public utility without

the consent of the FPC. The original provision proposed by the House bill, which was dropped by the conferees, provided that upon certification by the FPC that the proposed transaction would be consistent with the public interest "any Act or Acts of Congress making the proposed transaction unlawful shall not apply."

The D. C. majority states that the Act is analogous to the Interstate Commerce Act (R., Vol. 18, p. 5374).* However, as is plainly illustrated in Appendix A hereto, there is no similarity between these two acts so far as the application of the antitrust laws in the fields of regulation covered by the respective acts is concerned. The Interstate Commerce Act contains *express provisions* (49 U. S. C. §§5(11) and 5b (9)), authorizing the Interstate Commerce Commission to approve, and thereby exempt, specified transactions, including revenue pooling arrangements (49 U. S. C. §5(1)), from the antitrust laws.** The Federal

---

* In support of this statement the D. C. majority cites *Northwestern Pub. Serv. Co.* v. *Montana-Dakota Util. Co.*, 181 F. 2d 19, 22 (8th Cir. 1950). That case, however, did not involve any question under the antitrust laws or the power of either the FPC or the ICC to grant any exemption therefrom. It referred simply to the similarity of the *rate regulation* jurisdiction of the two Commissions.

** Prior to the enactment of such express provisions, this Court held transactions of the kind subsequently exempted thereby to be illegal. *U. S.* v. *Southern Pacific Co.*, 259 U. S. 214 (1922); *U. S.* v. *Lehigh Valley R. Co.*, 254 U. S. 255 (1920); *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439 (1945). Under the express statutory authorization given the ICC by Congress after those cases were decided, the ICC approved the same or similar transactions without any suggestion that it would have had power to do so in the absence of such statutory authorization. *In the Matter of the Application of Southern Pacific Company to Acquire Control by Lease and by Stock Ownership of Central Pacific Railway Company*, Fin. Docket No. 2613, 76 I. C. C. 508 (1923); *Western Traffic Association—Agreements*, 276 I. C. C. 183 (1949). In *McLean Trucking Co.* v. *U. S.*, 321 U. S. 67, 86 (1944), this Court stated that even in the case of transactions which the ICC was expressly authorized by statute to exempt from the antitrust laws, the FCC was not entitled to ignore the policy of the antitrust laws in making its decisions.

Power Act, on the other hand, in addition to containing no authorization whatever to the FPC to exempt any transactions from the antitrust laws, expressly restates, in Section 10(b), the substance of the Sherman Act.

2. Applicable decisions of this Court.

The D. C. majority's holding that the Act repeals the antitrust laws by implication is squarely contrary to the decisions of this Court. This Court has frequently held that there is no implied repeal of, or exemption from, the antitrust laws, and even express authorizations to regulatory bodies to exempt from the antitrust laws have been strictly construed and the antitrust laws enforced as to transactions other than those expressly authorized to be exempted.

For example, in *U. S.* v. *Borden Co.*, 308 U. S. 188 (1939), the District Court had dismissed certain counts of an indictment under the Sherman Act on the ground that the Agricultural Marketing Agreement Act (50 Stat. 248, 7 U. S. C. 671 *et seq.*) had vested in the Secretary of Agriculture plenary power over the marketing of milk and that as a result such marketing "is removed from the purview of the Sherman Act" (308 U. S. at 197).* This Court reversed

* Other decisions of this Court are *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439 (1945) [holding application of antitrust laws to price-fixing conspiracy of railroads not impliedly repealed by rate regulation provisions of the Interstate Commerce Act]; *U. S. Alkali Export Ass'n.* v. *U. S.*, 325 U. S. 196 (1945) [holding provisions of Sherman Act not impliedly repealed by Webb-Pomerene Act giving Federal Trade Commission power to investigate and make recommendations for adjustment of activities of export associations in restraint of trade]; *U. S.* v. *South-Eastern Underwriters Ass'n.*, 322 U. S. 533 (1944) [holding that State regulation could not affect application of antitrust laws to insurance companies and only Congress, not the Courts, can give exemption]; *U. S.* v. *Socony-Vacuum Oil Co.*, 310 U. S. 150 (1940) [holding National Industrial Recovery Act did not authorize exemptions from

unanimously. The Court pointed out that there was no express provision in the Agricultural Marketing Agreement Act for such an exemption, except as to carefully defined specific transactions, and reaffirmed the "cardinal principle of construction that repeals by implication are not favored" (p. 198). The Court stated in part (pp. 198-9):

> "When there are two acts upon the same subject, the rule is to give effect to both if possible. * * * as was said by Mr. Justice Story in *Wood* v. *United States*, 16 Pet. 342, 362, 363, '* * *.' There must be 'a positive repugnancy between the provisions of the new law, and those of the old; and even then the old law is repealed by implication only *pro tanto* to the extent of the repugnancy'."

Unlike the Act, the statute involved in the *Borden* case contained provisions permitting antitrust exemption under certain circumstances. With respect to these provisions, this Court said (p. 201):

> "These explicit provisions requiring official participation and authorization show beyond question how far Congress intended that the Agricultural Act should operate to render the Sherman Act inappli-

---

antitrust laws except to the extent expressly provided therein]; *Western Union Division* v. *United States*, 338 U. S. 864 (1949), affirming 87 F. Supp. 324 (D. D. C. 1949) [see particularly statement of three-judge court at p. 337 of 87 F. Supp. that "absent a specific congressional permission, an administrative agency cannot validate an agreement between competitors which is otherwise invalid under the anti-trust laws"] See also, *Norfolk Southern Bus Corp.* v. *Virginia Dare Transportation Co.*, 159 F. 2d 306 (4th Cir. 1947), cert. den. 331 U. S. 827; *Hinton* v. *Columbia River Packers Assn.*, 131 F. 2d 88 (9th Cir. 1942); *Manaka* v. *Monterey Sardine Industries*, 41 F. Supp. 531 (N. D. Calif. 1941). After the decision in the *Georgia* case, above cited, Congress enacted the Reed-Bulwinkle Act of 1948 (49 U. S. C. §5b(9)), specifically exempting certain railroad price-fixing agreements when approved by the Interstate Commerce Commission.

cable. If Congress had desired to grant any further immunity, Congress doubtless would have said so." *

Although the D. C. majority concedes that regulated industries are not exempt from the antitrust laws, it has actually held in this case that, solely because Sections 202 and 205 of the Act give the FPC general regulatory jurisdiction over certain electric utilities, the Act is repugnant to and supersedes the antitrust laws with respect to such utilities. But this Court has repeatedly held that the antitrust laws are applicable to regulated industries in the absence of statutory provisions for specific exemption.**

The above-cited decisions of this Court were the basis of the adjudication by the Fourth Circuit that the FPC, having been given no authorization by Congress to override or grant exemption from the antitrust laws, could not validate the *per se* illegal Baltimore and Safe Harbor contracts and that any arrangements which the FPC might approve would have to be on a basis which would not offend the antitrust laws (R., Vol. 18, p. 5349).

---

* Compare the very limited authority to exempt from the antitrust laws granted to the FPC by the recent amendment to the Clayton Act passed in December, 1950. This authority to exempt clearly does not cover transactions of the type involved here, but only acquisitions of stock or assets. The above statement of and quotations from the *Borden* case are taken substantially from the government's brief in the *Far East Conference* case, argued in this court on January 29, 1952, October term 1951, No. 15 Misc., in which the government took the same position that petitioners take here, namely, that a regulatory body has no authority to override or grant exemptions from the antitrust laws except to the extent, if any, that Congress has specifically conferred such power upon it.

** *Georgia* v. *Pennsylvania R. Co., supra; U. S.* v. *South-Eastern Underwriters Ass'n., supra; U. S.* v. *Terminal R. Ass'n.*, 224 U. S. 383 (1912); *U. S.* v. *Southern Pacific Co.*, 259 U. S. 214 (1922); *U. S.* v. *Reading Co.*, 253 U. S. 26 (1920); *U. S.* v. *Union Pacific R. Co.*, 226 U. S. 61 (1912). See, also, *U. S. Telephone Co.* v. *Central Union Telephone Co.*, 202 F. 66 (6th Cir. 1913), cert. den. 229 U. S. 620; *In re American Fuel & Power Co.*, 122 F. 2d 223 (6th Cir. 1941).

3. Pertinent rulings of other Federal regulatory agencies and the Attorney General.

In its inexplicable insistence in this case upon arrogating to itself the power to override the antitrust laws in order to give Consolidated a strangle-hold over potential competitors, the FPC stands alone among government agencies. Other regulatory bodies have uniformly acknowledged that they have no power to override or grant exemption from the antitrust laws except in strict accordance with express Congressional authorization.

For example, the Interstate Commerce Commission has held that Section 20a of the Interstate Commerce Act, giving it "exclusive and plenary jurisdiction" over issuance of carriers' securities, did not impliedly repeal Section 10 of the Clayton Act (15 U. S. C. §20) regarding competitive bidding for such securities. That Commission emphasized that Section 20a did not contain any specific provision for exemption from these Clayton Act requirements and that where Congress had intended exemptions from the antitrust laws they had elsewhere been expressly provided for in the Interstate Commerce Act. *Columbia Terminals Co.—Issuance of Notes*, 40 M. C. C. 288, 293 (1945).

Similarly, the Federal Communications Commission in its *Report on Chain Broadcasting*, May 2, 1941, in discussing its regulatory powers with respect to broadcasting said (p. 46):

> "In the absence of Congressional action exempting the industry from the anti-trust laws, we are not at liberty to condone practices which tend to monopoly and contractual restrictions destructive of freedom of trade and competitive opportunity."

The Attorney General, in an opinion to the Secretary of State dated October 31, 1944 (Vol. 40, Att. Gen. Op. p. 335),

advised that the Civil Aeronautics Board has no authority to exempt agreements from the antitrust laws except to the extent Congress has specifically so provided, and that statutory provisions granting such authority must be strictly complied with in order to be effective.*

These rulings of other regulatory agencies and the Attorney General are clearly sound. As the D. C. majority admits (R., Vol. 18, p. 5374) the initial duty with respect to the promulgation of reasonable rates and adequate services rests upon the utilities themselves and is a "condition precedent to proper operation of the rate-making process." It is the function of regulatory commissions to *police* this duty, not *assume* it. The public is entitled to the benefits of competitive rate making by utilities within the maximum limits which would be permitted by the regulatory body. See *Georgia* v. *Pennsylvania R. Co.*, *supra* (324 U. S. at pp. 458-9).

---

* This ruling of the Attorney General reflects the position which the Department of Justice has taken in case after case. The Department has uniformly maintained the position that there is no implied repeal of or exemption from the antitrust laws; that a regulatory body has power to override the antitrust laws only if and to the extent expressly provided in the regulatory statute; and that there is no Congressional policy exempting transactions in the general field of regulation of any regulatory authority. See, for example, the Government's briefs in the following cases: *U. S.* v. *Pacific & Arctic Co.*, 228 U. S. 87 (1913); *U. S.* v. *Borden Co.*, 308 U. S. 188 (1939); *U. S.* v. *South-Eastern Underwriters Association*, 322 U. S. 533 (1944); *U. S. Alkali Export Assn.* v. *U. S.*, 325 U. S. 196 (1945); *Schwegmann Brothers* v. *Calvert Corp.*, 341 U. S. 384 (1951); *U. S.* v. *Far East Conference*, 94 F. Supp. 900 (D. N. J. 1951) argued in this Court on January 29, 1952 (October Term 1951, No. 13 Misc.); *Isbrandtsen Co.* v. *U. S.*, 96 F. Supp. 883 (S. D. N. Y. 1951), argued in this Court on January 30, 1952 (October Term 1951, No. 134, 135); *U. S.* v. *Railway Express Agency, Inc.*, 1952 C. C. H. Trade Regulation Service ¶67,215 (D. Del., December 7, 1951).

4. The provisions of the Act relied on by the D. C. majority do not support its decision.

The regulatory provisions of Part II of the Act which the D. C. majority regarded as superseding the antitrust laws are said to be contained in Sections 202* and 205. These Sections contain ordinary regulatory provisions.

Section 202 of the Act (16 U. S. C. §824 a) authorizes the FPC to promote and encourage voluntary interconnection and coordination of public utility facilities and to require, subject to certain limitations, when it finds it necessary or appropriate in the public interest, the establishment of physical connection of transmission facilities and to prescribe the terms and conditions of the arrangement to be made therefor.

Section 205 of the Act provides that rates shall be just and reasonable, prohibits preferences and prescribes the rules for the filing of rate schedules. All of the other Federal regulatory statutes discussed above contain similar provisions.**

These Sections 202 and 205 include no provision for exemption from the antitrust laws and clearly do not destroy the specific mandate contained in Section 10(h) of the Act and in the antitrust laws. Nor is there anything

---

* Section 202 is not involved in this proceeding. This proceeding was not begun under that Section. There was no application by any state commission or any other person, as required by the Section, asking the FPC to direct establishment of any physical connection of transmission facilities. The facilities of the companies had already been physically connected for many years.

** Other Federal regulatory statutes (such as the Interstate Commerce Act, Sections 1, 3(4) and (5), and 6(11) (49 U. S. C. §§1, 3(4) and (5) and 6(11)), the Communications Act, Section 201 (47 U. S. C. §201), and the Civil Aeronautics Act, Section 1002 (49 U. S. C. 642)), provide for interconnection of facilities and the fixing of terms of through service and joint rates, but these have not been held to authorize the granting of exemption from antitrust laws. See *Georgia* v. *Pennsylvania R. Co.*, *supra* (324 U. S. 439, 456-457).

in these sections which even looks toward the elimination of competition between public utilities, let alone authorizing restrictive or other types of agreements which would permit a private utility to suppress such competition. On the contrary, Section 202 expressly states that the purpose of interconnection of facilities to be fostered thereby is that "of assuring an abundant supply of electrical energy throughout the United States."

There is no repugnancy between these regulatory provisions and the antitrust laws. The FPC can effectuate the purposes of these provisions, without overriding those laws, by approving the furnishing of power and payment therefor of unit rates on the usual basis without managerial control of one company over another. As Judge Miller's dissenting opinion below forcefully pointed out (R., Vol. 18, p. 5415):

> "Section 202 * * * empowers the Commission to require the interconnection and co-ordination of the facilities of the two utilities. But neither that section nor any other section of Part II authorizes the Commission to require interconnection and co-ordination of facilities under terms and conditions which will result in a violation of the Sherman Act. The Commission can exercise its power under § 202 and under all of Part II without setting up an arrangement which is unlawful under anti-trust statutes. The Fourth Circuit intimated as much when it suggested that the interconnection of facilities and interchange of energy be continued 'by some method which would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania.' The majority opinion does not suggest any reason why that cannot be done by the Commission.

> "Since the Power Commission can perform all its functions under Part II without creating a violation of the Sherman Act, there is no repugnancy between the two statutes, and no room for the court to say that Part II superseded the anti-trust statutes."

Moreover, as the Fourth Circuit said in its decision affirming the illegality of the Safe Harbor contract (Pamphlet op. p. 15).

> "Indeed it is impossible to say that an effective power pool cannot be maintained without the prohibitions upon individual action contained in the two contracts which, for this purpose, may be considered one."

5. The cases relied on by the D. C. majority do not support its decision.

The cases cited by the D. C. majority for its holding that the Act repeals the antitrust laws by implication and permits the FPC to ignore the antitrust laws, support the petitioners' position here to the extent that they are applicable at all. The *Borden* case has been discussed above and clearly supports the petitioners. The *U. S. Navigation Co.*, *Sunshine* and *Rock Royal* cases (284 U. S. 474; 310 U. S. 381; 307 U. S. 533) involved regulatory statutes which, unlike the Act, contained express provisions for exemption from the antitrust laws. *Terminal Warehouse Co.* v. *Penn R. Co.*, 297 U. S. 500 (1936) and *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439 (1945) held that regulated industries are subject to the antitrust laws even though their rates and services are subject to the exclusive jurisdiction of regulatory bodies. *U. S. Alkali Export Assn.* v. *U. S.*, 325 U. S. 196 (1945) is strong authority against the D. C. majority's holding. This Court there held that the Webb-Pomerene Act, giving the Federal Trade Commission the

power to investigate violations of the Sherman Act, did not empower that Commission to enforce the Sherman Act or in any way repeal the provisions of the latter act.

In *Keogh* v. *Chicago & N. W. Ry. Co.*, 260 U. S. 156, 162 (1922), which the D. C. majority cites for the proposition that a rate is not necessarily illegal because it is a *result* of a conspiracy in restraint of trade in violation of the anti-trust laws, the attack was solely on the amount (*i.e.*, the rate) specified in an order of the Interstate Commerce Commission, and the Commission's order did not incorporate or embody the illegal conspiracy or arrangement alleged to exist. The FPC orders here involved, while they purport to be only rate orders, do embody illegal arrangements, require their continuance, and in critical respects are based on the assumed existence and continuance of those arrangements.

Furthermore, in the *Keogh* case, this Court simply held that a rate already established by the Interstate Commerce Commission in one proceeding could not be attacked in a court in another proceeding. Here we have an appeal from the orders issued in the very proceeding in which the rates were prescribed, in which the appellate courts have statutory authority either to set aside the orders or to require that they be modified in the light of the established illegalities of the contractual situation. There is no collateral attack here on a commission order which has gone into effect. The Courts are now determining whether the orders shall go into effect.*

---

* A further distinction of the *Keogh* case, which upheld primary jurisdiction in the Interstate Commerce Commission with regard to a treble damage action based on alleged illegal rates, is that the Interstate Commerce Act expressly provided an exclusive remedy for recovery of such damages in a proceeding before the ICC. The Federal Power Act clearly contains no provision making proceedings before the FPC a remedy (either exclusive or non-exclusive) for antitrust law violations.

The D. C. majority states (R., Vol. 18, pp. 5372-3) that Congress and the states may authorize arrangements which are in violation of the antitrust laws and cites *Parker* v. *Brown*, 317 U. S. 341 (1943), but that case has no application to the present situation and does not support the holding of the Court that the FPC has authority to validate arrangements otherwise illegal under the antitrust laws. The case has nothing to do with the scope of the authority of the FPC under the Federal Power Act. In stating in connection with the citation of this case that Congress may authorize arrangements otherwise in violation of the antitrust laws, the D. C. majority by-passed the question involved here, namely whether Congress has done so. The *Parker* case involved only the validity of the California Agricultural Prorate Act, under which the State of California fixed quotas for the production of raisins, and held that since the fixing of such quotas was an act of that State, not of private parties, the California Act was not in conflict with the Sherman Act because the Sherman Act is not applicable to the actions of a State.* This Court held (317 U. S. at pp. 351-2) that even a State "does not give immunity to those who violate the Sherman Act by authorizing them to violate it, or by declaring that their action is lawful".

Here the FPC *is* attempting to authorize violation of the antitrust laws by Consolidated (a *private party*) and to base its orders upon private agreements which are in violation of the antitrust laws. It should be noted that Consolidated in exercising restraints over Penn Water under the contractual arrangements would not be acting in accord-

---

* The FPC, of course, is not a State but a federal agency which has no authority to override any Federal law unless expressly authorized to do so by Congress, and the FPC has been given no such authority except with respect to acquisitions of stock or assets under Section 7 of the Clayton Act.

ance with any statutory regulatory standards but only in its own private interest or at its own whim.*

In *Schwegmann Bros.* v. *Calvert Corp.*, 341 U. S. 384, 389 (1951), this Court, citing its decision in the *Parker* case, reaffirmed that a State may not permit private parties to impose restraints which the Sherman Act forbids.

The *Lowenstein* case (69 Fed. 908), also cited by the D. C. majority (R., Vol. 18, p. 5373), is similar to the *Parker* case, holding that a State may *itself* operate a monopoly in the liquor trade. The *Olsen* case (195 U. S. 332) (R., Vol. 18, p. 5373) held that a *State* does not violate the antitrust laws by licensing pilots. The only issue raised by the *Olsen* case was whether a State may grant exclusive franchises. Such action is not comparable to exempting *private agreements* permitting one corporation to suppress competition with it by another.

6. No question of exhaustion of administrative remedy is involved.

The D. C. majority states (R., Vol. 18, pp. 5375-6) that §205 (d) of the Act (16 U. S. C. §824d (d)) requires Penn Water to submit new arrangements and rate schedules to the FPC for approval, and that if Penn Water is dissatisfied with the decision of the FPC with respect thereto it may take an appeal. But the petitioners have in this case prop-

* Even Congress could not constitutionally place one independent company under the domination of another. *Carter* v. *Carter Coal Co.*, 298 U. S. 238, 311-12 (1936). As the Fourth Circuit pointed out (R., Vol. 18, pp. 5329-30) Consolidated has consistently exercised its powers in disregard of the interests of both Penn Water and the public. The FPC had no authority to prevent or to supervise such actions by Consolidated and has never attempted to assert any such authority. Even if such authority existed in the FPC, the contractual arrangements, as the Fourth Circuit pointed out (Pamphlet Op., pp. 15-16), deprived Penn Water of the right to initiate proceedings before regulatory bodies with respect to matters affecting its business and the public interest.

erly exhausted the administrative remedy provided in the Act because they raised the points involved before the FPC itself* and, after rejection of those points by the FPC in its orders, petitioned the D. C. Circuit and in turn this Court for a review of such orders, pursuing exactly the remedy specified in Section 313(b) of the Act.** Furthermore, Penn Water did in fact file new rate schedules for service to Consolidated on the usual unit rate basis as soon as the preliminary injunction to perform the Baltimore and Safe Harbor contracts was dissolved, but the FPC rejected such schedules (Tr. 5628-30) on the ground, among others, that to file new schedules Penn Water "must recognize" the existing FPC orders, thus possibly barring itself from continuing to appeal in the courts from such orders.

The procedure suggested by the D. C. majority would require Penn Water (i) to accept the present rate orders (despite the fact that they are being properly reviewed under the Act), (ii) to file new schedules with the FPC embodying a new arrangement and (iii) to continue illegal arrangements until final determination (probably after several appeals) of such new proceeding. Any such procedure could only result in confusion and delay.

Under Section 205 of the Act a rate schedule becomes effective upon its filing, without necessity of affirmative FPC approval, and continues in effect unless and until affirmatively disapproved by the FPC. Thus, the D. C. majority's interpretation of Section 205 would mean that

---

* The FPC, in its brief below in opposition to petitioners' motions to set aside the FPC orders, expressly stated (Tr. 5552) that the arguments advanced by Penn Water "are not new, having been urged upon the Commission and considered by it and having been repeatedly urged in this proceeding before this Court."

** Nor is there here any "collateral attack" on an FPC order which has become effective. The FPC orders have been stayed pending final determination in this case whether they shall become effective.

the *mere filing* of illegal arrangements would be sufficient to exempt them indefinitely from the antitrust laws or other laws making them illegal unless and until the FPC affirmatively disapproved them. Congress surely cannot have intended to enable private parties to obtain exemption from the antitrust laws for contracts suppressing competition by the mere act of filing them with the FPC.

Those Federal regulatory acts which give authority to the regulatory body to override the antitrust laws set up very carefully defined standards and safeguards.* The decision of the D. C. majority would give the FPC authority to override the antitrust laws without such Congressionally created standards and safeguards.

To uphold the D. C. majority's decision in this case would constitute virtual abandonment of the antitrust laws so far as regulated industries are concerned. It would reverse the entire pattern and history of Federal regulatory enactments. It would mean that, although Congress has followed the policy of leaving the antitrust laws in full effect except where specific exceptions are provided for in

---

* See, for example, Section 5 of the Interstate Commerce Act (49 U. S. C. §5 (1) (11)) permitting the ICC to exempt arrangements for the pooling and division of earnings which requires a specific finding by that Commission that the arrangement will not unduly restrain competition; Section 5a(9) of the same Act (49 U. S. C. §5b(9)) authorizing the ICC to exempt price fixing agreements, which requires a specific finding that the arrangements will further the national transportation policy as set forth in the Interstate Commerce Act; and Sections 408, 412 and 414 of the Civil Aeronautics Act (49 U. S. C. §488, 492 and 494) authorizing the CAB to exempt various transactions, including arrangements for the pooling and division of earnings, which prohibit the exemption in some cases if a monopoly and restraint of competition would result and, in other cases, if the CAB finds the transactions would violate the Civil Aeronautics Act. This would include the requirement of the latter Act (Section 2, 49 U. S. C. §402) that the CAB encourage competition to the extent necessary to insure the sound development of the air transportation system.

regulatory statutes, henceforth the antitrust laws would have no effect whatever unless expressly reenacted in the regulatory statute. Indeed, under the D. C. majority's decision even with such specific reenactment the antitrust laws would not survive enactment of a general regulatory statute, because in the Act itself Section 10(h) substantially restates the Sherman Act.

Affirmance of the D. C. majority's decision would give all regulatory agencies *carte blanche* not only to ignore the antitrust laws but to authorize private parties to ignore them. The ICC, the FCC, the CAB and other administrative agencies would no longer need to confine themselves, in authorizing departure from the antitrust laws, to the specific transactions as to which exemption is authorized by the regulatory statutes under which they operate, but could ignore the antitrust laws in any and all instances. If the FPC in this case despite the antitrust laws can validate arrangements which have been specifically adjudged illegal and void *per se*, there is no longer any limit to the power of any regulatory agency to disregard the antitrust laws at its pleasure and to choose, as the FPC has done here, which companies shall be given power to suppress competition and which ones shall be the victims of that suppression.

B. Section 10(h) of the Act, reaffirming the Antitrust Laws, was not impliedly repealed by Part II of such Act and there is no repugnancy between these Provisions.

The D. C. majority concedes (R., Vol. 18, p. 5377) that Section 10(h) of Part I of the Act "does indeed virtually restate the Sherman Act" but argues that the section "is found only in Part I of the Federal Power Act, which deals with water power licensees, and not in Part II, dealing with public utilities selling electric energy in interstate com-

merce at wholesale." The D. C. majority therefore concludes that "Congress did not intend to make licensees which are also Part II companies, such as Penn Water, subject to §10(h)."*

There is no basis for this conclusion. Far from repealing Section 10(h), the Act of 1935 reenacted it. The above cited decisions of this Court, ruling against repeals by implication and holding that exceptions to the antitrust laws cannot be made by the courts in the absence of express Congressional provision, are particularly applicable where, as in the case of Section 10(h), the provision claimed to have been impliedly repealed is contained in the very statute which is claimed to have repealed it.

Section 10(h) is one of a number of conditions required by Congress to be incorporated in licenses granted under the Act, and there is no suggestion by the D. C. majority that any of the other conditions imposed by Section 10 have been repealed either expressly or by implication. The D. C. majority treats Section 10(h) as though it were contained in a statute enacted *prior* to Part II of the Act, whereas in fact Section 10(h) was reenacted as a section of Part I at the same time Part II was enacted. In such reenactment various changes not pertinent here were made in Part I but no change was made in Section 10(h). It is clear, therefore, that Congress intended no change in Section 10(h).

---

*Petitioners contend (Point III below) that Penn Water, as a licensee subject to the comprehensive system of regulation provided in Part I, is not also subject to the different regulatory provisions of Part II to which certain public utilities other than licensees are subject. The inapplicability of Part II would remove all basis for the decision of the D. C. majority that the antitrust laws and Section 10(h) have been impliedly repealed as applied to Penn Water. But it is petitioners' contention here that even assuming the applicability of Part II to Penn Water, the antitrust laws and Section 10(h) nevertheless remain applicable and that no provision of the Act, whether contained in Part I or Part II, impliedly repeals either the antitrust laws or Section 10(h) of the Act.

By its express terms Section 10(h) is a required condition of "all licenses", but the D. C. majority's decision would in effect rewrite the statute to make Section 10(h) applicable to "all licenses except those issued to licensees which are subject to regulation under Part II." The argument of the D. C. majority that Section 10(h) was repealed by the enactment of Part II (so far as concerns licensees which enter interstate commerce, but presumably not licensees which do not enter such commerce) is obviously unsound on its face.

Since 1920 the statute has made it mandatory that all licensees have various specified conditions incorporated in their licenses including Section 10(h). There is no discretion in this respect on the part of the FPC. It is inconceivable that Congress intended one of those conditions automatically to become null and void if, as, and when the licensee should enter into interstate commerce, but remain binding on other licensees, or intended that licensees who were formerly expressly prohibited from making agreements in restraint of trade be not only permitted, but encouraged, to do so upon entering interstate commerce.

The D. C. majority bases its conclusion on the assertion (R., Vol. 18, p. 5377) that one of the primary objectives of Part II is "to limit the output of electrical energy" citing Section 202(a) (16 U. S. C. §824a(a)). Actually, however, Part II has precisely the opposite purpose. Section 202(a) expressly includes as the first purpose of Part II "the purpose of assuring an abundant supply of electric energy."

It seems clear that Section 10(h) was included in the Act to extend the antitrust laws to *all* licensees, whether or not engaged in interstate commerce. As was correctly stated in the Fourth Circuit decision as to which certiorari was denied by this Court (R., Vol. 18, p. 5338):

> "The prohibition against monopolistic combinations was included among the conditions upon which

> the Power Commission may issue licenses for the construction and maintenance of power projects—not to deprive the courts of jurisdiction to enforce the anti-trust acts, but to make it perfectly clear that no licensee can legally agree to limit output, restrain trade or fix prices. *The condition was a reaffirmance of the Sherman Act and was designed to restrict rather than to enlarge the Commission's authority.*"*

There is no repugnancy whatever between Section 10(h) and Part II; as the dissenting opinion below clearly demonstrates and as the Fourth Circuit pointed out, interconnection and coordination of facilities can be maintained without offending the antitrust laws. The Pennsylvania customers to the north, as well as numerous electric utilities in other parts of the country, are interconnected and interchange capacity and energy and maintain efficient pooling of power resources with contractual arrangements on the customary unit rate basis without control by any company over any other company or other restraints on competition. The unusual revenue pooling and restrictive controls of the Baltimore and Safe Harbor contracts are wholly unnecessary to effective interconnection and pooling of power resources.

It is significant that in an effort to support its assertion of repugnancy the D. C. majority found it necessary to resort to the argument that a Section which expresses a purpose of assuring an abundant supply of electrical energy (§202(a)) is the opposite of a Section which bans agreements to limit the output of electrical energy (§10(h)).**

---

* Italics supplied here and elsewhere in this brief unless otherwise noted.

** Contrary to the reasoning of the D. C. majority, respondents have argued that Section 10(h) gives the FPC authority to enforce the antitrust laws and pass on antitrust matters. The Fourth Circuit in the Baltimore contract case disposed of this argument

C. The FPC Clearly Ordered Continuance of or Based its Orders Upon, Contractual Provisions Which are Illegal *Per Se*.

1. Pertinent Provisions of the FPC Orders.

The opinion of the D. C. majority treats the contractual arrangements as having been ordered by the FPC to continue and upholds the FPC's authority to order such continuance. This has been the position taken by Respondents, Consolidated and the Maryland Commission, as to both the Baltimore and Safe Harbor contracts. It is also the position which has been taken by the FPC regarding the Safe Harbor contract. As regards the Baltimore contract, counsel for the FPC have taken different positions at different times. In their brief below they took the position that the rate schedule which the FPC prescribed "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's [Consolidated's] facilities" (Tr. 5574). In their memorandum relating to the petition for certiorari, however, government counsel took the position in substance that the FPC had authority to, but did not in fact, order continuance of any of the provisions of the Baltimore contract held illegal by the Fourth Circuit, asserting that Articles IV and V thereof were the only provisions which were held illegal and that these articles were not approved by the FPC.

Since the principal question for decision by this Court is the authority of the FPC to direct continuance of or

---

by pointing out that Section 10(h) was not an operative provision of the Act, but simply a provision to be incorporated in all licenses, and that the function of the FPC was limited to calling any violation of a condition of a license to the attention of the Attorney General for such action, if any, as he might care to take to institute a court proceeding to enjoin the violation, or to revoke the license. The Fourth Circuit also pointed out that the Secretary of War has a power under the Act similar to that of the FPC. (R., Vol. 18, pp. 5336-9). In any event, any proceedings to enforce Section 10(h) must be brought before the courts for their decision, not the FPC.

base its orders on such illegal contractual arrangements, it is believed that it will be helpful to the Court to set forth pertinent provisions of the FPC orders regarding the contractual arrangements.

(a) *The FPC Orders Required Continuance of Contractual Arrangements Adjudged Illegal.*

In its opinion denying rehearing (Feb. 28, 1949, R., Vol. 16, p. 5178) the FPC stated that it was immaterial to its rate orders that the Baltimore and Safe Harbor contracts might be illegal and directed continuance of the Baltimore contract as follows:

> "In our opinion and order we took care to leave the continuation of the integrated and interconnected system in full effect, merely changing the rates, as shown by our statements wherein we specifically stipulated that
>
> > " 'The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company* takes what is left and assures Respondents [Penn Water and Transmission Company] of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. *That arrangement will, therefore, be continued* * * * ' " (R., Vol. 16, pp. 5184-5). (Matter in brackets added.)**

---

* Throughout the FPC orders and opinions Consolidated is referred to as Baltimore Company.

** This requirement was also contained (as indicated in the quotation above) in the FPC's first opinion (Jan. 3, 1949), (R., Vol. 16, p. 4981), and in finding 37 and par. (D) of its first order (R., Vol. 16, pp. 4994, 4995).

The first FPC opinion (No. 173) was incorporated in, and made a part of, its first order (Jan. 5, 1949), and the second order (Feb. 28, 1949) did the same with the second opinion (No. 173A) (R., Vol. 16, pp. 4983, 5192).

In paragraph (11) of its first order the FPC said:

> "The contracts referred to in (6) and (7) above [the Baltimore and Safe Harbor contracts], facilitate the achievement of those objectives *particularly by the methods of payment which they provide*, and by reason of the fact that generation of energy is directed by the coordinated action of load dispatchers in the City of Baltimore, representing the three system companies." (R., Vol. 16, p. 4987).

It is thus clear that the FPC specifically ordered the continuance of the illegal revenue pooling provisions of the Baltimore contract.

In the rate orders and opinions the FPC praised and commended *all* of the restrictive provisions of the Baltimore contract.

For example, in its opinion of February 28, 1949 denying rehearing, the FPC said:

> "By the terms of those contracts the installation of additional facilities by Penn Water is subject to approval by Baltimore Company,[2] to assure coordinated planning and investment to meet the growing power needs of the system as a whole with resulting additional economies and consumer benefits." (R., Vol. 16, p. 5184).

Footnote 2 referred to above quotes in full Article V of the Baltimore contract, the provision restraining Penn Water's plant expansion, expressly held illegal on its face by the Fourth Circuit.

In that opinion the FPC further said:

> "In this case refusal of Penn Water to receive energy originating outside of Pennsylvania from Baltimore Company would not be merely a termination of the purchase and sale of that energy (i.e., a

> cancellation subject to Section 35.5 of the Rules) but would constitute a change in rates and service in several aspects which cannot be accomplished except in compliance with requirements prescribed under Section 205 of the Federal Power Act." (R., Vol. 16, p. 5186).

Here the FPC is referring to the power of Consolidated under the Baltimore contract which the Fourth Circuit specifically held to be an exclusive dealing provision on its face in violation of Section 3 of the Clayton Act (R., Vol. 18, p. 5331), since it required Penn Water to purchase energy from Consolidated by prohibiting Penn Water from purchasing such energy from others without the consent of Consolidated.

Again, in its order of October 27, 1949,* the FPC in prescribing allegedly proper rate schedules which called for the residual specified return formula contained in the Baltimore contract, stated:

> "The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force." (R., Vol. 17, p. 5283.)

FPC counsel now contend that by the phrase "provisions of the aforementioned contracts, in and of themselves law-

---

* This was the order by which the FPC further reduced Penn Water's rates, without notice or opportunity for hearing and after exclusive jurisdiction had vested in the D. C. Circuit.

ful" in this paragraph the FPC intended to exclude from the continuing arrangements contractual provisions which might be subsequently held by the courts to be illegal. FPC counsel then state that Articles IV and V are the illegal provisions, and the only illegal provisions, and are excluded.

A conclusive answer is that, in the very same order (R., Vol. 17, pp. 5273-4), the FPC expressly provides that it is continuing the exclusive dealing provision contained in in Article IV and elsewhere in the Baltimore contract, which was held to be a *per se* violation of Section 3 of the Clayton Act.

There is a further answer. These rate schedules were prescribed by the FPC (October, 1949) before even the first District Court decision was rendered (February, 1950) and months before the Fourth Circuit decision declaring the Baltimore contract illegal (September, 1950). It seems disingenuous to contend that an administrative body like the FPC was directing continuance of an arrangement indefinite in scope and dependent on subsequent decisions which might be rendered by courts in other cases, either the Baltimore contract case or the Safe Harbor contract case or some other case, none of which had then been decided.

The only tenable construction is that the phrase "provisions of the aforementioned contracts, in and of themselves lawful" was an attempt by the FPC to support its previous orders by a bold assertion that all of the provisions of the Baltimore contract, except the rates, are lawful.

The D. C. majority nowhere states that the FPC orders do not require continuance of contractual arrangements illegal under the antitrust laws. In fact it refers to the scope of the FPC's action as governing "the operations and arrangements under scrutiny" and states (making

no exception as to any restrictive provisions) that Penn Water can only change its operations, contracts, arrangements, etc., in accordance with the Act and with the consent of the FPC (R., Vol. 18, pp. 5375-6). The D. C. majority then supports critical features in the FPC orders, just as the FPC did, on the assumed continued existence of the contracts, as appears below.*

(b) *The FPC Based Critical Features of Its Orders Upon the Assumed Existence and Continuance of the Illegal Contracts.*

(i) *The prescribed rate of return was based on the assumption that Penn Water would receive the "stabilized income" provided by the Baltimore contract until 1980.*

The FPC, prospectively (*i.e.*, from and after February 1, 1949, the specified operative date of the FPC orders if they become effective), reduced the amounts payable by Penn Water's utility customers so as to limit Penn Water's return to the abnormally low rate of 5¼% per annum of depreciated original cost (and then by a subsequent order to 4¾%), on the express basis that "The contract with Baltimore Company [Consolidated] assures Respondents [Penn Water and Transmission Company] of a stabilized income" (R., Vol. 16, p. 4953). It was only the Baltimore contract which gave Penn Water a "stabilized income" until 1980, irrespective of the periods of low flow

---

* The dissenting opinion points out (R., Vol. 18, pp. 5404-5) that the critical features of the FPC's orders (discussed in paragraphs (b).(i), (ii) and (iii) below), namely, the rate of return, the jurisdictional findings, and the allocation of cost of service, are based respectively upon the financial security, operations, and entitlements and obligations provided for by the Baltimore contract and the assumed continuance thereof until 1980.

in the Susquehanna River when Penn Water might not be able to generate and sell a normal amount of electricity. Without such long term continuing contractual obligation there was obviously no basis for the low return allowed.

The D. C. majority states (R., Vol. 18, p. 5387) that the FPC had "substantial evidence before it to support its findings" with respect to rate of return, but the central aspect of the "evidence" referred to by the D. C. Circuit (R., Vol. 18, p. 5386) is that Penn Water is "insulated" from any "substantial risk" by the illegal Baltimore contract.

Government counsel concede (Memorandum for the FPC on certiorari in this case (Govt. Memo.) p. 16) that the sole basis of the low rate of return is that "under the arrangements with Consolidated which the FPC directed be continued * * * Penn Water was assured a stabilized income as in the past."

Since the Baltimore contract has been adjudicated illegal there is no obligation whatsoever of Consolidated to Penn Water to continue to take any power at all. For example, notwithstanding the FPC's direction to Penn Water to put this tariff into effect, Consolidated could stop taking power on the FPC prescribed basis at the end of a period of high flow when a large amount of power had been generated and delivered, leaving Penn Water to sell the relatively small amount of power coming from the river in low flow as best it could, and thus to receive much less than the allowed return. The fact is that the FPC order, in fixing the abnormally low rate of return, was clearly based not on operations as FPC counsel like to assert, but on the assumed contractual obligations of Consolidated to take power from Penn Water and pay it a specified return until 1980. From operations, without a contract, there could be no "stabilized income."

(ii) *The FPC held it had jurisdiction over intrastate services on the assumption that the illegal and non-existent contracts would continue.*

The FPC also held that, because the companies were tied together under the illegal Baltimore and Safe Harbor contracts (R., Vol. 16, pp. 4859-60) the services of Penn Water to the three Pennsylvania electric utilities, although rendered by Penn Water entirely within Pennsylvania, were interstate in character and subject to regulation by it.*

Government counsel again concede (Govt. Memo., p. 25) that the finding of the FPC that the Pennsylvania business was interstate was "based on the continuance of the arrangements as to power pooling and the residual-payment type of rate."

Here again the D. C. majority attempted to minimize the effect of the contracts upon the decision of the FPC. But the decision of the D. C. majority is based upon its own assertion (R., Vol. 18, p. 5384) that "Each sale [of Penn Water in Pennsylvania] is in effect a pool sale drawn from the integrated interstate system and hence interstate in nature." The existence of this so-called interstate pool depends upon the illegal contracts tying the companies together under the control of Consolidated and upon the illegal revenue pooling provisions thereof (R., Vol. 16, p. 4860).

The other basis of jurisdiction over Penn Water's sales in Pennsylvania asserted by the FPC (R., Vol. 16, pp. 4860-

---

* Thus, this basis of jurisdiction of the FPC over Penn Water's Pennsylvania business was dependent upon the illegal Safe Harbor as well as the illegal Baltimore contract, the former of which is stated by the FPC itself in its brief in the Fourth Circuit to have been prescribed by it "including the terms which the District Court viewed as in restraint of trade." The asserted basis of FPC jurisdiction is therefore clearly founded on contractual provisions held illegal under the antitrust laws by the Fourth Circuit.

61) was the purchase by Penn Water of energy generated by Consolidated in Maryland for sale to Penn Water's Pennsylvania customers. Such purchases from Consolidated were compelled by the exclusive dealing provisions of the Baltimore contract (e.g. Art. IV, R., Vol. 15, p. 4612) which were held by the Fourth Circuit to be illegal *per se* under Section 3 of the Clayton Act (R., Vol. 18, p. 5351). Without such provisions Penn Water could not be compelled by Consolidated to purchase such supplemental energy outside of Pennsylvania. Obviously, this phase of the FPC orders rests on assumed continued existence of these contractual provisions held illegal by the Fourth Circuit.

(iii) *The allocation of the rate reduction between customers was based upon the alleged "entitlements" of Consolidated provided for under the illegal and non-existent contracts.*

The FPC allocated the reduction among Consolidated and the three Pennsylvania electric utility customers of Penn Water, giving 89% of the reduction to Consolidated (R., Vol. 16, pp. 4980-81), such allocation being determined on the basis of alleged power "entitlements" (R., Vol. 16, pp. 4978-79) of Consolidated under the Baltimore and Safe Harbor contracts and not on the basis of the power actually delivered to Consolidated which was far less. Without the illegal contracts such "entitlements" would be non-existent.* As the dissenting opinion points out (R., Vol. 18, p. 5404) "* * * as a result of that interpretation [of the Baltimore contract] the Commission concluded that

* Obviously, the FPC could not properly order such artificial entitlements contrary to the service which was actually being rendered; and the statement of Consolidated in its brief in opposition to the granting of certiorari (p. 25) that in the absence of the void contracts the entitlements are those provided for by a tariff is simply unfounded.

very substantial sales by Penn Water to others had really been for the account of Consolidated, and allocated the reduction accordingly.

An allocation of cost on a delivered power basis (that is, on actual operations) would have given the Pennsylvania utilities a much greater share of the rate reduction. In this instance again Government counsel concede (Govt. Memo. p. 25) that the finding of the FPC regarding allocation of the rate reduction was "based on the continuance of the arrangements as to power pooling and the residual-payment type of rate."

The allocation to Consolidated by the FPC of the major portion of the reduction in Penn Water's rates also necessitated an underlying determination by the FPC that, because of the existence and continuance of the Safe Harbor contract, the alleged power entitlements of that contract in favor of Consolidated negative any obligation of Safe Harbor to deliver capacity and energy under contracts with the Pennsylvania customers which Safe Harbor had executed jointly with Penn Water with the approval of Consolidated.

Penn Water had made contracts with the three Pennsylvania utility customers and with the Pennsylvania Railroad for delivery of power, all with the approval of Consolidated. Safe Harbor had executed such contracts with PP&L, PE and the Pennsylvania Railroad jointly with Penn Water for such supply of power. The supply of power under these contracts requires the use of Safe Harbor's output as well as that of Penn Water. Nevertheless, based on the assumed existence of Consolidated's "entitlements" under the Safe Harbor contract, the FPC held that Safe Harbor was only a nominal party to the other contracts and that the use of Safe Harbor's power under such other contracts was a diversion of "entitlements" belonging to Consolidated.

Without the Safe Harbor contract there is no basis for this determination by the FPC.*

The D. C. majority (R., Vol. 18, p. 5390) plainly recognized that its affirmance of the allocation of the reduction provided for by the rate orders depended upon its decision that the FPC may exempt the Baltimore and Safe Harbor

---

* The FPC made its determination of excess revenues on its interpretation of the "entitlements" of Consolidated under the Baltimore and Safe Harbor contracts as follows:

As to the Baltimore contract, it did this by considering all the revenues actually received by Penn Water from the Pennsylvania customers for net interchange energy as revenues received by Penn Water from Consolidated. Thus, for example, although the actual operations, as recognized by the FPC opinions, show revenues received by Penn Water from Consolidated of $1,104,951.85 in the test year 1946, the FPC determined that Penn Water received total revenues from Consolidated in that year of $2,386,311 (R., Vol. 16, pp. 4958, 4980). It was only after such improper adjustments that the FPC could order a reduction in revenues from Consolidated of over $1,700,000. The sole basis of this artificial FPC determination of revenues was its interpretation of the Baltimore contract as entitling Consolidated to the residue of Penn Water's energy output after Penn Water's contractual obligation to furnish only *firm* energy (as distinguished from *interchange* energy) to the Pennsylvania customers had been met. Contracts with all the Pennsylvania customers also contained provisions for the furnishing of interchange energy by Penn Water. Absent the Baltimore contract, the FPC's determination of the excess revenues and allocation of the rate reduction is wholly unsupportable.

As to the Safe Harbor contract, the FPC based its allocation of Penn Water's reduction upon the alleged entitlement of Consolidated under the Safe Harbor contract to two-thirds of the output of the Safe Harbor plant. In actual operations, however, only approximately one-third of Safe Harbor's output went to Consolidated. By reason of the contract entitlement, the FPC regarded Safe Harbor's capacity and energy supplied in Pennsylvania as being diverted from Consolidated by Penn Water and determined that Consolidated should be credited by Penn Water for such alleged diversion on the basis of Consolidated's relatively higher cost for steam generation of an equal amount of power. This resulted in an improper determination of the cost of Penn Water's services to each of its customers and an over-statement of the alleged excess revenues received by Penn Water from Consolidated. Thus, there is no question but that the allocation of the reduction was dependent upon the Safe Harbor contract. Counsel for Consolidated itself conceded this in argument in the District Court in the Safe Harbor contract case (Ct. Tr. p. 74, April 20, 1951).

contracts from the antitrust laws and accordingly may base its allocation upon the artificial entitlements created thereby rather than upon the actual deliveries of power.

2. The FPC Orders Clearly Required Continuance of or Were Based on Illegal Contractual Arrangements Regardless of Articles IV and V of the Baltimore Contract.

FPC counsel now apparently contend that the FPC's rate orders did not require continuance of Articles IV and V of the Baltimore contract, which expressly conferred upon Consolidated the power to control all contracts by Penn Water for purchase and sale of power and to control Penn Water's expansion or disposition of facilities, and that therefore the FPC prescribed only "lawful" parts, and no unlawful parts, of the contract.*

We have already quoted above passages from the FPC's orders reciting FPC requirements that existing arrangements continue and stating that the FPC was "merely changing the rates". We there showed also how the FPC specifically singled out Articles IV and V for lavish praise and expressly ordered continuance of the exclusive dealing provisions of Article IV, and how the FPC's brief in the Court below stated that the rate schedule which it prescribed for Penn Water "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's facilities" (Tr. 5574).

---

* The Fourth Circuit, in declaring the entire Baltimore contract illegal, held (R., Vol. 18, pp. 5358-9) that a part thereof, the prior 1927 Agreement was not reactivated as Consolidated and the Maryland Commission contended. The Court said that the controls over Penn Water given to Consolidated by the Baltimore contract were "closely associated" with the payment provision, pointing out that it was conceded that without the control provisions the 1931 Baltimore contract would have been impracticable and would not have been made. Similarly, in the case of the Safe Harbor contract, the control provisions were characterized by the District Court (Bryan, J., sitting by special designation), whose decision was affirmed by the Fourth Circuit, as the "warp and weft" of the contract (R., Vol. 18, p. 5366).

However, accepting at face value for the sake of argument the FPC's contention that it did not prescribe Articles IV and V but the rest of the contract only, the fact remains that the FPC orders clearly required continuance of arrangements which are illegal *per se* because, as more fully shown below, (a) the antitrust law illegalities are not merely contained in Articles IV and V of the contract but permeate the entire arrangement, (b) the FPC admits having required the contractual method of payment, which is revenue pooling illegal *per se*, and (c) the Penn Water rate orders rest not only on the Baltimore contract but also on the companion Safe Harbor contract (which gave Consolidated controls substantially similar to those in the Baltimore contract) and the FPC admits (Govt. Memo., p. 24, fn. 29) having ordered continuance of the entire Safe Harbor contract, including the provisions thereof adjudged illegal *per se* under the antitrust laws.

(a) *The antitrust law illegalities are not merely contained in Articles IV and V of the contract but permeate the entire arrangement.*

The entire Baltimore contract (R., Vol. 18, p. 5397) has been adjudged illegal and void. Mere assumed excision of Articles IV and V from the Baltimore contract, as urged by FPC counsel, would by no means cure the FPC's difficulty*.

---

* The Respondents nowhere explain how there is any business reality under their present theory of the situation created by the FPC orders and the Fourth Circuit decisions in the Baltimore contract case. The Penn Water contract, absent Articles IV and V, is not a rational business arrangement (R., Vol. 18, p. 5359). Consolidated itself so asserted in affidavits and briefs submitted to the Fourth Circuit and in its brief to this Court in opposition to certiorari (p. 18). Counsel for the government have conceded (Govt. Memo., p. 23) that the entire agreement was stricken down because its illegal provisions were inseparable parts of a *contract* that could not operate as a *contract* between the parties without these provisions. How could the arrangement operate any better as a *rate schedule* between the parties in the absence of these provisions?

The retreat of FPC counsel to a suggestion that the FPC approved the balance of the arrangement and that such balance was "lawful" will not stand analysis. The basic Baltimore contract of June 1, 1931 contains ten Articles. It is revealing to examine these Articles one by one and then ask just what "lawful" parts FPC counsel has in mind:

Article I provides that the Agreement shall continue in force until April 22, 1980. Under what provision of the Act can the FPC possibly claim the power to issue an order requiring that rates or any other arrangements imposed on a utility "continue in force until April 22, 1980"? What possible justification is there in ordering Penn Water to perform until 1980 without ordering that Consolidated likewise perform?

Article II provides that Consolidated shall be entitled to all of Penn Water's own power and that received by Penn Water under the Safe Harbor contract not disposed of by Penn Water to others under contracts made *with Consolidated's approval.* This Article obviously embodies the admitted illegalities of Article IV of the Baltimore contract and all the adjudicated illegalities of the Safe Harbor contract which the FPC admits it prescribed *in toto.*

Article III provides for the specified return method of payment, which is illegal *per se* as shown in the next subdivision of this brief. Aside from this aspect, the provision in substance reincorporates the illegal features of Article IV of the Baltimore contract in that it effectively prevents Penn Water from selling power to others than Consolidated by removing all incentive on the part of Penn Water to do so because any revenues received from such sales would be credited to Consolidated.

Article IV is the Article requiring Penn Water to obtain Consolidated's approval before entering into any agreement

for purchase, sale or interchange of power, and is the Article under which Consolidated has sought to require termination or revision of Penn Water's contracts with the Pennsylvania customers, claiming the rates charged therein to be too low. It is also the Article which required exclusive dealing as to purchases of power. The FPC has required exclusive dealing by Penn Water with Consolidated to be continued in the FPC orders of February 28 and October 27, 1949.

Article V is the Article requiring Penn Water to obtain Consolidated's approval for plant expansion, or disposition of facilities, and is the Article under which Consolidated forbade Penn Water to build its proposed new steam generating plant using river coal free except for the cost of reclaiming.

Article VI is merely an incidental provision requiring Penn Water to keep its equipment in good condition as far as practicable.

Article VII is an Act-of-God provision to the effect that if any catastrophe should prevent Penn Water from supplying and Consolidated from receiving any part of the power contracted for, their respective obligations to supply and receive shall be suspended for the duration of the catastrophe, with reasonable abatement of payments in favor of Consolidated but without any provision for relieving Penn Water from its obligation under Article III to credit Consolidated with all revenues from other customers or for relieving Penn Water of any of its other obligations under the Baltimore contract.

Article VIII in effect subjects all managerial functions affecting Penn Water (including operating, engineering, accounting and contract matters) to the control of an operating committee with a veto power in Consolidated's commit-

tee representative or President as to all such matters. Under what provision of the Act can the FPC possibly claim authority to order that one company shall have such power and control over another independent company? Obviously this Article embodies essentially the same kind of control provisions as Articles IV and V and in fact was so treated in the Fourth Circuit decisions (R., Vol. 18, pp. 5328-9; Pamphlet Op., p. 7; see also R., Vol. 18, pp. 5366).

Article IX provides that in order to determine the payments to be made by Consolidated under the provisions of Article III (which embodies the illegal specified return provision) Consolidated shall have complete access to and right of audit of Penn Water's accounts. Under what provision of the Act can the FPC possibly claim authority to issue an order giving one company such a right as to another? This is one of the Articles used by Consolidated to facilitate its oppression of Penn Water by withholding of amounts aggregating over $900,000 as of December 1948.

Article X provides that in case of "any dispute" arising under the contract between Penn Water and Consolidated the dispute shall be referred to a board of arbitration, although such arbitration agreements are not even enforceable under Maryland law, the only jurisdiction in which Consolidated can be reached. Under what provision of the Act can the FPC possibly claim a right to include such a provision in a rate order?

The foregoing analysis demonstrates, we submit, that one need do no more than read the ten articles of the 1931 contract to see that the *per se* illegalities pervade every Article (with the possible sole exception of the incidental provision of Article VI that Penn Water's equipment shall be kept in as good condition as practicable) and that the

FPC's argument that its orders prescribed only the "lawful" parts of the contract cannot be supported.

(b) *The FPC admits that it required continuance of the specified return method of payment, which is illegal per se.*

The FPC orders concededly did direct continuance of the specified return method of payment contained in the Baltimore contract. These provisions are in violation of the antitrust laws because they have all the vices of and in effect are provisions for the pooling and division of earnings.* Since they provide that Penn Water shall receive a specified return regardless of the services rendered, and credit Consolidated with revenue from other customers, they stifle the incentive of Penn Water to compete, either with Consolidated or with others, and rob it of any initiative to obtain more customers and effect operating economies.

As pointed out in the preceding subsection of this brief, the payment provision has features of Article IV of the Baltimore contract and a like effect. Because of this Penn Water has no motive to sell power to others than Consolidated since all revenues from such sales will be credited to Consolidated. Penn Water is thus prevented from selling to others as effectively as under Article IV.

In *U. S.* v. *Paramount,* 334 U. S. 131, 149 (1948), this Court held such arrangements for the pooling and division

---

* Respondents claimed in their briefs relating to the petition for certiorari herein that the Fourth Circuit did not hold the revenue pooling arrangement illegal. Actually, the revenue pooling feature is basic to the whole contractual arrangement, and the Fourth Circuit held the arrangement illegal in its entirety. In its first opinion, in the Baltimore contract case, the Fourth Circuit, having found some illegal features of the contract, expressly refrained from going on and passing on other features. But in the Safe Harbor contract case, the Fourth Circuit held that the Safe Harbor contract was illegal for the same reasons as the Baltimore contract and expressly enumerated (Pamphlet Op., pp. 6-7) the revenue pooling Article among the restrictive provisions.

of earnings to be in violation of the antitrust laws stating "Clearer restraints of trade are difficult to imagine."*

The stifling of incentive is even more pronounced in the Penn Water arrangement than in the type of arrangement involved in most of the cases, under which two companies share in arbitrary proportions, unrelated to services, the total earnings of both. In the latter situation, although incentive is diminished it is not completely eliminated, because if either company can increase the total joint earnings by getting new business or increasing its efficiency, it will at least share in the increased earnings to the extent of its arbitrary proportion. In the Penn Water arrangement, however, Penn Water's incentive is completely removed because 100% of the benefit of any increase in Penn Water's business or efficiency goes to Consolidated, and none of the burden of inefficiency or increased expense falls on Penn Water. In fact the arrangement may result in a credit rather than a charge to Consolidated in any year as pointed out in the Statement.

---

* Such arrangements were also held illegal in *U. S.* v. *Reading Co.*, 253 U. S. 26, 48 (1920); *Northern Securities Co.* v. *U. S.*, 193 U. S. 197, 327-328 (1904); *Norfolk Southern Bus Corp.* v. *Va. Dare Transp. Co.*, 159 F. 2d 306, 309-10 (4th Cir. 1947); *Lee Line Steamers, Inc.* v. *Memphis, Helena & Rosedale Packet Co.*, 277 Fed. 5, 8 (6th Cir. 1922); *Chicago, M. & St. P. R. Co.* v. *Wabash, St. L. & P. R. Co.*, 61 Fed. 993, 997 (8th Cir. 1894).

In this last case the court said at p. 997 "The Contract removed every incentive to the companies to afford the public proper facilities, and to carry at reasonable rates; for, under its provisions, a company is entitled to its full percentage of gross earnings, even though it does not carry a pound of freight."

The fact that the rates and services of the parties to a revenue pooling arrangement are regulated does not eliminate its illegality under the antitrust laws any more than it eliminates the illegality of other restraints of trade. In both the *Reading* and *Norfolk Southern Bus* cases the parties to the revenue pooling arrangement condemned under the antitrust laws were utilities whose rates were regulated.

The illegality of the arrangement is not lessened by the fact that incentive was removed only as to the suppressed company, Penn Water, and not as to the suppressor, Consolidated. The elimination of competition on the part of one of the two parties is sufficient to eliminate competition between them completely.*

Even where, by special statutory provision, the unit rates are permitted to be combined with a maximum rate-of-return factor, care is taken to avoid removal of the incentive for increased efficiency and economy by permitting the utility to keep a share of any earnings in excess of the specified rate of return.**

As in the case of other types of agreements in restraint of trade, where Congress has desired to permit agreements for the pooling and division of earnings to be exempted by a regulatory body from the antitrust laws, it has specifically so provided, under carefully defined conditions and safe-

---

* The FPC has conceded that this type of payment provision removes incentive to compete. In its brief submitted to the Fourth Circuit in October, 1951 in connection with its petition for intervention in the suit regarding the invalidity of the Safe Harbor contract, the FPC stated (p. 14) that the payment provision (which is in effect the same as that in the Baltimore contract) prevents "setting up an economic interest upon his [Safe Harbor's] part," and argued (pp. 33-34) that the restrictions on Safe Harbor were valid because, due to the payment plan, "its interests are not adversely affected" by the manner in which it is operated.

** For example, Potomac Electric Power Company, under such a special statute, agreed with the Public Utilities Commission of the District of Columbia that if its unit rates in any year should yield more than a 7½% return on the value of its property, it would reduce its unit rates for the following year by an amount equal to one-half of such excess, retaining the other half. See *Potomac Electric Power Co.* v. *Public Utilities Commission*, 158 F. 2d 521 (1946). Under this type of arrangement, the utility retains its incentive to get new business and effect economies, since it can keep all the benefits thereof in the current year and a share of such benefits even in the following year.

guards.* There is no such provision in the Federal Power Act. These provisions of other acts clearly indicate the distinction made by Congress between ordinary provisions for the regulation of rates and special provisions relating to revenue pooling.

Regulation of rates (i.e., the amount to be charged) upon the basis of a return found reasonable, does not, as do the revenue pooling arrangements of the Baltimore contract, insure the receipt of such return irrespective of whether or not the utility renders adequate service or loses business through a policy of non-competition.** The specified return provisions of the Baltimore contract provide for payment even if no power at all is delivered.

The contention that a Federal regulatory agency may, pursuant to its authority to regulate rates, insure that a specified return will be received (or, in other words, regulate on the basis of a cost-plus subsidy plan) has been rejected by the Civil Aeronautics Board under the Civil Aeronautics Act. *Pennsylvania-Central Airlines Corp., et al., Motions*, 8 C. A. B. 685, 696 (1947). That Act, moreover, unlike the Federal Power Act, specifically authorizes the

---

* See, for example, Section 5(1) and (11), Interstate Commerce Act (49 U. S. C. §5(1) and (11)); Section 15, Shipping Act (46 U. S. C. §814); Sections 412(a) and 414, Civil Aeronautics Act (49 U. S. C. §§492(a) and 494). The Interstate Commerce Commission which, as pointed out above, has the express authority to exempt pooling arrangements from the antitrust laws, has stated in a recent decision:

> "The object of pooling arrangements is ordinarily the restraint of competition, the statute directing that we find, in approving the arrangement, that such restraint shall not be undue." *Application of Pullman Co. under Sec. 5(1), Interstate Commerce Act*, 259 I. C. C. 41, 43-5 (1944).

** "A rate established as reasonable, whether by the company or the commission, is not guaranteed by the commission or the public. Whether it will actually yield more or less than a fair return during its continuance is a risk of the business." *Georgia Ry.* v. *R. R. Comm.*, 278 Fed. 242, 247 (N. D. Ga. 1922), aff'd. 262 U. S. 625 (1923).

Board to exempt arrangements for the pooling and division of earnings from the antitrust laws (49 U. S. C. §§492, 494). *The Pennsylvania-Central* decision was affirmed by this Court in *T. W. A.* v. *C. A. B.*, 336 U. S. 601 (1949) which held that the normal method of rate regulation by prescribing the *amount* to be charged "forces carriers within a given class to compete in securing revenue and in reducing or controlling costs" (pp. 606-7).*

Thus, the courts, in striking down in the above cited cases revenue pooling arrangements analogous to that provided in the Baltimore contract (except where such arrangements have been specifically authorized with appropriate safeguards by Congress), have in no way interfered with the normal rate-making process. The FPC departed from the normal and customary rate making process when it prescribed the specified return method of payment.

(c) *The FPC admits that it required continuance of the entire Safe Harbor contract, which is also a foundation of the Penn Water rate orders.*

The FPC itself characterized the Safe Harbor contract (along with the Baltimore contract) as one of the "foundation contracts" underlying the Penn Water rate orders. The characterization was entirely justified because the Penn Water rate orders in numerous respects (most notably in connection with the FPC's asserted jurisdiction over Penn

---

* See also *United-Western, Acquisition Air Carrier Property*, 8 CAB 298, 321 (1947), in which the CAB stated: "the established policy of this Board * * * recognizes that differences in the return may accrue to different carriers operating under the same rates and * * * permits management to retain the profits of its economies as an incentive toward the accomplishment of decreased costs and increased revenues. The incentive which the Board's rate policy holds out to air carriers to profit from economies which produce a better-than-average return upon investment itself invalidates the assumption that the rate-making process is an instrument of precision which produces a mathematically precise rate of return." To the same effect see *FPC* v. *Natural Gas Pipe Line Co.*, 315 U. S. 575, 590 (1942).

Water's Pennsylvania business [See Section C 1(b)(ii) of this Point], determinations of cost of services to and determinations of revenues received from the various customers and the cost allocation under which the major share of the rate reduction is given to Consolidated [See Section C 1(b)(iii) of this Point], were predicated upon the fictitious "entitlements" (R., Vol. 16, pp. 4978-9) provided for in the Safe Harbor contract rather than upon actual operations and power actually supplied.

The Safe Harbor contract has been adjudged illegal *per se* and void in its entirety on the same grounds as the Baltimore contract.

The FPC conceded in its October, 1951 brief in the Fourth Circuit case (referred to in Govt. Memo., p. 34) that "the Commission's order prescribed the June, 1931 [Safe Harbor] contract, as supplemented, including the terms which the District Court viewed as in restraint of trade."

II. The FPC has no authority to direct continuance of or base its orders on contractual arrangements of a state utility corporation adjudged illegal under the laws of its state of incorporation.

The D. C. majority ignored completely that the antitrust laws were not the only basis of the *per se* illegalities of the Baltimore and Safe Harbor contracts. As adjudged by the Fourth Circuit, the contracts were illegal and void on their face for the separate and independent reason that they violated the fundamental laws of the State of incorporation of Penn Water and Safe Harbor, namely, (a) the statutes of Pennsylvania governing Pennsylvania corporations,* (b)

* "The business of every corporation created hereunder, or accepting the same, shall be managed and conducted by a president, a board of directors * * *". (Section 5, Corporation Act of 1874). The substance of this statute was incorporated in the Penn Water and Safe Harbor by-laws.

the doctrine of *ultra vires* as laid down by the courts in Pennsylvania and elsewhere,* (c) the Pennsylvania statutes governing Pennsylvania utility corporations,** and (d) common law and public policy.***

---

* Decisions holding contracts which deprive corporate directors of management powers to be *ultra vires* and void are: *Dubbs* v. *Kramer*, 302 Pa. 455, 153 Atl. 733, 734 (1931); *Severance* v. *Heyl & Patterson, Inc.*, 123 Pa. Super. 553, 187 Atl. 53, 58 (1936); *Sherman & Ellis* v. *Indiana Mutual Casualty Co.*, 41 F. 2d 588 (7th Cir. 1930), cert. den. 282 U. S. 893; *Rosenthal* v. *Light*, 185 App. Div. 702, 173 N. Y. S. 743 (1919); *Smith* v. *California Thorn Cordage, Inc.*, 129 Cal. App. 93, 18 P. 2d 393 (1933); *Long Park, Inc.* v. *Trenton-New Brunswick Theatres Co.*, 297 N. Y. 174, 77 N. E. 2d 633 (1948).

** "It shall be the duty of every public service company—

"(a) To furnish and maintain such service, including facilities, as shall in all respects be just, reasonably adequate, and practically sufficient for the accommodation and safety of its patrons, employes, and the public, and in conformity with such reasonable regulations or orders, as may be made by the commission." (Article II, Section 1, Pennsylvania Public Service Company Law of 1913.)

"Upon like approval of the commission first had and obtained, as aforesaid, and upon compliance with existing laws, *and not otherwise*, it shall be lawful—* * *

"(c) For any public service company to sell, assign, transfer, lease, consolidate, or merge its property, powers, franchises, or privileges, or any of them, to or with any other corporation or person." (Article III, Section 3, Pennsylvania Public Service Company Law of 1913.)

Such provisions were reenacted with the same purport in Pennsylvania Public Utility Law, May 28, 1937.

For full text of Pennsylvania statutes see Appendix to Brief of Pennsylvania Commission in Case No. 429.

Co.*, 61 Fed. 993, 997 (8th Cir. 1894); *Central Transportation Co.* v. *Pullman's Car Co.*, 139 U. S. 24, 48, 51 (1891); *The New York and Maryland Line R. Co.* v. *Winans*, 17 How. 30 (U. S. 1854); *U. S. Tel. Co.* v. *Central Union Tel. Co.*, 202 Fed. 66, 72-73 (6th Cir. 1913), cert. den. 229 U. S. 620; *Union Trust & Savings Bank* v. *Kinloch Long-Distance Tel. Co.*, 258 Ill. 202, 101 N. E. 535, 537-38 (1913); *State* v. *The Hartford and New Haven R. Co.*, 29 Conn. 538 (1861); *Chicago Gas-Light & Coke Co.* v. *People's Gas-Light & Coke Co.*, 121 Ill. 530, 13 N. E. 169, 172-173 (1887); *Coombs* v. *Burk*, 40 Cal. App. 8, 180 Pac. 59 (1919). See also 7 Fletcher, Cyc. of Corporations §3592 (Perm. Ed. 1931).

The same contractual provisions for restrictive controls in Consolidated and revenue pooling which made the contracts illegal *per se* under the antitrust laws, as discussed in Point I above, also made them illegal under Pennsylvania laws. The contracts violated these state laws by depriving Penn Water and Safe Harbor of their initiative as to rates and services, and by taking managerial control away from their boards of directors and giving it to another corporation, Consolidated, a Maryland corporation and a competitor.

Thus, the illegalities were not mere violations of regulations of Pennsylvania or its Commission. They were not in the field of regulation at all but represented violation of the fundamental law of the sovereign which created the corporations.

There is nothing in the Act which even purports to give the FPC authority to order or condone contractual arrangements violative of such state laws. On the contrary, the wording of the Act and its legislative history indicate that even in the field of regulation Congress did not intend to take from the states any functions theretofore exercised, but only to supplement the authority of states where necessary to regulate matters in the area of interstate commerce which were beyond the reach of the states.

Where Congress has intended to permit a Federal regulatory body to modify the powers of a state corporation in some respects it has specifically so provided; Interstate Commerce Act, Section 5(11) and 20b(5) (49 U. S. C. §§5(11), 20b(5); Section 213 of the Motor Carrier Act of 1935 (49 Stat. 557).* No such provisions are to be found

---

* For example, Section 5(11) of the Interstate Commerce Act provides in part: "* * * and any carriers or other corporations, and their officers and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the opera-

in the Federal Power Act. The Act does not even contain a general provision exempting transactions approved by the FPC from other laws such as is contained in the Federal Communications Act with respect to mergers of telegraph companies (47 U. S. C. §222(c)(1)).* See also Section 414 of the Civil Aeronautics Act, 49 U. S. C. §494.

That, by enactment of the Act and the granting of licenses thereunder, Congress did not intend to alter the powers of state corporations or give them powers which they do not have under their organic state laws, is shown by Section 9(b) which requires as a condition of obtaining a license that the applicant corporation must show that it has complied with the laws of the state in which the project is located and has the right under state law to engage in the business of developing the project.

Respondents can point to no provision in the Act indicating any intention to deprive a corporation of its initiative as to reasonable rates and adequate services, which is "one of the most important duties of a public utility, inherent in its franchise to serve the public", as the Fourth Circuit held in the Baltimore contract case (R., Vol. 18, p.

---

tion of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved or provided for in accordance with the terms and conditions, if any, imposed by the Commission; and to hold, maintain, and operate any properties and exercise any control or franchises acquired through such transaction. Nothing in this section shall be construed to create or provide for the creation, directly or indirectly, of a Federal corporation, but any power granted by this section to any carrier or other corporation shall be deemed to be in addition to and in modification of its powers under its corporate charter or under the laws of any State."

* The Section provides in part: "* * * the Commission shall enter an order approving and authorizing such consolidation or merger, and thereupon any law or laws making consolidations and mergers unlawful shall not apply to the proposed consolidation or merger."

5347). Even the D. C. majority concedes that freedom of exercise by public utility companies of "their private initiative in promulgating rates, services and changes therein * * * is an important condition precedent to proper operation of the rate-making process" (R., Vol. 18, p. 5374). The respondents cannot point to any provision of the Act giving the FPC authority to permit a corporation to perform acts which are *ultra vires* or in contravention of the corporate statutes or common law, and public policy of the state of incorporation.

There is no general inconsistency between these Pennsylvania laws and the Act. Obviously, the FPC, to whatever extent it has jurisdiction, can regulate the rates to be charged and the services to be rendered by Penn Water without in effect ordering Penn Water to violate the organic laws of its state of creation by permitting Consolidated to veto its managerial decisions, suppress its competitive activities and stifle its incentive for growth, through provisions for revenue pooling, operating committee vetoes, and other restrictive controls. The FPC need only permit Penn Water to have an arrangement with Consolidated of the usual unit rate type, without managerial controls, as is elsewhere found in the industry. This Court has held that state law is superseded by a Federal law "only where the repugnance or conflict is so 'direct and positive' that the two acts cannot 'be reconciled or consistently stand together'." *Kelly* v. *Washington*, 302 U. S. 1, 10 (1937); *Hines* v. *Davidowitz*, 312 U. S. 52 (1941).*

---

* Even where a Federal agency charged with the regulating of certain phases of interstate commerce has express authority to override state law, such authority may be exercised only where necessary to perform the functions assigned to it by Congress. *Florida* v. *U. S.*, 282 U. S. 194, 211-12 (1931); *Yonkers* v. *U. S.*, 320 U. S. 685, 690 (1944); *American Express Co.* v. *Caldwell*, 244 U. S. 617, 625 (1917); *North Carolina* v. *U. S.*, 325 U. S. 507, 511 (1945); *State of Texas* v. *U. S.*, 84 F. Supp. 791, 793 (W. D. Okla., 1949).

This Court has frequently held that an intention by Congress to preclude a state from exercising its traditional powers must be clear and manifest. See *International Union, U. A. W.* v. *Wisconsin Employment Relations Board*, 336 U. S. 245, 253 (1949); *Davies Whse. Co.* v. *Bowles*, 321 U. S. 144, 152 (1944); *California* v. *Zook*, 336 U. S. 725, 733 (1949), and cases cited.

But Congressional intent has been expressed to the contrary here. Even in the field of regulation as distinguished from fundamental state law, Part II of the Act, under which the FPC claims authority to continue arrangements illegal under state laws, provides in Section 201(a):

> "* * * such Federal regulation [under Parts II and III], however, to extend only to those matters which are not subject to regulation by the States." (Matter in brackets added.)

Furthermore, as more fully discussed in Point III below, the legislative history of Part II indicates that Congress intended to give the FPC only such powers as were beyond the reach of the states under the decision of this Court in *Public Utilities Commission* v. *Attleboro Steam & Electric Co.*, 273 U. S. 84 (1927).*

Even under specific provisions for overriding other laws, such as are contained in the Interstate Commerce Act and Federal Communications Act, there would be no authority to require a state corporation to continue an arrangement such as the Baltimore contract which destroys the inherent nature of the corporation in violation of the laws of the state of incorporation. An attempt to grant

---

* Hearings on H. R. 5423 before the House of Representatives Committee on Interstate and Foreign Commerce, 74th Cong., 1st Sess. Pt. 1, p. 384, quoted in *Connecticut Light & Power Co.* v. *FPC*, 324 U. S. 515, 525 (1945) and *Jersey Central Power & Light Co.* v. *FPC*, 129 F. 2d 183, 193 (3d Cir. 1942).

such authority would be an unconstitutional invasion of the rights reserved to the states under the Tenth Amendment.

In *Chicago Title & Trust Co.* v. *41-36 Wilcox Building Corp.*, 302 U. S. 120 (1937) this Court held that even Congress pursuant to its bankruptcy power could not breathe life into a corporation which had been dissolved under the law of its state of incorporation. In holding that a corporation which had been dissolved under the state law could not file a voluntary petition in bankruptcy, this Court stated (pp. 127-128):

> "How long and upon what terms a state-created corporation may continue to exist is a matter exclusively of state power. *Horn Silver Mining Co.* v. *New York*, 143 U. S. 305, 312-313; *Ashley* v. *Ryan*, 153 U. S. 436, 441, 443; *New Jersey* v. *Anderson*, 203 U. S. 483, 493. The circumstances under which the power shall be exercised and the extent to which it shall be carried are matters of state policy, to be decided by the state legislature. There is nothing in the federal Constitution which operates to restrain a state from terminating absolutely and unconditionally the existence of a state-created corporation, if that be authorized by the statute under which the corporation has been organized. And it hardly will be claimed that the federal government may breathe life into a corporate entity thus put to death by the state in the lawful exercise of its sovereign authority."

In *Hopkins Federal Savings & Loan Ass'n.* v. *Cleary*, 296 U. S. 315 (1935), this Court held that an attempt by Congress to convert a state building and loan association into a Federal corporation contrary to the law of the state of incorporation was unconstitutional under the Tenth Amendment.

It would have violated Section 1 of Article I of the Constitution and the Fifth Amendment had Congress attempted

to give the FPC authority to take from Penn Water its corporate powers and vest those powers in a foreign competitor corporation. In *Carter* v. *Carter Coal Co.*, 298 U. S. 238 (1936) this Court held that a delegation under the Bituminous Coal Conservation Act of 1935 to less than all the producers of coal and employers of mine workers of the power to fix the wages to be paid by all the producers and employers was unconstitutional and said:

> "The power conferred upon the majority is, in effect, the power to regulate the affairs of an unwilling minority. This is legislative delegation in its most obnoxious form; for it is not even delegation to an official or an official body, presumptively disinterested, but to private persons whose interests may be and often are adverse to the interests of others in the same business. * * * The difference between producing coal and regulating its production is, of course, fundamental. The former is a private activity; the latter is necessarily a governmental function, since, *in the very nature of things, one person may not be entrusted with the power to regulate the business of another, and especially of a competitor.* And a statute which attempts to confer such power undertakes an intolerable and unconstitutional interference with personal liberty and private property. The delegation is so clearly arbitrary, and so clearly a denial of rights safeguarded by the due process clause of the Fifth Amendment, that it is unnecessary to do more than refer to decisions of this court which foreclose the questions. *Schechter Corp.* v. *United States,* 295 U. S. at p. 537; *Eubank* v. *Richmond,* 226 U. S. 137, 143; *Seattle Trust Co.* v. *Roberge,* 278 U. S. 116, 121-122" (pp. 311-312).

In any event there is no indication anywhere in the Federal Power Act that it was intended to permit the FPC to require electric utilities to perform contractual arrange-

ments depriving them of their independence and initiative with respect to rates and services or to perform *ultra vires* acts in violation of the laws of the sovereign creating them.

III. A licensee subject to regulation under Part I of the Act is not also subject to the different regulatory provisions of Part II.

The Federal Water Power Act of 1920 (now Part I of the Federal Power Act) was designed primarily to encourage the development of the hydroelectric resources of the United States. By that act a system of regulation, primarily by the states concerned, was established for persons licensed to develop hydroelectric power on navigable streams. The Water Power Act provided for various special rights to be enjoyed and obligations to be performed by licensees, and protected the licensee against any unilateral change in his license contract by providing (Sections 6 and 28) that no license could be altered without the licensee's consent and that no amendment of that Act should affect the rights of any licensee thereunder.

Parts II and III of the Federal Power Act were enacted in 1935 (at which time the 1920 Act with certain changes was reenacted as Part I). Part II was enacted primarily for the purpose of subjecting to Federal regulation public utilities other than licensees which had been held by this Court* not to be subject to regulation by the states as regards wholesale rates in interstate commerce and which were therefore free from any regulation, state or Federal, as to such rates.

The structure and language of the Act and the contractual nature of licenses issued under Part I, as well as its

---

Public Utilities Commission v. *Attleboro Steam and Electric Co.*, 273 U. S. 84 (1927).

legislative history, show that Congress did not intend to subject to regulation under Part II licensees which were already subject to regulation under the different regulatory system of Part I. Furthermore, in view of the provisions of Section 201(a) of the Act, namely, "such Federal regulation [Parts II and III], however to extend only to those matters which are not subject to regulation by the States," it is clear that it was not intended that Part II should interfere in any respect with existing regulatory powers of the states provided for in Sections 19 and 20 of Part I.

A. The Language of the Act.

The D. C. majority held that by enactment of Part II of the Act Congress intended to repeal provisions of Part I of the Act, although Congress simultaneously reenacted Part I* (R., Vol. 18, p. 5381).

That this is not a reasonable construction of the Act, and that the only reasonable construction is that Part II is not applicable to licensees subject to regulation under Part I, is plain from the wording of the Act.

Under Section 20 of Part I licensees rendering electric services in interstate commerce are subject to regulation by the states concerned, unless one of the states does not have a regulatory authority or the regulatory authorities of the

---

* This holding was basic to the holding of the D. C. majority that Section 10(h) of Part I restating the antitrust laws had been impliedly repealed by Part II. If Part II is not applicable to licensees under Part I, then the holding of the D. C. majority as to Section 10(h) falls completely. However, as stated in Point I, even if Part II should be held applicable to licensees there would still be no sound ground for holding Section 10(h) to have been impliedly repealed because of the absence of any inconsistency between any provision of Part II and the provisions of Section 10(h).

states are unable to agree. This is the same regulatory authority which the states possessed up to 1935 under the corresponding section of the Federal Water Power Act of 1920.

Part II expressly provides that the FPC shall have jurisdiction to regulate interstate rates of a "public utility". Thus, if a licensee under Part I were also a public utility within the meaning of Part II, it would be subject to dual regulation and there would be an irreconcilable conflict between the two Parts. But no sensible legislative body would enact in the same bill such a patent inconsistency without specifically resolving it. Congress did preclude any inconsistency when it provided that Federal regulation under Parts II and III of the Act was "to extend only to those matters which are not subject to regulation by the states" (Section 201(a)). Bearing in mind that the states for fifteen years had had authority to regulate the rates of licensees as specified in Section 20 of Part I, how could Congress have made it more plain that the regulation provided for in Part II was not to apply to such licensees?

This construction of the two parts of the Act conforms to the cardinal principle of statutory construction that all parts of an act shall be given effect where possible. The construction urged by the FPC and the D. C. majority does not conform to that principle of construction.

Similarly, the decision of the Third Circuit in *Safe Harbor Water Power Corporation* v. *F. P. C.*, 179 F. 2d 179 (1949), cert. den. 339 U. S. 957, does not conform to that principle. That decision left unsolved the inconsistency between Section 20 of Part I and the provisions of Part II, by saying in effect that it did not need to solve the inconsistency because at that time the states concerned were

unable to agree, so that at that moment the FPC had jurisdiction under both Section 20 of Part I and the provisions of Part II. However, such an accident of a special situation cannot be a guide to the construction of a statute intended to have general application to a whole industry in many states throughout the country.

In a prior case involving FPC jurisdiction over rates of Safe Harbor, in which the Third Circuit set aside FPC orders as beyond the FPC's jurisdiction, the Court said:

> "We conclude that it was the intention of Congress to regulate hydroelectric power by state commissions using the federal Agency set up in Section 20 only where the state commissions did not or could not perform the function expected of them."*

In the second *Safe Harbor* case the Third Circuit conceded that its first *Safe Harbor* decision had "squinted" toward the construction that Part II was not applicable to licensees under Part I (179 F. 2d, at p. 188). It also expressly refused to accept an argument that Part II, simultaneously enacted with reenactment of Part I, repealed Part I (179 F. 2d at p. 186).

Another inconsistency between Parts I and II arises with respect to rate base. It is clear from the legislative history that under Part I net investment was intended to be the rate base used for establishing rates for licensees. Section 3(13) of Part I defines** net investment to provide in effect for an undepreciated rate base except where depre-

---

* *Safe Harbor Water Power Corporation* v. *F. P. C.*, 124 F. 2d 800, 806 (1941), cert. den. 316 U. S. 663 (1942).

** In order to encourage private investment it was essential that the terms which might affect the investment of licensees be certain; and therefore a definition of net investment was provided.

ciation and other reserves are accumulated from earnings in excess of a fair return.*

Under Part II the rate base is left to the FPC to determine, and it has here prescribed a depreciated rate base under Part II rather than the net investment rate base under Part I.**

Thus it cannot be denied that there are substantial and material conflicts and inconsistencies between Parts I and II of the Act. All of these are eliminated by the self-evident construction of the Act that Part I applies to licensees and Part II applies to "public utilities" engaged in interstate commerce other than licensees. Such a construction preserves the basic intent of Congress in its enactment of the Act not to curtail state jurisdiction. It also avoids the

---

* In this connection the Secretary of Agriculture, Houston, recommended using net investment only rather than net investment or fair value and said in testifying before the Committee on Water Power of the House of Representatives, 65th Congress, 2nd Session (p. 701):

> "'Net investment' would furnish a certain basis for the Commission in *establishing rates*, which the 'fair value' does not."

Mr. Esch, one of the sponsors and draftsmen of the bill during the debate on the conference report (Cong. Rec., 65 Cong., 3d Sess., Vol. 57, Part V, p. 4638) said:

> "Another change made by the conferees was in reference to the basis for rate making. In the House bill the *basis for rate making* was practically the net investment, but there was some doubt expressed by the Senate conferees that the terms used would not authorize the commission to allow to the licensee the cost for the construction of locks, aids to navigation, or other capital expenditures."

** In view of the above discussed conflicts and inconsistencies between Part I and Part II, the D. C. majority is clearly incorrect when it states (R., Vol. 18, p. 5381) that

> "The *only problem* suggested to us which may arise from such a construction is that, in the event of recapture by the United States of the site awarded to a licensee, which is also a public utility, payment would have to be made pursuant to the valuation formula contained in Part I, which is said to differ from that used for rate-making in Part II."

undesirable necessity of invoking the principle of implied repeal. As this Court said in *United States* v. *Jackson*, 302 U. S. 628 (1938) at p. 631:

> "Repeals by implication are not favored. A law is not to be construed as impliedly repealing a prior law unless no other reasonable construction can be applied."

Here the construction of only one statute is in issue rather than the reconciliation of two conflicting laws enacted at different times.

Throughout the Act the careful and discriminating use of the words "licensees" and "public utilities" emphasizes and demonstrates the differentiation between licensees and public utilities. Throughout Part I the term "licensee" is used, throughout Part II the term "public utility" is used and throughout Part III (the procedural and administrative Part) terms expressly applying to both, such as "every licensee and public utility" are used. The words "Part" and "Act" are also carefully and discriminatingly used throughout the Act to indicate the separate applicability of Parts I and II to licensees and public utilities, respectively, and the joint applicability of Part III (the procedural and administrative Part) to both licensees and public utilities.

This construction of the Act was the one naturally adopted by the Second Circuit in *Niagara Falls Power Co.* v. *Federal Power Commission*, 137 F. 2d 787, 795 (2nd Cir. 1943), cert. den. 320 U. S. 792, and by another panel of the D. C. Circuit in *Alabama Power Co.* v. *Federal Power Commission*, 128 F. 2d 280, 293 (D. C. Cir. 1942), cert. den. 317 U. S. 652, cases in which the courts stated that Part II did not apply to licensees. In the first of these cases, involving a determination of original cost of the utility's properties, the Court said (p. 795):

> "When Congress in 1935 added Part II to the statute, 16 U. S. C. A. §824 *et seq.* which relates principally to rates of public utilities engaged in interstate commerce, *other than licensees* under Part I, it provided * * * ".

In the second of these cases, in which the Court was reviewing a determination by the FPC of the total cost of a licensed hydroelectric project, the Court pointed out (p. 293) that the FPC

> "in making valuations for purposes of rate regulation of public utilities—*not its licensees*—is governed, also, by a different formula than when it makes valuations of the property of a licensee. The formula for valuation of *properties of licensees*, for rate making purposes is contained in the provisions of sections of the 1920 Act which were incorporated into *Part I* of the Federal Power Act of 1935. *Part II* of the Power Act is that which deals with *public utilities* subject to the control of the Federal Power Commission, by reason of being engaged in distribution of electric power in interstate commerce." *

Such is the plain and simple explanation of the provisions of the Act and there is no conflict between Part I and Part II on such basis. It was only years after the enactment of the Act, when the FPC attempted to extend its jurisdiction under Part II to cover licensees, that an *FPC-*

---

* The D. C. majority attempts to minimize these cases saying that neither one of them is "a rate case" and "Neither involved Part II and the possibility of conflict between Parts I and II was not discussed" (R., Vol. 18, pp. 5379-80). Both cases, however, deal with the determination of the "actual legitimate original cost" of a licensee's project property which is basic to any determination of the reasonableness of a licensee's rates under Part I. Moreover, Part II is discussed in both cases, as well as Part I, and both Courts correctly found no conflict between Parts I and II since they state Part I applies to licensees and Part II applies to public utilities which are not licensees.

created conflict arose. Congress never created any conflict since it had no thought of taking away any jurisdiction from the States and never intended that the provisions of Part II would apply to licensees that were already regulated under the provisions of Part I.

B. The Contractual Nature of a License Issued under Part I.

The Federal Water Power Act of 1920 was intended as an incentive to the development of national water power resources by private capital. It was recognized that private investors had theretofore been reluctant to risk their funds in water power developments primarily because of legal uncertainties. To eliminate these uncertainties Congress provided that investors could enter into license contracts with the United States, acting through the FPC, which contracts should include *all* the conditions, liabilities and responsibilities of the licensee, vis-a-vis the Government, during the license term.

This contractual relationship between licensees and the Government provided for governmental regulation of a unique character. The reason and purpose for this unique regulation was the unique status of licensees, as contrasted with ordinary utility companies engaged in the production or distribution of electric services. In return for the contractual benefits available to licensees, including the right to a specified and defined method of rate regulation, licensees had to assume unique burdens not incidental to ordinary regulation. The ordinary public utility, for example, is not subject, as is a licensee, to recapture of its property (Section 14), is not required to provide navigation facilities (Section 11), is not required to pay administrative charges (Section 10(e)), nor is it subject to expropriation of earnings (Section 10(e)) or to the crea-

tion and maintenance of amortization reserves (Section 10(d)). All such unusual provisions, however, were consistent with the purpose of the act, to promote hydroelectric development by offering terms that would be fair to the investor and protect the interests of the Government.

The Federal Water Power Act also contained a unified financial set up for licensees by harmonizing the provisions for rate fixing with those for amortization and in turn with those for determining the price of recapture of licensed projects by the Federal Government.

It was recognized that a definitive agreement as to just what system of regulation would apply, and under what circumstances, would be of paramount importance to prospective investors in a licensed project. In consequence, it was provided in Sections 19 and 20 of the Water Power Act that the FPC should have regulatory jurisdiction over intrastate rates of licensees only in the event the state in which the operations were conducted had no regulatory body, and should have regulatory jurisdiction over interstate rates of licensees only in the event that the states concerned had not provided any regulatory body or were unable to agree upon such rates.

It was furthermore the intent of Congress that the unique status of licensees should be preserved and maintained. For this reason it was provided in Section 6 that licenses might be altered only upon mutual agreement between the licensee and the FPC and in Section 28 that no amendment to the Act should affect any license theretofore issued.

Significantly, when the national policy with respect to the rendering of hydroelectric services was re-examined in 1935 at the time of the re-enactment of the Water Power Act as Part I of the Federal Power Act, the contractual status of licensees was left intact.

Part II, on the other hand, is a typical regulatory statute for ordinary electric utility companies engaged in interstate wholesale sales of electric energy without any of the special provisions contained in the Water Power Act or Part I for licensees.

The suggestion that, with the enactment of Part II, Congress intended to eliminate the entire statutory purpose of Part I, by making licensees who might engage in interstate commerce also subject to regulation by the FPC as an ordinary incident of government control, and not exclusively and uniquely by *contract,* is wholly inconsistent with the re-enactment of Part I.

Moreover, by statutory contract no amendment could be made by the United States in license contracts, irrespective of whether such change was by legislation or by FPC action, without the consent of the licensee. Thus license contracts could not have been amended by Congress in 1935 to subject the licensee to FPC regulation rather than regulation by the states as to its interstate wholesale rates. For the D. C. majority to argue that Congress intended by the enactment of Part II to subject licensees to the provisions thereof is in effect to argue that Congress intended to impair the obligation of the license contracts already in existence between the Government and licensees. Obviously Congress never had any such intent. Any such attempt was forbidden by Congress itself in Sections 6 and 28 of the Water Power Act. It might well be unconstitutional under the Fifth Amendment to the Constitution.*

---

* Respondents' argument that in this case there could not have been any impairment of the license contract of Penn Water since it did not formally enter into a license contract with the Government until 1951, is beside the point. It is inconceivable that Congress intended without saying so to have Part II applicable to certain companies which obtained licenses after 1935 but not to other companies which obtained them before that date. Thus the questions to be determined are (a) whether or not Part II at the time of its adop-

C. The Legislative History.

The Congressional intent is borne out by the reiteration throughout the Congressional hearings on the Act that the jurisdiction of the States was not to be supplanted or curtailed in any respect by the Act. If licensees were subject to Part II of the Act and that Part repealed by implication Part I, as Respondents contend, jurisdiction of interstate wholesale rates of licensees would have been taken from the states involved and given to the FPC.

When the Public Utility Bill (H. R. 5423) which became the Federal Power Act was first introduced, Hon. Clyde L. Seavey, a member of the FPC, stated to the House Committee on Interstate and Foreign Commerce (74th Cong., 1st Sess., hearing on H. R. 5423 (p. 384)):

> "The new title II of the act is designed to secure coordination on a regional scale of the Nation's power resources and *to fill the gap in the present State regulation of electric utilities. It is conceived entirely as a supplement to, and not a substitute for State regulation.*"

In the report of the Committee on Interstate Commerce, submitted to the Senate by Senator Wheeler (see S. Report No. 621, 74th Congress, 1st Sess., p. 18) it is stated with respect to that Committee's revision of the original bill:

> "* * * *The revision has also removed every encroachment upon the authority of the States.* The revised

---

tion was applicable to interstate wholesale sales by all licensees irrespective of whether or not they had prior thereto taken out licenses and (b) whether or not Part II repealed by implication the provisions of Part I in those respects in which Part II is inconsistent with Part I. The determination of these questions does not depend upon the result in any particular case arising years later, but has to be determined by the intent of Congress when, in 1935, it enacted Part II of the Act at the same time it reenacted the comprehensive contractual system for licensees which had already been in effect for 15 years and under which many license contracts for hydroelectric projects had already been entered into between the Government and licensees.

bill would impose Federal regulation only over those matters which cannot effectively be controlled by the States. The limitation on the Federal Power Commission's jurisdiction in this regard has been inserted in each section in an effort to prevent the expansion of Federal authority over State matters . . . ."

This same Senate Report (p. 48), when referring to the declarations of legislative policy contained in Sections 201(a) and (b) of Part II of the Act, said:

> "Subsection (a) * * * *declares the policy of Congress to extend that regulation to those matters which cannot be regulated by the States* and to assist the States in the exercise of their regulatory powers, but not to impair or diminish the powers of any State commission."*

In the course of hearings in which the purpose and effect of the three Parts of the Act were outlined for the Committee on Interstate and Foreign Commerce of the House of Representatives, 74th Cong., 1st Sess., on H. R. 5423, Commissioner Clyde L. Seavey of the FPC, commented upon such amendments, and made it clear that only Part III applied to *all* companies subject to FPC regulation (p. 389) saying:

> "The grants of authority in the present subsections (f), (g) and (h) to prescribe accounts, require reports, and make rules and regulations are removed from section 4 and placed in title III of the amended

* Additional similar statements are found throughout the hearings and Congressional Reports by all FPC witnesses, including FPC Solicitor Dozier DeVane (See for example the Hearings before the House Committee pp. 518, 529, 547-548), and by Members of Congress, including Mr. Rayburn, Chairman of the House Committee considering the bill (See for example his Report No. 1318, House of Representatives, 74th Congress, 1st Sess., p. 8).

> Power Act, *where they relate to all companies subject to regulation by the Commission.*"

Commissioner Seavey also made it clear that Part II only covered interstate electric utilities, not licensees, when he told the Committee, in presenting a prepared analysis of the Bill (p. 384):

> "The present analysis is devoted to the new titles which are added by the bill. * * * *Of these new provisions title II * * * contains the substantive provisions for the regulation of interstate electric utilities, and title III * * * brings together the provisions applicable to both water power licensees under title I and interstate operating companies under title II, including the general administrative and procedural sections.*"

The D. C. majority opinion mentions the decision of this Court in the *Attleboro* case and the Congressional intent to fill the gap of the state regulation of electric utility companies. This argument, however, demonstrates that licensees were not intended to be included within the category of public utilities under Part II, since there was no gap of regulation with respect to licensees. Section 20 as reenacted in Part I provides for regulation of the interstate power sales of licensees either jointly by the states involved or, in case of their inability to agree, by the FPC. Thus there was no gap for Congress to fill in 1935 as regards licensees. The gap that Congress filled was with respect to public utilities which are not licensees whose interstate wholesale rates were held under the *Attleboro* case not to be subject to regulation by their home state. As Mr. Dozier DeVane, Solicitor for the FPC, told the House Committee (pp. 497-498):

> "I would like to say first that insofar as rates are concerned that section 201 is intended to give the Federal Power Commission jurisdiction over the wholesale rates only; rates over which the State commissions have no jurisdiction as decided by the Supreme Court of the United States in the *Public Service Commission* v. *The Attleboro Steam & Electric Co.*, 273 U. S. 83."

Mr. DeVane further stated to the Committee (p. 514):

> "We have attempted in this bill, Mr. Wolverton, to accomplish these two purposes: *One is not to supersede, but aid State regulation; and insofar as rates are concerned, to deal only with rates that State Commissions cannot regulate.*"

By all tests of reasonable construction Part II of the Act is not applicable to licensees under Part I.

Conclusion.

It is respectfully submitted that the judgment and orders of the D. C. Circuit should be in all respects reversed and the D. C. Circuit should be directed to grant petitioners' motions to set aside the orders of the FPC.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1951.

No. 428.

PENNSYLVANIA WATER & POWER COMPANY and SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND,
Petitioners,

v.

FEDERAL POWER COMMISSION, and CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE and PUBLIC SERVICE COMMISSION OF MARYLAND, Intervenors,
Respondents.

REPLY BRIEF FOR THE PETITIONERS.

Statement.

In view of the confusing discussion of a multitude of largely irrelevant issues in respondents' briefs, it is now necessary to redefine the narrow issues actually in this case.

It is particularly important to make clear just what impact the Fourth Circuit decisions in the contract cases have on this case, in which the FPC orders against Penn Water are being reviewed in accordance with the statutory procedure under Section 313 of the Federal Power Act (the Act).*

The Fourth Circuit decisions affect this case in two ways:

(1) The Fourth Circuit held that the Baltimore and Safe Harbor contracts were illegal under the antitrust laws

---

* Sections of the Act are referred to as numbered in the pamphlet filed in this Court by the FPC.

and state law and void in their entirety. Since the FPC orders direct that those contractual arrangements be continued, they can be sustained only if authority is found in the Federal Power Act for the FPC to order continuance of arrangements illegal under the antitrust laws and state law. Thus, the prime issue in this branch of the case is whether there is any such authority in the Act. None will be found (Point I below). The newly invented argument of FPC counsel that the FPC orders did not direct continuance of illegal arrangements is frivolous and is disposed of in subdivision (c) of Point I below.

(2) To the extent that determinations made in the FPC orders are based on the assumed continuance of the private contractual obligations and entitlements contained in the void contracts, the determinations are unfounded and therefore erroneous in view of the Fourth Circuit decisions holding the contracts null and void in their entirety. Thus, the prime issue in this branch of the case is whether determinations in the FPC orders are founded upon such contractual obligations and entitlements as distinguished from physical operations, which were wholly different. That they were so founded will be shown in Point II below. In this branch of the case there is no question of statutory authority. There could never be any statutory authority to issue orders on non-existent foundations.

The Fourth Circuit in the decisions discussed by the respondents was, of course, not reviewing the FPC orders against Penn Water (here under review) or the FPC orders against Safe Harbor (not here under review) and was therefore not acting on and changing either set of orders. Petitioners have never claimed otherwise.

However, when Penn Water in this proceeding brought to the attention of the FPC (January 28, 1949) the illegalities of the contracts, the FPC should have withdrawn its order of January 5, 1949, which directed continuance of the illegal arrangements and which was based in important respects on the assumed continuance of the illegal private obligations and entitlements. Since the FPC did not do so,

the reviewing Court, the D. C. Circuit, should have set aside such orders.

The issues mentioned above are particularly clear-cut in view of the concessions which have been made by the FPC:

(a) The FPC has conceded that such a contract is illegal as a private contract.* The decisions of the Fourth Circuit as to such illegality stand as *res judicata* between the intervenors and petitioners.** In any event, those decisions are not on review here, and any reargument here of the issues they decided is beside the point. This brief will, therefore, contain no argument on points in intervenors' briefs relating to those issues.

(b) The FPC has conceded that the whole basis of the D. C. majority decision was erroneous by conceding that Section 10(h) of Part I of the Act was not impliedly repealed by Part II, as held by the D. C. majority, and that the Section has the same scope as the Sherman Act itself (FPC Br., pp. 63-4).

(c) The FPC also concedes that the arrangement which the FPC directed be continued stifles competition and removes all incentive on the part of Penn Water to compete (FPC Br., pp. 15, 18, 48, 61, 62) and that the payment provision is a revenue pooling arrangement which would be

---

* Memorandum on unsuccessful motion to postpone argument herein (p. 3).

** This disposes of Consolidated's Brief Points I, III and V and the Maryland Commission's Brief Points 1 and 3c, which constitute an attempt to argue that the Fourth Circuit decisions are erroneous. This Court has denied certiorari as to the Baltimore contract case, 340 U. S. 906 (1950); the petition for certiorari as to the Safe Harbor contract case has not been decided. The only new issue presented by the latter petition is whether the Safe Harbor contract is substantially similar in effect to the Baltimore contract. Counsel for Consolidated conceded in the Baltimore contract case (Record in Safe Harbor contract case, p. 52) that the Safe Harbor contract was substantially identical. Both the District Court and the Fourth Circuit (unanimously) held the contracts were substantially identical. Consolidated has had one review of that question. Consolidated is not entitled to a second review of this purely private question which does not warrant the attention and time of this Court.

illegal under the antitrust laws as a contract between private parties (FPC Br., p. 60 fn. 44 and p. 68 fn. 46).

The plain fact is that the FPC has turned the business and management of Penn Water over to a competitor, Consolidated, under the guise of a rate order which, in the words of the FPC's brief below,

> "permits Penn Water's facilities to be operated as though they were under common ownership with Baltimore Company's facilities." (Tr., p. 5574).

It was this very system of operation, embodied in the Baltimore contract, under which Consolidated, by letter of November 23, 1948, prohibited Penn Water from building a new $20,000,000 addition to its steam electric generating plant at Holtwood, Pa., fueled by coal dredged from the Susquehanna River (free but for the cost of processing), which could now have been producing needed power for the defense effort. Instead, Consolidated used its contractual powers to take the business for itself, by building a new steam electric generating plant of its own in Baltimore, to be fueled by more expensive bituminous coal bought in the market.*

A large portion of the brief of the FPC, and the briefs of the intervenors, is taken up with a discussion of economic matters relating to the electric utility industry, apparently in an attempt to make it appear that determination of such matters, or consideration of the voluminous record relating thereto, is necessary or pertinent to the decision of this case. On the contrary, all that is necessary for the determination of this case are the parts of the opinions and orders of the FPC referred to in petitioners' main brief (p. 3), the provisions of the Federal Power Act, and

---

* The Fourth Circuit emphasized this as one of the flagrant abuses of the contract system of operation. Consolidated asserts that the Court's finding as to this action of Consolidated was unsupported by the proceedings in the District Court, which upheld the contract. But the District Court itself expressly found that Consolidated under the contract prohibited Penn Water from building its steam plant "and instead, extended its own plant facilities in Baltimore" (89 F. Supp. 452, 460).

the adjudicated fact that the Baltimore and Safe Harbor contracts with their alleged entitlements and obligations are invalid and non-existent as private contractual obligations.*

There is here no case for administrative expertise, but only a case of an administrative agency having issued orders which were clearly without foundation and beyond its authority as a matter of law, and having maintained its position even after these errors of law were pointed out to it. Here we have a direct review of orders issued by the FPC after the illegalities of the situation were brought to its attention. FPC counsel conceded in their brief below (Tr. 5552) that these arguments advanced by Penn Water

> "are not new, having been urged upon the Commission and considered by it and having been repeatedly urged in this proceeding before this Court."

Since this is a direct statutory review, as conceded in the FPC's brief (p. 59), the cases cited by the respondents, including *Far East Conference* v. *United States*, October Term, 1951, No. 15 Misc., relating to referral of questions of fact to administrative bodies when they have not passed on them, have no application. On the state of the record in the *Far East* case, the questions had not been passed on by the administrative body. The FPC does not really argue that the *Far East* case is applicable here, but only that it may have application to the Safe Harbor contract case.**

Furthermore, all the respondents' arguments regarding the necessity for finding background facts and the effects of the illegal arrangements are beside the point under con-

---

* The orders here under review are expressly founded on both contracts; the invalidity of the Baltimore contract alone is a complete ground for setting the orders aside.

** This contention also is incorrect, because before the District Court or the Fourth Circuit decided either the Baltimore contract case or Safe Harbor contract case, the FPC had rendered its decision on the questions, albeit erroneously. However that may be, no one suggested in either contract case that there be such a referral, and counsel for the FPC was present in all courts and was furnished with all the briefs, as the Fourth Circuit found (194 F. 2d 89, 91 (1952)).

trolling decisions of this Court because the arrangements have been held illegal *per se* as a matter of law (Penn Water's main brief, pp. 24, 25). The FPC has had its full opportunity to advance its views; its views are erroneous as a matter of law and therefore should be reversed by the courts.

I. The FPC has no authority to direct continuance of arrangements illegal under the antitrust laws and state law, as it has attempted to do.

(a) Arrangements illegal under the antitrust laws.

To sustain the FPC orders here under review, some specific provision must be found in the Federal Power Act (or in some other Act of Congress) authorizing the FPC to direct continuance of arrangements otherwise illegal under the antitrust laws.

General regulatory provisions have never been construed as authorizing a regulatory body so to do, in the absence of some provision in the regulatory act (or the antitrust laws themselves) expressly giving the authority. We showed in our main brief (pp. 26-40 and App. A) that this Court, other regulatory bodies and the Attorney General have always so decided. Appendix A to our main brief contains a tabulation of provisions of Federal regulatory acts giving such specific authority, without which other regulatory bodies have not attempted to approve or direct continuance of illegal arrangements.

In order that there can be no question on this score, we submit as Appendix I to this brief a tabulation of general regulatory provisions in other Federal regulatory acts, which have never been held sufficient to permit the regulatory body to approve or direct transactions illegal under the antitrust laws. Where Congress intended to give such authority, it has enacted specific provisions, as also shown in the tabulation.

An examination of the tabulation shows that the subject matter of the regulatory provisions in these other acts

Constitutional Provisions.

Fifth Amendment	12
Tenth Amendment	14

is, in most cases, more extensive than that in the sections of the Federal Power Act to which FPC counsel refer.

FPC counsel do not discuss the point made in our main brief (pp. 27-30) that the Federal Power Act does not contain any specific provision authorizing the FPC to approve or order transactions illegal under the antitrust laws, and that it was not until the recent amendment of Section 7 of the Clayton Act (on December 29, 1950) that the FPC was given the one power of this kind that Congress has ever conferred upon it, namely, the power to exempt acquisitions of stock or assets approved by it. They do not discuss the point that this is a clear indication that, prior to December 29, 1950, the FPC had no power to exempt such acquisitions, and thereafter had only the limited power to exempt such acquisitions and no other transactions. Nor do they discuss the further point that a provision giving the FPC authority to grant exemptions was dropped from the original bill when the Federal Power Act was enacted in 1935. They simply fail to meet the clear implication from these Congressional actions.

As previously pointed out, the FPC has conceded (Br., pp. 63-4) that Section 10(h) of Part I of the Federal Power Act was not, as argued by the D. C. Circuit majority, repealed by Part II, and that the Section has the same scope as the Sherman Act itself.* FPC counsel argue that, notwithstanding the presence of this prohibition in Penn Water's license, it is not binding, and the FPC may somehow waive it. But the government license is a bilateral contract binding on both the government and the licensee and the FPC may not waive any of the statutory conditions, including this one. Permission to the FPC to waive such a statutory condition is given in subsection (i) of Section 10 in two specific and limited instances only, i.e., in the case of a license for a minor part only of a whole project, or for a small project of not more than 100 horsepower, neither of which has any application here.

FPC counsel refer to general regulatory provisions of the Federal Power Act, contending that such provisions

---

* The D. C. Circuit majority itself conceded this.

authorize the FPC to approve or direct the otherwise illegal arrangements. A brief analysis of such provisions will show that they do not contain any such authority.

Sections 205(a) and (b) are general regulatory provisions regarding rates and services of public utilities such as are found in the other Federal regulatory acts listed in Appendix I hereto and do not carry the requisite authority. Establishment of "just and reasonable" rates and preventing of "undue preference" does not carry with it any power to order an arrangement whereby one company is turned over to the control of another, and its incentive to compete with the other company is destroyed, in violation of the antitrust laws.

That such is the effect of the FPC orders is shown in our main brief (pp. 48-52; 58-68). The argument of FPC counsel that the orders do not do so is unfounded and is disposed of in subdivision (c) of this point below.

Section 206 implements Section 205 and also is a general regulatory provision for preventing rates of public utilities which are "unjust, unreasonable, unduly discriminatory or preferential" and determining the "just and reasonable rate." This is another general regulatory provision which does not carry the requisite authority. This section, like Section 205, provides that the FPC may adjust rates whether they are contained in a unilateral tariff or in a bilateral contract. That it so provides does not mean that the FPC has authority to create a bilateral contract, which is by its nature a consensual arrangement, when none exists. It is even more obvious that a contract which is illegal as between the parties could not be imposed. Furthermore, even if the FPC could create a contract, it would have to be done by an order binding on both parties. Here, the FPC has entered no order against Consolidated and it has conceded it is Penn Water which is subject to penalties under the orders issued (FPC Br., p. 53).

FPC counsel mention Section 207 (Br., p. 40, fn. 31). There is no authority in Section 207 to approve or direct continuance of contractual arrangements, illegal or otherwise. That section deals only with the matter of inade-

quate service. This language is general, like the other general regulatory sections referred to.

Section 203(a) mentioned by Consolidated (Br., p. 53), is irrelevant. Under it, the FPC may approve the sale or other disposition by a public utility of facilities, or the purchase by a public utility of a security of another public utility. This section has been present in the Act since its enactment in 1935. Yet, as pointed out above, Congress found it necessary in December 1950 to enact a specific amendment to Section 7 of the Clayton Act, in order to give the FPC power to exempt from the antitrust laws acquisitions approved by it under Section 203(a) of the Federal Power Act.

Section 202, cited by FPC counsel, clearly does not give the FPC the requisite authority. In fact, the policy outlined in subsection (a) is directly contrary to the assertions of FPC counsel. The policy is "assuring an abundant supply of electric energy throughout the United States", and encouraging "the voluntary interconnection and coordination of facilities". Subsection (b) provides that, where adjacent public utilities are not interconnected, the FPC may require interconnection and the exchange of energy. This is similar to the authority to require interconnections contained in the other Federal regulatory acts tabulated in Appendix I hereto (Column 7). Such a provision does not empower the regulatory body to direct an arrangement for the entire business of the public utility, but only for such interconnection. Section 202(b) is patently insufficient to empower the regulatory body to order an arrangement otherwise illegal under the antitrust laws in the absence of specific provisions such as are contained in some of the other Federal regulatory acts.*

Section 20 of Part I providing for the regulation of the interstate rates and services of licensees is another general regulatory provision providing for "reasonable, nondiscriminatory, and just" rates, to be regulated by the states

* Furthermore, none of the foregoing Sections 202, 205, 206, and 207 are applicable to licensees regulated under Part I of the Federal Power Act (see Point III below).

involved or, if they are unable to agree, by the FPC. There is no authority here to order contractual arrangements illegal or otherwise.

Section 4(g) of Part I provides for investigation of any attempted occupancy of public lands or streams and issuance of such order in that connection as may be appropriate. This section has no applicability to a licensee of the Federal Government legally occupying a power site and has no relation to contractual arrangements.

Section 4(e) relates to the issuance of licenses, *i. e.*, licenses containing the conditions required by Section 10, including the condition of Section 10(h) that licensees shall not make combinations or agreements to limit the output of electrical energy or restrain trade or fix prices, which FPC counsel concede restates the antitrust laws (Br., p. 64).

Section 10(a) provides for the inclusion in each license granted, of a condition that the physical project "including the maps, plans, and specifications" shall be such as in the judgment of the Commission is best adapted for developing the water power. This subsection has nothing to do with contractual arrangements.

There is nothing in any of these provisions cited by FPC counsel or the intervenors different from the broad regulatory authority in other acts, shown in Appendix I hereto, which have never been treated by either Congress or the Courts as conferring power on the regulatory body to order arrangements otherwise illegal under the antitrust laws, in the absence of specific provisions of the type tabulated in Appendix A to petitioners' main brief.

Nor is there any general repugnancy between the Act and the antitrust laws, as the dissenting opinion below and the Fourth Circuit pointed out. Penn Water can sell power to Consolidated under an arrangement which does not violate the antitrust laws. This would be under the usual form of unit rate contract, without managerial controls of Consolidated over Penn Water like the contracts Penn Water has with the three Pennsylvania utilities, which these same FPC orders also approve. This is the type of contract found elsewhere in the industry.

FPC counsel resort to another contention based on the assumed authority of the FPC to direct continuance of the arrangements, which authority we have shown does not exist. They claim that the arrangement directed here, whereby the business and management of Penn Water is turned over to its competitor, Consolidated, resembles the action of a commission of the State of California in fixing raisin quotas under the California Agricultural Prorate Act, which this Court held not to be action within the purview of the antitrust laws, because it was the act of the State. *Parker* v. *Brown*, 317 U. S. 341 (1943).

The situation here is not similar to that in *Parker* v. *Brown*. There the State Commission simply assigned a raisin quota to producers. Here by orders against Penn Water, the FPC is purporting to permit a private party, Consolidated, to control Penn Water and prevent Penn Water's competition, in violation of the antitrust laws.

Here, it is Consolidated, not the FPC, which the FPC's orders permit to perform acts violating the antitrust laws. Further, it is difficult to see how the FPC can exempt Consolidated from the antitrust laws in an order directed against Penn Water.

By its orders the FPC is attempting to confer on Consolidated powers which the FPC itself does not have under the Act. It is not claimed that the FPC has any power over installation of facilities of Penn Water such as steam electric generating plants.* Yet the FPC is giving Consolidated control over the expansion of such facilities by Penn Water. FPC counsel say in effect (Br., p. 53) that if Penn Water should disobey a direction of Consolidated it would be a violation of an order issued under the Act and subject Penn Water to penalties or restraints to be imposed by the FPC. Yet the FPC itself has no such authority over facilities under the terms of the Act. Obviously Consolidated therefore, in controlling Penn Water's expansion of facilities would be acting under an unauthorized dele-

* The FPC's powers with respect to construction of facilities are limited to those which are part of a licensed *hydroelectric* project (Section 10(b) of the Act) despite Consolidated's incorrect statements in this regard (CG Br., pp. 74, 75).

gation without statutory standards and at its own whim in its own interest. Thus, the FPC is trying to obtain by indirection a power it admittedly does not have under the Act.

The true significance of *Parker* v. *Brown* in the present case arises from the fact that, as this Court stated, a state or public authority "does not give immunity to those who violate the Sherman Act by authorizing them to violate it, or by declaring that their action is lawful" (317 U. S. at p. 351).

The situation here is analogous to that in the *Schwegmann* case (341 U. S. 384 (1951)). There this Court held that a state could not demand of private parties conduct which the Sherman Act forbids. The State of Louisiana required liquor retailers to abide by minimum prices fixed by contract between distributors and other retailers, though not parties to such contracts themselves. This requirement of Louisiana law did not come within the narrowly defined express power to exempt from the antitrust laws granted to the states by Congress in the Miller-Tydings Act.

In the case here the FPC is attempting to require Penn Water to follow the mandates of a competitor, Consolidated, not only as to prices at which it sells power to others, but in all phases of its business, and to give up all incentive to compete, obtain new business and economize. The orders require Penn Water to submit itself to actions by Consolidated, a private party, which violate the antitrust laws. Such a situation has no analogy to the case put by FPC counsel (Br., p. 59) that a regulatory body might fix rates for several utilities, though they could not legally agree among themselves on such rates.

The situation here is also like that in *Carter* v. *Carter Coal Co.*, 298 U. S. 238 (1936), where this Court struck down the Bituminous Coal Conservation Act of 1935, as unconstitutional under the Due Process Clause of the Fifth Amendment, because it turned phases of the business of some coal companies over to the direction of competitors. It is obvious that, if Congress itself has no constitutional power to hand the business of one corporation over to a

competitor, a regulatory commission cannot do so. Neither the FPC nor the intervenors attempt to distinguish the situation in this case from that in the *Carter Coal* case.

Moreover the FPC is a Federal agency which cannot direct continuance of contractual arrangements illegal under the antitrust laws without specific authority from Congress. The pattern of legislation shown in Appendix A to our main brief giving certain regulatory agencies specific authority in limited instances to grant exemptions from the antitrust laws demonstrates this conclusively.

The FPC concedes (Br., p. 49) that as to the approving or permitting of a contract which might otherwise contravene the Sherman Act "the Government has consistently maintained that express statutory authority and an exercise of that authority are needed to establish an exemption from the antitrust laws."

It is clear that there is no authority in the Federal Power Act for the FPC to order continuance of contractual arrangements whereby private parties violate the antitrust laws.

(b) Arrangements illegal under fundamental state law.

We have pointed out in Point II of our main brief that the arrangements here involved have been held to violate fundamental Pennsylvania law, including the doctrine of *ultra vires*, not mere regulations of Pennsylvania or its Public Utility Commission.

Just as in the case of the antitrust laws, the Federal regulatory body must have some express authority in its regulatory act in order to supersede state law of the fundamental organic character involved here. FPC counsel point to no provision of the Federal Power Act which contains such authority.

As we pointed out in our main brief, such provisions are contained in some other Federal regulatory acts (p. 70), for example, Section 5(11) of the Interstate Commerce Act.

Furthermore, as pointed out in our main brief (pp. 72-73), action of a Federal regulatory body supersedes state law only where this is necessary, in order to carry out the

purposes of the Federal regulatory act. FPC counsel can, of course, point to no such necessity here, because the purposes of the Federal Power Act can be carried out by the FPC's approval of an ordinary unit rate contract between Penn Water and Consolidated with no managerial controls of one company over the other, such as is customary in the industry.*

Consequently, the cases cited in the FPC brief (p. 86) to the effect that Federal laws override state laws when Congressional intent is expressed and necessity therefor exists are not in point.

Also not in point are the cases cited in the FPC brief (p. 89) relating to situations where the Federal Government has preempted a field. There is no such preemption here. The only statutory provisions pointed out by the respondents for the proposition that Congress in enacting the Federal Power Act intended to preempt the field either do not sustain them or prove the opposite.

Section 8 of the Federal Power Act provides that no voluntary transfer of a license, or rights thereunder, shall be made without the written approval of the FPC. But the corporate powers surrendered here are not rights under a license. That this is so is not only self-evident but is also shown by Section 9(b), which requires, as a condition of obtaining a license, that the applicant must prove that it is duly authorized under state law to conduct the business which it must conduct to operate under the license. This is a recognition of the fact that such corporate rights flow from the laws of the state of incorporation and not from a license under the Federal Power Act.

FPC counsel nowhere discuss the constitutional question under the Tenth Amendment which arises under the cases cited in our main brief (pp. 74-75) since the FPC

---

* Consolidated admits this would be satisfactory (Br., p. 41). The efficient power pools found in other parts of the country operate under such ordinary contracts. In this connection, the illegal revenue pooling in the present FPC orders should not be confused with pooling of power, which is a matter of physical interconnection.

orders attempt to override these fundamental state laws, as distinguished from mere state regulation of rates and services.

(c) The claim of FPC counsel that the FPC orders did not direct continuance of illegal contractual arrangements is frivolous.

FPC counsel now claim (Br., p. 72) that the FPC order of October 27, 1949 contained a provision eliminating from the FPC orders "any provision which might be held unlawful in the course of Penn Water's antitrust litigation against Consolidated".

Obviously the D. C. Circuit recognized that the FPC had purported to continue arrangements violative of the antitrust laws. A large portion of the opinion of the majority was devoted to an argument in support of the FPC's power to do so, and the entire minority opinion was occupied with arguments to the contrary.

FPC counsel at one time asserted that the provisions of the Baltimore contract excluded are those of Articles IV and V and only such articles. Since the filing of petitioners' main brief FPC counsel claim that a phrase in Article II is also excluded by the alleged exception (Br., p. 83, fn. 58).

The whole contention is without foundation.

The principal FPC orders were those of January 5 and February 28, 1949. As pointed out in our main brief (pp. 48-52 and 58 to 68), those orders directed the whole "present arrangement" to be continued, merely changing the rate of return. There was no exception whatsoever in the orders. The order of February 28, 1949 expressly approved the restrictions contained in Article IV (on Penn Water's right to contract) and Article V (on expansion of Penn Water's facilities), and said no change could be made in the arrangement by Penn Water without filing the change with the FPC for its approval.

Following the entry of such orders, petitioners petitioned the D. C. Circuit, pursuant to Section 313(b) of the Act, to review the orders and the FPC filed the transcript

with the D. C. Circuit. Thereafter pursuant to that Section, that Court had "exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part."*

Thus the FPC order of October 27, 1949 was issued after the D. C. Circuit had exclusive jurisdiction to modify the original orders. It was also issued without any notice or any opportunity for hearing. Yet this is the order which contains the claimed exception.

The October 27, 1949 order approved the specified return method of payment, made further downward adjustment of rates so that the rate of return was reduced from the specified 5¼% to 4¾%, and then stated:

> "All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force" (R., Vol. 17, p. 5283).

This was obviously not designed to except any provision, but an attempt to sustain the legality of all the provisions of the contract to assist the intervenors, with whom the FPC has cooperated from the beginning of these litigations.

It was not until after the decision of the District Court sustaining the Baltimore contract had been reversed by the first Fourth Circuit decision, September 30, 1950, that this theory (admitted by FPC in its Brief, p. 31 to be a mere construction of the order) was evolved by FPC counsel and presented in their answer (November 28, 1950) to petitioner's motion to bring the Fourth Circuit decision before the D. C. Circuit in this case.

The contention of FPC counsel that certain contractual provisions were excepted, turns on the phrase "provisions of the aforementioned contract, in and of themselves lawful". Counsel state that Articles IV and V are the

---

* The stay order of the D. C. Circuit, entered April 29, 1949, did not and could not reserve any jurisdiction in the FPC to change its original orders once jurisdiction had been vested in that Court, as now claimed by FPC counsel (Br., p. 25).

illegal provisions, although there is no indication whatsoever in the FPC order that those are the illegal provisions referred to or that there are any illegal provisions intended to be referred to. If the FPC had in fact intended to exclude Articles IV and V from its orders, it would have been a simple matter to have done so.

As pointed out in our main brief (p. 60), the contention that Article IV was thereby excluded is destroyed by the very order itself which, in another portion, expressly provides that the exclusive dealing provision contained in Article IV shall be continued (R., Vol. 17, pp. 5272-3). Furthermore, FPC counsel now admit (Br., p. 60) that the exclusive dealing provision of Article IV has been continued, terming it a service. Again, the order clearly continues the payment method which FPC counsel concede is illegal revenue pooling between private parties (Br., pp. 60-61, fn. 44) and which they concede was listed among the illegal provisions in the second Fourth Circuit decision (Br., p. 68, fn. 46).*

At the time the October 27, 1949 order was entered, there had been no decision by any court in the contract litigation. There had been a trial in the District Court and briefs filed by petitioners setting forth the many illegal features of the contract. As FPC counsel state (Br., p. 72) the FPC at that time knew the claims of illegality being made by petitioners (FPC counsel had all the briefs and were present in all the Courts). The Penn Water briefs, which FPC counsel then had, claimed that many provisions of the Baltimore contract were illegal, including the payment provision and provision for an operating committee, as well as Articles IV and V (Briefs of September 15, 1949, October 4, 1949 and October 17, 1949, in District Court). The provision in the October 27, 1949 order was obviously an attempt to bless rather than exclude the illegal provisions.

---

* Both the first and second Fourth Circuit decisions included among the illegal provisions, the provision for an operating committee which gave Consolidated a vote over all managerial decisions of Penn Water and Safe Harbor, respectively (R. Vol. 18, p. 5328, and 194 F. 2d 89, 93).

Furthermore, it is absurd to say that a mature administrative body like the FPC was leaving the contents of an alleged rate schedule to be determined by others in other proceedings, even if it had authority so to delegate its function. It had no authority to do so. It also had no authority after the filing of the transcript in the D. C. Circuit, April 22, 1949, *itself* to make any change in its prior orders, let alone delegate authority to make a change.

Another inconsistency of this claim of respondents should be pointed out. While they state that the FPC left to the Fourth Circuit in the contract litigation the determination of what terms of the Baltimore contract were to be continued by the so-called tariff, the intervenors at the same time claim that the Fourth Circuit decision was an improper attack on the order. These conflicting contentions will simply not stand up.

The contention is made even more absurd by the contrary assertion of FPC counsel that the FPC directed the continuance of all of the contractual provisions of the Safe Harbor contract, when there is no substantial difference in this connection between the orders on Safe Harbor and the orders on Penn Water, except that the orders on Penn Water, unlike the Safe Harbor orders, specifically mention and direct continuance of the very illegal provisions which FPC counsel now state are excluded.*

Intervenor Consolidated argued to this Court in its petition for certiorari in the Baltimore contract case, which was denied (p. 20):

> "The Commission necessarily *approved every provision of the Basic Agreement*, except the pecuniary amount of the rates". [Italics Consolidated's.]

Moreover, the exclusion of Articles IV and V, and even the phrase in Article II now mentioned by FPC counsel, does not eliminate the difficulty that the FPC ordered continuance of illegal arrangements. The illegalities are

---

* Obviously FPC counsel are taking these opposite positions to suit the procedural situation, there being no review case pending over the FPC Safe Harbor orders.

not contained only in Articles IV and V of the Baltimore contract. They permeate the whole contract, as shown in detail in Penn Water's main brief (pp. 60-62). Confronted with the details of such permeation, FPC counsel apparently decided in their current brief to concede that at least some of Article II was also illegal and was intended to be excepted. FPC counsel have never stated what other provisions they may claim are excepted.

No attempt is made by FPC counsel to argue the legality of the other provisions. For example, it is stated (Br., p. 62) that they "are merely ancillary". In fact FPC counsel claim the FPC can disregard the illegalities and say in their brief (p. 84) "the Commission's order is not invalidated because the contract as such may have been permeated with 'illegalities'."

We do not wish to repeat the exposition in our main brief (pp. 60-62) of the permeation of the whole contract by the illegalities. We point out, however, as an example that Article VIII provides for an operating committee which, without any of the other provisions, gives Consolidated a veto power over all of the managerial decisions of Penn Water, and which was specifically held to be illegal by the Fourth Circuit in both of its decisions (R., Vol. 18, pp. 5328-9; 194 F. 2d 89, 93).

In any event, FPC counsel concede and assert that the orders continued the illegal revenue pooling method of payment and the exclusive dealing arrangement whereby Penn Water is required to purchase any supplemental power it may need or desire from Consolidated. This exclusive dealing provision was expressly held by the Fourth Circuit to be illegal *per se* under Section 3 of the Clayton Act in the Baltimore contract case (R. Vol. 18, p. 5331). These provisions in themselves place Penn Water under the domination and control of Consolidated and permit Consolidated to eliminate all competition on the part of Penn Water and all competition in the sale of power to Penn Water on the part of other utilities with which Penn Water is connected.

The revenue pooling provision, which removes all incentive on the part of Penn Water, is as effective an instrument for suppressing competition as the direct power to veto other business, and also is a clear violation of doctrines of fundamental state law. Through it and the exclusive dealing provision Penn Water has been made to surrender to Consolidated its initiative over rates and services and managerial controls over important phases of its business. These provisions make the arrangement *ultra vires* Penn Water, as the Fourth Circuit held.

Consequently, the claim of FPC counsel regarding the exceptions in the October 1949 order is not only fanciful but is also immaterial.

II. The FPC based important determinations in its orders on the assumed continuance of the illegal private contractual obligations.

If, as we contend, the FPC orders were based on assumed continuance of private contractual obligations and entitlements, and such obligations and entitlements did not exist, the orders were without foundation and must fall. There is here no question of finding statutory authority. There can be no statutory authority to issue orders on false foundations, whether on private contracts illegal under the antitrust laws, or state law, or on any other type of non-existent foundation.

Therefore, in this branch of the case it remains only to make plain that the orders are based on the assumed continuance of the private contractual obligations and not simply on operations. Three important determinations in the orders were so based:

(a) **Rate of return.** The FPC opinions plainly state that the low rate of 5¼% (reduced even further to about 4¾% by the October 27, 1949 order) was fixed because the contract assured Penn Water of "stabilized income" and the Court below held that thereby Penn Water was "insulated" from "any substantial risk" by the contract (FPC Br., p.

77). FPC counsel now say that the unilateral arrangement prescribed by the FPC provides the same "stabilized income" during whatever period the rates "are operative, be it a month, a year, or a decade". There is clearly no stability in such an arrangement.

Consolidated may decide to stop taking and paying for power under the unilateral arrangement at any time. The FPC issued no order requiring Consolidated to continue. Thus, as pointed out in our main brief (p. 53), this may occur after a period of high flow in the Susquehanna River when a large amount of power had been generated and delivered, leaving Penn Water to sell the relatively small amount of power coming from the river in low flow as best it can and thus receive much less than the allowed return. This is certainly not a "stabilized income".

The statement of FPC counsel (Br., p. 109) that the FPC was regulating the sale of the product of this so-called integrated, interstate system, some generated in Maryland and some in Pennsylvania, is erroneous. No investigation was made of Consolidated's rates and charges for its contribution; the only orders issued were against Penn Water.

There is simply no escape from the fact that the substitution of the Commission-prescribed unilateral arrangement will not provide for the same "stabilization of income".

(b) **Jurisdiction of the FPC over Penn Water's Pennsylvania business.** Here, again, FPC counsel claim the jurisdictional determination of the order as to Penn Water's Pennsylvania business is not based on the invalidated contracts (Br., pp. 75-6).

FPC counsel ignore the point made in our main brief (pp. 54-5) that one of the express bases for this jurisdiction was the purchase by Penn Water from Consolidated of energy generated by Consolidated in Maryland and brought across the state line into Pennsylvania for resale to the Pennsylvania utilities, along with power generated by Penn Water in Pennsylvania. This purchase was required by the illegal exclusive dealing provision of the contract.

Once Penn Water is free from this contractual compulsion vested in Consolidated to compel Penn Water to purchase this power from Consolidated, this basis of the jurisdictional determination disappears. Realizing that this is so, FPC counsel have refrained from making the claim (made about other illegalities), that the illegal exclusive dealing provision has been excepted from the contractual provisions directed to be continued.

The other basis of this jurisdictional determination found in the FPC order is that the facilities of Penn Water are, under the Baltimore contract, operated by Consolidated from Maryland, along with the facilities of Safe Harbor and of Consolidated itself, and that the three groups of facilities by reason of this contractual arrangement constitute one system which lies across state lines. Here again, once Penn Water is free of this operational direction from Maryland, there is no more basis for claiming that its facilities are part of one system along with those of Consolidated, than that its facilities are part of one system along with the facilities of any of the utilities with which it is connected in Pennsylvania—Metropolitan Edison (ME), Pennsylvania Power and Light (PP&L), or Philadelphia Electric (PE). This is so, because there is no physical, engineering or electrical difference between these connections, and without the arrangement of control by Consolidated, Penn Water can no more be said to be in a power pool with Consolidated than in a power pool with ME or PP&L or PE.

To have an effective power pool there is no need for the continuance of the arrangement under Consolidated control. The Pennsylvania customers, ME, PP&L and PE are interconnected and exchange energy and have an effective power pool as do other utilities throughout the country under unit rate arrangements customary in the industry without managerial controls by any one company over another.

The conclusion is inescapable that, absent the arrangement of control by Consolidated, there is no basis whatever for FPC jurisdiction over Penn Water's sale of electrical

energy generated in Pennsylvania and sold to Pennsylvania utilities for use in Pennsylvania.

(c) **Allocation of the rate reduction.** We showed in our main brief (pp. 55-57) how the FPC had awarded the major portion, 89%, of the rate reduction to Consolidated as against 11% to Penn Water's Pennsylvania customers.* We there showed that the allocation was not based on service actually being rendered, but on the alleged artificial entitlements of Consolidated and the alleged artificial obligations of Penn Water and Safe Harbor under both the Baltimore and Safe Harbor contracts.

The entitlements and obligations referred to are the alleged entitlements of Consolidated to receive, and the alleged obligations of Penn Water to furnish, all of Penn Water's power remaining after Penn Water's firm commitments to its Pennsylvania customers are fulfilled and Consolidated's alleged entitlement to receive, and Safe Harbor's alleged obligation to furnish, two-thirds of Safe Harbor's power. But absent the contracts, Consolidated has no entitlement to power generated by Penn Water which is not delivered to Consolidated for use in Consolidated's system. Similarly, absent the Safe Harbor contract, Consolidated has no artificial entitlement to Safe Harbor's power which is not delivered to Consolidated for use in Consolidated's system.

FPC counsel admit (Br., p. 81) that the allocation of the reduction "actually did follow that provided by the contracts."

Consequently, since the private contractual obligations and entitlements are concededly void, the two bases on which the FPC allocated the rate reduction are non-existent and the allocation must fall.

We should add that FPC counsel discuss this matter as if Consolidated would somehow be unfairly dealt with by

* There is nothing to the assertion by the respondents that the Pennsylvania customers have not intervened to complain, since the Pennsylvania Public Utility Commission has intervened and is representing their interests in this case and is making this complaint.

an allocation of a rate reduction based on actual service, but they give no reason for their assertions. On the other hand, they ignore the incongruous effect of the allocations in the FPC order which, as pointed out in our main brief (p. 10), would have resulted in a net credit to Consolidated of $616,000 for the test year 1946. Although in that year Consolidated received a substantial amount of electric service from Penn Water, Consolidated would not only have not paid for such electric service, but would have received a cash bonus—all at the expense of Penn Water and its Pennsylvania utility customers.

These three important determinations contained in the FPC orders must fall, regardless of whether the FPC has any authority under the Federal Power Act to continue arrangements illegal under the antitrust laws. They are founded on erroneous assumptions. They are founded on private contractual obligations and entitlements which have been adjudicated among all the parties thereto to be invalid and non-existent. This would be so irrespective of the legal reason for the invalidation of the contracts. It is immaterial in this branch of the case that one of the legal reasons was the antitrust laws. The same result would have to be reached if the Fourth Circuit had held, for example, that the Baltimore contract no longer existed because of its termination for breach, by Penn Water's written notice of December 21, 1948, which not only declared the contract void for illegalities, but also terminated it on account of material breaches by Consolidated. The Fourth Circuit did not have to decide this matter of breach because it found the Baltimore contract void *ab initio* (R., Vol. 18, p. 5349).

III. FPC counsel fail to explain how Part II of the Act can be applicable to licensees under Part I.

The essential dilemma in trying to argue, as FPC counsel do, that Part II of the Act is applicable to licensees under Part I, such as Penn Water, is the clear inconsistency of the regulatory systems of the two Parts. Under Part I interstate rates and services of licensees are subject to regulation by the states involved, unless they are unable to agree, and then by the FPC; under Part II regulation in all cases is by the FPC. The Act is silent, if both Parts are applicable to a licensee, as to which regulatory system shall govern. This point alone should show that Congress did not intend both parts of the Act to be applicable to licensees.

To meet this dilemma FPC counsel argue that Section 20 of Part I does not mean what it says, that the states do not now have the power to regulate by agreement the interstate wholesale rates and services of licensees thereunder and that Congress enacted Part II in 1935 on that assumption. FPC counsel concede in their brief (p. 127) that the "sponsors of the Act" (the Federal Water Power Act of 1920) "believed that the power of the States was not limited to interstate retail rates." Moreover, when Congress enacted Part II in 1935, it simultaneously reenacted the Federal Water Power Act as Part I of the Federal Power Act, *without changing the language of Section 20,* an astounding performance if what FPC counsel states were correct. FPC counsel say that Congress made this new assumption in 1935 despite the express words of the section to the contrary.

FPC counsel state that Congress made this assumption because of this Court's decision in the *Attleboro* case, 273 U. S. 83 (1927). But this is unsound. The *Attleboro* case simply decided that one state could not regulate the interstate wholesale rates of an ordinary public utility, but had nothing to do with regulation of interstate wholesale rates by two states under compact powers expressly given

to them in Section 20 of the Federal Water Power Act (now Part I of the Federal Power Act) by Congress.

FPC counsel fail to discuss the decision of the Third Circuit in the first *Safe Harbor* rate case, 124 F. 2d 800 (1941), cert. den. 316 U. S. 663 (1942), which is the only applicable and controlling decision on the question. The basic holding of this case was that the States of Maryland and Pennsylvania had the right to regulate the interstate wholesale rates of Safe Harbor under Section 20 of Part I, and possessed the constitutional power to do so.*

We should add that the dilemma regarding dual regulation was not solved by the Third Circuit in the second *Safe Harbor* rate case, 179 F. 2d 179 (1949), cert. den. 339 U. S. 957, relied on by FPC counsel, as explained in our main brief (pp. 78-79).

The dilemma is insoluble and prevents any sound determination that Part II is applicable to licensees under Part I.**

The dilemma can only be avoided by adopting the simple construction indicated by the wording and structure of the Act—that Part I is applicable to licensees, Part II to public utilities in interstate commerce other than licensees, and Part III to both.

---

* The cases cited by the FPC in its brief (p. 125) are inapplicable since they, like the *Attleboro* case, involved no question of the power of two states to regulate under compact, and none of them even considered Section 20 of the Federal Power Act.

** FPC counsel also fail to show that the rate base defined for licensees under Part I is the same as the discretionary rate base determined by the FPC under Part II, for the reason they give is a *non sequitur*. They merely say that because the *rates* to be established as provided in Part I are just and reasonable rates and the *rates* to be established under Part II are also just and reasonable rates, the *rate base* must therefore be the same.

FPC counsel avoid any discussion of the plain fact that Section 3(13) of Part I of the Act provides expressly that net investment (rate base) shall be that provided for in "Classification of Investment in Road and Equipment of Steam Roads, Issue of 1914, Interstate Commerce Commission", and that under that classification concededly no deduction from investment accounts is made on account of depreciation until property is retired.

That simple construction of the Act would also, as Congress intended, give licensees of the Federal Government the rights to which they are entitled to match the severe duties and obligations imposed on them, described in our main brief (pp. 83, 84), to which ordinary public utilities are not subject.

IV. Miscellaneous contentions and incorrect statements of the Respondents.

The briefs of the FPC and the intervenors make a number of contentions and incorrect statements regarding matters which are either irrelevant or of no great significance. There is no necessity to deal with these in detail but certain of them will be briefly disposed of. We do not deal at all with intervenors' statements arguing as to the validity or invalidity of the Baltimore and Safe Harbor contracts, since those matters stand as *res judicata*.*

A. FPC Brief.

1. **Penn Water is not Dependent on Consolidated's Steam Generation.** It is claimed that Penn Water must have Consolidated's steam generated electricity and is thus dependent on Consolidated (FPC Br., pp. 13, 45). The claim is baseless. The three Pennsylvania utilities with which Penn Water is connected all have large steam electric generating capacities and serve the same type of customers as Consolidated. If Penn Water needs supplemental steam generated electricity, it would be free to obtain it from these other utilities. Penn Water has been required to purchase supplemental electricity from Consolidated because of the illegal exclusive dealing provision of the Baltimore contract.

Penn Water at the present time has hydro-generated power and a small amount of steam-generated power for

* Since the FPC orders are founded on both the Baltimore and Safe Harbor contracts, the adjudicated invalidity of the Baltimore contract is sufficient basis regardless of the Safe Harbor contract for setting aside such orders.

sale to other utilities. This electricity can be sold by Penn Water at less than it costs these neighboring utilities to generate their own power and is readily saleable to them when, and in the quantities, available. If Penn Water has necessity, as FPC counsel assert, for "firming up" its hydro-generated electricity with steam-generated electricity, it could purchase from any connected utility in the absence of the illegal exclusive dealing provision of the FPC orders.

2. **Feasibility of Unit Rates.** FPC counsel assert (Br., p. 47) that there are too many uncontrollable variables to permit the unit rate basis for Penn Water's tariffs. There is obviously nothing to this. No one knows in advance how much power any utility is going to sell during a given period of time and rates established as reasonable by a regulatory body are not guaranteed by that body. As pointed out in our main brief (pp. 66, 67), the unit rate in the words of the Civil Aeronautics Board preserves "incentive toward the accomplishment of decreased costs and increased revenue" and, in the words of this Court, forces utilities "within a given class to compete in securing revenues and in reducing or controlling costs". *TWA* v. *CAB*, 336 U. S. 601, 606-7 (1949).

Penn Water's contracts with the Pennsylvania utilities are on the usual unit rate basis. The specified return method of payment is virtually unheard of in the industry except in the case of a parent and a wholly-owned subsidiary, where the subsidiary is an incorporated "vest pocket" of the parent and the contract is a mere matter of bookkeeping.*

3. **Alleged Concessions by Penn Water.** FPC counsel make unsupported assertions that petitioners have made numerous concessions regarding the FPC rate orders. We wish to inform the Court that no such concessions have been made. Petitioners do not concede, for example, that

* The Conowingo contract mentioned by intervenors was made in such a situation. This contract did not contain any managerial controls by the purchaser over the seller.

the FPC orders were authorized by or conform to the standards of the Federal Power Act (FPC Br., pp. 29, 38, 39, 60); or that the orders are supported by substantial evidence, or that the rate reduction was not excessive (FPC Br., pp. 36, 79).

There is no concession, as stated by FPC counsel (Br., p. 40 fn. 30) that Penn Water's sales to Consolidated are subject to the Commission's jurisdiction. We concede that such sales are in interstate commerce and subject to whatever regulatory system Congress has provided, but we contend that such system is regulation under Section 20 of Part I by the states if they can agree and, only if they cannot agree, by the FPC.

4. **Suggestion of Application by Penn Water to FPC for Relief from Restraints Ordered by It.** The contention is made that privately exercised restraints, such as Consolidated's control over Penn Water's expansion of facilities, are valid because Penn Water can apply to the FPC to have them lifted. That the FPC might change an illegal restraint does not make it valid while in force.

As pointed out above, by giving these restraints over Penn Water to Consolidated, and then claiming that a violation of the restraints would be a violation of an order of the FPC, FPC counsel are seeking to obtain for the FPC a power over non-project facilities which it does not have under the Act.

The whole idea that the FPC has power to, or will, police the performance of the arrangement in the public interest is specious. The FPC did not even so much as express concern over Consolidated's action in prohibiting Penn Water from building its new steam plant. On the contrary, the FPC in its order of February 28, 1949 subsequently praised the very contract provision under which that action had been taken. The FPC did nothing about Consolidated withholding over $900,000 (up to December 1948) from Penn Water. In fact, it expressly refused to take any action (R. Vol. 16, p. 4960).

Also, the FPC refused to investigate Consolidated's rates and charges for the power it sold to Penn Water and issued orders only against Penn Water, notwithstanding that such rates and charges were for interstate wholesale rates and regulatable to the same extent Penn Water's rates and charges were regulatable, and notwithstanding that Penn Water had requested such regulation.

5. **Incorrect Statement as to Penn Water's Retail Rights.** It is claimed in the FPC brief (p. 7) that Penn Water has no retail "franchise service area". This flies directly in the face of the decision of the Fourth Circuit, which is binding on all the necessary parties, including the Maryland and Pennsylvania Commissions, that Penn Water itself has charter rights to sell power at retail in Pennsylvania, and that its wholly-owned subsidiary, Susquehanna Transmission Company of Maryland, has charter rights to sell electricity at retail in Maryland (R., Vol. 18, p. 5326).

At the present time, Penn Water does not have any retail distribution system. However, as the Fourth Circuit found, Penn Water sold electricity to the street railway company in Baltimore up until the time during the period of Aldred control when the business was taken away from Penn Water and given to Consolidated (R., Vol. 18, pp. 5325, 5329).

Neither the FPC nor the intervenors question that both Consolidated and Penn Water have the right to and do sell at wholesale.

6. **References to Statements of Penn Water Officers.** FPC counsel point to testimony of officers of Penn Water and annual reports of Penn Water praising the contractual arrangement. They fail to state, however, that such statements were made at a time before Consolidated had used the controls of the agreement, culminating in Consolidated's use of its controls to prevent Penn Water from building its new steam generating plant. They also fail to state that the reports referred to were issued in the period of Aldred control, from 1910 at least through 1946.

7. **Alleged Failure to Challenge FPC Order of October 27, 1949.** The claim is made (FPC Br., p. 22 fn. 21) that Penn Water has not challenged the reduction of its rate of return from 5¼% to about 4¾% by the FPC order of October 27, 1949. We cannot understand this because Penn Water separately petitioned for review of the whole October order (R. Vol. 17, p. 1), argued the matter before the District of Columbia Circuit and listed affirmance of the order in its petition for certiorari (p. 1) and its main brief herein (p. 20) as among the errors to be urged.

8. **Alleged Resemblance to Cost-Plus Contract.** FPC counsel assert (Br., p. 93) that the illegal revenue pooling arrangement is like a cost-plus contract and that cost-plus contracts are not *ultra vires*. There is faint resemblance between the payment arrangement present here and an ordinary cost-plus contract although each have the same vice of removing incentive, the cost-plus contract to a much lesser degree.

Usually, cost-plus contracts are not made between competitors, and do not relate to the entire business of one of the contracting parties. Under an ordinary cost-plus arrangement there is no managerial control by a purchaser over a seller and the seller is free to do as much business as it pleases with others. A cost-plus contract covering the entire business of a company made with a competitor would be illegal, just as the payment provision here is illegal, since both remove incentive and eliminate competition.

No cost-plus arrangement would ever result in the purchaser receiving the commodity plus a cash bonus as the present arrangement would have resulted in the test year 1946, as previously pointed out. Also, under a cost-plus contract, the return is not fixed without any relation to the amount of the commodity furnished, as it is in this case.

B. Intervenors' Briefs.

1. **Suggested Initiation of New Rate Case.** Intervenors' counsel contend that Penn Water must file a new tariff and

have a new proceeding before the FPC and the courts in order to obtain relief from this restrictive arrangement.

There is nothing to this. The issues are before this Court in this proceeding. If Penn Water had abandoned review of the present orders and filed a new arrangement with the FPC, the FPC would undoubtedly have contended that this case was a precedent for its authority to impose the contractual arrangements.

In fact, Penn Water did file a new arrangement, February 6, 1951, at the earliest possible moment it could legally do so. This was immediately after the District Court on January 17, 1951, pursuant to the mandate of the Fourth Circuit, dissolved the preliminary injunction obtained by Consolidated requiring Penn Water to perform both the Baltimore and Safe Harbor contracts. But the FPC rejected this new tariff on the ground, among others, that to be permitted to file new schedules Penn Water "must recognize" the existing FPC orders. Thus, the FPC sought to put Penn Water in a position of barring itself from continuing to appeal from such orders.

This argument of intervenors' counsel is simply an attempt by them to avoid decision of the real issues, notwithstanding the years of litigation and expense which have been incurred by all parties to get such issues before this Court.

2. **Misstatement as to Penn Water's Intent Regarding Interstate Operations.** There is no attempt here, as intervenors contend, on the part of Penn Water to stop selling power to Consolidated and thereby withdraw from interstate commerce. Penn Water has repeatedly declared its readiness to continue to furnish power to Consolidated and thereby to subject itself to whatever regulatory system Congress has imposed on such sales. Penn Water does, however, contend that its Pennsylvania sales of power generated in Pennsylvania are not in interstate commerce but are subject to the regulation of the Pennsylvania Commission.

3. **Misstatement as to Safe Harbor's Status.** Intervenors repeatedly refer to Safe Harbor as being wholly-owned by Penn Water and Consolidated or as being jointly owned by them. Neither statement is correct. Safe Harbor is not a wholly-owned subsidiary of either Penn Water or Consolidated, nor do Penn Water and Consolidated own its stock jointly; each owns separately one-half of the voting stock of Safe Harbor. The stock is in no way tied to the power contract and is free for sale to anyone at any time. Thus all or any part of the voting stock may at any time come into the ownership of someone having no relation whatever to the power contract.

4. **Misinterpretation of Passage in Second Fourth Circuit Decision.** Intervenors say that in the Safe Harbor contract case the Fourth Circuit said that the FPC had not prescribed the provisions of the contract, including the illegal provisions, as if that meant that the Fourth Circuit had said that the FPC had not approved all the provisions. What the Fourth Circuit was doing at this point in its opinion was answering a minor controversy brought about by a statement in Penn Water's brief in the case as to whether the FPC had originated the provisions or whether the FPC had simply approved provisions which it found in the agreement and which were originated by John E. Aldred and associates.* The Fourth Circuit said that the latter

---

*Penn Water Brief in answer to Brief of the FPC, p. 17: "The plain fact is, as shown by the FPC opinion and order of 1946 in the *Safe Harbor* case (Tr. 477-568), that the FPC did not itself prescribe the provisions of the Safe Harbor contract. As this Court found in the prior case (Op. 7, 9, 10), the Safe Harbor contract was drafted in 1931 while the parties were under the control of J. E. Aldred and associates. The contract was required to be filed with the FPC by general order of the FPC issued under the Federal Power Act. All that the FPC in its opinion and order in the *Safe Harbor* rate case did, was to change the rate, that is, the amount to be charged by Safe Harbor for its electricity. The FPC simply assumed the contract provisions. The opinion and order in the rate case are devoid of language appraising or evaluating the beneficial or detrimental effects of the contract provisions. There was no issue before the FPC in the *Safe Harbor* rate case as to any such matter."

was the case. This portion of the opinion is only a statement of the case, not a basis of decision, since the Fourth Circuit clearly held that the FPC had no authority under the Federal Power Act to exempt the contract from the antitrust laws and that the courts were not ousted from jurisdiction to determine antitrust law questions.

5. **Statement as to Continuance of Services.** Intervenors say that the contractual arrangements have been performed right along, even since Penn Water's claim of invalidity in December, 1948. But Penn Water was under court injunction, obtained by Consolidated, to perform both the Baltimore and Safe Harbor contracts until dissolution of the injunction January 17, 1951. Thereafter, on February 6, 1951 petitioners tried to file with the FPC rate schedules for new arrangements with Consolidated, but the rate schedules were rejected by the FPC. Penn Water then had to await the decision of the D. C. Circuit and now of this Court before taking further action.

6. **Statement Regarding Allocations.** Intervenors state that allocation of a rate reduction is a matter of fact to be determined at the administrative level. But this is clearly not so when the reduction being allocated, as well as the allocation, is expressly based on a non-existent foundation, as is the case here. Moreover the courts clearly have power to review and set aside plainly erroneous calculations and allocations.

7. **Statement Regarding Dissenting Opinion Below.** Intervenors say that the dissenting opinion below recognized the validity of the payment provision of the Baltimore contract. This is incorrect. The opinion clearly recognized that the Fourth Circuit invalidated the entire contract (R. Vol. 18, pp. 5409-12).

8. **Statement Regarding Motions to Set Aside.** Intervenors seem to intimate that petitioners did not call the Fourth Circuit's Safe Harbor contract decision to the

attention of the D. C. Circuit. On the contrary, just as soon as the District Court decided the Safe Harbor contract was invalid, petitioners moved to bring that decision before the D. C. Circuit and also presented the decision to the D. C. Circuit later in a motion for rehearing and that decision is part of the record in this case (R. Vol. 18, p. 5361).

9. **Statement as to Relief.** Intervenors contend that Penn Water has changed from time to time the relief it asked for in this case. There is nothing to this. Penn Water has always asked for the equitable relief the situation calls for. The words used may have varied but their import was the same. All the prayers for relief in the petitions for review and the motions in the D. C. Circuit ask for such relief as may be just in the premises.

The orders of the FPC are illegal and should be set aside and Penn Water should be permitted to file with the appropriate regulatory authorities new arrangements not incorporating the illegal contractual features. The moneys segregated under the D. C. Circuit stay order and FPC stay order are in the jurisdiction of the Courts and should be dealt with by them in an equitable manner.

Conclusion.

It is respectfully submitted that the judgment and orders of the D. C. Circuit should be in all respects reversed and the D. C. Circuit should be directed to grant petitioners' motions to set aside the orders of the FPC.

I. The decision of the D.C. Circuit, holding that where electric energy is produced in Pennsylvania and thereafter commingled with electric energy flowing from another state and sold to Pennsylvania customers and where the respective portions of such energy are ascertainable, is contrary to the decisions of your Honorable Court in Peoples Gas Company v. Public Service Commission, 270 U.S. 550 (1926) and Lone Star Gas Company v. Texas, 304 U.S. 224 (1938)	21

a. The D.C. Circuit Decision Is Contrary To Peoples Gas Co. v. Public Service Commission, 270 U.S. 550 (1926) .. 21

b. The D. C. Circuit Decision Is Contrary To Lone Star Gas Company v. Texas, 304 U. S. 236 (1938) 24

II. The D.C. Circuit erroneously held, in conflict with the decision of the Fourth Circuit, that the FPC may compel continuance of, and base its orders upon, contractual arrangements which disable a Pennsylvania public utility from performing duties imposed upon it under the law of its state of incorporation and surrender to a foreign public utility the basic rights, powers and privileges which such law, and public policy, require it to exercise independently 26

III. The decision of the D.C. Circuit affirming FPC's determination of jurisdiction over Penn Water's sales in Pennsylvania is in conflict with the decision of the Fourth Circuit and erroneous because such determination, and the D.C. Circuit decision, are based upon the assumed existence and continuance of the illegal Baltimore and Safe Harbor contracts 37

Pennsylvania Public Utility Commission,

Petitioner

v.

Federal Power Commission,

Respondent.

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

Petitioner, Pennsylvania Public Utility Commission, prays that your Honorable Court issue a writ of certiorari to review the judgment and orders of the United States Court of Appeals for the District of Columbia Circuit (herein-

after called D. C. Circuit) entered in the above case on July 3 and 6, and September 6, 1951, (Printed Record Vol. 18 pp. 73, 74, and p. 78) denying motions to annul or remand and affirming orders of the Federal Power Commission. The judgment and orders were entered by a divided court and in direct conflict with the unanimous decision of the United States Court of Appeals for the Fourth Circuit from which this Court denied certiorari[1], and the decision of the United States District Court for Maryland,[2] declaring illegal certain contracts and holding in effect that FPC had no authority to validate them by the orders here involved. These contracts so declared illegal are the basis for the orders of FPC and terms thereof are required by said orders to be continued in effect.

OPINIONS AND ORDERS BELOW

The opinion and order of FPC dated January 5, 1949, the opinion and order of February 28, 1949, and opinion and order of October 27, 1949, are found at R. Vol. 16 pp. 39-191; Vol. 16 pp. 372-388; Vol. 17 pp. 46-71; the majority opinion of the D. C. Circuit (R. Vol. 18 pp. 46-72) per Bazelon, Circuit Judge, in which Fahy, Circuit Judge, joined is not yet officially reported. The dissenting opinion of Wilbur K. Miller, Circuit Judge, was filed on October 4, 1951. The order denying rehearing, to which Judge Miller also dissented, is found at R. Vol. 18, pp. 78.

JURISDICTION

The jurisdiction of this Court is invoked under Section 1254(1) of the Judicial Code (62 Stat. 928, 28 U.S.C. §1254) and Section 313(b) of the Federal Power Act (49 Stat. 860, 16 U.S.C. §825 l).[3]

STATUTES INVOLVED

The statutes of the Commonwealth of Pennsylvania involved are set forth in Appendix A.

---

[3] The judgment of the D. C. Circuit was entered on July 3, 1951. Petitioner's motion for rehearing was denied September 6, 1951, (R. Vol. 18 pp. 73-74). Application for a stay of certification to the FPC of the opinion and judgment (in lieu of mandate) of the D. C. Circuit pending application to this Court for a writ of certiorari and final disposition of the cases was duly made, and the orders granting and extending the stay were entered September 17, 1951, and October 15, 1951, respectively.

STATEMENT

FPC orders, which the D. C. Circuit affirmed, were issued in proceedings to determine the reasonableness of rates charged for the energy supplied by Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland to Consolidated Gas, Electric Light & Power Company of Baltimore, Pennsylvania Power and Light Company, Philadelphia Electric Company and Metropolitan Edison Company. The latter three electric companies are located in Pennsylvania. These orders required a reduction in rates as well as continuance of substantive provisions of a contract between Penn Water and Consolidated.[4] The amount and allocation of the reduction were based upon said contract. Determination of FPC jurisdiction over Penn Water's wholesale sales in Pennsylvania and the allocation of the reduction between Consolidated and the Pennsylvania customers of

---

[4] The Baltimore contract consisted of three agreements dated December 31, 1927, June 1, 1931 and September 29, 1939 between Penn Water and Consolidated (R. Vol. 15, pp. 4577-4603; 4606-4621).

Penn Water were predicated upon the assumed existence and continuance of such contract. A further contract between Penn Water, Consolidated and Safe Harbor Water Power Corporation[5] was likewise the basis for important features of the order. FPC designated these contracts "the foundation contracts" of its orders. These contracts were adjudicated by the unanimous decision of the United States Court of Appeals for the Fourth Circuit and by the United States District Court for Maryland to be illegal and void **ab initio** in their entirety, as being in violation of the laws of Pennsylvania governing public utilities as well as Federal antitrust laws and public policy.

Litigation was begun in the Fourth Circuit prior to the first FPC order involved (January 5, 1949) and was formally brought to the attention of FPC by petitions for rehearing. FPC, however, held that the illegality of the contracts was immaterial to its orders. The decision of the Fourth Circuit (R. Vol. 18, pp. 1-28) was

[5] The Safe Harbor contract consisted of three agreements dated June 1, 1931, August 1, 1932 and November 22, 1939 between Safe Harbor, Consolidated and Penn Water (R. Vol. 15, pp. 4554-4576). In the case of each contract the basic agreement was the one dated June 1, 1931.

rendered and certiorari denied by your Honorable Court while review of the FPC orders by the D. C. Circuit Court was pending. The decision was brought to the attention of that Court by formal motions.

The Fourth Circuit held that the interchange of electricity should be by some method which "will not infringe either the [Federal] antitrust laws or the utility laws of Pennsylvania". The D. C. Circuit held, in effect, that "anti-trust criteria" do not apply to orders of the FPC and that the FPC could order continuance of what would otherwise be an illegal contractual arrangement and could base important features of its orders thereon. The D. C. Circuit did not discuss the adjudicated invalidity of the contracts under the Pennsylvania Public Utility Law and public policy.

The D. C. Circuit decision permits and, for the first time, enables FPC to dictate complete terms and conditions by and under which public utilities subject to its jurisdiction may operate. Further, FPC may now dictate the terms of any contract between public utilities and may dictate all intercorporate relations, notwithstanding the opposition of management of any or all of the utilities involved, or the legality thereof under federal or state laws.

The effect of its decision was to hold such invalidity wholly immaterial and to permit the FPC to incorporate into its rate orders provisions which destroy initiative in establishing reasonable rates and services although such initiative was required to be preserved under the Pennsylvania Public Service Company law (in effect when the Baltimore contract was made) and the Pennsylvania Public Utility Law, which is now in effect, and although the D. C. Circuit Court itself concedes (R. Vol. 18, p. 53) that the preservation of such initiative is a "condition precedent to proper operation of the rate making process."

The decision of the D. C. majority is not only in direct conflict on questions of Federal law of great importance with the unanimous decision of the Fourth Circuit and other courts, but the conflicting decisions relate to the identical contracts. The decision of the Fourth Circuit will have been rendered ineffective by the decision of the D. C. Circuit majority if this petition is not granted by Your Honorable Court.

Determination by Your Honorable Court of the validity or illegality of the contracts involved is of vital importance to your petitioner and the Commonwealth of Pennsylvania, as well as to the public utility commissions and the respective

states throughout the United States of America. The holding of the D. C. Circuit, affirming the action of FPC assuming jurisdiction of wholesale sales of electric energy within a state of energy produced within that state, is so inextricably based upon the contracts declared by the Fourth Circuit to be illegal and void **ab initio** that if FPC is denied the power to enforce the illegal contracts under the guise of rate orders, the basis for its finding and conclusion that the sales are in interstate commerce will have been removed.

THE PARTIES INVOLVED AND THEIR INTERESTS AND BUSINESSES.

Pennsylvania Public Utility Commission, your petitioner, is the administrative agency within the Commonwealth of Pennsylvania to which has been delegated the power and upon which has been conferred the duties of enforcing the public utility laws and of regulating rates and services of public utilities engaged in intrastate commerce.

Penn Water and Safe Harbor are Pennsylvania electric utility corporations subject to the jurisdiction of your petitioner. Both corporations own hydroelectric generating plants on the Susquehanna River. Penn Water also owns a steam generating plant and transmission lines in Pennsylvania, and, through its wholly owned subsidiary, transmission lines in Maryland. The present business of such companies is the sale of electric energy at wholesale and in bulk.

Penn Water's wholesale customers include PE, PP&L and ME. These are Pennsylvania electric utilities, having steam electric generat-

ing plants and transmission and distribution facilities in Pennsylvania, and sell both at wholesale and at retail. They are also subject to the jurisdiction of your Petitioner, Pennsylvania Public Utility Commission.

Consolidated is a Maryland electric utility corporation with steam electric generating, transmission and distribution facilities in and around the City of Baltimore, Maryland. Consolidated has generating capacity several times that of Penn Water or Safe Harbor and is in the business of selling electric energy at wholesale and in bulk as well as at retail.

THE CONTRACTS

The invalidated Penn Water, Baltimore and Safe Harbor contracts, which would have remained in effect until 1980, provided for payments by Consolidated for power, not on a unit rate basis, but on a basis which would provide to the seller recovery of operating expenses including taxes and a specified return on investment, regardless of the amount of power delivered or extent of services rendered, with a credit to Consolidated for revenues received from sales of power to others. This arrangement is in clear violation of the Pennsylvania Public Utility Law which requires utilities to establish and maintain reasonable rates and furnish adequate service. The obvious purpose and effect of the arrangements in issue are to remove incentive to compete, to expand or to effect operating economies. The contracts contain closely associated provisions providing for control by Consolidated over the contracts, sales, purchases, prices, output and expansion of both Penn Water and Safe Harbor which are also illegal under Pennsylvania law, public policy and the antitrust laws, and were **specifically** alluded to as being illegal

under such laws by the decisions of the Fourth Circuit and the District Court for Maryland.

The contracts surrender control of Penn Water and Safe Harbor to Consolidated, stifle their initiative with respect to rates and services and virtually destroy the independent corporate character of these Pennsylvania corporations. The provisions of the contracts have been used by Consolidated to interfere with Penn Water's and Safe Harbor's contracts with their Pennsylvania customers[6] and to prohibit Penn Water from building a new large steam electric generating plant in 1948 from which badly needed power could have been economically produced.

---

[6] PP&L, PE and ME. The contracts with these customers are all on the customary unit rate basis, i. e., payment based on amount of power delivered and without managerial control and restraints by the purchaser over the seller.

PROVISIONS OF THE FPC ORDERS

FPC in its opinion denying rehearing (February 28, 1949) held immaterial to its rate orders the possible illegality of the Baltimore and Safe Harbor contracts. It directed continuance of the existing illegal pooling arrangement of the Baltimore contract as follows:

> "The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents (Penn Water and Susquehanna Transmission Company) of the recovery of all proper operating expenses, depreciation, taxes and a fair rate, is the most practicable under the circumstances. That arrangement will, therefore, be continued * * *" (R. Vol. 16, p. 379). (Matter in parenthesis added.)[7]

The FPC approved in emphatic terms the restrictive controls of the Baltimore contract, such

[7] A similar directive is contained in the first FPC order (R. Vol. 16 p. 175).

as Article VIII[8] requiring the consent of Consolidated to any action by Penn Water with respect to operating, engineering, or accounting matters (R. Vol. 16, pp. 53-54), Article IV[8] requiring the consent of Consolidated to purchases and sales by Penn Water (R., Vol. 16, p. 380) and Article V[8] requiring the consent of Consolidated to substantial expansions by Penn Water (R. Vol. 16, p. 378). Possibility exists that FPC or Consolidated might, in the future, assert that the FPC orders required continuance of the illegal restrictive provisions of the Baltimore and Safe Harbor contracts, as well as the payment provisions, and that the D. C. Circuit upheld its power to do so. The FPC orders were based upon the assumed existence of the entire contracts, including the restrictive provisions specifically referred to as illegal by the decisions of the Fourth Circuit and the District Court for Maryland. FPC, relying upon Baltimore and Safe Harbor contracts as "foundation contracts", held that certain operations thereunder, the wholesale sales of electric energy by Penn Water to the three Pennsylvania electric utilities, otherwise intrastate, were interstate in character and subject to regulation by it. Actually, these serv-

[8] The entire text of these Articles are set forth at R., Vol. 15, pp. 4612-14.

ices are rendered wholly within the State of Pennsylvania, but the FPC held them interstate on the grounds (R., Vol. 16, pp. 53-55) that Penn Water was part of an integrated system (created by the illegal contracts and continued by FPC direction) and that power purchased from Consolidated was used to supplement the power generated by Penn Water and sold in Pennsylvania (Article IV of the Baltimore contract permitting Consolidated to require that such supplemental power be purchased from it by preventing such purchase from others).

Absence of the illegal provisions of the Baltimore contract, which Consolidated utilized to require Penn Water to purchase supplemental power from Consolidated rather than from Penn Water's Pennsylvania customers, would permit Penn Water to purchase such supplemental power in Pennsylvania and thereby eliminate the need for intermingling of interstate power with that sold by Penn Water to such customers.

FPC held that the sales of electric energy by Penn Water to its Pennsylvania customers constituted sales in interstate commerce. It dismissed, without discussion, argument made by your Petitioner regarding lack of jurisdiction over the sale of energy produced in Pennsylvania and sold to Pennsylvania customers, as well as

the alternative contention that sales to Pennsylvania customers are local in character and the interstate commerce, if any involved, so negligible as to be incidental to the dominant intrastate business and as such not interstate commerce. Instead, it concluded that, by reason of the contractual arrangements, the system was "an integrated and coordinated electric system" (R. Vol. 16, p. 53) and that each of Penn Water's sales in Pennsylvania "is clearly a system transaction of a character wholly interstate even though at times it involves varying amounts of energy never crossing the State boundary, sometimes unmixed and sometimes mixed with out-of-state energy. (R. Vol. 16, p. 55)

FPC allocated the reduction between Consolidated and the three Pennsylvania electric utility customers of Penn Water, giving the major share of the reduction to Consolidated, such allocation being determined on the basis of alleged "entitlements" of Consolidated under the Baltimore and Safe Harbor contracts and not on the basis of the power actually delivered. An allocation on the latter basis would have given the Pennsylvania utilities a much greater share of the rate reduction.

ULTIMATE RELIEF SOUGHT BY PETITIONERS

Pennsylvania Public Utility Commission ultimately seeks to be free from FPC interference as regards enforcement of orders and regulations pertaining to the intrastate rates and services of Penn Water, to the end that the Commission may perform properly the duties imposed upon it and exercise the powers delegated to it by the Pennsylvania Public Utility Law.

Petitioner requests Your Honorable Court to review this case and set aside the orders of the FPC or, in the alternative, to remand the case to FPC with directions (a) that its jurisdiction be limited to determination of the reasonableness of rates for power sold in interstate commerce by Penn Water and Transmission Company to Consolidated, and (b) to determine such rates without regard to the illegal contracts and on a unit rate basis to be determined by the amount of capacity and energy actually supplied and with allocations, if any be made, to be based on costs of energy supplied and services actually rendered and not on fictitious "entitlements".

QUESTIONS PRESENTED

I. Where electric energy is produced in Pennsylvania and thereafter sometimes commingled with electric energy flowing from another state and sold to Pennsylvania customers and where the proportions of such respective energy are ascertainable, are such sales in interstate commerce within the scope and intendment of the Federal Power Act and subject to the jurisdiction of FPC?

II. May FPC compel a Pennsylvania public utility to maintain contractual arrangements, whereby such corporation is disabled from properly performing its duties under the law of the state of its incorporation and surrenders basic rights, powers and privileges inherent in that franchise to a foreign public utility and may FPC premise its findings as regards jurisdiction and other critical provisions of its rate orders upon the existence and continuance of such contractual arrangement?

III. Where contracts which constitute the basis for a jurisdictional finding by FPC of interstate transmission of energy have been de-

cleared illegal as being in violation of the Federal anti-trust laws, the Pennsylvania Public Utility and public policy, may FPC, nevertheless, require continuance of such contractual arrangements in the form of a rate order?

The above stated issues were determined in the affirmative by the D. C. Circuit and such determinations are specified as errors to be urged.

REASONS FOR GRANTING THE WRIT AND ARGUMENT

I. The decision of the D. C. Circuit, holding that where electric energy is produced in Pennsylvania and thereafter commingled with electric energy flowing from another state and sold to Pennsylvania customers and where the respective portions of such energy are ascertainable, is contrary to the decisions of Your Honorable Court in Peoples Gas Company v. Public Service Commission, 270 U. S. 550 (1926) and Lone Star Gas Company v. Texas, 304 U. S. 224 (1938).

---

a. The D. C. Circuit Decision Is Contrary To Peoples Gas Co. v. Public Service Commission, 270 U. S. 550 (1926).

The energy produced and sold in Pennsylvania is in intrastate commerce, irrespective of whether mingled with energy of another state. In **Peoples Gas Co. v. Public Service Commission,** 270 U. S. 550, 554-555 (1926) the Gas Com-

pany received two-thirds of its gas from West Virginia and produced the other one-third in Pennsylvania. The gas from both sources was mixed and sold to various customers. Your Honorable Court held that the West Virginia gas was in interstate commerce but that the Pennsylvania gas was in intrastate commerce only. It was said:

> "As respects the Pennsylvania gas we think it must be held to be in intrastate commerce only. Feeding it into the same pipe lines with the West Virginia gas works no change in this regard. Of course after the commingling the two are undistinguishable. But the proportions of both in the mixture are known and that of either readily may be withdrawn without affecting the transportation or sale of the rest. So for all practical purposes the two are separable, and neither affects the character of the business as to the other. Eureka Pipe Line Co. v. Hallanan, 257 U. S. 265; United Fuel Gas Co. v. Hallanan, 257 U.S. 277; 281. And see Hallanan v. Eureka Pipe Line Co., 261 U.S. 393; Hallanan v. United Fuel Gas Co., 261 U.S. 398."

The fact of commingling with electric energy from another state does not affect the true nature of that produced and sold within the state. Par-

ticularly is that true where, as here, a division between purely intrastate energy and energy obtained from Consolidated is entirely practical. While impliedly denying the practicality in one portion of its order, FPC recognized the feasibility and duty of making similar allocations in its order of October 27, 1949 (R. Vol. 17, p. 53). FPC there specified in each of the three schedules of rates to the Pennsylvania customers an identical formula for fuel cost adjustment applicable to the portion of the kilowatt-hours sold as firm energy to Pennsylvania customers which is supplied by the Baltimore Company. The separation of sources of supply which FPC made in this latter matter is the type of allocation it should have made between intrastate and interstate sources of electric energy.

Your Honorable Court has approved FPC allocations where a utility's business consisted of intrastate sales, direct industrial and interstate wholesale:

Colorado Interstate Gas Co. v. Federal Power Commission, 324 U. S. 581 (1945);

Panhandle Eastern Pipe Line Co. v. Federal Power Commission, 324 U. S. 635 (1945).

Recognition of the practicalities of an allocation of source of energy which, on the basis of the instant record, is approximately 83% intrastate and 17% interstate, compels the conclusion that sales involving interstate commerce are negligible and sales in intrastate commerce predominant.

---

b. The D. C. Circuit Decision Is Contrary To Lone Star Gas Company v. Texas, 304 U. S. 236 (1938).

The sales of energy by Penn Water to its Pennsylvania customers are matters of local concern which should logically be regulated by a local regulatory commission. The holding of FPC and D. C. Circuit that **all** sales were in interstate commerce and subject to the jurisdiction of FPC is contrary to the decision of Your Honorable Court in **Lone Star Gas Company v. Texas,** 304 U. S. 236 (1938). In that case, a company sold gas to distributing companies in Texas. 11% of the gas was obtained from Oklahoma. The Texas Commission regulated the rates of all gas delivered in Texas including that obtained from Oklahoma and commingled with the Texas gas. It was held that the Texas Com-

mission had not undertaken to regulate the sales and deliveries of gas in interstate commerce. Your Honorable Court said (p. 239):

> "* * * We think that the proved manner in which the gas from Oklahoma was treated and handled in Texas made it an integral part of the gas supplied to the Texas communities in appellant's intrastate business and that the Commission was entitled so to consider it in fixing its rate."

The treatment and amount of the backfeed energy in the instant case also made it an integral part of the energy produced in Pennsylvania and sold to Pennsylvania customers in Penn Water's intrastate business.

The primary features of the operation should control. The sales to Pennsylvania customers are local in nature and primarily intrastate. This is not a matter of permitting the Federal Power Commission to regulate accounting or the sale of securities; it is a matter of limiting the Federal Power Commission to the jurisdiction over rates as specifically set forth in the Federal Power Act.

II. The D. C. Circuit erroneously held, in conflict with the decision of the Fourth Circuit, that the FPC may compel continuance of, and base its orders upon, contractual arrangements which disable a Pennsylvania public utility from performing duties imposed upon it under the law of its state of incorporation and surrender to a foreign public utility the basic rights, powers and privileges which such law, and public policy, require it to exercise independently.

There is a clear conflict between the decisions of the Courts of Appeals for the Fourth Circuit and for the District of Columbia Circuit with respect to the power of the FPC to require continuance of, and base its determinations upon, illegal contractual arrangements contained in the Baltimore and Safe Harbor contracts. The Fourth Circuit held that the parties must find some method of interchanging electrical energy which "would meet with the approval of the appropriate regulatory authority and will not offend * * * the utility laws of Pennsylvania" (R. Vol. 18, p. 28). The D. C. Circuit majority decision did not even refer to this holding and ignoring the fact that the Baltimore and Safe

Harbor contracts were held invalid **in their entirety** because they violated the utility laws of Pennsylvania and public policy, held, in effect, that the FPC could predicate important features of its rate orders upon the assumed existence and continuance thereof, and thus require continuance of illegal provisions contained therein.

The invalidity of the Baltimore and Safe Harbor contracts under state law[9] and public policy[10] does not arise by reason of a mere technical violation of statute or charter. It arises from the fact that the contracts destroy the independent corporate character of the corporations. They completely divest the boards of directors of powers of management which belong to them alone by virtue of their corporate franchises. The contracts deprive Penn Water of the power to perform basic and fundamental duties imposed by Pennsylvania law and, in particular, the initiation of reasonable rates and adequate services. The Fourth Circuit, citing decisions

[9] The State statutes involved are set forth in Appendix A. pp. 41 to 46.

[10] The public policy referred to is not merely state public policy but public policy as laid down in decisions of this Court. **Gibbs v. Consolidated Gas Co. of Baltimore**, 130 U. S. 396 (1889); **Thomas v. Railroad Co.**, 101 U. S. 71 (1879); **Central Transp. Co. v. Pullman's Palace Car Co.**, 139 U. S. 24 (1891).

of this Court, properly held (R. Vol. 18, p. 25): "Indeed such restrictions upon the freedom of a public utility cannot be sustained irrespective of statutory prohibition". Further, it said (R. Vol. 18, p. 26):

> "One of the most important duties of a public utility, inherent in its franchise to serve the public, is the duty to take the initiative in proposing reasonable rates and rendering adequate services, taking into account changing conditions; and the utility is not relieved from this duty because its activities are subject to governmental regulation, for a regulatory commission is not clothed with the responsibility or qualified to manage the utility's business."

The District Court for Maryland in its order invalidating the Safe Harbor contract (R. Vol. 18, p. 45) held that the agreements violate the laws of Pennsylvania governing public utilities, public policy, the common law and are ultra vires, completely destroying "corporate virility".

The Court of Appeals for the Fourth Circuit stated (R. Vol. 18, p. 26):

> "The conclusion is inescapable that the contractual restrictions upon the power of Penn Water to perform its functions as a

utility under the Pennsylvania statutes are invalid.

This conclusion is not avoided by the fact that Penn Water is a public utility under Part II of the Federal Power Act and subject as such to the regulation of the Federal Power Commission."

The District Court for Maryland was in accord, stating (R. Vol. 18, p. 45) that the Safe Harbor contract deprives that company of "the discretion and initiative necessary to respond and be alive to its public obligations", and is "intolerable under the common law and statutes of the State of Pennsylvania".

These courts specifically allude to certain of the restrictive provisions of the contracts, including the provisions restricting contracts and plant expansion (R. Vol. 18, pp. 25, 42, 43) and requiring concurrence of Consolidated in operating, engineering and accounting matters (R. Vol. 18, pp. 7-8, 45). The FPC orders which were affirmed by the D. C. Circuit, on the other hand, commended and condoned these provisions (R. Vol. 16, pp. 181 and 378-379).

The FPC orders specifically require continuance of the payment provisions. These provisions are also restrictive and illegal under

the Pennsylvania public utility laws, and public policy, because they provide that Penn Water shall receive a specified return regardless of the quantity or quality of services rendered and thereby remove all incentive to exercise initiative with respect to rates and services, to obtain new business, or to effect operating economies. The Court of Appeals for the Eighth Circuit held a contract containing such provisions (as well as price fixing provisions) "contrary to public policy, and void" in **Chicago, M. & St. P. R. Co. v. Wabash, St. L. & P. R. Co.**, 61 Fed. 993, 997 (8th Cir. 1894), stating:

> "* * * The contract removed every incentive to the companies to afford the public proper facilities, and to carry at reasonable rates; for, under its provisions, a company is entitled to its full percentage of gross earnings, even though it does not carry a pound of freight. The necessary and inevitable result of such a contract is to foster and create poorer service and higher rates. There is no inducement for a road to furnish good service, and carry at reasonable rates, when it receives as much or more for poor service, or for no service, as it would receive for good service and an energetic struggle for business.

> "A railroad company is a quasi public corporation, and owes certain duties to the public, among which are the duties to afford reasonable facilities for the transportation of persons and property, and to charge only reasonable rates for such service. Any contract by which it disables itself from performing these duties, or which makes it to its interest not to perform them, **or removes all incentive to their performance, is contrary to public policy and void;** * * *."

That decision followed and cites **Gibbs v. Consolidated Gas Co. of Baltimore,** 130 U. S. 396, 406, 410-11 (1889), cited by the Fourth Circuit (R., Vol. 18, pp. 25).

Section 1 of the Public Service Company Law [11] and Sections 301 and 401, of the Pennsylvania Public Utility Law,[12] imposing upon public utilities the duty to furnish adequate services at reasonable rates are, in effect, statutory reaffirmations of this public policy and prohibit revenue pooling arrangements like that contained in the Baltimore contract, as well as the other types of restrictive provisions contained therein.

---

[11] Appendix A, p. 41.
[12] Appendix A, pp. 44-45.

The statement of the D. C. Circuit that the Fourth Circuit only held illegal certain restraints imposed upon Penn Water by Consolidated under the Baltimore contract is, therefore, immaterial, since the illegal revenue pooling provisions are clearly directed by the FPC orders to be continued in effect. Furthermore, as already pointed out, the orders are based upon the assumed continued existence of *contracts* which the courts in the Fourth Circuit ruled invalid in their entirety. The orders cannot be based upon their own requirements. For example, the allocation of the major share of the rate reduction to Consolidated, is based upon its alleged "entitlements" under the contract. No evidence exists, other than the contracts, upon which the FPC could predicate a decision as to the existence of such entitlements.

While the Federal Power Act gives the FPC jurisdiction over rates and services, it does not give it any power or authority to breathe into state corporations powers, franchises or other rights which they do not possess under the laws of their states of incorporation. This is pointed out in the Fourth Circuit opinion (R. Vol. 18, p. 27-28), which states (citing Section 201(b) (16 U.S.C. Section 824(b)):

"There is, however, a limitation upon the jurisdiction of the Federal Power Commis-

sion over public utilities subject to Part II * * *."

and concludes that "there is a field in which the Pennsylvania Utility Commission is qualified to act."

The legislative history of Part II of the Act shows that Congress intended to give the FPC powers **supplementary** to those exercised by the states and only to regulate in that area of commerce which was beyond the reach of the states under the decision in **Public Utilities Commission v. Attleboro Steam & Electric Co.**, 273 U.S. 83 (1927).[13] Since the power of the FPC to regulate rates and services is made merely *supplemental* to the regulatory powers of the states, there was clearly no intention on the part of Congress to displace the authority of the states over the inherent powers of corporations created by them.

There is no indication anywhere in the Federal Power Act that it was intended to permit the

---

[13] Hearings on H.R. 5423 before the House of Representatives Committee on Interstate and Foreign Commerce, 74th Cong., 1st Sess., Pt. 1, p. 384. Quoted in **Connecticut Light & Power Co. v. FPC**, 324 U.S. 515, 525 (1945), and in **Jersey Central Power & Light Co. v. FPC**, 129 F. 2d 183, 193 (3d Cir. 1942).

FPC to require the performance of contractual arrangements depriving state utilities of their independence and initiative with respect to rates and services in violation of state law.

Your Honorable Court has frequently held that an intention by Congress to preclude a state from exercising its traditional powers must be clearly manifested. See **International Union, U.A.W. v. Wisconsin Employment Relations Board,** 336 U.S. 245, 253 (1949); **Davies Whse. Co. v. Bowles,** 321 U.S. 144, 152 (1944); *California v. Zook,* 336 U.S. 725, 733 (1948) and cases cited. A state law is superseded by a Federal law "only where the repugnance or conflict is so 'direct and positive' that the two acts cannot 'be reconciled or consistently stand together' ". **Kelly v. Washington,** 302 U.S. 1, 10 (1937).

As Your Honorable Court held in **Hines v. Davidowitz,** 312 U.S. 52, 67 (1941), the controlling question is "whether, under the circumstances of this particular case, Pennsylvania law stands as an obstacle to the accomplishment and execution of the full purposes and objectives of Congress." Even where a federal agency charged with regulating certain phases of interstate commerce has authority to override state law, this Court has held such authority may be exercised only where neces-

sary to perform the function assigned the agency by Congress.

Florida v. U.S., 282 U.S. 194 (1931).

Clearly, no such necessity exists in this case because, as the Fourth Circuit suggested, the FPC can regulate the interstate rates and services of Penn Water without imposing upon it a contract which is in violation of state law and public policy. Especially is this true where, as in the instant case, the illegality of the Baltimore contract arises out of the fact that it deprives Penn Water of the power to **initiate** rates and services in the first instance, which power the D. C. Circuit concedes (R. Vol. 18, p. 53) to be "a condition precedent to the proper operation of the rate-making process."[14]

As the Fourth Circuit pointed out (R. Vol. 18, p. 28), the approval of both the Federal and State Commissions may properly be required. See **Lake Shore & Michigan Southern Railroad Co. v. Ohio**, 165 U.S. 365 (1897) and **Cummings v. Chicago**, 188 U.S. 410 (1903), holding that the construction of a bridge and dock, respectively,

---

[14] It is noteworthy in this connection that the policy of the Pennsylvania Public Utility Law is consistent with the policy laid down by the decisions of your Honorable Court cited by the Fourth Circuit (R., Vol. 18, pp. 25-26).

in navigable rivers, even though approved by Secretary of War pursuant to the River and Harbor Acts of 1890 (c. 907, 26 Stat. 426) and 1899 (c. 429, 30 Stat. 1121) respectively, required approval of state authorities also.

In **McGuinn v. City of High Point,** 217 N.C. 449, 8 S.E. 2d 462 (1940), it was held that the granting of a project license by FPC did not give the licensee additional corporate powers, and that the lack of such power under state law prevented the operation of the project by such licensee. In **Northern Pennsylvania Power Co. v. Pennsylvania Public Utility Commission,** 132 Pa. Super. 178, 200 Atl. 866 (1938), reversed on other grounds, 333 Pa. 265, 5 A. 2d 133 (1939), it was held that a merger approved by FPC also required the approval of your petitioner.

III. The decision of the D. C. Circuit affirming FPC's determination of jurisdiction over Penn Water's sales in Pennsylvania is in conflict with the decision of the Fourth Circuit and erroneous because such determination, and the D. C. Circuit decision, are based upon the assumed existence and continuance of the illegal Baltimore and Safe Harbor contracts.

FPC in its first opinion (R., Vol. 16, pp. 53-54) makes it clear that its decision as to jurisdiction over Penn Water's sales in Pennsylvania is based upon the fact that the facilities of Penn Water, Transmission Company, Safe Harbor and Baltimore Company are "operated as an integrated and coordinated electric system" and that all of Penn Water's and Transmission Company's facilities are "integral parts of that system". The Commission states (p. 53) that the illegal contracts "were designed to facilitate this completely integrated operation of system generating and transmitting facilities" and calls them the "system foundation contracts" (pp. 53, 378). The existence of the so-called integrated and coordinated system is plainly dependent upon

the restrictive provisions of the agreements through which Consolidated controls the other companies. FPC shows this by its reference (pp. 54-54) to Article VIII[15] which not only provides for intercompany cooperation but also prohibits Penn Water from taking any action with respect to operating, engineering and accounting matters without the consent of a representative of Consolidated. The Safe Harbor contract contains a similar provision (Article XIV, R., Vol. 15, p. 4567) specifically held illegal by the District Court for Maryland (R., Vol. 18, p. 45). Similarly the Commission refers (p. 54) to "the provisions for over-all compensation to Penn Water and Safe Harbor without regard to the amounts delivered" (the illegal revenue pooling provisions) as "Contributing to the accomplishment of complete integration".

FPC also predicates its decision as to jurisdiction on the intermingling of power purchased from Consolidated with other power produced by Penn Water for the purpose of sale to the Pennsylvania customers (R., Vol. 16, pp. 54-55). This intermingling, as the FPC states, is likewise dependent upon the illegal contracts. It

---

[15]Article VIII is set forth in full at R., Vol. 15, pp. 4613-14.

says (p. 55): "The very purpose of the system foundation contracts was the elimination of artificial barriers such as State boundaries". Also, in its opinion (February 28, 1949) denying rehearing, the FPC pointed out (R., Vol. 16, p. 380) that "refusal of Penn Water to receive energy originating outside of Pennsylvania from Baltimore Company" could not be effected in compliance with the contract. This is, of course, primarily due to the fact that under Article IV (R., Vol. 15, p. 4612), Penn Water cannot purchase the supplemental energy which it needs to supply its Pennsylvania customers from any one other than Consolidated without Consolidated's consent.

Under applicable decisions of this Court, the mere mingling of the power purchased from Consolidated with that produced and sold by Penn Water in Pennsylvania would not, apart from the existence of the contracts requiring such intermingling and tying the companies together into the so-called "integrated system", be sufficient grounds for holding such sales in Pennsylvania to be sales in interstate commerce.

Wherefore, Pennsylvania Public Utility Commission, petitioner, respectfully prays your Honorable Court to issue the requested writ of

certiorari to the United States Court of Appeals for the District of Columbia Circuit.

Respectfully submitted,
Pennsylvania Public Utility Commission,

Preliminary Statement

IN THE

SUPREME COURT OF THE UNITED STATES

October Term, 1951

No. 429

PENNSYLVANIA PUBLIC UTILITY COMMISSION,

Petitioner

vs.

FEDERAL POWER COMMISSION

BRIEF FOR PETITIONER

PRELIMINARY STATEMENT

Your Honorable Court issued a writ of certiorari to review the judgment and orders of the United States Court of Appeals for the District of Columbia, entered by a divided court July 3 and 6, and September 6, 1951 (R. Vol. XVIII, pp. 5394, 5395, 5399).

Preliminary Statement

The judgment and orders denied motions to set aside orders of the Federal Power Commission (FPC), directing continuance of, and premised on, provisions of two power contracts, adjudged illegal by the United States Court of Appeals for the Fourth Circuit as being in violation of the antitrust laws, the law of Pennsylvania and of the common law (R. Vol. XVIII, 5322 and Opinion in Case No. 6315 January 3, 1952).[1]

[1] Pennsylvania Water & Power Co., Pennsylvania Public Utility Commission v. Consolidated Gas Electric Light & Power Company of Baltimore, Public Service Commission of Maryland, 184 F. 2d 552 (1940), cert. den. 340 U. S. 906 (1950), relating to the Baltimore contract. Pennsylvania Water & Power Co., Pennsylvania Public Utility Commission v. Consolidated Gas Electric Light & Power Co., Safe Harbor Water Power Corporation, Public Service Commission of Maryland, No. 6315, January 3, 1952, affirming District Court of Maryland, 97 F. Supp. 952 (May 3, 1951) and Docket No. 5253 (Op. March 12, 1951, and Order March 19, 1951), relating to the companion Safe Harbor contract.

OPINIONS BELOW

The majority opinion (R. Vol. XVIII, p. 5367) of the D. C. Circuit, per Bazelon, J., in which Fahy, J., joined (D. C. majority), and the dissenting opinion (R. Vol. XVIII, p. 5402) of Wilbur K. Miller, J., are reported at 193 F. 2d 230. The opinions and orders of the FPC of January 5, 1949, February 28, 1949, March 17, 1949, October 27, 1949, and December 15, 1949, which were affirmed by the D. C. majority, are found at R. Vol. XVI, pp. 4845, 5178, 5220 and Vol. XVII, pp. 5267, 5315.

JURISDICTION

The petition for a writ of certiorari was filed November 16, 1951, and was granted February 4, 1952. The jurisdiction of this Court rests on Section 1254 (1) of the Judicial Code (62 Stat. 928, U. S. C. §1254 (1) and Section 313 (b) of the Act (49 Stat. 860, 16 U. S. C. §825 (1)).

STATEMENT OF THE CASE

(a) The Parties Involved and Their Interests and Business

Pennsylvania Public Utility Commission, your petitioner, is the administrative agency within the Commonwealth of Pennsylvania to which has been delegated the power and upon which has been conferred the duties of enforcing the public utility laws and of regulating rates and services of public utilities engaged in intrastate commerce.

Pennsylvania Water and Power Company, hereafter designated Penn Water, and Safe Harbor Water Power Corporation, hereafter designated Safe Harbor, are Pennsylvania electric utility corporations subject to the jurisdiction of your petitioner. Both corporations own hydro-electric generating plants on the Susquehanna River. Penn Water also owns a steam generating plant and transmission lines in Pennsylvania, and, through its wholly owned subsidiary, transmission lines in Maryland. The present business of such companies is the sale of electric energy at wholesale and in bulk.

Penn Water's wholesale customers include Philadelphia Electric Company, Pennsylvania Power & Light Company and Metropolitan Edison Company (PE, PP&L and ME). These are Pennsylvania electric utilities, having steam electric generating plants and transmission and distribution facilities in Pennsylvania, and sell both at wholesale and at retail. They are also subject to the jurisdiction of your petitioner, Pennsylvania Public Utility Commission.

Consolidated Gas Electric Light & Power Company of Baltimore, hereafter designated Consolidated, is a Maryland electric utility corporation with steam electric generating, transmission and distribution facilities in and around the City of Baltimore, Maryland. Consolidated has generating capacity several times that of Penn Water or Safe Harbor and is in the business of selling electric energy at wholesale and in bulk as well as at retail.

(b) The Proceedings before the FPC and the D.C. Circuit

The FPC orders were entered as a result of a proceeding by FPC in September, 1944, to examine into the rates charged by Penn Water to Consolidated. Hearings began in 1946 and were completed in July, 1947. Consolidated, the Maryland Com-

mission and the Pennsylvania Commission intervened in the proceeding.

FPC assumed jurisdiction not only of Penn Water's rates to Consolidated but also of the rates for Penn Water's services in Pennsylvania to the three electric utilities in Pennsylvania, PP&L, PE and ME.

The FPC orders (1) directed continuance of illegal contractual arrangements contained in the Baltimore contract; and (2) based critical dispositions in its orders upon the assumed existence and continuance of both the illegal Baltimore and Safe Harbor contracts by (a) basing its jurisdiction over rates for Penn Water's services in Pennsylvania to its three Pennsylvania customers upon the existence of an alleged single interstate system (the facilities of Consolidated, Penn Water and Safe Harbor) created by the two illegal contracts, and upon interstate purchases of power by Penn Water from Consolidated required by an exclusive dealing provision in the Baltimore contract adjudged illegal *per se* under Section 3 of the Clayton Act, and (b) by basing its findings of revenue and expenses, allocation of costs and allocation of the reduction, predominately to Consolidated as against the three Pennsylvania customers of Penn Water, on "entitlements" and "obligations" created solely by the two illegal contracts.

The first FPC order was issued January 5, 1949, eighteen months after the last hearing and shortly after the contract litigation had been begun. The illegalities of the contracts, as raised by the contract litigation, were immediately brought to the attention of the FPC in a petition for rehearing, January 28, 1949. FPC denied rehearing February 28, 1949 and held that, even if the Courts determined the contracts to be illegal, such illegalities would be immaterial to its orders.

The FPC orders are expressed to be operative from and after February 1, 1949, but their effect was stayed by order of the FPC, and then by order of the D. C. Circuit, and revenues collected by Penn Water under its contract with its four electric utility customers in excess of the amounts allowed by the FPC orders have been segregated to await the final determination of the case.

Petitions to the D. C. Circuit to review the FPC orders brought to the attention of that Court the illegalities of the Baltimore and Safe Harbor contracts, raised in the contract litigation, as grounds for annulling or remanding the orders (R. Vol. XVI, pp. 4807-13; R. Vol. XVII, pp. 5222, 5230).

Prior to the completion of the filing of briefs in the D. C. Circuit in the present case, and after the Fourth Circuit decision invalidating the Baltimore contract, Petitioner moved (November 21, 1950) in

the D. C. Circuit to present that decision to the D. C. Circuit as a basis for annulling or remanding the FPC orders on the ground that they were founded on the illegal Baltimore contract. When this Court denied certiorari in the Baltimore contract case, leave was granted by the D. C. Circuit and the matter was briefed and argued. While the decision was pending below, and immediately following the decision of the District Court for Maryland invalidating the Safe Harbor contract, Petitioner moved (May 8, 1951) in the D. C. Circuit to annul or remand the FPC orders on the further ground that they were founded also on the illegal Safe Harbor contract. The motion was denied.

(c) The Contracts

The invalidated Penn Water, Baltimore and Safe Harbor contracts, which would have remained in effect until 1980, provided for payments by Consolidated for power, not on a unit rate basis, but on a basis which would provide to the seller recovery of operating expenses including taxes and a specified return on investment, regardless of the amount of power delivered or extent of services rendered, with a credit to Consolidated for revenues received from sales of power to others. This arrangement is in

clear violation of the Pennsylvania Public Utility Law which requires utilities to establish and maintain reasonable rates and furnish adequate service. The obvious purpose and effect of the arrangements in issue are to remove incentive to compete, to expand or to effect operating economies. The contracts contain closely associated provisions providing for control by Consolidated over the contracts, sales, purchases, prices, output and expansion of both Penn Water and Safe Harbor which are also illegal under Pennsylvania Law, public policy and the antitrust laws, and were specifically alluded to as being illegal under such laws by the decisions of the Fourth Circuit and the District Court of Maryland.

The contracts surrender control of Penn Water and Safe Harbor to Consolidated, stifle their initiative with respect to rates and services and virtually destroy the independent corporate character of these Pennsylvania corporations. The provisions of the contracts have been used by Consolidated to interfere with Penn Water's and Safe Harbor's contracts with their Pennsylvania customers[2] and to prohibit Penn Water from building a new large

---

[2] PP&L, PE and ME. The contracts with these customers are all on the customary unit rate basis, i.e., payment based on amount of power delivered and without managerial control and restraints by the purchaser over the seller.

steam electric generating plant in 1948 from which badly needed power could have been economically produced.

(d) Provisions of the FPC Orders

FPC, in its opinion denying rehearing (February 28, 1949), held immaterial to its rate orders the possible illegality of the Baltimore and Safe Harbor contracts.

FPC approved in emphatic terms the restrictive controls of the Baltimore contract; such as Article VIII[3] requiring the consent of Consolidated to any action by Penn Water with respect to operating, engineering, or accounting matters (R. Vol. XV, p. 4564), Article IV requiring the consent of Consolidated to purchases and sales by Penn Water (R. Vol. XV, pp. 4558-59) and Article V requiring the consent of Consolidated to substantial expansions by Penn Water (R. Vol. XV, p. 4559).

The FPC orders were based upon the assumed existence of the entire contracts, including the restrictive provisions specifically referred to as illegal by the decisions of the Fourth Circuit and the Dis-

[3] The entire text of these Articles are set forth at R. Vol. XV, p. 4554.

trict Court for Maryland. FPC, relying upon Baltimore and Safe Harbor contracts as "foundation contracts", held that certain operations thereunder, the wholesale of electric energy by Penn Water to the three Pennsylvania electric utilities, otherwise intrastate, were interstate in character and subject to regulation by it. Actually, these services are rendered wholly within the State of Pennsylvania, but FPC held them interstate on the grounds (R. Vol. XVI, pp. 4859-61) that Penn Water was part of an integrated system (created by the illegal contracts and continued by FPC direction) and that power purchased from Consolidated was used to supplement the power generated by Penn Water and sold in Pennsylvania (Article IV of the Baltimore contract permitting Consolidated to require that such supplemental power be purchased from it by preventing such purchase from others).

FPC held that the sales of electric energy by Penn Water to its Pennsylvania customers constituted sales in interstate commerce. It dismissed the contentions made by your petitioner that FPC lacked jurisdiction over the sale of energy produced in Pennsylvania and sold to Pennsylvania customers and that sales to Pennsylvania customers are local in character and the interstate commerce, if any involved, so negligible as to be incidental to the dominant intrastate business and as such not interstate commerce. Instead, it concluded that, by

reason of the contractual arrangement, the system was "an integrated and coordinated electric system" (R. Vol. XVI, p. 4859) and that each of Penn Water's sales in Pennsylvania "is clearly a system transaction of a character wholly interstate even though at times it involves varying amounts of energy never crossing the State boundary, sometimes unmixed and sometimes mixed with out-of-state energy" (R. Vol. XVI, p. 4861).

FPC based its allocation of the reduction between Consolidated and the three Pennsylvania electric utility customers of Penn Water, giving the major share of the reduction to Consolidated, on the basis of alleged "entitlements" of Consolidated under the Baltimore and Safe Harbor contracts and not on the basis of the power actually delivered. An allocation on the latter basis would have given the Pennsylvania utilities a much greater share of the rate reduction.

ERRORS TO BE URGED

The United States Court of Appeals for the District of Columbia Circuit erred in holding that:

I. Where electric energy is produced in Pennsylvania and thereafter sometimes commingled with electric energy flowing from another state and sold to Pennsylvania customers and where the proportions of such respective energy are ascertainable, such sales are in interstate commerce within the scope and intendment of the Federal Power Act and subject to the jurisdiction of FPC.

II. FPC may compel a Pennsylvania public utility to maintain contractual arrangements, whereby such corporation is disabled from properly performing its duties under the law of the state of its incorporation and surrenders basic rights, powers and privileges inherent in that franchise to a foreign public utility.

III. FPC may premise its findings as regards jurisdiction and other critical provisions of its rate orders upon the existence and continuance of illegal and invalid contracts, more particularly, findings regarding allocation of reduction in rates.

SUMMARY OF ARGUMENT

Pennsylvania Public Utility Commission ultimately seeks to be free from FPC interference as regards enforcement of orders and regulations pertaining to the intrastate rates and services of Penn Water, to the end that the Commission may perform properly the duties imposed upon it and exercise the powers delegated to it by the Pennsylvania Public Utility Law.

Petitioner contends that Your Honorable Court should set aside the orders of the FPC or, in the alternative remand the case to FPC with directions (a) that its jurisdiction be limited to determination of the reasonableness of rates for power sold in interstate commerce by Penn Water and Transmission Company to Consolidated, and (b) to determine such rates without regard to the illegal contracts and on a unit rate basis to be determined by the amount of capacity and energy actually supplied, with allocations of reductions, if any be made, to be based on costs of service for energy supplied and services actually rendered and not on fictitious "entitlements."

ARGUMENT

I. Where Electric Energy Is Produced in Pennsylvania and Thereafter Commingled with Electric Energy Flowing from Another State and Sold to Pennsylvania Customers and Where the Respective Portions of Such Energy Are Ascertainable, the Sale of Such Energy Is Subject to the Jurisdiction of the Pennsylvania Public Utility Commission

(a) Pennsylvania Public Utility Commission has jurisdiction under Peoples Gas Company v. Public Service Commission, 270 U. S. 550, 46 Sup. Ct. 371 (1926).

The energy produced and sold in Pennsylvania is in intrastate commerce, irrespective of whether mingled with energy of another state. In *Peoples Gas Co. v. Public Service Commission*, 270 U. S. 550, 554-555, 46 Sup. Ct. 371 (1926) the Gas Company received two-thirds of its gas from West Virginia and produced the other one-third in Pennsylvania. The gas from both sources was mixed and

sold to various customers. Your Honorable Court held that the West Virginia gas was in interstate commerce but that the Pennsylvania gas was in intrastate commerce only. It was said:

> "As respects the Pennsylvania gas we think it must be held to be in intrastate commerce only. Feeding it into the same pipe lines with the West Virginia gas works no change in this regard. Of course after the commingling the two are undistinguishable. But the proportions of both in the mixture are known and that of either readily may be withdrawn without affecting the transportation or sale of the rest. So for all practical purposes the two are separable, and neither affects the character of the business as to the other. Eureka Pipe Line Co. v. Hallanan, 257 U. S. 265; United Fuel Gas Co. v. Hallanan, 257 U. S. 277; 281. And see Hallanan v. Eureka Pipe Line Co., 261 U. S. 393; Hallanan v. United Fuel Gas Co., 261 U. S. 398."

The fact of commingling with electric energy from another state does not affect the true nature of that produced and sold within the state. Particularly is that true where, as here, a division between purely intrastate energy and energy obtained from Consolidated is entirely practical. While impliedly denying the practicality in one portion of its order,

FPC recognized the feasibility and duty of making similar allocations in its order of October 27, 1949 (R. Vol. XVII, p. 53). FPC there specified in each of the three schedules of rates to the Pennsylvania customers an identical formula for fuel cost adjustment applicable to the portion of the kilowatt-hours sold as firm energy to Pennsylvania customers which is supplied by the Baltimore Company. The separation of sources of supply which FPC made in this latter matter is the type of allocation it should have made between intrastate and interstate sources of electric energy.

Your Honorable Court has approved FPC allocations where a utility's business consisted of intrastate sales, direct industrial and interstate wholesale: *Colorado Interstate Gas Co. v. Federal Power Commission*, 324 U. S. 581, 65 Sup. Ct. 829 (1945); *Panhandle Eastern Pipe Line Co. v. Federal Power Commission*, 324 U. S. 635, 65 Sup. Ct. 821 (1945). Recognition of the practicalities of an allocation of source of energy which, on the basis of the instant record, is approximately 88% intrastate and 17% interstate, compels the conclusion that sales involving interstate commerce are negligible and sales in intrastate commerce predominant.

(b) Pennsylvania Public Utility Commission has jurisdiction under Lone Star Gas Company v. Texas, 304 U. S. 224, 236, 58 Sup. Ct. 833 (1938).

The sales of energy by Penn Water to its Pennsylvania customers are matters of local concern which should logically be regulated by a local regulatory commission. The holding of FPC and D. C. Circuit that all sales were in interstate commerce and subject to the jurisdiction of FPC is contrary to the decision of Your Honorable Court in *Lone Star Gas Company v. Texas*, 304 U. S. 224, 236, 58 Sup. Ct. 883 (1938).

In *Lone Star Gas Company v. Texas*, supra, a company sold gas to distributing companies in Texas. 11% of the gas was obtained from Oklahoma. The Texas Commission regulated the rates of all gas delivered in Texas including that obtained from Oklahoma and commingled with the Texas gas. It was held that the Texas Commission had not undertaken to regulate the sales and deliveries of gas in interstate commerce. Your Honorable Court said (p. 239):

> "* * * We think that the proved manner in which the gas from Oklahoma was treated and handled in Texas made it an integral part of the gas supplied to the Texas communities in

appellant's intrastate business and that the Commission was entitled so to consider it in fixing its rate."

The treatment and amount of the backfeed energy in the instant case also made it an integral part of the energy produced in Pennsylvania and sold to Pennsylvania customers in Penn Water's intrastate business.

The primary features of the operation should control. The sales to Pennsylvania customers are local in nature and primarily intrastate. This is not a matter of permitting the Federal Power Commission to regulate accounting or the sale of securities; it is a matter of limiting the Federal Power Commission to the jurisdiction over rates as specifically set forth in the Federal Power Act.

II. FPC May Not Compel a Pennsylvania Public Utility to Maintain Contractual Arrangements whereby Such Corporation Is disabled from Properly Performing Its Duties under the Law of the State of Its Incorporation and Surrender Basic Rights, Powers and Privileges to a Foreign Public Utility

(a) The FPC order based upon the invalid contracts disables Pennsylvania Water and Power Company from performing duties imposed upon it under Pennsylvania law.

The invalidity of the Baltimore and Safe Harbor contracts under state law[4] and public policy[5] does not arise by reason of a mere technical violation of statute or charter. It arises from the fact that the contracts destroy the independent corporate character of the corporations. They completely divest

[4] The State statutes involved are set forth in Appendix A.

[5] The public policy referred to is not merely state public policy but public policy as laid down in decisions of this Court: Gibbs v. Consolidated Gas Co. of Baltimore, 130 U. S. 396 (1889); Thomas v. Railroad Co., 101 U. S. 71 (1879); Central Transp. Co. v. Pullman's Palace Car Co., 139 U. S. 24 (1891).

the board of directors of powers of management which belong to them alone by virtue of their corporate franchises. The contracts deprive Penn Water of the power to perform basic and fundamental duties imposed by Pennsylvania law and, in particular, the initiation of reasonable rates and adequate services. The Fourth Circuit, citing decisions of this Court, properly held (R. Vol. XVIII, p. 5346). "Indeed such restrictions upon the freedom of a public utility cannot be sustained irrespective of statutory prohibition". Further, it said (R. Vol. XVIII, p. 5347):

> "One of the most important duties of a public utility, inherent in its franchise to serve the public, is the duty to take the initiative in proposing reasonable rates and rendering adequate services, taking into account changing conditions; and the utility is not relieved from this duty because its activities are subject to governmental regulation, for a regulatory commission is not clothed with the responsibility or qualified to manage the utility's business."

The District Court of Maryland in its order invalidating the Safe Harbor contract (R. Vol. XVIII, p. 5366) held that the agreements violate the laws of Pennsylvania governing public utilities, public policy, the common law and are ultra vires, completely destroying "corporate virility".

The Court of Appeals for the Fourth Circuit stated (R. Vol. XVIII, p. 5347):

> "The conclusion is inescapable that the contractual restrictions upon the power of Penn Water to perform its functions as a utility under the Pennsylvania statutes are invalid."

The District Court of Maryland was in accord, stating (R. Vol. XVIII, p. 5366) that the Safe Harbor contract deprives that company of "the discretion and initiative necessary to respond and be alive to its public obligations", and is "intolerable under the common law and statutes of the State of Pennsylvania".

These courts specifically allude to certain of the restrictive provisions of the contracts, including the provisions restricting contracts and plant expansion (R. Vol. XVIII, pp. 5346, 5363, 5364) and requiring concurrence of Consolidated in operating, engineering and accounting matters (R. Vol. XVIII, pp. 5328, 5329, 5366). The FPC orders which were affirmed by the D. C. Circuit, on the other hand, commended and condoned these provisions (R. Vol. XVI, pp. 4987, 5184, 5185).

The FPC orders approved by a majority of the D. C. Circuit specifically require continuance of the payment provisions. These provisions are also restrictive and illegal under the Pennsylvania public

utility laws, and public policy, because they provide that Penn Water shall receive a specified return regardless of the quantity or quality of services rendered and thereby remove all incentive to exercise initiative with respect to rates and services, to obtain new business, or to effect operating economies.

The Court of Appeals for the Eighth Circuit held a contract containing such provisions (as well as price fixing provisions) "contrary to public policy and void" in *Chicago, M & St. P. R. Co.*, 61 Fed. 993, 997 (8th Cir., 1894), stating:

> "* * * The contract removed every incentive to the companies to afford the public proper facilities, and to carry at reasonable rates; for, under its provisions, a company is entitled to its full percentage of gross earnings, even though it does not carry a pound of freight. The necessary and inevitable result of such a contract is to foster and create poorer service and higher rates. There is no inducement for a road to furnish good service, and carry at reasonable rates, when it receives as much or more for poor service, or for no service, as it would receive for good service and an energetic struggle for business.
>
> "A railroad company is a quasi public corporation, and owes certain duties to the public,

among which are the duties to afford reasonable facilities for the transportation of persons and property, and to charge only reasonable rates for such service. Any contract by which it disables itself from performing these duties, or which makes it to its interest not to perform them, or removes all incentive to their performance, is contrary to public policy and void, * * *."

That decision followed and cites *Gibbs v. Consolidated Gas Co. of Baltimore*, 130 U. S. 396, 406, 410-11 (1889), cited by the Fourth Circuit (R. Vol. XVIII, p. 5346).

Section 1 of the Public Service Company Law[6] and Sections 301 and 401, of the Pennsylvania Public Utility Law[7], imposing upon public utilities the duty to furnish adequate services at reasonable rates are, in effect, statutory reaffirmations of the public policy and prohibit revenue pooling arrangements like that contained in the Baltimore contract, as well as the other types of restrictive provisions contained therein.

The statement of the D. C. Circuit that the Fourth Circuit held illegal only certain restraints imposed upon Penn Water by Consolidated under the Baltimore contract is, therefore, immaterial,

---

[6] Appendix A, p. 45.

[7] Appendix A, p. 48.

since the illegal revenue pooling provisions are clearly directed by the FPC orders to be continued in effect. Furthermore, as already pointed out, the orders are based upon the assumed continued existence of contracts which the courts in the Fourth Circuit ruled invalid in their entirety. The orders cannot be based upon their own requirements.

While the Federal Power Act gives the FPC jurisdiction over rates and services, it does not give it any power or authority to breathe into state corporations powers, franchises or other rights which they do not possess under the laws of their states of incorporation. This is pointed out in the Fourth Circuit opinion (R. Vol. XVIII, p. 5348, 5349), which states (citing Section 201(b) (16 U.S.C. Section 824 (b)):

> "There is, however, a limitation upon the jurisdiction of the Federal Power Commission over public utilities subject to Part II * * *."

and concludes that "there is a field in which the Pennsylvania Public Utility Commission is qualified to act."

The legislative history of Part II of the Act shows that Congress intended to give the FPC powers supplementary to those exercised by the states and only to regulate in that area of commerce which was

beyond the reach of the states under the decision in *Public Utilities Commission v. Attleboro Steam & Electric Co.*, 273 U. S. 83, 47 Sup. Ct. 294 (1927).[8] Since the power of the FPC to regulate rates and services is made merely supplemental to the regulatory powers of the states, there was clearly no intention on the part of Congress to displace the authority of the states over the inherent powers of corporations created by them.

There is no indication anywhere in the Federal Power Act that it was intended to permit the FPC to require the performance of contractual arrangements depriving state utilities of their independence and initiative with respect to rates and services in violation of state law.

Your Honorable Court has frequently held that an intention by Congress to preclude a state from exercising its traditional powers must be clearly manifested. See *International Union, U. A. W. v. Wisconsin Employment Relations Board*, 336 U. S. 245, 253, 69 Sup. Ct. 516 (1949); *Davies Whse. Co. v. Bowles*, 321 U. S. 144, 152 64 Sup. Ct. 474 (1944);

---

[8] Hearings on H.R. 5423 before the House of Representatives Committee on Interstate and Foreign Commerce, 74th Cong., 1st Sess., Pt. 1, p. 384. Quoted in Connecticut Light & Power Co. v. FPC, 324 U. S. 515, 525 (1945), and in Jersey Central Power & Light Co. v. FPC, 129 F. 2d 183, 193 (3d Cir. 1942).

California v. Zook, 336 U. S. 725, 733, 69 Sup. Ct. 841 (1948) and cases cited. A state law is superseded by a Federal law "only where the repugnance or conflict is so 'direct and positive' that the two [illegible] cannot 'be reconciled or consistently stand together' ". *Kelly v. Washington,* 302 U. S. 1, 10, 58 Sup. Ct. 87 (1937).

Your Honorable Court held in *Hines v. Davidowitz,* 312 U. S. 52, 67, 61 Sup. Ct. 399 (1941), that the controlling question is "whether, under the circumstances of this particular case, Pennsylvania law stands as an obstacle to the accomplishment and execution of the full purposes and objectives of Congress." Even where a federal agency charged with regulating certain phases of interstate commerce has authority to override state law, this Court has held such authority may be exercised only where necessary to perform the function assigned the agency by Congress: *Florida v. U. S.,* 282 U. S. 194, 51 Sup. Ct. 119 (1931).

Clearly, no such necessity exists in this case because, as the Fourth Circuit suggested, the FPC can regulate the interstate rates and services of Penn Water without imposing upon it a contract which is in violation of state law and public policy. Especially is this true where, as in the instant case, the illegality of the Baltimore contract arises out of the fact that it deprives Penn Water of the power

to initiate rates and services in the first instance, which power the D. C. Circuit concedes (R. Vol. XVIII, p. 5374) to be "a condition precedent to the proper operation of the rate-making process."

The D. C. Circuit by affirming the orders of FPC has effectively approved a principle of law which permits FPC to require performance by Penn Water of contracts which have been declared illegal and void as violating the law of the state of incorporation.

(b) Findings regarding jurisdiction and allocation of reduction in rates.

---

(1) *FPC based its jurisdiction on the contracts*

FPC in its first opinion (R. Vol. XVI, pp. 4859-60) makes it clear that its decision as to jurisdiction over Penn Water's sales in Pennsylvania is based upon the fact that the facilities of Penn Water, Transmission Company, Safe Harbor and Baltimore Company are "operated as an integrated and coordinated electric system" and that all of Penn Water's and Transmission Company's facilities are "integral parts of that system". FPC states that

the illegal contracts "were designed to facilitate this completely integrated operation of system generating and transmitting facilities" and calls them the "system foundation contracts" (R. Vol. XVI, p. 4859). The existence of the so-called integrated and coordinated system is plainly dependent upon the restrictive provisions of the agreements through which Consolidated controls the other companies. FPC shows this by its reference to Article VIII which not only provides for intercompany cooperation but also prohibits Penn Water from taking any action with respect to operating, engineering and accounting matters without the consent of a representative of Consolidated. The Safe Harbor contract contains a similar provision (Article XIV, R. Vol. XV, p. 4567) specifically held illegal by the District Court of Maryland (R. Vol. XVIII, p. 5366). Similarly FPC refers to "the provisions for over-all compensation to Penn Water and Safe Harbor without regard to the amounts delivered" (the illegal revenue pooling provisions) as "Contributing to the accomplishment of complete integration" (R. Vol. XVI, p. 4860).

FPC also predicates its decision as to jurisdiction on the intermingling of power purchased from Consolidated with other power produced by Penn Water for the purpose of sale to the Pennsylvania customers (R. Vol. XVI, pp. 4860-1). This

intermingling, as the FPC stated, is likewise dependent upon the illegal contracts.

Speaking with regard to the contracts, it stated (R. Vol. XVI, p. 4861):

> "The very purpose of the system foundation contracts was the elimination of artificial barriers, such as State boundaries. In the making of sale of system barriers, such as those by Penn Water to its Pennsylvania utility customers, no distinction is made between energy crossing a State boundary and that which does not. Likewise, title to energy flowing on the system is of no significance among the companies comprising the system since they physically function as one enterprise and since the compensation features of the system contracts are so designed as to render consideration of title unimportant.
>
> "In the light of the foregoing facts, each of Penn Water's sales in Pennsylvania is clearly a system transaction of a character wholly [19] interstate even though at times it involves varying amounts of energy never crossing the State boundary, sometimes unmixed and sometimes mixed with out-of-state energy. In short, Penn Water is selling interstate system energy to purchasers outside the system. Such sales are sales "in interstate commerce".

Disposing of the contention that there existed a joint rate, the Commission said (R. Vol. XVI, p. 4863):

> "In the first place, Safe Harbor sells its entire output to Penn Water and Baltimore Company and having received payment therefor constituting its entire revenue, it cannot sell any part of it to Penn Water's Pennsylvania customers. And while the [21] system operations are coordinated, the compensation features of the contracts by which Safe Harbor and Penn Water sell to Baltimore Company clearly refute any suggestion of 'joint rate' ".

In its opinion (February 28, 1949) denying rehearing, FPC pointed out (R. Vol. XVI, p. 5186) that "refusal of Penn Water to receive energy originating outside of Pennsylvania from Baltimore Company" could not be effected in compliance with the contract. This is due to the fact that under Article IV (R. Vol. XV, p. 4612) Penn Water cannot purchase the supplemental energy which it needs to supply its Pennsylvania customers from any one other than Consolidated without Consolidated's consent.

Under applicable decisions of this Court, argued supra, the mere mingling of the power purchased from Consolidated with that produced and sold by Penn Water in Pennsylvania would not afford a

basis for FPC assuming jurisdiction. Illegal and invalid contracts requiring such intermingling of energy and tying the companies together into a so-called "integrated system" cannot be deemed in law to be a proper basis for holding such sales in Pennsylvania to be sales in interstate commerce.

---

(2) *Allocations of Rate Reductions*

FPC found that for the test year 1946 Penn Water's revenues, per books, for services to Consolidated were shown as $1,399,331.10 (R. Vol. XVI, p. 4958). It also found that Penn Water's net cost of service to Consolidated was $652,933 (R. Vol. XVI, p. 4980). Penn Water actually received from Consolidated in 1946 only $1,104,951.85. Accepting, arguendo, FPC's findings, it would appear that Penn Water's revenues from Consolidated were excessive by approximately $747,000. In contrast FPC's finding No. 33 (R. Vol. XVI, p. 4992-4993) reads:

> "On the basis of a reasonable and proper allocation of the cost of service rendered by Penn Water and Transmission Company to Baltimore Company, the rates and charges to Baltimore Company for 1946 are unjust and unreasonable by approximately $1,733,318."

This glaring discrepancy is explained by FPC's adjustment of Penn Water's actual revenues as shown by the books by an amount of $1,127,699, so that, with certain other adjustments not here material, it concluded that Penn Water was theoretically to be regarded as receiving in revenues from Consolidated in 1946 the sum of $2,386,311 (R. Vol. XVI, p. 4959, 4961, 4980).[9] This extraordinary adjustment in revenues arose entirely from acceptance and recognition of alleged "entitlements" of Consolidated to Penn Water's output under the contract.

Without the Baltimore contract, the FPC could not have found the dollar amounts which it treated Penn Water as having received from Consolidated. Nor could it have found the dollar amounts which it did find to represent Penn Water's cost of service to Consolidated. Without the Baltimore contract, FPC could not have found that, of the ordered $1,954,261 reduction in rates,[9] approximately 89%

---

[9] The FPC found Penn Water's revenues for the test year 1946 to have been "excessive" in an amount of $2,176,786. Of this figure $222,475 was deemed to be excess revenues received from the Railroad which the Commission did not purport to regulate. In consequence, the actual reduction ordered came to $1,954,261, of which $1,733,318, or approximately 89%, was allocated to Baltimore Company.

should be allocated to Baltimore Company (R. Vol. XVI, p. 4980).

The major adjustment of $1,127,699 represents a transfer by FPC to revenues from Consolidated of net interchange revenues actually received by Penn Water from the sale of energy to PP&L, ME, and PE (R. Vol. XVI, p. 4961). FPC's explanation for this adjustment is somewhat cryptic, but it clearly arises out of acceptance of "entitlements" to Penn Water's energy under the invalid Baltimore contract. The Commission said (R. Vol. XVI, p. 4979):

> "As interchange sales in Pennsylvania are on a when-as-and-if basis, the mwh so supplied by Penn Water comes from Baltimore Company's contract residual entitlement to Penn Water's resources and are therefore deemed to have been made for Baltimore Company's account."

FPC construed the Baltimore contract to entitle Consolidated to all of Penn Water's electric capacity and energy not otherwise disposed of under existing contracts approved by Consolidated (R. Vol. XVI, p. 4986). "Contracts" for the sale of energy in the invalid Baltimore contract were construed by FPC to refer only to existing contracts for the sale of firm energy. In other words, although FPC found (R. Vol. XVI, p. 4988) that Penn Water

under its arrangements with PP&L, ME and PE not only sells firm energy, but also buys and sells in interchange transactions, for purposes of cost allocation the Baltimore contract provisions regarding "entitlements" cause Consolidated to receive all the residue of Penn Water's energy output after only its firm commitments to the Pennsylvania customers had been met.

The significant fact is that FPC increased Penn Water's alleged revenues from Consolidated by over $1,000,000 because it regarded Penn Water's net interchange revenues from sales of energy as being made out of Consolidated's contractual "entitlement" and thus for Baltimore Company's account.

The net revenues from interchange transactions with Pennsylvania customers are billed to and received from those customers. They are not revenues from Baltimore Company. The contract being illegal and void, there cannot be any contractual "entitlement" whatever to any of Penn Water's output by Consolidated. Not even FPC may continue to regard as revenues received from Consolidated those revenues which Penn Water actually received from the Pennsylvania customers. Clearly FPC's adjustment of $1,127,699 net interchange revenue is improper. The $1,127,699 does not represent additional revenue from Consolidated. This conclusion of FPC is wholly unsupportable in that

it is premised upon "entitlements" under a contract which has been declared illegal, invalid and unenforceable.

The D. C. Circuit has approved determination by FPC of an allocation of reduction in rates which has as its sole basis the judicially declared illegal and void contracts. FPC reallocated revenues and expenses of Penn Water in determining the excess of revenue earned above a fair return. Findings of cost allocations were made and a reduction of rates directed in direct proportion of the excess revenue to such reallocated cost. Each of the above are based on provisions of the illegal contracts.

FPC's finding with regard to revenues and expenses are based upon the provisions of the contract (R. Vol. XVI, p. 4961):

> "Instead of showing the net revenue from interchange power as a credit item to operating expenses, the amount thereof, $1,127,699 has been added to revenues from Baltimore Company."

With regard to the allocation of costs, the Commission made the following observations:

(a) Division of cost of service between Consolidated and Pennsylvania customers (R. Vol. XVI, p. 4963):

> "By combining recomputed firm power services rendered Baltimore Company by both

Penn Water and Safe Harbor, Respondents' witness Spaulding testified that costs applicable to such services exceeded the recomputed billing by the amount of $266,578. Important bases for Spaulding's determination were the assumptions that Safe Harbor and Penn Water render joint services to Baltimore Company, and that Baltimore Commpany does not have a right or contract entitlement to two-thirds of Safe Harbor's output."

(b) Allocation of transmission facilities:

1. 220 KV. 60 Cycle Lines and Switching Stations (R. Vol. XVI, p. 4965):

"The allocation of the witness Spaulding is based upon his view that the transmission of energy from Baltimore to Pennsylvania does not relate to the firm demand requirements of any of the [147] Pennsylvania customers except the Railroad and that the supply to the Railroad is in part a responsibility of Baltimore Company.[112]

"[112] He considers the problem as if Baltimore Company's entitlement to power and energy from Safe Harbor did not exist. This interpretation of the subordination of entitlement is neither necessary nor supportable."

2. Safe Harbor-Perryville Line, Conestoga Substation and Perryville Switching Station (R. Vol. XVI, p. 4967):

> "On the other hand, Staff witness Davis allocated the substation 47% to Baltimore Company and 53% to the Railroad in Pennsylvania, and the line and switching station 91% to Baltimore Company and 9% to the Railroad in Pennsylvania, in each instance on the basis of energy flows over the facilities and on the ground that these facilities were used not only for service to the Railroad in Pennsylvania and Maryland, but also for the rendering of interchange services to Philadelphia Company on the behalf of Baltimore Company from the residual of energy to which the latter is entitled under its contract."

(c) Allocation of 25 Cycle Production Facilities to Pool (R. Vol. XVI, p. 4969):

> "Spaulding's 50.15% determination involves acceptance of his estimate of dependable hydro capacity and also his combining the dependable capacity for both Penn Water and Safe Harbor without regard to the Baltimore Company's entitlement (contract proportion) in [152] determining the capacity service rendered Baltimore Company."

"In charging Pennsylvania customers equitably for energy received, it becomes necessary and proper to first charge Baltimore Company with all of the hydro capacity and energy received and to credit it for all steam capacity and energy supplied by it and all hydro capacity and energy diverted from it."

(d) Capacity available to Baltimore Company (R. Vol. XVI, p. 4976):

"[162]

	Holtwood Steam (kw)	Holtwood Hydro (kw)	Safe Harbor Hydro (kw)	Total (kw)
Dependable capacity	28,000	91,740	158,260	278,000
Less prorated station use and line losses	2,216	7,260	12,524	22,000
	25,784	84,480	145,736	256,000
Less Baltimore Co.'s 2/3rds of Safe Harbor's capacity			97,157	97,157
Less 25 cycle to Highlandtown		41,480		41,480
	25,784	43,000	48,579	117,363
Demands in Pennsylvania				153,512
Balance to be supplied by Baltimore Company				36,149"

(e) Unit costs for capacity and firm energy and further allocations (R. Vol. XVI, p. 4979):

"As interchange sales in Pennsylvania are on a when-as-and-if basis, the mwh so supplied by Penn Water comes from Baltimore Company's contract residual entitlement to Penn Water's

resources and are therefore deemed to have been made for Baltimore Company's account."

With regard to the allocation of rate reduction, the Commission applied the provisions of the illegal and void contracts (R. Vol. XVI, p. 4981):

> "Under the arrangements now in effect the sales to Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company are made on a firm basis and Baltimore Company takes what is left. In fact, Baltimore Company in times of severe water shortage may carry the main burden of supplying the foregoing Pennsylvania customers.
>
> "[167] It is not feasible, because of the nature of Penn Water's operations, for the latter to assume firm commitments to all its customers, including Baltimore Company. The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. That arrangement will, therefore, be continued with, however, such modifications as are necessary to accomplish the reductions mentioned

above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company."

FPC, having allocated costs on the basis of contractual entitlements, concluded that the difference between total allowable costs and total revenues, thus determined, represented the excess amounts earned by the rates of Penn Water and accordingly determined the percent of excess revenues (R. Vol. XVI, p. 4980):

"The allocated special facility costs added to the allocated hydro capacity cost and the allocated cost of capacity supplied by Baltimore Company (supra) and to firm energy costs give total allocated costs which compare with total revenues as follows:

"[166]

PP&L Co.	$1,877,818	$1,958,356	$ 80,538	3.70
Philadelphia Company	834,550	948,861	114,311	5.25
Metropolitan Company	641,361	667,455	26,094	1.20
Railroad (in Pa.)	1,261,323	1,483,798	222,475	10.22
Baltimore Company	652,993	2,386,311	1,733,318	79.63
Total	$5,268,045	$7,444,781	$2,176,736	100.00"

The D. C. Circuit, in affirming the order of FPC, was clearly in error in permitting a determination of FPC jurisdiction on the basis of the provision of the illegal contracts and in permitting a determination of allocation of costs and revenues on the basis

of the illegal provisions of entitlement and in directing a rate reduction, based on the result of such allocations.

Further irrespective of the invalidity of the contracts there is no reasonable basis for application of a fiction of entitlements where the amount of energy actually sold by and to the respective parties is known. Fiction is at war with reality. The realities of the relationship are illustrated only by the actual sale and purchase of energy as were reflected on the books of Penn Water, Safe Harbor and Consolidated.

Failure of FPC to accept the business practices reflected by books of parties themselves was so arbitrary and capricious as to amount to an error of law.

CONCLUSION

Pennsylvania Public Utility Commission respectfully urges your Honorable Court the importance of the instant case to it, the administrative body charged with the power and duty to enforce the Pennsylvania Public Utility Law, and to Pennsylvania customers of Pennsylvania Water and Power Company.

Argument

The issues before your Honorable Court relate to the power and duty of your petitioner with regard to regulation of intrastate sales of energy by Pennsylvania Water and Power Company, and to the power of FPC to require continued performance of contractual provisions which are not only invalid but also illegal as being contrary to public policy and the laws of the Commonwealth of Pennsylvania. There is also challenged the power of a regulatory body such as FPC to dispense favor to one utility as against another, as well as the power to disregard fact, reality and accepted business principles and to indulge in theory and fiction. By such indulgence FPC has assumed power, and the D. C. Circuit Court has placed thereon the sanction of the law, to arbitrarily discriminate in the allocation of rate reductions not only between utilities but between people of the several states.

Pennsylvania Public Utility Commission respectfully submits that the D. C. Circuit Court was in error in (1) holding that sales of energy produced and sold within the Commonwealth of Pennsylvania, mingled at times with energy from another state, constituted sales in interstate commerce, notwithstanding that the respective amounts were ascertainable and that the amount flowing from another state represented an insignificant portion of the total; (2) holding that FPC had power to require a Pennsylvania public utility to perform contracts

which were illegal in the state of Pennsylvania, and (3) holding that FPC may disregard the actual sales in fact and effect an allocation of a reduction in rates on the basis of contractual entitlements.

Your Honorable Court is respectfully requested to uphold the errors assigned and to annul the orders of FPC or, in the alternative, to remand the case to FPC with appropriate directions.

Respectfully submitted,

THOMAS M. KERRIGAN,
Assistant Counsel,

WILLIAM J. GROVE,
Assistant Counsel,

LLOYD S. BENJAMIN,
Acting Counsel,

For Pennsylvania Public Utility Commission.

MEMORANDUM FOR THE FEDERAL POWER COMMISSION

OPINIONS BELOW

The main opinion of the Federal Power Commission, issued on January 5, 1949, directing a rate reduction (R. XVI, 39–191)[1] is reported at

[1] The record in these cases consists of eighteen printed volumes and several unprinted volumes of transcripts and exhibits. We will use Roman numerals to refer to volumes and arabic numbers to refer to pages. Thus (Tr. VI, 73) and (R. XVI, 91) will indicate page 73 in volume six of the unprinted transcript and page 91 of volume sixteen of the printed record, respectively.

82 PUR(NS) 193. Its opinion of February 28, 1949, denying rehearing (R. XVI, 372–388) is reported at 82 PUR(NS) 286, and its opinion order, issued October 27, 1949, rejecting proposed tariffs and prescribing the rate schedules prescribed (R. XVII, 46–71) is not yet reported. The opinions of the Court of Appeals for the District of Columbia Circuit (R. XVIII, 46–72, 81–98) are not yet officially reported.[2]

JURISDICTION

The judgment of the Court of Appeals in these cases was entered on July 3, 1951 (R. XVIII, 73–74). Petitioners' applications for rehearing, seasonably filed, were denied on September 6, 1951 (R. XVIII, 78). The petitions for writs of certiorari were filed on November 16, 1951. The jurisdiction of this Court is invoked under 28 U. S. C. 1254 (1) and under Section 313 (b) of the Federal Power Act.

---

[2] Additional opinions here relevant are: (1) The opinions of the Court of Appeals for the Fourth Circuit in *Pennsylvania Water & P. Co.* v. *Consolidated G., E. L. & P. Co. of Baltimore*, 184 F. 2d 552 (C. A. 4), certiorari denied, 340 U. S. 906, 186 F. 2d 934 (C. A. 4) (the first *Consolidated* case), which appear at R. XVIII, 1–28, 35–40; (2) the opinion of the District Court for the District of Maryland in *Pennsylvania Water & P. Co.* v. *Consolidated G. E. L. & P. Co. of Baltimore*, 97 F. Supp. 952 (the second *Consolidated* case), which appears at R. XVIII, 40–46, and the opinion on appeal of the Court of Appeals for the Fourth Circuit, decided January 3, 1952, copies of which have been made available to the Court by the petitioners.

QUESTIONS PRESENTED

1. Petitioners seek to raise the question as to whether the Federal Power Commission may prescribe contractual arrangements adjudged by the Fourth Circuit to violate the antitrust laws and the laws of Pennsylvania, or provisions premised upon such unlawful arrangements (Pet. in No. 428, p. 17). We do not believe that the case presents any such question, inasmuch as the Commission has not entered any order prescribing or premised upon arrangements adjudged unlawful.

2. Whether Penn Water's wholesale sales to its electric utility customers in Pennsylvania are, in the circumstances of this case, in interstate commerce.

3. Whether interstate wholesale rates of Penn Water, which both owns and operates facilities for the transmission and sale for resale of electric energy in interstate commerce and holds a license under Part I of the Federal Power Act, are, in the circumstances of this case, regulable by the Federal Power Commission under the rate regulation provisions of both Part I and Part II of the Act. We do not believe the case presents the question raised by petitioners as to inconsistency between the two Parts, and repeal of Part I *pro tanto* by the subsequently enacted Part II.

STATUTE INVOLVED

The pertinent provisions of the Federal Power Act (Title II of the Public Utility Act of 1935, c. 687, 49 Stat. 803, 838, 16 U. S. C. 791a, *et seq.*) appear in the pamphlet copy of the Act submitted with this memorandum.

STATEMENT

These cases were instituted by the filing under Section 313 (b) of the Federal Power Act of three petitions for review of two orders of the Federal Power Commission (FPC) in the Court of Appeals for the District of Columbia Circuit. Two of the petitions, one filed jointly by Susquehanna Transmission Company of Maryland[3] and Pennsylvania Water and Power Company (Penn Water) on April 22, 1949, and the other filed by the Pennsylvania Public Utility Commission (Pennsylvania Commission) on April 25, sought review of an FPC order, issued January 5, 1949, requiring Penn Water to reduce, effective February 1, 1949, its interstate wholesale rates and charges for electric energy by approximately $2,000,000 annually. The third petition was filed by Penn Water on February 8, 1950, seeking re-

[3] Because of doubts respecting Penn Water's right to own and operate facilities in Maryland, Susquehanna Transmission Company of Maryland was created as a wholly owned subsidiary of Penn Water to own part of Penn Water's transmission facilities located in that state. By virtue of its arrangements with Penn Water, Susquehanna has no separate rates and charges. The references to Penn Water in this brief generally include Susquehanna.

view of the FPC order, issued October 27, 1949, rejecting rate schedules proposed by Penn Water in alleged compliance with the January 5 order and prescribing rate schedules to effectuate those rate reductions. While these petitions were pending before the court below, petitioners filed motions to annul the FPC orders on the ground that the contract between Penn Water and Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated), on which these orders were allegedly based, had been invalidated as violative of the federal antitrust laws and the laws of Pennsylvania in a private suit between the parties.[4] The court below (one judge dissenting) denied the motions to annul and affirmed the FPC orders. The facts pertinent to the issues here involved may be summarized as follows:

Penn Water: Penn Water, a corporation organized under the laws of Pennsylvania, owns and operates at Holtwood, Pennsylvania, on the Susquehanna River some nine miles north of the Pennsylvania-Maryland State line a "run-of-river" hydroelectric project under a 50-year license issued in 1931 by the FPC under Part I of the Federal Power Act (R. XVI, 41–42, Order of July 3, 1931 in Project 1881). In addition, Penn Water, in conjunction with Susquehanna, owns and operates transmission lines and associ-

[4] *Pennsylvania Water & P. Co.* v. *Consolidated G., E. L. and P. Co. of Baltimore*, 184 F. 2d 552, 186 F. 2d 934 (C. A. 4); R. XVIII, 1–28, 35–40.

ated equipment located in Pennsylvania and Maryland (R. XVI, 41–42). These transmission lines interconnect with those of Consolidated (the Baltimore electric company) and of Safe Harbor Water Power Corporation (Safe Harbor),[5] by means of which the electric generating facilities of Penn Water, Consolidated and Safe Harbor are interconnected, integrated and operated as a power pool in order to supply their combined loads with maximum over-all economy and maximum coordinated utilization of hydro resources and generating facilities (R. I, 25–27, 69–78). These transmission lines also interconnect with the facilities of Penn Water's Pennsylvania customers, including the Thorndale-Columbia section of the Pennsylvania Railroad (Railroad), and with the facilities of the Potomac Electric Power Company and of the Perryville (Md.)-Benning (D. C.) section of the Railroad (R. XVI, 43).

[5] Safe Harbor is a Pennsylvania corporation which owns and operates under a 50-year license issued in 1930 by the FPC a large "run-of-river" hydro-electric project on the Susquehanna River several miles above Penn Water's project. All of its stock is owned by Penn Water and Consolidated: 100,000 shares of Class A nonvoting stock are owned by Consolidated and 200,000 shares of Class B voting stock are divided equally between Penn Water and Consolidated (R. XVI, 44). Safe Harbor's rates and charges have been held subject to FPC regulation, both as a "licensee" under Part I of the Federal Power Act, and as a "public utility" under the Act's Part II. *Safe Harbor W. P. Corp.*, 5 FPC 221, 231–243, 66 PUR(NS) 212, 222–223, affirmed, 179 F. 2d 179 (C. A. 3), certiorari denied, 339 U. S. 957.

Penn Water has no franchise service area and does not itself sell to the public. In addition to its arrangements with Consolidated (see *infra*), Penn Water has contractual obligations to sell firm electric energy to three electric utilities in Pennsylvania, and to the Railroad for electrified railroad use in Pennsylvania (R. XVI, 45–48).

The Power Pool: Under its power pooling arrangements with Consolidated,[6] which were to remain in effect until April 22, 1980, Penn Water delivers to Consolidated all of the residue of Penn Water's capacity and energy remaining after Penn Water's firm obligations to the three Pennsylvania utilities and the Railroad have been met (R. XV, 4607–4608; XVI, 45). Penn Water, in turn, is entitled to obtain from Consolidated steam-generated energy in excess of Consolidated's own requirements up to the limits of its available generating capacity to enable Penn

[6] Penn Water was also a party, together with Consolidated, to a fifty-year agreement, effective June 1, 1931, with Safe Harbor, the third member of the power pool. Under this contract, Safe Harbor agreed with Consolidated and Penn Water (and the latter *inter se*), that in return for a combined annual payment which would yield to Safe Harbor a specified rate of return after operating expenses (including taxes and depreciation) the latter companies should be entitled to all of the capacity and energy available from Safe Harbor's project in the ratio of two-thirds to Consolidated and one-third to Penn Water (R. XV, 4554–4576; XVI, 45). Under the arrangement, the entitlements are at the disposal of the power pool to permit the maximum utilization of the resources at lowest cost (R. I, 26; V, 2137–2138; XIII, 4369).

984143—52——2

Water to meet its firm power obligations in Pennsylvania (R. XV, 4585; XVI, 45).[7] For the residue, Consolidated pays whatever dollar amount is necessary, in addition to Penn Water's revenues from those customers, to cover all of Penn Water's cost of operation (including taxes and depreciation) and to provide Penn Water with a fair return on investment (R. XVI, 45). The amount Consolidated is to pay is computed in accordance with a formula which includes a credit to Consolidated for its deliveries to Penn Water. The purpose of this arrangement, as stated in Article VIII of the Supplemental Agreement of June 1, 1931, was "to encourage the maximum utilization of the power and energy entitlements and resources and other facilities of the parties * * * to the end that the joint use of this property and equipment shall give the greatest practical benefit to the public" (R. XV, 4613–4614; XVI, 53–54).[8] The contract also contained,

[7] Consolidated's generating facilities, the principal steam-electric resources of the pool, consist now of four steam-electric plants of 585,000 kw. Safe Harbor's generating facilities are exclusively hydro, its plant having an effective capacity of 230,000 kw. Penn Water's generating facilities are principally hydro with an effective capacty of 104,000 kw.; its steam-electric plant has a capacity of only 20,000 kw. (R. XVI, 42, 168).

[8] Article VIII goes on to provide that the parties

"* * * shall so conduct their operations that economic interchange of power and energy during the different hours of the day, the seasons of the year, and over more prolonged periods, shall be encouraged in every possible way" (R. XV, 4614; XVI, 54).

as Articles IV and V (R. XV, 4612–13), the provisions, held unlawful by the Fourth Circuit, that Penn Water could not expand or contract its facilities, or take on new customers without the consent of Consolidated.

Such an arrangement has enabled Penn Water to operate in a manner not otherwise possible because of the unusual nature of its system. Since its hydro plant, which constitutes the bulk of its energy resources, is essentially, a "run-of-river" plant,[9] Penn Water's ability to provide dependable capacity from its own resources is limited by the amount of water available in the Susquehanna River, which "is one of the most variable flow streams of large size in the country." (Tr. III, 1236).[10] Most of the time there is not enough river flow to permit the operation of Penn Water's hydro plant to the full electric capacity of the generators.[11] At times of low flow it does not have sufficient capacity to supply the demands of its customers. Consequently, if dependent solely upon its own generating facilities to supply the firm power loads of its customers, it could not do

[9] Penn Water's hydraulic storage capacity is sufficient only to provide for a weekly cycle of drawdown and refill (R. I, 438–439).

[10] The flow of the river fluctuates widely from a low of 2,100 cubic feet per second to a high of 860,000 cfs (R. I, 39).

[11] The Penn Water hydro plant can utilize a maximum of 31,500 cfs. (Tr. LIX, 22536), with the river flow more often than not being substantially less (Tr. LVIII, 22371; LXVI, 24764).

so (R. V. 2149; Tr. X, 3626). For the periods of low and high flow of the river do not coincide with periodic low and high demands for electric energy, which characteristically occur in daily, weekly and yearly cycles, each with its own peak;[12] since electric energy cannot feasibly be stored, all demands must be satisfied by capacity capable of producing electric energy instantaneously as customers switch on their lights, motors, and other appliances.

Moreover, if operated independently, Penn Water could not have made the most effective utilization of the potential resources of the river nor could it have obtained the maximum economy of generation (R. I, 25, 74–75, 440–441). Penn Water's inability to impound water during high flow months for use in subsequent low flow months, and the frequent recurrence of low river flows, limits its dependable capacity (R. I, 413; V, 2212–2216; XVI, 165–166). These physical limitations, plus the excessive capital investment required for producing the relatively small de-

[12] Daily peaks are usually in midmorning or midafternoon when industrial activity is highest, or in the early evening hours when residential use overlaps commercial and industrial uses. Weekly peaks usually occur in the first five working days of the week; weekly lows on week ends (and holidays). Yearly peaks usually occur in winter when darkness falls before the close of the working day, and frequently during the pre-Christmas period, when unusually high commercial and residential uses coincide with high industrial use (R. I, 42; Tr. LXV, 24222).

pendable output,[13] would preclude Penn Water, if operated independently, from competing successfully with steam plants and substantial water would have to be wasted over the spillways at times of high flow (R. I, 25; Tr. III, 1236).

Under the power pool arrangements worked out by Penn Water and Consolidated, Penn Water's hydro facilities have been integrated into a system which has steam generating facilities and supplies a large utility load (R. I, 32–33, 439); this results in the most effective and economic use of Penn Water's hydro resources. Penn Water has been able to take on firm obligations and to meet them through the availability of power from Consolidated's steam-generation plants (R. V, 2397), which normally are capable of producing up to their full capacity;[14] in times of severe water shortage, Consolidated

[13] Since the continuous output of the Penn Water plant at low water (2,100 cfs) is only about 8,500 kw.; the investment per kw. would be $3,897, compared to an average investment of $316 per kw. for electric plant in service of companies whose electric operating revenues are more than $250,000 per year. R. XVI, 186; Tr. III, 1236; *Statistics of Electric Utilities in the United States* (Federal Power Commission 1950), p. xxi.

[14] Steam plants, not shut down for emergency or for scheduled maintenance, are usually capable of producing up to their full capacity at all times, including peak-load periods (R. VI, 2455), and usually are used in the order of their efficiency—the newer, larger, more efficient units being used most continuously (base-load operations), the less efficient units being put into operation for shorter periods as the load increases (peak-load operation) (R. I, 23, 36–37, VI, 2455).

carries the main burden of supplying Penn Water's customers (R. XIV, 4405; XVI, 175).

In addition, during periods of low river flow, Penn Water's hydro plant is shut down during daily and weekly off-peak load hours to permit water to accumulate. The steam plants of the pool are utilized to carry the load during such periods. Then during peak-load hours, the hydro plant is operated at full capacity for a few hours using the water which has accumulated during the period of nonuse (R. I, 37, 439; VI, 2455; Tr. LIII, 20137). Through such peaking operation, its hydro plant is used to the best advantage by contributing its maximum generating capacity to the system during peak-load hours when maximum capacity is needed and by saving the costs of using the oldest and most inefficient steam plants which would otherwise be used (R. I, 38-42; VI, 2455).[15] On the other hand, when the river flow is high, the hydro plant is operated around the clock to carry the base load of the pool in substitution for steam-generated energy, thereby reducing the amount of fuel which would otherwise have to be burned and minimizing the

[15] The availability of the hydro energy avoids the installation of additional steam capacity and the necessity of keeping existing boilers banked and ready for use (R. I, 24, 38), which would involve standby losses and the operation of turbo-generators below their most efficient loadings. The hydro capacity is also instantly available, coming from standstill to full load in a fraction of a minute (R. I, 42).

waste of water (R. I, 36–37, 40, 75; VI, 2455; Tr. III, 1236, 1246–1247).[16]

Since, under the system thus evolved, Penn Water's hydro facilities are integrated with the generating facilities of Consolidated as well as Safe Harbor, the energy used to satisfy demands of customers of either is determined on the basis of maximum utilization and economy (*i. e.*, river flow, relative costs of steam generation, and magnitude of loads) (R. I, 40; II, 599–600; XVI, 181). As a result, the flow of energy is generally south from Pennsylvania toward Maryland at all times during the spring months when the river is high (R. I, 341). During the rest of the year, the practice is to generate energy at Penn Water's hydro plants so as to assist Consolidated in carrying its peak loads during the day, but to stop hydro generation so as to allow the ponds to refill during off-peak periods (R. I, 45–46, 439). And, although at such times the flow of energy tends to be to the north, from Baltimore to Pennsylvania, the direction of flow on the lines crossing the State boundary may change frequently according to the needs of the consumers in Pennsylvania or Maryland (R. I, 341; II, 599–600; VI, 2455; XVI, 54; Tr. LXVI, 24733).

[16] The purpose of the residual type of payment provided in the contract (*supra*, p. 8) was to free and direct the entire pecuniary motivation to the achievement of the maximum over-all economy of operation and utilization of available resources and facilities, without artificial restrictions due to contractual prices or otherwise (R. I, 25–27, 69–78).

The FPC's order of January 5, 1949: On September 1, 1944, having received petitions from the Mayor and City Council of Baltimore, Maryland and from the Public Service Commission of Maryland (Maryland Commission) (R. XV, 4623, 4731–33),[17] the FPC instituted an investigation into the reasonableness of the rates and charges made by Penn Water for its interstate sales of electrical energy at wholesale, including its sales to Consolidated (R. XVI, 31).[18] After extensive hearings in which Consolidated and the Maryland and Pennsylvania Commissions actively participated as intervenors (R. I, 2; XVI, 31–37), the FPC on January 5, 1949, issued its opinion and order (R. XVI, 39–191).

After reviewing the operations of the power pool, the FPC found that since all of the resources of the pool are available to meet the combined load of its members, without reference to

---

[17] The importance of the interstate rates to Consolidated's retail rates to consumers, which were at the time the subject of a Maryland Commission rate proceeding, is referred to by that commission in its opinions in its investigation. *Re Consolidated Gas Electric Light and Power Company of Baltimore*, 61 P. U. R. N. S. 94, 102–103; *id.*, 67 P. U. R. N. S. 144, 149–150.

[18] The FPC simultaneously and on the same petitions initiated a separate investigation of the rates charged by Safe Harbor Water Power Corporation to Consolidated, and after hearings, on November 4, 1946, ordered a reduction of about $627,551 annually. *Safe Harbor W. P. Corp.*, 5 F. P. C. 221. Upon review, the Court of Appeals for the Third Circuit affirmed the order. *Safe Harbor W. P. Corp.* v. *FPC*, 179 F. 2d 179 (C. A. 3), certiorari denied, 339 U. S. 957.

state boundaries, the pool was an "integrated and coordinated interstate electric system." (R. XVI, 51). The FPC further found that the sales of system energy, such as those by Penn Water to its Pennsylvania utility customers, made without reference to the state of origin of the energy, were pool sales, and hence, in light of the interstate nature of the pool, were sales in interstate commerce (R. XVI, 55). The FPC accordingly concluded that Penn Water is a "public utility" under Part II of the Federal Power Act by virtue of its ownership and operation of facilities for the transmission and sale at wholesale of electric energy in interstate commerce, and that its sales for resale to Consolidated, as well as to its three Pennsylvania customers, are subject to Commission jurisdiction under Section 206 (a) of the Act (R. XVI, 56).[19]

In addition, the FPC found that it had jurisdiction to regulate Penn Water under Section 20 of Part I, which relates *inter alia* to rates of licensees whose power enters interstate commerce, since, as it found, the States were "unable to agree" on these rates (R. XVI, 58). The FPC further found that Penn Water's status as a licensee under Part I does not exempt it from regulation under Part II and that no conflict resulted in the pending case from regulation under both Parts (R. XVI, 59).

[19] The FPC did not assert jurisdiction over Penn Water's sales to the Railroad (R. XVI, 51).

In determining just and reasonable rates, the FPC found Penn Water entitled to a return of $1,300,672, computed on a "fair and reasonable rate of return" of 5¼% on a proper rate base, which the FPC found to be $24,774,712[20] (R. XVI, 186). This 5¼% rate of return was allowed since, under the arrangements with Consolidated which the FPC directed be continued as "the most practicable under the circumstances" (R. XVI, 175), Penn Water was assured a stabilized income as in the past (R. XVI, 147).

Since Penn Water's net operating income exceeded a fair return by $1,954,261, the FPC undertook to determine "a reasonable and proper allocation of the cost of service rendered by Penn Water" (R. XVI, 175, 186). On the basis of that allocation, which the FPC grounded on the representative costs of Penn Water's services, which the FPC directed to be continued, to its Pennsylvania customers and to Consolidated, the FPC ordered Penn Water, effective February 1, 1949, to file tariffs which would reduce its rates to its Pennsylvania customers by the aggregate sum of $220,943 and to Consolidated by a reduction of $1,733,318 in Consolidated's residual payments (R. XVI, 174–175, 187, 189–90).[21]

---

[20] This rate base consists of gross investment of $33,426,585 plus working capital of $650,000 less accrued depreciation of $9,001,873 (R. XVI, 186).

[21] The FPC formula differed from that provided for in the contract in the following particulars, among others: The

Petitioners sought rehearing of this rate reduction order of January 5, 1949, on the ground, among others, that the contract between Penn Water and Consolidated, particularly Article IV and V, violated the antitrust laws (R. XVI, 206), and consequently that the FPC findings as to jurisdiction, rate of return and allocation, were invalid (R. XVI, 206, 208, 236, 248, 249, 330–331, 332). In so urging, petitioners referred to the complaint filed in December 1948, by Penn Water against Consolidated in the United States District Court for the District of Maryland in which Penn Water sought a declaratory judgment that the contract was invalid under the antitrust laws (R. XVI, 207). The FPC denied the petitions for rehearing with the comment (R. XVI, 378):

> If there are questions as to the legality of the foundation contracts which are in litigation, as [petitioners'] application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions.

---

rate of return was reduced from 7% to 5¼%; the rate base to which the 5¼% was to be applied was changed from an undepreciated rate base to a rate base computed by deducting accrued depreciation from gross investment and including working capital; the method of computing the annual allowance for depreciation was changed from a sinking-fund depreciation method to the straight line method, thereby increasing the annual allowance (R. XVI, 186–7; R. XVII, 58–62; Tr. III, 1136–8, 1159–60; R. XV, 4608–12, 4617–21).

Following the FPC's denial of a second petition for rehearing, Penn Water, on April 22, 1949, and the Pennsylvania Commission, on April 25, petitioned the court below for review of the FPC's January 5 order.

The FPC's order of October 27, 1949: Thereafter, on May 31, Penn Water filed with the FPC rate schedules purportedly in compliance with the January 5 order (R. XVII, 27–45). On October 27, the FPC, rejected these schedules after finding that they did not comply with the January 5 order in several respects. The FPC prescribed schedules which it found would effectuate the requirements of its order, and directed the continuance of only those provisions of the Penn Water-Consolidated contract which were "in and of themselves lawful" (R. XVII, 46–47, 62).[22] After denial of its application for rehearing of this order, Penn Water filed in the court below an additional petition seeking review of this order (R. XVII, 1–10).

The proceedings below: While these cases were pending in the court below, petitioners moved the court to annul the FPC's orders on the ground that essential factual and legal support for these orders had been destroyed by the decision

[22] These rate schedules were to be effective in accordance with the terms of an order of the court below, issued on April 29, 1949, which stayed their effective date pending final decision on the condition that Penn Water segregate in a special reserve the amount of the prescribed rate reduction.

rendered by the Court of Appeals for the Fourth Circuit in Penn Water's private antitrust action against Consolidated (*supra*, pp. 5, 17) (R. XVIII, 1–28).[23] The court below, however, denied the motions to annul. It construed the Fourth Circuit decision—

> as having done no more than declare illegal under the antitrust laws certain restraints exercised by [Consolidated] upon Penn Water—such as requiring its approval before it could take on new customers or expand generating facilities. Those restraints had been privately agreed upon by the parties and submitted to the Commission as an accomplished fact. The court was careful to avoid using language which might be interpreted in such a fashion as to affect any rate proceeding * * * [R. XVIII, 53–54].

Accordingly, the court stated (R. XVIII, 54):

> In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligation under the Federal Power Act to continue the then-existing services and rates. It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order. "A rate is not necessarily illegal because it is the result of a conspiracy in restraint of trade in viola-

[23] The Fourth Circuit's decision reversed the ruling of the District Court for the District of Maryland holding that the contract was valid. *Pennsylvania Water & P. Co.* v. *Consolidated G. E. L. & P. Co. of Baltimore*, 89 F. Supp. 452.

> tion of the Anti-Trust Act. What rates are legal is determined by" the regulatory statute [citing *Keogh* v. *Chicago & N. W. Ry. Co.*, 260 U. S. 156, 162]. The validity of Commission action in this proceeding must be determined in light of the criteria furnished by the Federal Power Act, as applied to the operations and arrangements under scrutiny.

As to petitioners' attacks on the jurisdictional basis of the FPC orders, the court held that Penn Water was part of an "integrated and coordinated interstate electric system", that its sales to its Pennsylvania customers were in interstate commerce, and that consequently it was a public utility under Part II of the Federal Power Act, with its rates for those sales subject to regulation under that Part (R. XVIII, 61–64). The court also ruled *inter alia* that the fact that Penn Water is a licensee under Part I, does not prevent it from also being regulated as a public utility under Part II (R. XVIII, 57–60), and further that since there was substantial evidence to support the finding that the Maryland and Pennsylvania Commissions were "unable to agree," the FPC was also authorized to regulate Penn Water's wholesale interstate rates as a licensee under Section 20 of Part I (R. XVIII, 60–61).

On the merits, the court ruled that the FPC's findings were supported by substantial evidence (R. XVIII, 64–72) and, accordingly, it affirmed (R. XVIII, 72).

ARGUMENT

(1) The principal basis for certiorari in these cases arises from the fact that in its opinion of January 3, 1952, in the second *Consolidated* case,[24] the Fourth Circuit has stated that it disagreed with the view expressed by the court below that the Federal Power Act authorizes the Federal Power Commission to prescribe arrangements which would otherwise be in violation of the antitrust laws. The question upon which the courts have differed is doubtless an important one—although since the enactment of the Federal Power Act it seems never to have arisen except in the two recent cases involving the Penn Water-Consolidated contracts. The Government's position on this question is that at least where the Federal Power Commission lawfully prescribes an arrangement requiring integrated operation of power companies, action in compliance with the Commission's order would not violate the antitrust laws. Cf. *Parker* v. *Brown*, 317 U. S. 341. The only question presented in such circumstances is the scope of the Commission's statutory authority.

These cases, however, may not present an appropriate vehicle for this Court to consider and determine the question upon which the courts of

[24] *Consolidated Gas Electric Light and Power Co. of Baltimore* v. *Pennsylvania W. & P. Co.* (C. A. 4), decided January 3, 1952.

appeals have disagreed. For the conflict with the Fourth Circuit would arise only if the Federal Power Commission *has* prescribed arrangements found by that court to violate the Sherman Act. Here, as we shall show, the Commission has not issued any such order; it has not required the companies to perpetuate any contractual provision found unlawful by the Fourth Circuit. Furthermore, neither of the Fourth Circuit's opinions expresses disagreement with the alternative ground for the decision of the court below (quoted at pp. 19–20, *supra*), that nothing in the antitrust or Pennsylvania laws warranted relieving Penn Water of its obligation to continue the then existing services at the reduced rates fixed by the Federal Power Commission,[25] which was the principal object of the Commission's order. Thus, on the present record, it seems highly unlikely that this Court will reach the issue of law upon which the two courts of appeals have disagreed.

The Fourth Circuit in the first *Consolidated* case held violative of the antitrust laws only the provisions of the contract (Articles IV and V) which prohibited Penn Water from making new sales or purchases of electric energy and from expanding its generating facilities without Consolidated's approval (R. XVIII, 7 *et seq.*; see

[25] Petitioners do not assert in this Court that the Federal Power Commission's order reducing rates is not supported by substantial evidence.

also R. XVIII, 25).[26] That court did not hold illegal the provisions as to power pooling and the residual payment type of rate.[27] And, although it went on to invalidate the entire contract, which, of course, included these provisions, it did so not because it regarded the latter provisions as illegal in and of themselves, but rather because, in its view, Articles IV and V were such inseparable parts of the agreement that the remainder could not operate as a contract between the parties without these Articles (R. XVIII, 37).

The FPC's opinions and orders do not prescribe the continuance of any provisions found unlawful. For the FPC's order expressly limited

---

[26] The Fourth Circuit expressly stated (R. XVIII, 7):

"The restrictions which are imposed upon the activity of Penn Water by the agreement and give rise to the contention of invalidity are contained in Articles IV and V * * *." Its decision in the second *Consolidated* case is similarly limited. Slip Op., pp. 3–4.

[27] In its opinion in the second *Consolidated* case (Slip Op., p. 5) the Fourth Circuit removed any possible doubt as to its holding in the first case by summarizing the contract as follows:

"This [the Penn Water-Consolidated contract] provided in effect that Consolidated should be entitled to all the electric capacity and energy available to Penn Water from its plant at Holtwood on the Susquehanna and from Safe Harbor, and in return Consolidated agreed to pay Penn Water an amount equal to its operating expenses and a specified rate of return on Penn Water's invested capital; *and then followed* the illegal restrictions upon the activities of Penn Water * * *." [Italics supplied.]

its scope to contractual provisions, "in and of themselves lawful" (R. XVII, 62)—a phrase included in the order after Penn Water had presented to the Commission its contention that portions of the contract were unlawful under the antitrust laws and had called attention to the fact that the issue was then pending before the District Court in Maryland in the first of the antitrust suits against Consolidated (R. XVI, 206–7). The obvious purpose of this phrase was to insure that the Commission's order would not be construed as having approved any provision which the courts might find to be unlawful.[28]

Indeed, both courts of appeals seem to agree that the Commission did not prescribe the restrictive Articles which the Fourth Circuit found unlawful. In the second *Consolidated* case, the Fourth Circuit declared that (Slip Op., p. 15)[29]—

> It is obvious that the Commission did not prescribe the restrictive conditions of the

---

[28] Penn Water's assertion (Pet. in No. 428, pp. 11–12), that the phrase "in and of themselves lawful," could not have any relationship to the Fourth Circuit's ruling on Articles IV and V, ignores these facts, which show that the FPC, even prior to the Fourth Circuit's ruling, was aware of the possible illegality of these provisions.

[29] Before the Fourth Circuit in the second case, the Power Commission had contended that its order there involved, unlike its order in the instant case, *had* prescribed the restrictive contractual arrangements in issue. The court's holding in response to this contention that the Commission could not prescribe what the antitrust laws prohibit was an alternative ground of its decision (Slip Op., p. 15, *et seq.*).

> contract as part of the rate order in either case * * *.

The court below, although holding that the Commission possesses power to do so, has not said that it has prescribed the restrictive conditions; on the contrary it differentiated between the "restraints * * * privately agreed upon by the parties and submitted to the Commission as an accomplished fact" and the "services and rates, reflecting underlying operations, which were the subject of the Commission's order" (R. XVIII, 54).

As the Fourth Circuit indicated in its decision in the second *Consolidated* case (Slip Op., pp. 14–15), the Commission's orders were directed to the continuance of the arrangements as to power pooling and the residual-payment type of rate (R. XVI, 175, 378–9), which the Fourth Circuit in neither case found to be in violation of the antitrust laws.[30] The Commission's conclusions as to rate of return, interstate commerce and allocation of the rate reduction were based on the continuance of the arrangements as to power pooling and the residual-payment type of rate. Although Penn Water had contended that this

[30] The FPC's purpose in requiring the continuance of the residual-payment type of rate was to encourage the most effective operation of the power pool. The testimony of Penn Water's own officers had clearly demonstrated that, contrary to Penn Water's present claim (Pet. in No. 428, p. 26, fn), the full benefits of the power pool could be obtained only by this type of payment (R. I, 25–27, 69–78).

residual type of payment violated the Sherman Act (Br. in first *Consolidated* case, p. 27; Br. in second *Consolidated* case, pp. 25–26, 32–35), the Fourth Circuit did not so hold. It therefore cannot be said that the Commission's decision was predicated on continued operation of the provisions of the contract found to have been illegal.

(2) The foregoing discussion is fully applicable to petitioners' contention (Pet. in No. 428, pp. 30–32; Pet. in No. 429, pp. 26–36) that the decision below is in conflict with the further ruling of the Fourth Circuit that the Penn Water-Consolidated contract violated the laws of Pennsylvania, in that they deprived Penn Water's directors of the powers of management (Pet. in No. 428, p. 31), and destroyed Penn Water's "corporate virility" (Pet. in No. 429, p. 28). Here, also, the Fourth Circuit ruling is limited to Articles IV and V of the contract (R. XVIII, 25, *et seq.*), and as we have shown, *supra*, pp. 23–24, the FPC did not prescribe the continuance of these provisions. Moreover, there is no conflict on this point for the further reason that the court below dealt only with those activities of Penn Water which are subject to regulation under the Power Act, whereas the Fourth Circuit only held that since some of Penn Water's activities in Pennsylvania appeared to be local and not subject to the Federal Power Act, there was room for the operation of Pennsylvania law with respect to some of the company's activities.

(3) Petitioner in No. 429 contends that Penn Water sales to its Pennsylvania customers were not in interstate commerce (Pet. in No. 429, pp. 16–17, 19, 21–25). It cannot be disputed that substantial amounts, and at times all, of the power sold to the Pennsylvania customers comes from Baltimore (R. XIV, 4405). Furthermore, as shown *supra*, pp. 11–13, Penn Water's generating facilities, together with those of Consolidated and Safe Harbor, are operated as an "integrated and coordinated interstate electric system" (R. XVI, 51). The output of that system or pool, part of which is sold to Consolidated and part to Penn Water's customers in Pennsylvania, is peculiarly the interstate product of the integrated system, functioning as a single multi-state electric and economic unit, for the existence and nature of the product are wholly dependent upon the operation of the integrated interstate system. The product Penn Water sells to the Pennsylvania customers is a product which would not be available but for the interstate pool which enables Penn Water to draw on Consolidated's out-of-state steam generators during peak-load hours of low river flow, and would not be available at the actual low production cost involved but for the operations of the interstate pool.

The unique characteristics of the power pool and the nature of the product not only distinguish this case from *Peoples Gas Co.* v. *Public Service Commission*, 270 U. S. 550, and *Lone Star*

Gas Company v. *Texas*, 304 U. S. 224,[31] relied on by the Pennsylvania Commission (Pet. in No. 429, pp. 21–25), but also support the FPC's conclusion, approved by the court below (R. XVIII, 61–64), that these sales are in interstate commerce although at times they involve varying amounts of energy never crossing the State lines (R. XVI, 55). The similar conclusion as to Safe Harbor, the third participant in the pool, has already been approved by the Court of Appeals for the Third Circuit. *Safe Harbor W. P. Corp.* v. *FPC*, 124 F. 2d 800 (C. A. 3); *Safe Harbor W. P. Corp.* v. *FPC*, 179 F. 2d 179 (C. A. 3), certiorari denied, 339 U. S. 957;[32] see, also, *Missouri* v. *Kansas Gas Co.*, 265 U. S. 298; *Public Utilities Commission* v. *Landon*, 249 U. S. 236.

[31] The fact that when the river flow is low Penn Water is unable to meet its maximum Pennsylvania load obligations from Pennsylvania generators further distinguishes the *Peoples Gas* case, which held that the state could require a sale from a pipeline carrying a mixture of out-of-state and in-state gas where the line contained sufficient intrastate gas for the sale. Similarly the *Lone Star Gas* case is further distinguishable inasmuch as the rates ultimately sought to be fixed there were retail rates which, under established principles, are subject to state regulation even though in interstate commerce (*Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U. S. 23).

[32] In the first *Safe Harbor* case, the Third Circuit pointed out that Safe Harbor is "part of a large integrated interstate electric system" and that its electric output "must be treated as an integrated whole." 124 F. 2d at 802, 807. And in the second *Safe Harbor* case, the Third Circuit again held that Safe Harbor's sales "constitute in fact wholesale sales in interstate commerce" because they are "delivered to an integrated interstate electric system." 179 F. 2d at 185, fn. 9.

(4) The court below properly affirmed the FPC's conclusion that Penn Water's status as a licensee under Part I of the Federal Power Act does not preclude its also being a "public utility," subject to Part II of the Act. This conclusion is not only the same as that reached by the Third Circuit on the same question in the second *Safe Harbor* case, in which this Court declined to review this holding by denying certiorari (Pet. in No. 709, October Term, 1949, pp. 6–19; 339 U. S. 957), but is fully supported by the legislative history of Part II, wherein Congress recognized that its definition of public utilities embraced some licensees and expressly intended that such licensees be regulated as public utilities as well.[33]

---

[33] Thus, the House Committee on Interstate and Foreign Commerce deleted the word "licensees" in Section 305 (a)'s prohibition against personal profit by officials and left that prohibition directed solely against public utilities, because it understood that licensees owning or operating Part II jurisdictional facilities would be regulated as public utilities. The Committee commented:

"The Senate bill includes licensees within the provisions of this section, but inasmuch as such licensees when interstate operating public-utility companies will be subject to the provisions of the section in any event, licensees have been omitted from the bill as reported, because of the lack of public interest in those companies which are not public utilities."

H. Rep. No. 1318, 74th Cong., 1st Sess., p. 31; H. Rep. No. 1903, 74th Cong., 1st Sess., pp. 56, 75; see also, Hearings before the Senate Committee on Interstate Commerce, 74th Cong., 1st Sess., on S. 1725, pp. 233–234.

The alleged conflicting dicta in *Niagara Falls Power Company* v. *FPC*, 137 F. 2d 787, 792–793 (C. A. 2), certiorari denied, 320 U. S. 792, and *Alabama Power Co.* v. *FPC*, 128 F. 2d 280, 293 (C. A. D. C.) were urged unsuccessfully as grounds for certiorari in the second *Safe Harbor* case (Pet. in No. 709, October Term, 1949, pp. 7–8, 15–16). On their face they afford little support to Penn Water's theory. Furthermore, a mere reading of the latter two decisions, in both of which the Commission prevailed, will show that the courts were dealing with problems in no way resembling those at bar, and that the statements were made in an entirely different context from that now under consideration.

Nor does the statement below (R. XVIII, 60) as to repeal of Part I by implication from Part II support Penn Water's claim of conflict with the Third Circuit's *Safe Harbor* decisions (Pet. in No. 428, pp. 32–33). The first *Safe Harbor* decision involved no question of regulation under Part II, since there the FPC had not undertaken to exercise its authority under that Part. 124 F. 2d 800 (C. A. 3); see also 179 F. 2d 179, 182. In its second *Safe Harbor* decision, the Third Circuit, in ruling that the company was subject to regulation under both Parts, found it unnecessary to hold that Part II, enacted in 1935, repealed by implication any portion of the earlier Section 20 since it found that the result would be the same under either part; the court indi-

cated, however, that had it been necessary to its decision, it would have so ruled. 179 F. 2d at 185, fn. 10.[34]

The court below also indicated that it did not matter which part was applicable (R. XVIII, 60). In this case, the FPC had proceeded under both Parts I[35] and II, and the standard for fixing rates under both Parts is essentially the same, as both the court below and the Third Circuit have held (R. XVIII, 60; *Safe Harbor W. P. Corp.* v. *FPC*, 179 F. 2d 179, 182–193 (C. A. 3), certiorari denied, 339 U. S. 957; Brief for the Federal Power Commission in Opposition, in No. 709, Oct. Term, 1949, pp. 13–23).

The "careful distinction" "drawn between 'licensees' under Part I and 'public utilities' under Part II" (Pet. in No. 428, p. 33) does not indicate that a company could not be both a licensee and a public utility and so regulable under both Parts; rather, it serves merely to define the provisions applicable to companies which are licensees and not public utilities and *vice versa*. Finally, subjecting Penn Water to regu-

[34] "It would seem to be more accurate to state that certain portions of Parts I and II are inconsistent with each other unless we, or some other court, find a rational reconciliation as we think we have done. If the provisions of the respective Acts cannot be reconciled then the former must be deemed to be repealed by the latter."

[35] The FPC may fix rates for licensees if it finds that the State Commissions are unable to agree on rates. Section 20, 16 U. S. C. § 813. Such a finding in this case was upheld by the court below (R. XVIII, 60–61), and is not challenged here.

lation as a public utility as well as a licensee affect no vested rights of Penn Water as a licensee, since its license was issued after the enactment of Part II in 1935.

CONCLUSION

The judgment below is clearly correct. Since the issue upon which the Fourth Circuit disagrees with the court below would seem not to be presented by the facts of this case, this Court may not deem this an appropriate case in which to consider that question. On the other question there is no conflict in decisions, and no need for certiorari.

Respectfully submitted.

ON PETITIONS FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

BRIEF OF INTERVENOR-RESPONDENT CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE IN OPPOSITION

OPINIONS BELOW

The Opinion of the United States Court of Appeals for the District of Columbia Circuit filed July 3, 1951, is not

yet officially reported, but appears at Record (R.), Vol. XVIII, p. 46. The Dissenting Opinion of Miller, Circuit Judge, filed October 4, 1951, which has not yet been officially reported, appears in Appendix B to the Petition in No. 428.

The Opinions and Orders of the Federal Power Commission (FPC) affirmed by the Court of Appeals have not yet been published. They appear in the Record as follows: (1) Opinion No. 173 and Order of January 5, 1949, reducing rates of Pennsylvania Water & Power Company (Penn Water) — R., Vol. XVI, pp. 39-176, 177-191; (2) Opinion No. 173-A and Order of February 28, 1949, denying Petition for Rehearing on Opinion No. 173 and Order of January 5, 1949 — R., Vol. XVI, pp. 372-388; (3) Order of March 17, 1949, denying Petition for Rehearing on Opinion 173-A and Order of February 28, 1949 — R., Vol. XVI, pp. 414-415; (4) Order of October 27, 1949, prescribing new rate schedules for Penn Water — R., Vol. XVII, pp. 46-71; and (5) Order of December 15, 1949, denying Petition for Rehearing on Order of October 27, 1949 — R., Vol. XVII, pp. 94-99.

JURISDICTION

Petitioners have invoked the jurisdiction of this Court under U. S. C., Title 28, Sec. 1254(1), and Sec. 313(b) of the Federal Power Act (U. S. C., Title 16, Sec. 825 l (b)).

PRELIMINARY STATEMENT

The Petitions allege actually three questions.

One question is whether a "licensee," under Part I of the Federal Power Act,[1] which is also a "public utility".

[1] U. S. C. A. Title 16, Part I, Secs. 791-823; Part II, Secs. 824-824h.

under Part II of that Act, is subject to rate regulation under Part II. Petitioner Penn Water denies this. Certiorari on this issue has already been denied by this Court.[2] This issue presents no conflict between Circuits.

A second question is whether, in connection with sales of combined steam and hydro electricity as "firm" power provided by an interconnected and physically integrated interstate electric power system, FPC may exercise jurisdiction over the fluctuating "unfirm" hydro component of this service if that component is generated and sold in a single State. The Pennsylvania Public Utility Commission (PUC) denies this. Its Petition on this issue ignores the facts of the interstate system's physical operation as established by the record and found by the Court below. This issue also presents no conflict between Circuits.

The remaining question — the "primary issue" — is alleged by both Petitioners, Penn Water and PUC, to be whether FPC may compel utilities under its jurisdiction to perform acts which — absent such order — would violate the Federal anti-trust laws. This question was not presented below because, *in this case*, FPC made no such order. It ordered as a tariff for Penn Water's services to Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated) the *rate* and *service* provisions of a contract between those companies, at the same time reducing rates to Consolidated approximately $1,700,000 out of an overall reduction of $2,000,000. These rate and service provisions, so ordered, have never been held to be illegal. Two paragraphs, Articles IV and V, of that contract were, however, later found by the Fourth Circuit

---

[2] *Safe Harbor Water Power Corporation v. Federal Power Commission* (1950), 339 U. S. 957 (C. A. 3, March 22, 1949, 179 F. 2d 179).

illegally to restrict Penn Water's contracts with third parties and its physical expansion. That Court thereupon invalidated the entire contract — the legal provisions with the illegal. Petitioners, and the Dissent below by Miller, J., contend that invalidation of the entire contract, *qua* private contract, automatically annulled the tariff which FPC had prescribed by adopting only the valid rate and service provisions of the contract. This alleged issue hangs on this *non sequitur*.

The Court below correctly found that the Petitioners had not exhausted their administrative remedies to change the tariffs by proper procedure before FPC instead of by their present effort to annul those tariffs and to vacate the rate reduction by collateral attack. This finding correctly disposed of the case. But the Court below went further and discussed the general relationship between the Federal Power Act and the Federal anti-trust laws. In a subsequent and different case, involving a different contract and opposite controlling facts,[3] the Fourth Circuit differed from the reasoning of the Court below in the latter's discussion of such relationship. The different reasoning *in that case*, possibly material *in that case*, may present sound grounds for granting certiorari *in that case*. Its difference from reasoning in this case, not material to the decision of this case, does not establish grounds for certiorari *in this case*. It presents a question which is not ripe for determination by this Court *at this time* on *this record*.

---

[3] *Consolidated Gas Electric Light and Power Company of Baltimore and Public Service Commission of Maryland v. Pennsylvania Water & Power Company and Pennsylvania Public Utility Commission*, USCA 4th, January 3, 1952, not reported. Copies of this Opinion have been filed by Petitioners with this Court.

THE QUESTIONS AS PRESENTED BY PETITIONERS

1. The question presented by Penn Water *alone* is its "Questions Presented" No. III (Penn Water Pet., No. 428, p. 17). This question is whether, as an acknowledged "licensee" under Part I of the Federal Power Act, Penn Water is subject to rate regulation under Part II of that Act as an acknowledged "public utility" under such Part II. This issue *was* submitted to and passed upon by the lower Court.

Under substantially identical facts and upon identical argument, the Third Circuit held that a "licensee" under Part I of the Federal Power Act is also subject to rate regulation under Part II of that Act if such licensee is also a Part II "public utility." *Safe Harbor Water Power Corp. v. FPC* (1949), 179 F. 2d 179. And, on an argument identical with that now presented by Penn Water, certiorari was denied. (1950) 339 U. S. 957. This question was adequately disposed of by Part II of the Opinion of the Court below (R., Vol. XVI, p. 57), and will not be further argued herein. This issue presents no conflict between Circuits, nor ground for the granting of certiorari.

2. The question presented by PUC *alone* is its "Questions Presented" No. I (PUC Pet., No. 429, p. 19). This question, *as so presented*, is whether FPC has jurisdiction over energy "produced in Pennsylvania and thereafter *sometimes commingled*" with interstate energy and sold to Pennsylvania customers. This issue also *was* submitted to and passed upon by the lower Court which found the issue to be based on a factually incorrect contention (repeated at Penn Water Pet., No. 428, p. 14) that "the services of Penn Water to the three Pennsylvania electric utilities (are) rendered by Penn Water entirely within Pennsylvania * * *." This contention is contrary to the factual record

before FPC, to the factual findings of FPC, and to the affirmance of those findings by the Court below. It ignores Penn Water's dependence on interstate system operations to firm up its own widely fluctuating output which is primarily dependent upon an extremely varied river flow. It likewise abandons the basis of Penn Water's attack on FPC jurisdiction over this service which it made before FPC, viz., that Penn Water's sales to its Pennsylvania customers were "*joint*" sales and that FPC has no statutory jurisdiction over *joint* tariffs (R., Vol. XVI, pp. 56-57). This question asks this Court to substitute its judgment for that of the Court below and for that of the FPC on complicated technical issues of fact. It was adequately disposed of by Part III of the Opinion of the Court below (R., Vol. XVI, p. 61) and will not be further argued herein. It provides no basis for the granting of certiorari.

3. The question presented by *both* Penn Water and PUC is described by Penn Water as follows (Penn Water Pet., No. 428, p. 2):

> "The primary issue raised by this petition is whether the FPC (in the absence of any express authority in the Federal Power Act such as is found in certain other Federal regulatory statutes) may compel electric utilities to perform, and may base its rate orders upon continued performance of, contracts which have been adjudged by the courts to violate Federal antitrust laws, public policy and the laws of the utilities' state of incorporation."

This issue is in effect a consolidation of Penn Water's "Questions Presented" Nos. I and II (Penn Water Pet., No. 428, p. 17). It is duplicated in the Petition of Pennsylvania Public Utility Commission and constitutes that Commission's "Questions Presented" Nos. II and III (PUC Pet., No. 429, p. 19). It was not passed upon by the Court below

or by FPC. Neither was it passed upon by the Fourth Circuit in the Baltimore Contract Case.[4]

This question, as so framed, distorts the issue that was tried below in the following respects:

a. The question distorts the orders of FPC here sought to be vacated.

FPC did not compel performance of any illegal contract provision. The Order of FPC establishing rates, which is here under attack, appears in full in R., Vol. XVII, pp. 46-71. After first reducing the tariff rates, the Commission's order provided that:

> "All other provisions of the aforementioned contracts, *in and of themselves lawful* prescribing or defining the *power, energy and transmission services to be furnished*, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force." (R., Vol. XVII, p. 62. Emphasis added.)

This order obviously prescribes observance only of contract provisions which are "in and of themselves lawful" and which also "prescribe or define" the "services to be furnished." It does not compel compliance with either Article IV or Article V of the Baltimore Contract, which Articles — and which Articles *alone* — were subsequently held "in and of themselves" unlawful by the Fourth Circuit.[5] Article IV imposed restrictions on Penn Water's contracts with third parties. It did not prescribe or define the services to be furnished, and therefore compliance with it was not prescribed by the above order of FPC. Article V placed

---

[4 & 5] *Pennsylvania Water & Power Company and Pennsylvania Public Utility Commission v. Consolidated Gas Electric Light and Power Company of Baltimore and Public Service Commission of Maryland* (Sept. 30, 1950), 184 F. 2d 552, Cert. Den., 340 U. S. 906.

restrictions on the physical expansion of Penn Water. It likewise did not prescribe or define the services to be furnished, and compliance with it was likewise not ordered by FPC.

b. The question assumes — but does not articulate — the *non sequitur* that if an entire contract between utilities, subject to FPC jurisdiction, is stricken down in a collateral action between private parties, because it contains two invalid restrictions, FPC cannot prescribe as a rate-schedule tariff the valid *rate* and *service* provisions of the contract divorced from such restrictions. Based on this *non sequitur*, Petitioners now argue that because the valid portions of the Baltimore *Contract* fell with the invalid under the Fourth Circuit's Opinions of Sept. 30, 1950 and January 10, 1951, the tariff prescribed by FPC in its Order of Oct. 27, 1949 to carry out its Opinion and Order 173 of Jan. 5 1949, and consisting of only the valid rate and service provisions of the Baltimore Contract as modified by FPC, was automatically annulled simultaneously with the contract invalidation. The dissent below of Miller, J., adopts, and is based on this very *non sequitur*. He there states: "But the Commission has ordered the two companies to continue to observe and be governed by all the provisions of the old contract which are 'in and of themselves lawful,' — a qualification which overlooks the fact that the Fourth Circuit condemned the contract in its entirety."

Although the Fourth Circuit struck down the entire contract, it "condemned" only Articles IV and V.

c. The question ignores the fundamental difference between FPC's ordering the continued performance of a private *contract* and its prescribing of a rate and service *tariff*.

d. The question (in asserting an illegal compulsion by FPC of "continued performance") ignores the plain direction to the Petitioners by FPC three years ago,[6] and by the Court below, to utilize the administrative remedies which are now and have at all times been available to Petitioners to change Penn Water's rate and service tariffs by the only method prescribed and permitted by the Federal Power Act. Penn Water denied that such administrative requirements applied to it (R., Vol. XVI, pp. 401 et seq.), and thus far has refused to avail itself of that remedy. Instead, it prosecutes this effort to strike down *ab initio*, by a collateral attack to which FPC was not a party, the rate reduction order of FPC applicable to services already actually rendered. Petitioners have not exhausted their administrative remedies.[7]

e. The question incorrectly asserts that FPC compelled an illegal method of rate payment, which Petitioners improperly label "revenue pooling." Because of Petitioners' inability to demonstrate that FPC prescribed performance of Articles IV and V of the Baltimore Contract, they endeavor to show that the payment provisions, which admittedly were ordered by FPC, are illegal. These payment provisions effect no pooling or sharing of revenue. This same argument was unsuccessfully made below and before the Fourth Circuit, but neither the Court below nor the Fourth Circuit at any time has regarded these provisions as illegal revenue pooling.

f. The question ignores the fact that the orders of FPC were expressly based on the continuing *physical operation* of a physically unified interstate power system. This

---

[6] Opinion 173-A (R., Vol. XVI, p. 372).

[7] Federal Power Act, Sections 205 & 206, 16 USCA, Sections 824d & 824e.

physical system operation has been unanimously commended by Commissions and Courts alike.[8] Such unified physical operation has in fact, continued down to the present.

From the foregoing, it is apparent that the orders of FPC here under attack do not purport to "compel" Penn Water or any other electric utility to "perform" any illegal contract or to do any illegal act, nor were those orders "based upon" the "continued performance" of any illegal contract or any illegal act. The Fourth Circuit underlined this fact by saying with respect to this very Baltimore Contract, "It is obvious that the Commission did not prescribe the restrictive conditions of the contract as part of the rate order * * *".[9]

This "primary issue" (as alleged by Petitioners) may be properly raised only after (a) Penn Water has first exhausted its administrative remedies, and then only (b)

if, thereafter, FPC actually does prescribe the illegal compulsions now incorrectly ascribed to it by Petitioners. This question presents no conflict between the Circuits *in this case* because neither Court had that issue before it. It presents no adequate ground for the granting of certiorari *in this case.*

STATEMENT

A. FPC Reduced Penn Water's Rates Approximately $2,000,000.

On petition of the Public Service Commission of Maryland (Maryland Commission), the City of Baltimore, and others, FPC on September 1, 1944 (over seven years ago) instituted an investigation of the rates charged to Consolidated by Penn Water and Safe Harbor Water Power Corporation (Safe Harbor) (R., Vol. XVI, p. 31). The latter two companies are Pennsylvania hydroelectric companies which sell only at wholesale. Penn Water also has a small amount of steam-electric generation. Safe Harbor is owned ⅔ by Consolidated and ⅓ by Penn Water, and under its FPC tariff sells its entire output to those two companies in that proportion.

The Safe Harbor rate case was tried first. On November 4, 1946, FPC reduced Safe Harbor's rate of return to 5% and its annual rates to its two customers by about $600,000. The question of whether a Part I "licensee" and Part II "public utility" could be regulated under Part II of the Federal Power Act was answered by FPC in the affirmative in that case. The Third Circuit affirmed on December 30, 1949, *Safe Harbor Water Power Corporation v. FPC,* 179 F. 2d 179, and certiorari was denied on May 15, 1950, 339 U. S. 957.

Trial of the Penn Water rate case began April 15, 1946, and concluded July 16 of the following year. It produced

a record of 26,000 pages of testimony, and at no time during that protracted hearing did Penn Water challenge the validity of any of its contracts. By its Opinion No. 173 and Order of January 5, 1949 (R., Vol. XVI, pp. 39, 177), FPC reduced Penn Water's rate of return to 5¼%, and its annual rates by $1,954,261, based on 1946 operations.

B. Penn Water Thereupon Unilaterally Altered Its Services and Contracts.

On January 28, 1949, Penn Water filed its Petition for Rehearing (R., Vol. XVI, p. 192), objecting "to virtually every statement, finding and requirement of that opinion and order" (R., Vol. XVI, p. 372). Its main contention was "that since the record before the Commission was closed there have been substantial changes in the operations and contracts of Petitioner Penn Water, * * * so that the bases for the said Order * * * are destroyed * * *" (R., Vol. XVI, p. 374). This contention by Penn Water, that the FPC Rate Reduction Order had been rendered entirely nugatory, referred to unilateral action by Penn Water, first, in physically disrupting the interstate, integrated system operations on January 26, 1949 (two days prior to its Petition for Rehearing)[10] and, second, in renouncing and instituting suit on December 21, 1948, against Consolidated to invalidate the long-term contract between Penn Water

[10] This physical throwing of switches, "splitting of buses," and similar radical departures from long-established system operating procedures was directed by a 14-page "Operating Order" issued by Penn Water to its and Safe Harbor's operators. It jeopardized the safety of Consolidated's expensive equipment in Baltimore and threatened the continuity of service in the Baltimore and Washington areas. This danger forced Consolidated and the Maryland Commission to seek injunctive relief in the United States District Court for the District of Maryland. It was this physical disruption of operations, and this alone, to which the injunction granted by that Court was directed. Penn Water has not again resorted to such action since that injunction was dissolved on mandate of the Fourth Circuit on January 17, 1951 (R., Vol. XVI, pp. 382-383).

and Consolidated of June 1, 1931 (the Baltimore Contract) under which Penn Water, prior to the enactment of the Federal Power Act of 1935, had contracted to sell power to Consolidated. This Contract had been filed by Penn Water with FPC on January 13, 1936 (pursuant to Section 205(c) of the Federal Power Act, U. S. C., Title 16, Sec. 824(d)(c)), as Penn Water's filed tariff prescribing its rate and service to Consolidated. FPC was not made a party to this suit.

C. FPC Directed Penn Water to Comply with Administrative Requirements of the Federal Power Act.

On February 28, 1949, FPC entered its Opinion 173-A and order denying Penn Water's Application for Rehearing (R., Vol. XVI, p. 372). In that Opinion, FPC pointed out that any unilateral change by Penn Water in such physical operations would constitute a change in its services and rates to Consolidated which could be accomplished only by compliance with the procedural requirements of the Federal Power Act through the filing by Penn Water of amended tariffs, and concluded, "None of these alleged changes having been made or proposed in the only way they could lawfully become effective, Respondents are in no position in this or any other proceeding to urge any objection or claim in reliance thereon." FPC further pointed out that if such changes "occurred before our order was issued Respondents cannot, on the allegations they have made, complain *in this proceeding* of our failure to hear matters which they failed to bring to our attention by timely application." (P. 382. Emphasis added.)

The Commission thereupon properly refused to consider *in this proceeding* this last-minute collateral attack by Penn Water in its effort to nullify the FPC tariff and thereby still further delay the major rate reduction "already long overdue." The Commission, however, carefully directed Penn

Water's attention to the appropriate and necessary administrative procedure under the Federal Power Act whereby any challenge to the tariff could be considered by the Commission.[11] Instead of responding to this suggestion and properly pursuing their administrative remedies, Petitioners actively prosecuted the collateral action in the United

---

[11] On this point, the Commission in its Opinion 173-A of February 28, 1949, said (R., Vol. XVI, 372, at pp. 380 et seq.):

"Furthermore, our rules (Sections 35.5) require that when a rate or service which has been filed with the Commission, as these foundation contracts have been, 'is proposed to be cancelled and no new rate schedule is filed in its place * * * each public utility required to file the schedule shall formally notify the Commission of the proposed cancellation' 30 days in advance and shall submit a statement of the reasons therefor and that notice has been served upon the other parties to the schedule or contract. A copy of such notice to the Commission is required to be duly posted.

"Compliance with filing requirements is particularly important in a case like the present where the filings cover, not a single sale and delivery by one party to the other, but interchange of energy and capacity between and among the parties to the contracts and numerous other obligations and rights which are required to be filed as changes under Section 35.3(c).

"* * *

"If such changes insofar as they affect rates charged Baltimore Company by Penn Water are to be legally effectuated under Section 205(d) of the Act, that can only be done by filing as prescribed in our rules. This will afford 30 days opportunity for examination of the changes before they become effective. If questionable, they are subject to suspension pending hearing and decision, under Section 205 of the Act. If at such a hearing it should appear that the changed rates to Baltimore Company are unjust or unreasonable (as a result of Penn Water's failure to utilize the more economical modes of operation previously followed or for any other reason), or that they are unduly discriminatory or preferential (because of an unreasonable difference between localities, or otherwise), the Commission may refuse to permit them to become effective insofar as they cover the services continued to be rendered by Penn Water to Baltimore Company.

"Insofar as such changes affect service, compliance with the Rule referred to would enable the Baltimore Company, the Maryland Public Service Commission, or any other interested electric utility or state commission, before such changes are put into effect to make application under Section 202(b) for an order 'to sell energy

States District Court for the District of Maryland to strike down the Baltimore Contract. They then sought to exploit their collateral attack by motions to annul or remand (filed in the instant proceeding at the last hour after main briefs were in and the case ready for argument). The Court below, however, in the Opinion here sought to be reviewed, yet again pointed out to Petitioners the necessity for exhaustion of their administrative remedy.[12] It is submitted that the Court below was correct, and that this case is not ripe for certiorari until after the administrative remedy has been exhausted.

---

* * * or exchange energy' from and after the time of the proposed change or termination of service, or a complaint under Section 207 as to the adequacy of the service to be rendered.

"None of these alleged changes having been made or proposed in the only way they could lawfully become effective, Respondents are in no position in this or any other proceeding to urge any objection or claim in reliance thereon. An unlawful attempt to avoid putting into effect the rate reduction we ordered affords no valid basis for objecting to that order."

[12] "* * * if petitioners, *as a result of the Fourth Circuit's decision*, wish to make any changes in operations, *contracts*, arrangements, etc. within the jurisdiction of the Federal Power Commission, they must do so in accordance with the Federal Power Act (cf. *Michigan Consol. Gas Co. v. Panhandle Eastern Pipe L. Co.*, 173 F. 2d 784, 788-789 (6th Cir., 1949)). Under Section 205(d) thereof, 'Unless the Commission otherwise orders, no change shall be made by any public utility in any such rate, charge, classification, or service, or in any rule, regulation, *or contract relating thereto*, except after 30 days' notice to the Commission and to the public' (16 U. S. C. Sec. 824d (d)). Pursuant to that section, petitioners may submit new *arrangements* and rates based thereon to the Commission. And the Commission 'either upon complaint or upon its own initiative without complaint' may 'enter upon a hearing concerning the lawfulness of such rate, charge, classification, or service * * *.' (Sec. 205 (e), 16 U. S. C. Sec. 824d (4)). If Penn Water feels itself aggrieved *after* such proposed changes *have been acted upon by the Commission*, it may *at that time* bring a new petition for review. In short, a 'rate established in the mode described should be deemed the legal rate and obligatory alike upon carrier and shipper until changed in the manner provided' by the statute. *(Robinson v. Baltimore & Ohio R. R.*, 222 U. S. 506, 510 (1912))." (R., Vol. XVIII, pp. 54, 55. Emphasis added).

D. Instead of Complying with FPC's Directions, Penn Water Attacked the Baltimore Contract in a Private Suit.

Instead of changing its services and rates by the appropriate administrative procedure, Penn Water prosecuted its private suit against Consolidated in the United States District Court for the District of Maryland to strike down the Baltimore Contract and by such collateral attack to annul the FPC rate reduction order *ab initio*. FPC was not a party to this suit.

On March 18, 1950, the District Court sustained the validity of the Baltimore Contract. *Pennsylvania Water & Power Company v. Consolidated Gas Electric Light and Power Company of Baltimore*, 89 F. Supp. 452.

On Penn Water's appeal, the Fourth Circuit reversed the District Court and, passing only on the face of the Contract, invalidated it.

E. The Fourth Circuit Invalidated the Baltimore Contract Only Because of the Restrictions of Articles IV and V Thereof.

The Fourth Circuit found that two, and only two, provisions of the Baltimore Contract were invalid (R., Vol. XVIII, p. 1 et seq.). These were Article IV, which restricted Penn Water's contracts with others, and Article V, which restricted Penn Water's physical expansion. As above noted, the FPC orders here under attack are not dependent on or related to these two restrictions, and do not require compliance therewith by Penn Water.

The Fourth Circuit's finding that the invalidity of the Baltimore Contract was confined to Articles IV and V is clearly shown from the following excerpts from its Opinion:

"The restrictions which are imposed upon the activity of Penn Water by the agreement and *give rise*

to the contention of invalidity are contained in *Articles IV and V* as follows:

"Article IV. So far as possible consistently with the performance of any duty or obligation to serve imposed on Power[13] by its charter or otherwise by law, Power shall obtain the approval of Electric before entering into any agreement or agreements with any other person or corporation for the sale and/or purchase and/or interchange of electrical and hydraulic power and energy, or before making any substantial modifications in the existing contracts now in force between Power and its customers other than Electric.

"Article V. So far as possible consistently with the performance of any duty or obligation aforesaid, Power shall obtain the approval of Electric (1) before incurring any single commitment for investment (except for renewals or replacements) in excess of $50,000.00 on the basis of which Electric shall make payment under Article III(b) hereof, and (2) before alienating or disposing of in any one year any property, plant, or equipment, other than stores and construction equipment, having a total value in excess of $50,000.00 and included in the investments of Power and/or subsidiaries of Power in plant, property or power development devoted to the generation, transmission, or distribution of electrical power and energy.

"* * *

"The District Judge found and it is not disputed that *the effect of the quoted provisions of Articles IV and V* of the contract is to confer upon Consolidated the power to control (1) the prices at which Power may sell its product; (2) the extent to which Power may extend its plant; (3) the territory in which Power may sell its product; and (4) the amount of back feed energy which Power must purchase from Consolidated.

[13] "Power" designates Penn Water and "Electric" designates Consolidated.

"We are in agreement with this interpretation of the contract. * * *

"* * *

"There can be no doubt that the freedom of action of Penn Water as a public utility of the state has been and is restricted *by the provisions of Articles IV and V* of the basic agreement whereby Penn Water is required to get the approval of Consolidated before making any agreement for the purchase or sale of electric power or making any investment or disposition of any property in excess of $50,000." (R., Vol. XVIII, pp. 7, 8, 25. Emphasis added.)

In its Opinion on Motion to Interpret Mandate the Fourth Circuit, after describing with approval the payment and other provisions of the Contract, again emphasized that only Articles IV and V of the Contract were illegal by saying:

"* * * Closely associated with these provisions were *the illegal restrictions* on the future activities of Penn Water *which resulted in the invalidation of the whole contract. Therein* Penn Water was required to obtain the approval of Consolidated before entering into any agreement for the sale or purchase of electric power and energy and to obtain the approval of Consolidated before making any investment or disposing of its property having a value in excess of $50,000. These restrictive conditions were included in order to safeguard Consolidated in the performance of its promises and it is conceded that without them the *contract* would have been impracticable and would not have been made. * * *" (R., Vol. XVIII, 35, at p. 37. Emphasis added.)

After thus finding that the *only* illegality in the Baltimore Contract was in Articles IV and V thereof, the Court found that those two Articles provided an essential *contractual* protection to Consolidated against the heavy open-end obligations imposed on Consolidated by the Contract,

and, because of their inseparability from the rest of the Contract, struck the entire Contract down. As noted above, the Baltimore Contract was executed before the enactment of the Federal Power Act, before Consolidated had the regulatory protection now afforded by such Act and when, therefore, the *contractual* provisions of Articles IV and V were its sole protection.

The finding that only Articles IV and V were illegal was again confirmed by the Fourth Circuit when, in its January 3, 1952 Opinion in the Safe Harbor contract case, it referred to its Baltimore Contract Opinion and said (pp. 3-4):

> "* * * We there held that the contract between Consolidated and Penn Water, then in suit, which for convenience may be called the Penn Water Contract, was invalid, because *Articles IV and V of the basic agreement* of June 1, 1931 conferred upon Consolidated the power to control: (1) the prices at which Penn Water might sell its product; (2) the extent to which Penn Water might extend its plant; (3) the territory in which Penn Water might sell its product; and (4) the amount of back feed energy which Penn Water must purchase from Consolidated. *These restrictions*, we concluded, *invalidated the contract* * * *." (Emphasis added.)

The Court below is thus obviously correct when it observes that the Fourth Circuit "issued a judgment declaring *certain phases* of the contractual arrangement between Penn Water and Consolidated illegal * * *."

Petitioners contend that since both the valid and invalid provisions of the Baltimore Contract were stricken down by the Fourth Circuit in their entirety *qua contract*, the provisions of the tariff prescribed by FPC, *qua tariff*, otherwise entirely valid, must likewise succumb. This is the fatal *non sequitur* of Petitioners' case.

F. Upon Invalidation of the Baltimore Contract, Penn Water Moved the Court Below to Annul the FPC Rate Reduction Order.

The FPC-Penn Water rate reduction order, effective February 1, 1949 (R., Vol. XVII, p. 58) was awaiting argument on appeal before the Court of Appeals for the District of Columbia Circuit when, on December 11, 1950, the Supreme Court of the United States denied certiorari in the Baltimore Contract case in the Fourth Circuit. On December 29, 1950, Penn Water filed its motion in the Court below to annul the rate reduction order because of the Fourth Circuit's invalidation of the Baltimore Contract. It is this motion, and the lower Court's denial thereof, which is of primary significance in the Petitions herein.

ARGUMENT

A. The Court Below Properly Denied the Motion to Annul the FPC Rate Reduction Order.

1. Because Petitioners Have Not Exhausted Their Administrative Remedy.

The Court below made the sound procedural determination, under established administrative law,[14] that Petitioners could not present to the Court of Appeals for the first time, as a basis for vacating the FPC's rate reduction orders, questions which Petitioners had ignored during the course of the lengthy hearings before the Commission, which they had subsequently made the basis of a collateral Court proceeding to which FPC was not a party, and as to which the Federal Power Act prescribes a proper procedure for presentation in the first instance to the Commission.

---

[14] *Macauley v. Waterman S. S. Corpn.* (1946), 327 U. S. 540; *Aircraft Diesel Equipment Corpn. v. Hirsch* (1947), 331 U. S. 752; *Myers v. Bethlehem Shipbuilding Corpn.* (1938), 303 U. S. 41; *FPC v. Metropolitan Edison Co.* (1938), 304 U. S. 375.

2. Because the FPC Rate Reduction Order Compelled No Unlawful Act.

a. FPC Did Not Compel Performance of Any Illegal Act or Contract Provision.

By its order of October 27, 1949 (R., Vol. XVII, p. 46), rejecting as improper rate schedules filed by Penn Water, purportedly in compliance with the original FPC rate reduction order, FPC prescribed the new rates to be collected by Penn Water, and again made it clear that its order did not attempt to validate any provisions of the Baltimore Contract which might later be invalidated in the then-pending litigation in Baltimore to which FPC was not a party.

It did this (R., Vol. XVII, p. 62) first, by prescribing as tariffs only those provisions of the Baltimore Contract *"in and of themselves lawful,"* thereby automatically excluding from its order any provisions which might be found unlawful "in and of themselves."

It did this, secondly, by prescribing as tariff provisions only those lawful provisions of the Baltimore Contract *"prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services * * *."* Articles IV and V of the Baltimore Contract do none of these things, and they were thereby specifically excluded from the FPC order regardless of the subsequent determination of their validity or invalidity.

Neither the Court below nor the Fourth Circuit found that FPC had purported to validate or prescribe performance of either Article IV or Article V of the Baltimore Contract. In the Baltimore Contract case, the Fourth Circuit said with respect to the Opinion and order of FPC: "The restrictive provisions of the agreement were not men-

tioned and their legal validity was not discussed." (R., Vol. XVIII, p. 22). Indeed, in its recent Safe Harbor Contract Opinion (p. 15), the Fourth Circuit affirmatively states with reference to the *Penn Water* FPC rate reduction order, "It is obvious that the Commission did not prescribe the restrictive conditions of the contract as part of the rate order * * *."

b. FPC Based Its Orders on the Continuing Physical Operations of an Interstate Power System.

In its Opinion 173-A and Order denying Penn Water's Application for Rehearing (R., Vol. XVI, p. 372 at p. 378), FPC described the physically unified interstate operations of Penn Water — as testified to by Penn Water's own officers — as being not only legal but commendable, and "precisely what was sought to be encouraged and fostered by the Federal Power Act * * *." (This unified integrated interstate operation has continued on down to the present, irrespective of contract invalidation.) It pointed out that questions as to the legality of the Baltimore *Contract*, then in litigation, could not affect the validity of the Commission's *Order* which was directed to the "continuation of the *operation* of the integrated and interconnected system," that is, to the *physical operation* of an interstate system.

Thus, the Court below said (R., Vol. XVIII, at p. 54):

> "It is those services and rates, reflecting *underlying operations* which were the subject of the Commission's order." (Emphasis added.)

c. FPC Did Not Prescribe "Revenue Pooling"

Penn Water's Petition contains a score of references to alleged illegal "revenue pooling" and "division of earnings" which it contends were "compelled" by FPC. By its very terms, the concept of "revenue pooling" contemplates a joint pooling or combining of revenues and a division or

sharing of the total. Under neither the Baltimore Contract nor the FPC Order is any pooling of revenues prescribed. This same attack was leveled at the Baltimore Contract before the Fourth Circuit. It was leveled at FPC's order before the Court below. It was also leveled at the Safe Harbor Contract before the Fourth Circuit. Petitioners, however, cannot point to a single holding or inference in any of the Opinions in these cases that the payment provisions ordered by FPC are invalid either as "revenue pooling" or otherwise. On the contrary, the Fourth Circuit, both in its Opinion in the main Baltimore Contract case, and in its Opinion on Penn Water's Motion to Clarify the Mandate in that case, described in detail the payment provisions of the Baltimore Contract with unquestioned approval, and clearly separated them from the illegal restrictions which invalidated that Contract. At this point, Penn Water's Petition (p. 9) again takes recourse to its fundamental *non sequitur* by saying:

> "It is thus clear that the FPC specifically ordered the continuance of the illegal revenue pooling provisions of the Baltimore contract.
>
> "While the Fourth Circuit did not specifically refer to these provisions in declaring the contract illegal it did declare the entire contract invalid * * *."

If Penn Water desires to change the payment provisions of the tariff prescribed by FPC, it may do so only through the appropriate and requisite administrative process.

d. FPC Did Not Base "Critical Features" of its Rate Reduction Orders on Continuance of the Baltimore Contract.

Penn Water's Petition, on this ground, challenges the validity of FPC's order with respect to rate of return, jurisdiction over Penn Water, and allocation of the rate reductions.

(1) The 5¼% Rate of Return.

The Court below (R., Vol. XVIII, p. 66) found that this rate of return was "designed to provide 3.17% for bonds, 5.21% for preferred stock and 8.64% for common stock and surplus and was 'fair' "; that it was based on "substantial evidence," and that it met "the test laid down in the *Hope* case." FPC there denied any "assumption" by it that the Baltimore Contract would be "continued" and asserted that this rate of return "was independently bottomed on the 'end result' test." The adequacy or fairness of this rate of return is not dependent on continuance of any contract. It relates to conditions actually existing during the period in which service was rendered under these rates. If Petitioners contend that this rate of return is now improper, they have their administrative remedy on full hearing before the Commission. The determination of rate of return should not be annulled because of a collateral attack in which it was not even considered.

(2) Jurisdiction of FPC Over Penn Water.

The Court below correctly affirmed FPC's assertion of jurisdiction on the basis of physical operations of the unified interstate electric system. These operations have continued despite invalidation of the Baltimore Contract and do not depend on its existence. No record citation is or can be given by Penn Water in support of its contention (Pet. No. 428, p. 14) that the existence of the interstate pool operations depends upon any illegal contractual provisions.

FPC has asserted that the Commission's jurisdictional findings "were based on the actual operations taking place and not upon the existence of any assumed contractual obligation to conduct such operations." FPC further asserted that its orders "were based upon a consideration of physical

facilities and electrical operations resulting in the service then being rendered * * *; were in no way dependent upon the restrictive conditions of the contract, or any assumed legal effect of the contract," and that the very services over which jurisdiction was so asserted have continued on down to the present and that such operations are "completely interstate in character." Penn Water's statement (Pet. No. 428, p. 14) that the existence of the interstate system depends on the illegal contracts is disproved by the continued operations of the system despite the non-existence of the Baltimore Contract. These operations continue because of the immutable laws of physics operating on existing interconnected generating and transmission facilities.

If Petitioners desire to reduce or terminate FPC jurisdiction over these operations, they may do so only by changing the operations pursuant to the administrative requirements of the Federal Power Act.

(3) Allocation of Rate Reductions.

The entitlements to which Petitioners object are those provided for by the tariff filed by Penn Water itself. They form an integral part of the tariff rates and are "in and of themselves lawful." Because they form a part of the tariff rate they likewise may not be changed except in conformity with administrative requirements.

The Court below amply disposed of this argument by Part V of its Opinion (R., Vol. XVIII, p. 69), and (at p. 71) found that "the conclusions of the Commission on this point are proper and are supported by substantial evidence."

B. Under the Facts of this Case, the Opinion of the Court Below is Not in Conflict with the Opinion of the Fourth Circuit in the Baltimore Contract Case.

Petitioners assert "direct conflict" between Circuits on the so-called "primary issue" but, as shown above, the record in this case does not properly present that issue. It was not ripe for decision and the lower Court did not decide it. It was not presented to the Fourth Circuit in the Baltimore Contract case.

After an extensive quotation from the FPC's Opinion No. 173-A, defining the physical operations covered by its order, the Fourth Circuit said:

> "This view of expert government authority is entitled to respect and we do not venture to say that the physical connection of the facilities of the two utilities, and the interchange of electric power produced by water in Pennsylvania and by steam in Maryland is not a desirable utilization of their combined resources. Nor do we undertake to gainsay the view of the Commission that *even if the restrictive conditions of the basic contract are invalid*, as to which the Commission expressed no opinion, it still has the *duty and authority* under the Federal Power Act to encourage and *establish the interconnection* of electrical facilities of regional districts if it finds that such action is necessary and appropriate in the public interest, and will not interfere with the lawful authority of the state commissions in respect to the generation and distribution of electrical energy in intrastate commerce. Sections 201, 202(a)(b), 16 U. S. C. A. Sections 824, 824a (a)(b)." (R., Vol. XVIII, pp. 23-24. Emphasis added.)

As to this, the lower Court said:

> "In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligation under the Federal Power Act to continue the

then existing services and rates. It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order." (R., Vol. XVIII, p. 54.)

This language as to the effect of the FPC order clearly presents no conflict. Nor is there any conflict on the question of whether Penn Water's application to FPC for rehearing was properly denied. In fact, the Fourth Circuit took pains in its Safe Harbor Contract Opinion to point out (p. 3) that "* * * we are not engaged in the review of the enforcement of an order of an administrative board or commission." Nor was that Court so engaged in the Baltimore Contract case.

Assuredly, there is no conflict with the holding of the lower Court that the anti-trust question had not been timely raised.

There is no conflict as to the holding of the lower Court that the regulatory provisions of Part II apply to Penn Water as a "public utility" under that section of the Federal Power Act notwithstanding the fact that it is also a "licensee" under Part I. This holding is in complete agreement with an identical ruling of the Third Circuit in the Safe Harbor rate case.[15]

There is no conflict between Circuits on the holding of the lower Court that all of Penn Water's sales of energy were subject to FPC jurisdiction. This holding is in complete agreement with an identical ruling of the Third Circuit on substantially identical facts in the Safe Harbor rate case.[16]

---

15 & 16 *Safe Harbor Water Power Corp. v. Federal Power Comm.*, *supra* n. 2.

There is no conflict as to the lower Court's holdings regarding Penn Water's rate base, rate of return, or allocations.

There is no conflict as to the lower Court's holding that Safe Harbor sells its entire output ⅔ to Consolidated and ⅓ to Penn Water. In fact, the Fourth Circuit in its most recent decision in the Safe Harbor contract case said (at pp. 4-5), "These two utilities are its only customers under an arrangement approved by the Pennsylvania Commission."

There is no conflict as to the lower Court's holding that the Petitioners have not exhausted their administrative remedy.

The Petitioners, in an effort to create a conflict between Circuits, have, in fact, distorted the holding of the lower Court. Their statement at page 5 of Penn Water's Petition (No. 428) that "* * * the D.C. majority held in effect that 'antitrust criteria' (R., Vol. XVIII, p. 55) do not apply to orders of the FPC * * *"; the statement on page 12 of that Petition that "* * * the D.C. majority has upheld the FPC orders on the ground that 'antitrust criteria' are not applicable"; and the reference on page 15 of the same brief to the lower Court's "decision that the FPC may exempt the * * * contracts from the antitrust laws" misrepresent the language of the lower Court's Opinion.

The Petitioners' motion to annul FPC's rate order was actually denied by the lower Court on the ground that Petitioners had not exhausted their administrative remedy. Preliminary to such ruling, however, and in response to the contentions made in such motions, the lower Court discussed the relationship between the Federal Power Act and the Federal antitrust laws. It thereby indicated its dis-

agreement with Petitioners' arguments as to the comprehensive and overriding effect of the Fourth Circuit's Opinion. The lower Court thereby reconciled its position *in this case* with that of the Fourth Circuit. *In this case*, no conflict between Circuits arises from this discussion because FPC carefully refrained from ordering the performance of any act which, *qua* contract, would violate the Sherman Act. The Court therefore made no definitive judgment on this concept, and carefully pointed out that before such a decision could be made, the actual issue must first be properly raised in appropriate proceedings under the Federal Power Act.

This discussion was not essential to the operative decision of the lower Court. It here presents, at most, an incipient difference of thinking between the Court below and the Fourth Circuit on a question not presented to either Court or decided by either. This incipient difference in thinking became more apparent in the recent decision of the Fourth Circuit in the Safe Harbor Contract case, which was, however, decided on an entirely different record. In the Safe Harbor case — quite contrary to the present case — FPC contends that it *did* prescribe restrictions which the Fourth Circuit found to be invalid *qua* contract. Petitioners' efforts to create a conflict between Circuits *in this case* present no grounds for the issuance of certiorari. The Fourth Circuit's Opinion in the Safe Harbor Contract case rendered January 3, 1952, may present such a conflict as to warrant the granting of certiorari *in that case*.

CONCLUSION

It is submitted that the judgment of the Court below, which affirmed the orders of the Federal Power Commission, should not be reviewed by certiorari here, unless the Court below made an error of law in its construction of the Federal Power Act, and the Commission's authority thereunder, under the Constitution and Laws of the United States. No such error appears from the Petitions.

It is respectfully submitted that the Petitions should be denied.

ALFRED P. RAMSEY,
G. KENNETH REIBLICH,
Counsel for Intervenor-Respondent, Consolidated Gas Electric Light and Power Company of Baltimore.

ON PETITIONS FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

BRIEF OF INTERVENOR-RESPONDENT PUBLIC SERVICE COMMISSION OF MARYLAND IN OPPOSITION TO GRANTING OF CERTIORARI

OPINIONS BELOW

The Opinion of the United States Court of Appeals for the District of Columbia has not yet been officially reported. It will be found in Vol. XVIII of the Record, pp. 46-72.

The Opinions and Orders of the Federal Power Commission affirmed by the Court of Appeals have not yet been published. They appear in the Record as follows: (1) Opinion No. 173 and Order of January 5, 1949 — Record, Volume XVI, pp. 39-191; (2) Opinion No. 173A and Order of February 28, 1949, denying Petition for Rehearing on Opinion No. 173 and Order of January 5, 1949 — Record, Volume XVI, pp. 372-388; (3) Order of March 17, 1949, denying Petition for Rehearing on Opinion No. 173A and Order of February 28, 1949, — Record Volume XVI, p. 414; (4) Order of October 27, 1949, prescribing rate schedules — Record, Volume XVII, pp. 46-71; and (5) Order of December 15, 1949, denying application for rehearing on Order of October 27, 1949 — Record, Volume XVII, pp. 94-99.

JURISDICTION

Petitioners invoke the jurisdiction of this Court under U. S. C. Title 28, Section 1254(1) and under U. S. C., Title 16, Section 825 l.

COUNTER STATEMENT OF THE CASE

Respondent-intervenor, Public Service Commission of Maryland (hereinafter referred to as "Maryland Commission") does not accept the Statement of the Case by Pennsylvania Water and Power Company (hereinafter referred to as "Penn Water") or that of the Pennsylvania Public Utility Commission (hereinafter referred to as "Pennsylvania Commission") because those petitioners, in a patent effort to divert the attention of this Court from the fundamental administrative-procedure determination of the Opinion below, misstate the only issue of substance which their petitions raise.

The Opinion of the Court of Appeals for the District of Columbia Circuit, and the judgment based thereon, affirm in normal manner rate orders of the Federal Power Commission which were based upon and fully supported by an extended record of hearings held during a long period of time. Certiorari should not issue from this Court unless there is serious question as to whether the Court of Appeals made a reversible error of law in its construction of the Federal Power Act, and the Federal Power Commission's authority under the Constitution and laws of the United States. No possibility of such error appears, in any manner, in either petition for certiorari.

The proceedings below were statutory appeals from final orders of the Federal Power Commission in an extensive rate investigation of Penn Water's wholesale charges, for hydroelectric power and energy sold by it to Consolidated Gas Electric Light and Power Company of Baltimore (hereinafter referred to as "Consolidated"). These orders hold, in effect, that Consolidated is entitled on a 1946 basis to an annual rate reduction of approximately $1,700,000 on its power bill from Penn Water. The total annual rate reduction ordered by the Commission in Penn Water's rates, on a 1946 basis, amounts to approximately $2,000,000 (FPC Opinion No. 173 and Order of January 5, 1949, Opinion No. 173A and Order of February 28, 1949, and Order of March 17, 1949, Volume XVI pp. 39, 372, and 414, respectively), the remaining $300,000 of the rate reduction being allocated to Penn Water's Pennsylvania customers. This reduction was ordered to be carried out by rate schedules specified for Penn Water by the Federal Power Commission in its Order of October 27, 1949, a petition for rehearing being denied by the Commission's Order of December 15, 1949 (Record Volume XVII pp. 46 and 94, respectively).

The rate case before the Federal Power Commission was begun by order issued September 1, 1944, and a supplemental order issued October 3, 1944, which instituted an investigation of the services, contracts, rates, and charges of Penn Water for any transmission or sale of electric energy subject to the Commission's jurisdiction under the Federal Power Act. A companion order issued on the same date (September 1, 1944) began a similar investigation of the rates and charges of Safe Harbor Water Power Corporation (hereinafter referred to as "Safe Harbor"). Both orders were issued in response to the request of the Maryland Commission* (Petition of August 31, 1944 — Record Volume XVI p. 41), which had pending before it a general investigation of the rates and charges of Consolidated to its Maryland consumers. The Maryland Commission found it necessary to have a prior determination by the Federal Power Commission of the *wholesale* rates paid by Consolidated for hydroelectric power and energy obtained from Penn Water and Safe Harbor, before passing upon the reasonableness of Consolidated's *retail* rates to its Maryland consumers.

The generating facilities of Penn Water, Safe Harbor, and Consolidated are coordinately operated as an integrated and interconnected electric system, the interconnection being provided primarily by an extensive network of transmission lines owned by Penn Water and its wholly owned subsidiary, Susquehanna Transmission Company of Maryland. These integrated operations, as currently performed, were begun under two long-term contracts executed in 1931, to continue until 1980. These contracts were filed with the

* Additional requests for investigation were filed by the governmental authorities of Baltimore City, Baltimore County, and other intervenors in the rate case before the Maryland Commission (Record Vol. XVI, p. 41).

Federal Power Commission in 1936 in compliance with the provisions of the Federal Power Act (Sec. 205 (c); 16 U. S. C. 824d (c)) and thus became the service and rate tariffs of the three companies, passing out of the realm of contract and into that of duty established by law.

Under one agreement (the "Safe Harbor contract") entered into on June 1, 1931, and supplemented by amendments dated August 1, 1932, and November 22, 1939, Consolidated purchased two-thirds and Penn Water purchased one-third of the entire Safe Harbor hydro output, produced at Safe Harbor, Pennsylvania, until 1980. In return, Consolidated and Penn Water assured Safe Harbor of a combined annual payment (divided two-thirds and one-third between the two companies) sufficient to yield a specified annual return above operating expenses. Under the other agreement (the "Penn Water contract"), entered into between Consolidated and Penn Water on the same date, June 1, 1931, Consolidated purchased all the power and energy available to Penn Water from its hydroelectric and steam generating plants at Holtwood, Pennsylvania, and also Penn Water's one-third of Safe Harbor's power and energy not otherwise disposed of in performance of Penn Water's obligations to its other customers. Consolidated pays Penn Water annually a lump sum sufficient to cover all operating expenses and taxes (including Penn Water's payment to Safe Harbor) plus a specified return.* These

* A survey of the Opinions of the Fourth Circuit in the Penn Water and Safe Harbor Contract cases will show that no criticism is made of the economical, coordinated, and integrated operations of the system which result from the above-described provisions, or even of any of the provisions themselves. The Opinions in the Penn Water contract case (184 F. 2d 552, and 186 F. 2d 934) clearly condemn as illegal per se only Articles IV and V of the Penn Water contract, which gave Consolidated control over Penn Water's contracts with others and over installation or disposition of generating facilities. This distinction was carefully observed by

contracts constitute part of the record before the Federal Power Commission as Items E, F, G, H, and I, and appear in the Record pp. 4554-4621. The form of service and payment therefor as thus described has been prescribed by the Commission's Orders.

The vast triangular power pool resulting from this coordinated arrangement for the interchange of energy and services has provided the Maryland consuming public with an economical, reliable, and necessary supply of hydro power since 1931. The overall plan has been consistently praised by all parties (see footnotes, pp. 8 and 9), until just before the Federal Power Commission ordered Penn Water to reduce its rates. Then, and only then, did Penn Water allege that the 1931 contracts were invalid. By strong inference, the plan has also been praised even by the two Fourth Circuit Opinions which held parts of the two 1931 contracts (not the operations) to be illegal per se.

The Safe Harbor rate case was tried first by the Federal Power Commission. It resulted in that Commission's Opinion No. 143 and Order of November 4, 1946 (5 FPC Rep. 221), in which the Commission reduced the rates of Safe Harbor to Penn Water and Consolidated by approximately $600,000 annually on a 1943 basis, saying in part:

> "The inter-connected system is so operated as to obtain the lowest cost for system power and energy requirements. The output of each generating facility flows into the system at such times and in such amounts as will produce economy of operation and reliability of service. * * *
>
> "Under a 1927 contract which, as amended (Basis Agreement), continues in effect until 1980, the Mary-

---

the Opinion below. It is also confirmed by the Fourth Circuit's Opinion in the recently decided Safe Harbor contract case, *Consolidated Gas Electric Light and Power Company of Baltimore et al. v. Pennsylvania Water and Power Company et al.*, decided January 3, 1952.

land company is entitled to all the electric capacity and energy not otherwise disposed of under existing contracts or by any obligation to serve imposed upon the Pennsylvania Company (Penn Water) by its charter or by law, which is available from the Pennsylvania Company's hydro and steam plants, as well as that available to the Pennsylvania Company from Safe Harbor. The Pennsylvania Company may require the Maryland Company (Consolidated) to supply it with steam generated energy (backfeed) in excess of the Maryland Company's own requirements, up to the available capacity of the Maryland Company's generating stations then being operated. The Maryland Company agrees to reimburse the Pennsylvania Company for all of its operating expenses, including taxes, depreciation, and the cost of power from Safe Harbor, as well as a certain return, less a credit for the revenues which the Pennsylvania Company receives for local sales in Pennsylvania."

The U. S. Court of Appeals for the Third Circuit upheld the Federal Power Commission's decision in every respect, noting that "Safe Harbor's output is delivered to an integrated interstate electric system * * *", and held that "Safe Harbor's contracts for power and its backing by the Pennsylvania and Maryland companies *are exemplary.*" (Emphasis supplied.) See *Safe Harbor Water Power Corp. v. Federal Power Commission*, 179 F. (2d) 179, cert. denied 339 U. S. 957 (1950).

In the Penn Water rate case (the present proceedings), hearings began on April 15, 1946, and concluded July 16, 1947, during which time over 26,000 pages of Record and hundreds of complicated exhibits were received. Following submission of voluminous briefs, the Federal Power Commission issued Opinion No. 173 and its Order of January 5, 1949 (Record Volume XVI pp. 39-191), ordering Penn Water to reduce its rates and charges, on a 1946 basis, in the total amount of approximately $2,000,000 annually.

During the entire period of the proceedings before the Commission, neither Penn Water nor the Pennsylvania Commission raised any question as to the validity of the long-term contracts under which the interconnected system had been established in 1931, and which as tariffs had been controlling the services of Penn Water and Safe Harbor since they were first filed in 1936 in response to the Order of the Federal Power Commission.

In its petition for rehearing filed with the Federal Power Commission on January 28, 1949, Penn Water asserted for the first time the fact that it considered its long-term power contracts to be null and void, and that it was making this assertion the basis of court proceedings recently instituted in the United States District Court for Maryland. Denying this petition, the Commission, in its Opinion 173A and Order of February 28, 1949 (Record Volume XVI pp. 372-382), informed Penn Water that its rate order rested upon *services as they had been rendered since 1931,* as testified to in the Record before the Commission, and as they must continue to be rendered until changed in the manner required by the Commission's rules issued under the provisions of the Federal Power Act. The Commission pointed out that illegality of particular provisions of the contracts could not affect the rates established by the Commission in relation to services actually rendered, and as they were continuing to be rendered (and have in fact continued to be rendered to the date of this Brief).*

* The Commission makes it quite clear, in its Opinion No. 173A, that it considered it improper to further delay rate reductions which were long overdue in relation to services which had been rendered in the same manner since 1931. The Commission emphasized the testimony of the officers of Penn Water that the integrated interconnected power system was "the outgrowth of twenty years of experience by the two companies in determining the best methods of promoting the coordination of the hydro and transmission facil-

Penn Water, although it continued its collateral attack on its long-term hydro contracts in the United States District Court for Maryland, did not choose to exercise its right to petition for changes of its tariffs as filed with the Federal Power Commission, or of its services as rendered thereunder. Instead, it elected to stand on the record before the Commission and to pursue its appeal from the Commission's orders to the U. S. Court of Appeals for the District of Columbia Circuit, filing a 238 page printed brief, supplemented by a 49 page brief filed by the Pennsylvania Commission. The Federal Power Commission replied with a printed brief of 178 pages, the Maryland Commission with 36 pages, and Consolidated with 50 pages. After these main briefs were filed, and the case ready to be set for argument on the merits, Penn Water and the Pennsylvania Commission filed motions to postpone the date of oral argument. Subsequently, they filed motions to annul or remand the orders of the Commission, asserting that they had been rendered void by the decision of the Fourth Circuit in the Penn Water contract case, *Pennsylvania Water and Power Company, et al. v. Consolidated Gas Electric Light and Power Company, et al.*, 184 F. 2d 552, 186 F. 2d 934, cert. den. 340 U. S. 906. The Court allowed time for extended briefing and argument of these motions, in assigning the case for three days of oral argument, divided between the motions and the appeal on the merits.

Having failed, after these extended briefs and argument below, to convince the Court of Appeals that there was any

---

ities of Penn Water with the steam generating plants of Baltimore Company, to the end of maximum utilization of natural resources, minimumzation of investment and the utmost in service availability to the ultimate customers," and that this should not be changed except by the procedures provided by the Act. (Record Volume I p. 69. See also Record Volume I pp. 25-26 and Volume XVI pp. 374-383.)

error in that Record of over 26,000 pages* of proceedings as conducted from September 1, 1944, to July 16, 1947, and culminating in the Order of January 5, 1949, petitioners now seek to have the entire effect of those proceedings destroyed and the purposes of the Federal Power Act frustrated, by insisting that the Court below erred in refusing to annul or remand the Commission's orders because of a collateral determination subsequently obtained by Penn Water in the Fourth Circuit, in proceedings to which the Federal Power Commission was even not a party. Petitioners make this argument despite the fact that the Fourth Circuit stated in the Penn Water contract case that its action did not extend to the rates (and accordingly services) covered by the Commission's Orders (*Pennsylvania Water and Power Company, et al. v. Consolidated Gas Electric Light and Power Company of Baltimore, et al., supra*—see infra, Argument III.)

The Court below referred to and accepted such statement of the Fourth Circuit in good faith, and did not disagree therewith; rather, it treated that statement as consistent with the view expressed below — that what might be illegal as contract between the parties, as constituting a monopoly in violation of the Sherman Act, might nevertheless be valid as an approved tariff or ordered operation

* The printed record in the Court below consisted of 4805 pages, plus an additional 514 pages of Appendices to Penn Water's Briefs. As is indicated in the first footnote of page 2 of Penn Water's petition, it sought to restrict the Record here. If this had been accomplished, the Court would not have before it the real nature of the case and the Record which shows the ample and complete support for the Commission's Orders, including the evidence of Penn Water's officers (Record Vol. I pp. 20-28, 31-46, 69), showing their sworn support of the integrated interconnected power pool which the Commission's Orders maintain — quite contrary to their later collateral efforts to destroy the benefits of that pool, by attacking the contracts which put it in operation.

by the Federal Power Commission, acting in pursuance of the directive of Congress specified in the Federal Power Act (Record Volume XVIII pp. 49-54). The Court below, however, did not rest with this reconciliation of the Commission's orders with the Opinion of the Fourth Circuit in the Penn Water contract case. Regardless of such reconciliation, it based its decision squarely on its holding that if Penn Water had any right to change its services or rates as a result of having had its contracts declared illegal in violation of the Sherman Act, it should pursue its legal remedies under the Federal Power Act, as it had first been directed to do by the Commission when the petition for rehearing before that Commission was denied.

The ensuing restatement of questions presented, and argument with reference thereto, will show that Penn Water is in no manner aggrieved by such a decision, that there is no conflict of circuits with reference thereto, and that certiorari, as requested by petitioners, should be denied.

RESTATEMENT OF QUESTIONS

The petitioners, Penn Water (its petition, p. 17) and Pennsylvania Commission (its petition, p. 19) each state three questions which they seek to have determined by this Court. Because of the duplication involved in Penn Water's questions I and II and the Pennsylvania Commission's questions II and III, all of which seek to present a single issue not yet properly before the Court, there are only three basic questions presented, none of which presents a proper basis for the granting of certiorari in this case.

Question I of the Pennsylvania Commission may be accepted as the first question. However, we will show in another part of this brief that it rests upon a conclusion of

fact contrary to that determined by the Commission upon substantial evidence, and then presents a question of law not faced by either the Commission or the Court below. It clearly does not present a basis for certiorari. (See Argument I herein).

Question III of petitioner, Penn Water, is the only one of the questions that was passed upon by the Court below, and may be accepted as the second question. However, it does not present a conflict of circuits such as is asserted by Penn Water. The Court below correctly followed the determination of the U. S. Court of Appeals for the Third Circuit in *Safe Harbor Water Power Corporation v. F. P. C.*, 179 F. 2d 179, 185 (1949) cert. den. 339 U. S. 957 (1950), *which is the only other opinion which has dealt squarely with this question.* In that case, certiorari was denied by this Court after it was faced with the same misleading argument as to conflict of circuits which is now presented here by petitioners. (See Argument II herein).

Penn Water's Questions I and II have their counterparts in Questions III and II, respectively, of the Pennsylvania Commission. These four questions, separately stated at length in the petitions, can be simply resolved into the one issue which is stated as the first sentence of Penn Water's "Statement" (its petition, pp. 2-3) namely, "the primary issue raised by this petition is whether the FPC * * * may compel electric utilities to perform, and may base its rate orders upon continued performance of, contracts which have been adjudged by the courts to violate Federal antitrust laws, public policy and the laws of the utilities' state of incorporation." This simplified statement, however, like the more complicated questions stated in the petitions, is calculated to mislead this Court to believe that such an issue had been raised in the proceeding before the Commis-

sion, had been ruled upon by the Commission after evidence and argument, and was then confirmed by the Court below.

Actually, the issue stated by petitioners here was never presented to the Commission, and was not accepted as an issue by the Court below. At best, it was suggested only by Penn Water's petition for rehearing before the Federal Power Commission, in response to which the Commission pointed out that if Penn Water desired to raise such questions (which it had ignored during the four years that the rate case was before the Commission and which involved a disruption of the integrated power system as Penn Water had presented it to the Commission), the provisions of the Commission's rules and the Federal Power Act relative to change or withdrawal of tariffs should be complied with (Record Vol. XVI, pp. 375-382).

In confirming the Commission's denial of Penn Water's petition for rehearing, the Court below makes the squarely procedural administrative law determination that Penn Water could not present to the Court of Appeals, *for the first time* as basis for setting aside or remanding the Commission's Orders, matters which the petitioners had ignored during the course of hearings before the Commission, which they had subsequently made the basis of a collateral attack in Court proceedings to which the Commission was not a party, and for which the Federal Power Act specifies a proper procedure of presentation in the first instance to the Commission. That was the basis of the decision below, which petitioners seek to avoid by misstating the issues to this Court, in Penn Water's Questions I and II and the Pennsylvania Commission's Questions III and II.

Phrased succinctly as a legal proposition for review by this Court, the proper third question is:

Was the Court of Appeals, as the tribunal established by law to review decisions of the Federal Power Commission, correct in affirming a decision of the Commission that the Federal Power Act requires a regulated licensee and utility to charge the rates and to perform the services required by order of the Commission, supported by an extended record and issued after protracted hearings, until that utility has sought and obtained a change of its rates and service under procedures duly established by the Commission under the Act?

The ensuing argument (Argument III) will demonstrate that the Court below correctly answered that question in orthodox fashion, under well-established doctrines of administrative law consistently confirmed by this Court.

If petitioners wish a determination of the issues which they erroneously claim to be the questions of this case, they should present the issues which raise those questions in *original* proceedings before the Commission, where a complete record may be made with reference thereto, and then bring them up through the proper appellate procedure. Only then will they be ripe for determination.

ARGUMENT

As shown above, there are really only three issues raised by the questions presented by petitioners. This Court does not decide upon certiorari any issues other than those specified in the petition. Rule 38, U. S. C. A. Title 28, Rules, U. S. Supreme Court, p. 66; *National Licorice Co. v. National Labor Relations Board*, 309 U. S. 350, 357 N. 2 (1940). This argument will address itself to three propositions relating separately to each of the three issues presented by the questions which petitioners raise:

I. *The Court of Appeals' affirmance of the Federal Power Commission's determination, that it has jurisdiction over all of the wholesale sales of Penn Water, was correct and creates no conflict of circuits (Pennsylvania Commission's petition, p. 19, Question 1).*

II. *The Court of Appeals' affirmance of the Federal Power Commission's determination, that it has jurisdiction over Penn Water as a public utility under Part II of the Federal Power Act, was correct and creates no conflict of circuits as to the issue involved (Penn Water's petition, pp. 17-18, Question III).*

III. *The Court of Appeals' denial of petitioners' motions to annul or remand was correct and creates no conflict between the circuits (Penn Water's petition, p. 17, Questions I and II; Pennsylvania Commission's petition, pp. 19-20, Questions II and III).*

Accordingly, certiorari should be denied.

I.

The Court of Appeals' affirmance of the Federal Power Commission's determination, that it has jurisdiction over all of the wholesale sales of Penn Water, was correct and creates no conflict of Circuits (Pennsylvania Commission's Petition p. 19, Question I).

Pennsylvania Commission's Question I (its petition, p. 19) states:

> "Where electric energy is produced in Pennsylvania and thereafter sometimes commingled with electric energy flowing from another state and sold to Pennsylvania customers and where the proportions of such respective energy are ascertainable, are such sales in interstate commerce within the scope and intendment of the Federal Power Act and subject to the jurisdiction of FPC?"

This question is predicated upon an assumption of fact (namely, the separability of intrastate wholesale sales of power and energy by Penn Water to its Pennsylvania customers) which is contrary: (1) to the Record as made before the Federal Power Commission, (2) to the findings of the Commission, and (3) to the confirmance by the Opinion below of those findings as being supported by substantial evidence. It is fully met and disposed of by that portion of the Opinion which reads in part as follows (Record Vol. XVIII, pp. 61-64):

> "* * * It is said that (1) Penn Water's sales to its Pennsylvania customers for resale are sales of electric energy produced and sold in Pennsylvania; (2) the back-feed energy generated by Baltimore Company to Penn Water and sold by it to its Pennsylvania customers loses its interstate character when it is received by Penn Water and commingled with the Pennsylvania produced energy. Even if these sales of back-feed are considered interstate, it is suggested that they constitute so negligible a portion of Penn Water's total sales to Pennsylvania customers that they cannot furnish the basis of federal regulation, or that federal regulation may extend only to an allocable portion of interstate sales.
>
> "* * *
>
> "We are convinced from an examination of the voluminous materials submitted to us that the Commission properly found Penn Water to be part of an 'integrated and coordinated interstate electric system.' * * *
>
> "* * * *Given such interconnected and integrated interstate wholesale operations, there can be no such thing as assigning a particular sale solely to operations within Pennsylvania. Each sale is in effect a pool sale drawn from the integrated interstate system and hence interstate in nature.*
>
> "The same conclusion was reached by the Third Circuit with regard to another of the participants in this

pool, Safe Harbor. The court pointed out that Safe Harbor is 'part of a large integrated interstate electric system' and that its electric output 'must be treated as an integrated whole'. In the second *Safe Harbor* case, the court again held that Safe Harbor's sales 'constitute in fact wholesale sales in interstate commerce' because they are 'delivered to an integrated interstate electric system.'

"*We find substantial evidence in the record to support the Commission's factual findings with regard to the interstate nature of Penn Water's sales.* It is the nature of the operations underlying the sales which furnishes the basis for Commission action rather than legalistic niceties of title and place of sale. Those operations bring petitioners' rates and services within the reach of Part II of the Federal Power Act. The Commission did not assume jurisdiction over any direct consumer sales. It 'was meticulous to take in only territory which this Court had held the States could not reach' — interstate sales at wholesale." (Emphasis added — footnotes omitted.)

The concluding paragraph of the Court's Opinion (Record p. 72) is also particularly applicable here, because Pennsylvania Commission's Question I involves "just the sort of weighing of evidence and making of pragmatic adjustments which fall within the special competence of an expert agency and which should not be interfered with by a court unfamiliar with day-to-day operations and complex technological and financial materials". The Court below pointed out the proper scope of review, when it continued (Record p. 72) "Our review is designed to leave to the Commission the flexibility which is necessary if it is satisfactorily to discharge its function of protecting the public interest, and yet to prevent arbitrary action outside the scope of the Commission's authority. *We have examined all the points raised and are convinced that the Commis-*

sion's treatment of each one was within the range of its statutory authority and was supported by substantial evidence." (Emphasis added.)

This ruling by the Court below is in direct pursuance of the review provisions of the Federal Power Act, Section 313 (U. S. C. A. Title 16, Sec. 825 l) and is in accord with a long line of decisions of this Court in many fields of administrative action.

Rochester Telephone Co. v. U. S., 307 U. S. 125, 146 (1939);
National Labor Relations Board v. Waterman S.S. Co., 309 U. S. 206, 208, 209 (1940);
National Labor Relations Board v. Link Belt Co., 311 U. S. 584, 596-597 (1941);
Colorado v. Interstate Gas Co., 324 U. S. 581, 586-590 (1945).

There is also nothing in the Record by way of evidence which would support the analogy which Question I of the Pennsylvania Commission seeks to draw between the complicated, integrated pool operation of the interconnected electrical system here involved, to the relatively simple local sales of gas involved in the cases of *Peoples Gas Co. v. Pub. Ser. Comm.*, 270 U. S. 550 (1926) and *Lone Star Gas Co. v. Texas*, 304 U. S. 236 (1938).

The Pennsylvania Commission did not present any evidence at any time to the Federal Power Commission. Its brief to the Federal Power Commission did not raise the issue now raised by its Question I, and did not cite either of the above cases. This observation is also true as to the briefs filed with the Commission by Penn Water. On the contrary, the Pennsylvania Commission relied for its jurisdiction over sales to the Pennsylvania customers of Penn Water, not on the argument that they constituted clearly separable sales of Pennsylvania generated energy, but on

the argument that they constituted "joint" sales by Penn Water and Safe Harbor and that the Federal Power Act (unlike the Interstate Commerce Act) did not give the Federal Power Commission jurisdiction over "joint" sales and services. This unsupported, untenable argument was effectively answered by the Commission in its Opinion 173 (Record pp. 56-58) and was abandoned by both the Pennsylvania Commission and Penn Water in the Court below.

The attempt to substitute before the Court below the argument now presented by Pennsylvania Commission's Question I was futile, because of the complete lack of support in the Record for any separability of the sales to the Pennsylvania customers of Penn Water from the overall operations of the power pool. The whole tenor of the evidence of experts for the Commission and for Penn Water was that it is impossible to identify kilowatt hours of electric energy fed into and sold out of an interconnecting transmission system of a power pool, such as is here involved. Aside from that, the energy use made of the pool by each particular customer is itself less valuable to any particular customer than the capacity (power) use made of the hydro-plants to replace steam generation. And so, unlike the case of *Peoples Gas Co. v. P.S.C., supra,* relied on by Pennsylvania Commission, the amounts of intrastate power and energy (capacity service as well as energy) are not separable for purposes of intrastate regulation. (See the Commission's Opinion 173, Record Vol. XVI, pp. 51-58).

Question I as raised by the Pennsylvania Commission asks this Court to substitute its judgment for that of the Court below and for that of the Federal Power Commission on *issues of fact* involving complicated technical questions, which the Commission was particularly qualified to determine and was authorized by statute to determine with finality. This Court must refuse this request.

Accordingly, the Pennsylvania Commission's request for certiorari rests only upon the two questions (II and III) which go to the denial by the Court below of the motions to annul or remand, discussed hereinafter, in Argument III.

II.

The Court of Appeals' affirmance of the Federal Power Commission's determination, that it has jurisdiction over Penn Water as a public utility under Part II of the Federal Power Act, was correct and creates no conflict of Circuits as to the issue involved (Penn Water's Petition, pp. 17-18, Question III).

Penn Water's Question III (its petition, pp. 17-18) states:

> "Does Part II of the Federal Power Act repeal by implication regulatory provisions of Part I of the Act; and is a corporation which is subject to regulation under Part I of the Federal Power Act as a licensee under contract with the Federal Government also subject to the different regulatory scheme of Part II of the Act, as the D.C. Circuit held contrary to statements of the Court of Appeals for the Second Circuit and another panel of the D.C. Circuit?"

It is difficult to believe that counsel seriously expected this question to provide grounds for the issuance of certiorari, upon the claimed conflict of circuits specified in Penn Water's petition (pp. 32-33). The Third Circuit, in the second Safe Harbor Rate case, 179 F. 2d 179, 185 (1949) cert. den. 339 U. S. 957 (1950), and the Court below are in clear agreement in the only two Opinions which have squarely faced the issue, considered it, discussed it, and made rulings thereon.

Penn Water suggests a conflict of circuits for three reasons, all of which are untenable: (1) a statement in the first Safe Harbor decision by the Third Circuit, *Safe Harbor*

Water Power Corp. v. FPC, 124 F. 2d 800, 808 (1941) cert. den. 316 U. S. 663 (1942), which did not have the issue before it, which at p. 804, footnote 4, states the Court's view as contrary to Penn Water's contention here, and which in any event would yield to the later decision by the same circuit in the second Safe Harbor case, *supra;* (2) an earlier decision by the United States Court of Appeals in the District of Columbia, *Niagara Falls Power Co. v. FPC*, 137 F. 2d 787, 792 (1943), which was not a rate case, which did not have the matter directly in issue, and which likewise must yield to the later pronouncement of the Court of Appeals below, speaking for the same circuit; and (3) a random statement in *Alabama Power Co. v. FPC*, 128 F. 2d 280, 293 (1943), which was not a rate case and again did not deal squarely with the issue.

The Opinion below (Record pp. 57-61), in conjunction with the above referred to Opinion of the Third Circuit in the second *Safe Harbor rate case* (179 F. 2d 179, 185), shows that the clear language of the Federal Power Act and the legislative history of the Act fully support the construction of Part II adopted by the Court below and that there is no error calling for review by this Court. In one brief paragraph the Opinion below disposes of the argument that there were other contrary rulings as follows (Record, p. 58):

> "The only judicial utterances cited to us in this regard are to the effect that 'Part II, as added in 1935, gives the Commission jurisdiction over the transmission and sale of electricity at wholesale in interstate commerce, whether or not by licensees' and that the Safe Harbor Company 'is not only a *licensee* under Part I but it is also a *public utility* under Part II.' Neither *Alabama Power Co. v. Federal Power Commission* nor *Niagara Falls Power Co. v. Federal Power Commission*, both of which contain language which

might be thought to run counter to Part II jurisdiction over a licensee, was a rate case. Neither involved Part II and the possibility of conflict between Parts I and II was not discussed."

The same arguments now presented in support of Penn Water's Question III were presented to this Court and rejected as forming no basis for certiorari in the above referred to second *Safe Harbor rate case*, 339 U. S. 957 (1950). This Question provides no adequate ground for the granting of certiorari, and Penn Water's petition must stand or fall upon its Questions I and II, as discussed hereinafter under Part III of this Argument.

III.

The Court of Appeals' denial of Petitioners' motions to annul or remand was correct and creates no conflict between the Circuits (Penn Water's petition, p. 17, Questions I and II; Pennsylvania Commission's petition, pp. 19-20, Questions II and III).

As earlier indicated (Restatement of Questions above), the several overlapping questions contained in Penn Water's petition as Questions I and II and the Pennsylvania Commission's petition as Questions II and III, are entirely summarized in Penn Water's claim that the "primary issue raised" is "whether the FPC (in the absence of any express authority in the Federal Power Act such as is found in certain other Federal regulatory statutes) may compel electric utilities to perform, and may base its rate orders upon continued performance of, contracts which have been adjudged by the courts to violate Federal anti-trust laws, public policy and the laws of the utilities' state of incorporation" (Penn Water petition, pp. 2-3). This question is simply not presented by the record, was not before the

Court below, and could not properly be ruled on by this Court in this proceeding.

The Federal Power Commission did not order the performance of any contracts as such, in any of the Orders affirmed below, or of any particular provisions of any contracts (most assuredly not the provisions of Article IV and V of the Penn Water contract, which were the sole provisions upon which the Fourth Circuit rested its Opinion regarding the invalidity of that contract).* When in its petition for rehearing before the Federal Power Commission, Penn Water for the first time suggested to the Federal Power Commission that the basic power contracts had been placed in litigation in the Courts, the Commission, in denying the petition (Opinion 173A, Record Vol. XVI, pp. 372, 375), informed Penn Water that the Commission's Order did not rest upon the decision of "questions as to the legality of the foundation contracts which are in litigation", but rather was founded upon the *operations* of the combined Penn Water-Safe Harbor-Consolidated system and the *services* as actually rendered by Penn Water.

The Federal Power Commission pointed out that until such operations and services were changed with the approval of the Commission, under the rules and regulations of the Commission issued in pursuance of the provisions of the Federal Power Act, Penn Water was bound to render them at the reduced rates prescribed by the Commission in its Order of January 5, 1949. The Commission thus met Penn Water's eleventh hour maneuver — a collateral attack

---

* The Fourth Circuit's holding that the Penn Water contract was invalid only because of the provisions of Articles IV and V appears in at least three places in its first opinion (Record, Vol. XVIII, pp. 7, 8, 25) in its second opinion (Record, Vol. XVIII, p. 37), and also in its opinion in the Safe Harbor Contract Case (p. 3 of printed pamphlet copy supplied by Penn Water).

to avoid the long overdue rate reduction — by referring Penn Water to the orderly processes of the law as prescribed by the Federal Power Act, implemented by the Commission's rules. If there was no error in the Commission's denial of petition for rehearing (and we submit clearly there was none for reasons hereafter briefly summarized), there was likewise none in the lower Court's affirmance thereof.

The provisions of the Penn Water contract held to be invalid *per se* (Articles IV and V only) have played no part in the rate orders of the Commission. The services originally began under the contracts in 1931, and have continued in exactly the same manner from 1931 to the present date. Obviously there must be rates to pay for such services (regardless of contract), and under the law they can properly be only the just and reasonable rates allowed by the Federal Power Act and prescribed by the Commission in this case.

Petitioners insist that the Orders of the Commission, prescribing reasonable rates based on operations, must be destroyed because of the illegality of the contracts, and moreover, (by inference here and statement to the Court below) still claim the right to keep the exorbitant rates prescribed by the very contracts which they claim to be illegal. In all equity and justice, there was never a clearer case for upholding the orderly processes of the law to defeat such unconscionable conduct.

What petitioners overlook is that when Penn Water filed its contract as a tariff in 1936 under the Federal Power Act, its former obligations to serve under the contracts and at the rates therein prescribed passed out of the realm of contract and into the area of duty prescribed by law. The *tariffs* (not the contracts), from that date and until with-

drawn or changed in the manner prescribed by the Federal Power Act (Sec. 205 as described by the Commission in its Opinion No. 173A, Record Vol. XVI p. 372), constituted the only lawful terms of service for Penn Water.* Any departure by the parties thereto would itself be unlawful.

Texas & Pacific Ry. v. Mugg, 202 U. S. 242 (1906);
Texas & Pac. Ry. v. Abilene Cotton Oil Co., 204 U. S. 426, 439-449 (1907);
Western Union Tel. Co. v. Esteve Bros. & Co., 256 U. S. 566, 573 (1921);
Davis v. Henderson, 266 U. S. 92, 93 (1924);
Davis v. Cromwell, 264 U. S. 560 (1924);
Northwestern Pub. Serv. Co. v. Montana-Dakota Co., 181 F. 2d 19, 22-23 (1950); affirmed *Montana-Dakota Co. v. Northwestern Pub. Serv. Co.*, 341 U. S. 246, 95 L. Ed. 912 (May 7, 1951).

The Eighth Circuit's opinion in the *Montana-Dakota* case states, in part:

> "The plan or scheme of the Federal Power Act is analogous to that of the Interstate Commerce Act * * *, and decisions under the latter act should be controlling here * * * The rates filed and approved by the Commission are the lawful rates until changed in the way approved by the Act * * *
>
> "Moreover, the transmission of electric energy being at wholesale and interstate, the seller must collect the charge named in the filed rate and the purchaser

---

* It has long been established administrative and utility law that, however great a regulated utility's substantive right may be, it must comply with the procedures established by the law for perfecting it.

State ex rel v. Kansas Postal Tel. Co., 96 Kan. 298 (1915), holding that a utility with a constitutional right to discontinue service, because it was operating at a loss, must nevertheless comply with the procedure of securing Commission approval to withdrawal.

State ex rel RR. Commissioners v. Bullock, 78 Fla. 321 (1919), affirmed 254 U. S. 513 (1921).

> must pay that rate. So long as the filed rate is not changed in the manner provided by the Act it is to be treated as though it were a statute, binding upon the seller and the purchaser alike."

This Court, in affirming on other grounds, recognized the doctrine of the filed tariff, saying in part that the utility "* * * can claim no rate as a legal right that is other than the filed rate, whether fixed or merely accepted by the Commission, and not even a Court can authorize commerce in the commodity on other terms."

The Court of Appeals for the Fourth Circuit, in deciding the Penn Water contract case, must have had this law well in mind when it rested its decision partly upon the case of *Georgia v. Pennsylvania RR. Co.*, 324 U. S. 439, 452-460 (1945). That case held that utilities as regulated industries are not *per se* exempt from the Sherman Act, but also stated clearly that in condemning a Sherman Act violation, the Court could not and would not intrude on the primary jurisdiction of the Interstate Commerce Commission over its filed tariffs.

Referring to *Keogh v. Chicago & N. W. R. Co.*, 260 U. S. 156, 161-162 (1922), the Opinion in the *Georgia* case (p. 453) states:

> "* * * The legal rights of a shipper against a carrier in respect to a rate are to be measured by the published tariff. That rate until suspended or set aside was for all purposes the legal rate as between shipper and carrier and may not be varied or enlarged either by the contract or tort of the carrier. And it added: 'This stringent rule prevails, because otherwise the paramount purpose of Congress — prevention of unjust discrimination — might be defeated. * * *' "

Referring to *North Dakota ex rel. Lemke v. Chicago & N. W. R. Co.*, 257 U. S. 485 (1922) and *Texas v. I. C. C.*, 258 U. S. 158 (1922), the *Georgia* case (p. 454) further states:

> "It is clear that a suit could not be maintained here to review, annul, or set aside an order of the Interstate Commerce Commission. Congress has prescribed the method for obtaining that relief. It is exclusive of all other remedies, including a suit by a State in this Court. * * *"

And, after referring to and quoting *Central Transfer Co. v. Terminal R. Asso.*, 288 U. S. 469 (1933), which likewise involved application of the "primary jurisdiction" doctrine as explicitly embodied in the Clayton Act, the *Georgia* case (p. 455) in referring back to all of these cases said:

> "* * * *We adhere to these decisions.* But we do not believe they or the principles for which they stand are a barrier to the maintenance of this suit by Georgia.
>
> "The relief which Georgia seeks is *not a matter subject to the jurisdiction of the Commission. Georgia in this proceeding is not seeking an injunction against the continuance of any tariff; nor does she seek to have any tariff provision cancelled.* * * *" (Emphasis added).

The Court of Appeals in the Fourth Circuit case was apparently mindful of these clearly established limitations upon its powers. This is evidenced by the extent to which its Opinion observes that it does not purport to affect the orders of the Federal Power Commission here under attack. Thus, it took care to point out that its decision did not have the very effect which is now ascribed to it as the principal basis for the present petitions. After discussing the Federal Power Commission rate case Opinion affirmed below, the Fourth Circuit said (184 F. 2d 552, 566) that it did not "undertake to gainsay the view of the Commission that *even if the restrictive conditions of the basic contract*

are invalid, a. to which the Commission expressed no opinion, it still has the duty and authority under the Federal Power Act to encourage and establish the interconnection of electrical facilities * * *".

The Fourth Circuit, at the conclusion of its Opinion in the recently decided Safe Harbor contract case (Opinion of Jan. 3, 1952, pamphlet copy filed with this Court, pp. 22, 23), summarized its position as follows:

> "*There need be no interference with the rate making power or the overall control of the Federal Power Commission.* We repeat with respect to Safe Harbor what was said in regard to Penn Water in our prior opinions, 184 F. 2d 552, 568, and 186 F. 2d 934, 937:
>
> " '*It is not our function in this case to decide how far the activities of Penn Water and Consolidated under the basic contract are subject to the regulations of the Federal Power Commission* or the Pennsylvania Public Utility Commission, either or both. * * * It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania' (184 F. 2d 568).
>
> " 'Throughout the trial of this case and in the argument of the pending motion, Penn Water has reiterated its desire to continue to supply electric energy to Consolidated; and in view of the close relationship between the parties, the existence of interconnecting equipment *and the control over its rates by the regulatory bodies, there is no reason to fear that the interest of consumers of electricity in Maryland will suffer through the invalidation of the existing contract between the two* utilities' (186 F. 2d 937)" (Emphasis added).

Assuming, as the Fourth Circuit says, that "there need be no interference with the rate making power or the overall control of the Federal Power Commission", what is there to be placed before this Court?

The Federal Power Commission, having found the operations of Penn Water as conducted from 1931 to date to be in the public interest, but at unjust and unreasonable rates, has prescribed just and reasonable rates and the conditions of service to which they apply (the latter being the conditions of service as previously rendered). The schedules prescribed by the Commission replace the pre-existing "filed tariffs" and the contracts between the parties, as far as service and rates are concerned. The decision of the Fourth Circuit case, in condemning certain contract provisions, can have no direct effect upon the filed tariffs or service as rendered thereunder prior to the effective date of the Commission's Orders, nor can it have any direct effect upon the schedules required by the Commission's Orders now attacked, which continue operations and services found to be in the public interest and establish reasonable rates therefor. The Court below determined, on the Record as made before the Commission, those matters left for the Court by the review provisions of the Federal Power Act (Sec. 313), concerning the power of the Commission to determine just and reasonable rates and terms of service.

The decisions of the Fourth Circuit in both contract cases affect in no way the justness or reasonableness of the Federal Power Commission's Orders in relation to the facts of operation, particularly since Penn Water does not deny that services have continued during the period subsequent to February 1, 1949, in the same manner as they have always been rendered since 1931. If the decisions in the Fourth Circuit cases can have any effect upon the reason-

ableness of the Commission's Orders for the future, regarding any desire of Penn Water to offer services in different form (or at different rates), this issue remains to be raised and established by Penn Water in the orderly manner prescribed by Section 205 of the Federal Power Act, and upon a properly made new record with reference thereto.

The petitions for certiorari constitute a studied and carefully presented attempt, first, to divert this Court's attention from the purely procedural administrative law determination made by the Court of Appeals for the District of Columbia Circuit, in denying petitioners' motions to annul; and second, to attract the Court's attention to an asserted conflict between the views of the Fourth Circuit and the Court below, as to the interrelationship of the Sherman Act and the Federal Power Act, which had not been presented to the Commission and hence could not have been covered by its Orders. They almost ignore the nature of the findings of the Court below that the Federal Power Commission, after 26,000 pages of record, had issued opinions and orders clearly within its jurisdiction under the Federal Power Act and amply supported by evidence in that Record, and that any rights which petitioners may have to change the operations and rates of Penn Water, predicated upon a subsequent decision by a Court in other proceedings regarding the contractual relation of the parties, may and must be properly presented to the Federal Power Commission under the appropriate sections of the Federal Power Act.

The Court below, faced with petitioners' motions to annul or remand, painstakingly considered whether the Fourth Circuit's decision regarding the applicability of the Sherman Act, the Pennsylvania Public Utility laws, and public policy to the long-term power contract between Penn Water and Consolidated, would apply equally to rate orders of the Commission. This matter had been pressed

upon the Court by petitioners in the motions to annul or remand, and had constituted the first part of the oral argument below. Petitioners claimed below, as they claim here, that the Fourth Circuit had collaterally destroyed the Orders of the Federal Power Commission.

In answering the argument of petitioners, the Court below expressed its opinion that integrated electric power service arrangements which might be illegal as entered into by agreement of the parties (whether because of the Sherman Act or some other law) might, nevertheless, be lawful if compelled by Congress acting through a duly established regulatory agency (Record Vol. XVIII, pp. 49-53). The Court below reconciled its position with that of the Fourth Circuit. It did not disagree therewith.

Furthermore, the Court below did not make a definitive decision as to any matter which it deemed to be within the Commission's primary jurisdiction. It clearly pointed out to petitioners that if a definitive decision as to such matter is to be had, it must occur only after petitioners (or others) have properly presented the matter to the Federal Power Commission, in the first instance, under the appropriate sections of the Federal Power Act. The Court below said (Record Vol. XVIII, pp. 54-55):

> "In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligation under the Federal Power Act to continue the then-existing services and rates. *It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order.* 'A rate is not necessarily illegal because it is the result of a conspiracy in restraint of trade in violation of the Anti-Trust Act. What rates are legal is determined by' the regulatory statute. *The validity of Commission action in this proceeding must be determined in light of the criteria furnished by the Federal Power Act, as applied*

to the operations and arrangements under scrutiny. If jurisdiction was properly assumed by the Commission, if its rate order is 'just and reasonable' within the meaning of the Federal Power Act, and if its findings are supported by substantial evidence, Penn Water can have no complaint and our review is at an end. If petitioners, as a result of the Fourth Circuit's decision, wish to make any changes in operations, contracts, arrangements, etc., within the jurisdiction of the Federal Power Commission, they must do so in accordance with the Federal Power Act. Under §205(d) thereof, 'Unless the Commission otherwise orders, no change shall be made by any public utility in any such rate, charge, classification, or service, or in any rule, regulation, or contract relating thereto, except after thirty days' notice to the Commission and to the public.' Pursuant to that section, petitioners may submit new arrangements and rates based thereon to the Commission. And the Commission 'either upon complaint or upon its own initiative without complaint' may 'enter upon a hearing concerning the lawfulness of such rate, charge, classification, or service * * *.' *If Penn Water feels itself aggrieved after such proposed changes have been acted upon by the Commission, it may at that time bring a new petition for review.* In short, a 'rate established in the mode prescribed should be deemed the legal rate and obligatory alike upon carrier and shipper until changed in the manner provided' by the statute." (Emphasis added.)

This portion of the Opinion shows the real procedural nature of the Court's decision below. It would necessarily be the basis for affirmance here if certiorari were to be granted. The Fourth Circuit has stated no conflict therewith. There could be no such conflict, because it is protected by many decisions of this Court.

The benefits to the public which will result from the final (but much delayed) affirmance of the Federal Power Com-

mission's Orders by the Court of Appeals for the District of Columbia Circuit should not be further delayed by reargument of well established law in this Court. Again, the opinion below succinctly summarizes the legal and practical reasons why the motions to annul or remand were denied, which reasons apply equally to a denial of the applications for certiorari here (Record Vol. XVIII, pp. 55-56):

> "To grant petitioners' motions and set aside the order at this time would be to substitute antitrust criteria for those of the Federal Power Act, a substitution which would be at cross-purposes with the intent of Congress. It would result in the reopening of a rate proceeding begun in 1944 because of an issue raised for the first time on rehearing in 1949 and a decision handed down in a suit between private parties under a non-controlling statute in 1951. In view of this chronology, we think the Supreme Court's statement in *Interstate Commerce Commission v. Jersey City*, 322 U. S. 503, 514 (1944), is especially pertinent: 'If upon the coming down of the order litigants might demand rehearings as a matter of law because some new circumstance has arisen, some new trend has been observed, or some new fact discovered, there would be little hope that the administrative process could ever be consummated in an order that would not be subject to reopening.' *The effect of granting petitioners' motions would be to disrupt a pattern of regulation which was carefully drawn to meet the problems of a complex industry.*" (Emphasis added.)

It is clearly manifest that the petitions filed here, in order to delay or defeat a substantial rate reduction, attempt to place the Fourth Circuit and the Court below in conflict upon substantial issues of law by having each Court decide *more than was really before it*, and by placing interpretations upon each Court's opinion inconsistent with

its language. Such an effort cannot support certiorari in this case.

Penn Water is not harmed by being properly relegated to its remedies of petition to the Federal Power Commission to change its services and rates, provided it can show justification for such changes. In the meantime, all parties will serve and be served under tariffs which were found by the Commission to be in the public interest as to the integrated, coordinated power system created hereby. The rates have been prescribed by the Commission as just and reasonable, upon a record which contains no reversible error. Any result, other than prompt denial of certiorari, would lead only to the chaos and confusion which the Federal Power Act sought to avoid by providing for the filing of new tariffs with the Commission.

On the other hand, the granting of certiorari in this case would reopen the validity of Federal Power Commission rate orders which are the result of three years of protracted hearings, years of research and study by that Commission's staff of experts, and careful prior judicial scrutiny of over 26,000 pages of expert testimony and hundreds of highly complicated exhibits. All factors were carefully weighed and considered by the Federal Power Commission before the orders, reducing Penn Water's wholesale charges to Consolidated, were issued. They were again carefully considered by the U. S. Court of Appeals for the District of Columbia, after three days of extensive argument by counsel. The Orders were found to be completely valid in every respect, and not in conflict with the Fourth Circuit's decision in the *Penn Water* contract case.

Every conceivable issue which could be properly brought before this Court, therefore, has already been painstakingly considered and adjudged, first, by the competent trained

technical experts of the Commission, and then by the Court below. There is no need for this Court to assume the tremendous responsibility of reviewing this already reviewed, immensely complicated case. Such a review is not only legally unnecessary. It would further prolong the long overdue rate reducation due from Penn Water to Consolidated, and through the latter company, to the Maryland public which has been forced to pay, and is still paying, excessive rates for electricity.

CONCLUSION

Wherefore, the petitions for certiorari should be denied.

Respectfully submitted,

CHARLES D. HARRIS,
General Counsel,
Public Service Commission
of Maryland.

SUMMARY OF ARGUMENT	43

PAGE

ARGUMENT:

I. The Fourth Circuit Had No Jurisdiction to Annul Either the Prescribed and Affirmed Safe Harbor Tariff or the FPC Order Prescribing the Filed Penn Water Tariff as Amended 49

II. The Federal Power Commission Had Authority to Prescribe the Tariff 52

III. The Federal Power Commission Has Primary Jurisdiction 55

IV. The Federal Power Commission Prescribed a Lawful Tariff

A. The Tariff Was Restricted to Provisions "In and Of Themselves Lawful" 58

B. Articles IV and V Were the Only Provisions of the Baltimore Contract Purportedly Found By the Fourth Circuit to be Unlawful "In and Of Themselves" 58

C. Articles IV and V Were Not Prescribed by FPC 59

D. The Allocations Prescribed by the FPC Are Lawful 60

E. The Payment Provisions Prescribed by the FPC Tariff Are Lawful 65

V. FPC Did Not Authorize an Unlawful Contract

A. Under the Sherman Act 68

B. Under Pennsylvania Law 74

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

BRIEF FOR INTERVENOR-RESPONDENT, CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

OPINION BELOW AND RELATED CASES

The Opinions and Orders of the Federal Power Commission (FPC) affirmed by the Court of Appeals have not all as yet been published. They are reported and or appear in the Record (R.) as follows:

1. Opinion No. 173 and Order of January 5, 1949 reducing the rates of Pennsylvania Water & Power Company (Penn Water) by $1,954,261, and prescribing Penn Water's tariff. 8 F. P. C. 1-106, R., Vol. 16, pp. 4845-4982, 4983-4997.

2. Opinion No. 173-A and Order of February 28, 1949, denying Petition for Rehearing on Opinion No. 173 and Order of January 5, 1949: 8 F. P. C. 170-81, R., Vol. 16, pp. 5178-5194.

3. Order of March 17, 1949 denying Petition for Rehearing on Opinion No. 173-A and Order of February 28, 1949: R., Vol. 16, pp. 5220-5221.

4. Order of October 27, 1949, prescribing new rate schedules for Penn Water: R., Vol. 17, pp. 5267-5292; and

5. Order of December 15, 1949, denying Petition for Rehearing on Order of October 27, 1949: R., Vol. 17, pp. 5315-5320.

6. **The opinion below:** Opinion of the Court of Appeals for the District of Columbia Circuit, affirming the above FPC orders: (July 3, 1951), 193 F. 2d Adv. Sh. 230, R., Vol. 18, p. 5367 (Dissent, R., Vol. 18, p. 5402).

7. Opinion and order of FPC, which prescribed the tariff of Safe Harbor Water Power Corporation (Safe Harbor) and reduced Safe Harbor's rates approximately $600,000: (Oct. 25, 1946), 5 F. P. C. 221.

8. Opinion of the Court of Appeals for the Third Circuit, affirming the last-named FPC order: (Dec. 30, 1949), 179 F. 2d 179; Cert. den. (May 15, 1950), 339 U. S. 957.

9. Opinion of the Fourth Circuit, in the "Baltimore Contract" case: (Sept. 30, 1950), 184 F. 2d 552, R., Vol. 18, p. 5322; Cert. den. (Dec. 11, 1950), 340 U. S. 906.

10. Opinion of the Fourth Circuit, interpreting its mandate in the last-named decision: (Jan. 10, 1951), 186 F. 2d 934, R., Vol. 18, p. 5356.

11. Opinion of the Fourth Circuit, in the "Safe Harbor Contract" case: (Jan. 3, 1952), ... F. 2d ..... (Pamphlet copy filed with this Court by Petitioners.)

12. Opinion of the three-judge Court Middle District of Pennsylvania, holding that the Pennsylvania Public Utility Commission has no jurisdiction over Safe Harbor's rates, and that the Federal Power Commission's Orders were not affected by the legality of the contracts under the Anti-trust laws and the laws of Pennsylvania: (Aug. 7, 1951), 99 F. Supp. 151,

JURISDICTION

The jurisdiction of this Court was invoked under Section 1254(1) of the Judicial Code (62 Stat. 928, 28 U. S. C. §1254) and Section 313(b) of the Federal Power Act (49 Stat. 860, 16 U. S. C. §8251).

QUESTIONS PRESENTED

1. Did the Fourth Circuit have jurisdiction, in a collateral action to which the Federal Power Commission was not a party, to annul, directly or indirectly, orders and tariffs promulgated by FPC? (Argument, Part I)

2. Did the Fourth Circuit have jurisdiction, in a collateral action to which the Federal Power Commission was not a party, and without preliminary referral to FPC, to annul contracts the provisions of which had, either in part or in whole, been prescribed as tariffs by FPC? (Argument, Part I)

3. Did the Federal Power Commission have authority to prescribe the tariff here assailed? (Argument, Part II)

4. Does the Federal Power Commission have primary jurisdiction to determine the facts with respect to the legality of the tariff provisions it has prescribed? (Argument, Part III)

5. Did the Federal Power Commission prescribe a lawful tariff? (Argument, Part IV)

6. Did the Federal Power Commission authorize an unlawful Contract? (Argument, Part V)

7. Does the Federal Power Commission have jurisdiction over sales of electricity in Pennsylvania from a physically integrated interstate electric system when, at times, such service consists in whole or in part of unfirm hydro-electric power generated in Pennsylvania, and at other times, in whole or in part, of firm steam-electric power generated in Maryland? (This brief will not argue this question.)

8. Is a "licensee" under Part I of the Federal Power Act, which is also a "public utility" under Part II of that Act, subject to rate regulation under Part II? (This brief will not argue this question.)

STATEMENT

By this action, Penn Water asks this Court to annul orders[1] of the FPC which prescribed tariffs for Penn Water's services and reduced, effective February 1, 1949, Penn Water's electric rates by $1,954,261 a year. Of this reduction, FPC ascribed $1,733,318 to excessive annual charges made by Penn Water to Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated) (R., Vol. 16, p. 4980).

---

[1] In the Matter of *Pennsylvania Water & Power Company*, FPC Docket No. IT-5915, Opinion No. 173 (R., Vol. 16, p. 4845) and Order issued Jan. 5, 1949 (R., Vol. 16, p. 4983), 8 F. P. C. 1; same case, Opinion No. 173-A (R., Vol. 16, p. 5178) and Order issued Feb. 28, 1949 (R., Vol. 16, p. 5192), 8 F. P. C. 170; Order of Oct. 27, 1949, prescribing rate schedules (R., Vol. 17, p. 5267); rehearing denied Dec. 15, 1949 (R., Vol. 17, p. 5316).

The interstate electric services to which such rate reduction applies have continued unchanged from the effective date of the FPC order (February 1, 1949), to the present.

1. HISTORY OF THIS CASE

The FPC rate reduction order of January 5, 1949 was the result of a plenary investigation[2] by that Commission of the "rates, charges, or classifications" and of the "rules, regulations, practices, or contracts affecting such rates, charges, or classifications" in connection with Penn Water's sales of electric energy subject to FPC's jurisdiction. This investigation, and a similar plenary investigation of the rates, charges, classifications, rules, regulations, practices, and contracts of Safe Harbor (4 F. P. C. 696), had been requested by the Public Service Commission of Maryland (Maryland Commission), the City of Baltimore, and others, in August, 1944 (R., Vol. 15, pp. 4623, 4731).

The Safe Harbor rate case was tried first, the hearings beginning November 17, 1944, and concluding March 16, 1945. They produced a transcript of 6,136 pages of testimony and 255 exhibits. On November 4, 1946, FPC filed its Opinion No. 143 and Order (5 F. P. C. 221), prescribing (a) in its entirety (except as to rates), as Safe Harbor's tariff, the contract between Safe Harbor, Penn Water, and Consolidated of June 1, 1931 (the Safe Harbor Contract),[3] under which Safe Harbor sold its entire output to its two owners, Penn Water and Consolidated, in proportion to their respective ownership, i.e., 1/3 to Penn Water and 2/3 to Consolidated; and (b) reducing rates by $627,000 annually. This order was affirmed by the Third Circuit on December

[2] Initiated by Order of September 1, 1944, 4 F. P. C. 697 (R., Vol. 16, p. 4837).

[3] R., Vol. 15, p. 4554.

30, 1949.[4] In that opinion, the Court said (179 F. 2d at p. 199):

> "Safe Harbor's contracts for power and its backing by the Pennsylvania [Penn Water] and Maryland [Consolidated] companies are exemplary."

The tariff and rates so prescribed and affirmed and service thereunder have continued in effect until the present.

Hearings in the *Penn Water* rate case began April 15, 1946, and continued intermittently to July 16, 1947. They produced a transcript of 21,260 pages of testimony, some 600 exhibits and the above-mentioned Order reducing rates by approximately $2,000,000.

On January 28, 1949, three weeks after such Order reducing its rates, Penn Water applied to FPC for rehearing, averring, *inter alia,*

> "* * * that *since the record before the Commission was closed* there have been *substantial changes* in the *operations* and *contracts* of Petitioner Penn Water, as hereinafter more fully described, so that the bases for the said Order and for many of the findings, conclusions, and requirements contained in said Opinion and Order are destroyed and such findings, conclusions and requirements are not in accord with the facts and the law * * *." (R., Vol. 16, p. 4999) (Emphasis added.)

The "substantial changes in the operations and contracts" so alleged related to unilateral action which had then just been taken by Penn Water.

Changes in "operations" had been effected by an elaborate Operating Order issued by Penn Water on January 26, 1949, just two days before the application for rehearing, to prevent the backfeed of power from Maryland to the

---

[4] *Safe Harbor Water Power Corporation v. Federal Power Commission,* 179 F. 2d 179 (1949), Cert. Den. 339 U. S. 957 (1950).

Pennsylvania companies. It directed the operators of the Penn Water and Safe Harbor electric plants on the Susquehanna River in Pennsylvania to throw certain switches, to "split" busses, to break the connections between the Baltimore system and the systems of the Pennsylvania electric companies, and to follow other novel operating procedures which not only changed the long-established unified operation of the entire interstate electrical system but exposed service to the public in the Baltimore and Washington areas to major breakdowns and interruptions and subjected Consolidated's equipment in Baltimore to the possibility of extensive damage.

This grave threat of serious service disruption and property damage impelled Consolidated and the Maryland Commission to seek the immediate protection of a preliminary restraining order which required the restoration of the "operating procedure" uniformly followed for the previous 17 years. This order was obtained in the action which Penn Water had just filed to annul the Baltimore contract.

In opposing the issuance of this restraining order, Penn Water's counsel told the Court that the purpose of these physical changes was to escape FPC jurisdiction, saying (Tr., Feb. 4, 1949, pp. 69, 110, 111):

> "We have filed an application for a rehearing before the Federal Power Commission in order to raise this point.* * *
>
> "But your Honor, we cannot defend ourselves before the Federal Power Commission unless we continue to do what we have done, that is, prevent the mingling of that power. We would have no defense. * * *
>
> "It is the opinion of the lawyers in the proceeding, I believe, and it is my opinion that we cannot upset the Federal Power Commission order, so far as it relates to jurisdiction over the Pennsylvania business, if we

permit power coming from Maryland to mingle with power delivered to those Pennsylvania customers. * * *

"I believe probably they have jurisdiction over us until the physical fact of non-mingling occurs."

Penn Water's Brief (PW Br.) is here silent as to the real occasion for this preliminary restraining order, but asserts (PW Br., pp. 15, 41) that it was obtained to require "Penn Water to perform the Baltimore and Safe Harbor contracts". Judge Miller's dissent in the Court below accepted this erroneous contention, which was also made in that Court.

The changes in "contracts" referred to in Penn Water's Petition for Rehearing were Penn Water's notices to Consolidated of the termination of its contracts with Consolidated (the Baltimore Contract and the Safe Harbor Contract[5] and the institution of suit by Penn Water in the United States District Court for the District of Maryland to annul the Baltimore Contract.

Penn Water's Petition for Rehearing pointed out "the effect of Articles IV and V" of the Baltimore Contract (R., Vol. 16, pp. 5006, 5012).

The close relationship between Penn Water's assault on the validity of its contracts with Consolidated and its application to FPC for rehearing on the rate reduction order was recognized by the Court below where it said (193 F. 2d Adv. Sh., at pp. 233-34, R., Vol. 18, p. 5370):

"* * * The illegality of these system foundation contracts was first raised by petitioners in their petition for rehearing of the January 1949 order, about nineteen months before the Fourth Circuit decision was handed down."

In its Opinion No. 173-A of February 28, 1949, 8 F. P. C. 170 (R., Vol. 16, p. 5178), on such petition for rehearing,

[5] R., Vol. 15, pp. 4606 and 4554, respectively.

FPC pointed out that any unilateral change by Penn Water in such physical operations would constitute a change in its services and rates to Consolidated which could be accomplished only by compliance with the procedural requirements of the Federal Power Act through the filing by Penn Water of amended tariffs, saying:

> "Now, by the changes referred to in Penn Water's application for rehearing, all of the carefully built-up benefits of pool design, investment, construction, and operation apparently are intended to be sacrificed by Penn Water. * * *" (8 F. P. C. at p. 176, R., Vol. 16, p. 5185).

In denying Penn Water's petition for rehearing and thereby avoiding still further delay in the major rate reduction (which it said was "already long overdue"), the Commission, however, carefully directed Penn Water's attention to the appropriate and necessary administrative procedure under the Federal Power Act whereby any challenge to the tariff could be considered by the Commission.[6]

---

[6] On this point, the FPC in the same Opinion said at 8 F. P. C. 176 et seq. (R., Vol. 16, at pp. 5186 et seq.):

"Furthermore, our rules (sec. 35.5) require that when a rate or service which has been filed with the Commission, as these foundation contracts have been, 'is proposed to be cancelled and no new rate schedule is filed in its place * * * each public utility required to file the schedule shall formally notify the Commission of the proposed cancellation' 30 days in advance and shall submit a statement of the reasons therefor and that notice has been served upon the other parties to the schedule or contract.' A copy of such notice to the Commission is required to be duly posted.

"Compliance with filing requirements is particularly important in a case like the present where the filings cover, not a single sale and delivery by one party to the other, but interchange of energy and capacity between and among the parties to the contracts and numerous other obligations and rights which are required to be filed as changes under section 35.3(c).

"* * *

"Insofar as such changes affect service, compliance with the rule referred to would enable the Baltimore Co., the Maryland

Instead of responding to this suggestion (which was approved as the lawful and proper procedure by the Court below), and changing its services and rates by the appropriate administrative procedure, Penn Water, on April 22, 1949, petitioned the United States Court of Appeals for the District of Columbia Circuit for review of the rate reduction orders. At the same time, Penn Water prosecuted the collateral action instituted by it against Consolidated in the United States District Court for the District of Maryland to annul the Baltimore Contract. FPC was not a party to the latter suit.

The District Court sustained the validity of the contract[7] and excluded Penn Water's voluminous proffers of evidence.

On appeal, the issue submitted by Penn Water was the "invalidity of the agreement on its face,"[8] and the Fourth Circuit reversed stating:[9]

> "* * * we reach the conclusion that the basic agreement is invalid on its face * * *." (R., Vol. 18, p. 5334).[10]

Public Service Commission, or any other interested electric utility or State commission, before such changes are put into effect to make application under section 202(b) for an order 'to sell energy * * * or exchange energy' from and after the time of the proposed change or termination of service, or a complaint under section 207 as to the adequacy of the service to be rendered.

"None of these alleged changes having been made or proposed in the only way they could lawfully become effective, respondents are in no position in this or any other proceeding to urge any objection or claim in reliance thereon. An unlawful attempt to avoid putting into effect the rate reduction we ordered affords no valid basis for objecting to that order."

[7] *Pennsylvania Water & Power Company v. Consolidated Gas Electric Light and Power Company of Baltimore* (Feb. 28, 1950), 89 F. Supp. 452.

[8] Penn Water's Brief in Fourth Circuit, pp. 3, 7.

[9] *Pennsylvania Water & Power Company v. Consolidated Gas Electric Light and Power Company of Baltimore* (Nov. 21, 1950), 184 F. 2d 552, 560 f.n. (R., Vol. 18, p. 5334).

[10] To the same effect, see Penn Water's Brief herein, p. 8.

On such a curtailed record,[11] the Fourth Circuit not only purported to find the contract to be invalid on its face because of Articles IV and V thereof, but, without any basis (other than Penn Water's rejected but unconceded and untried proffers), made many assertions regarding factual issues, e. g.: potential competition (completely at variance with the conclusions of FPC);[12] the physical operations of the interstate system; the supposed effect of the contract on such operations; the alleged actual exertion of restraints by Consolidated over Penn Water (especially with respect to an alleged "prohibition" by Consolidated of Penn Water's plant expansion); and the relative "economy" of river coal. None of these findings were based on any trial of the facts in any Court. Consolidated not only denies all of these findings but also the jurisdiction of the Fourth Circuit to make them and to hold the contract invalid without at least preliminary reference to FPC. Some of these assertions by the Fourth Circuit were adopted without question by Judge Miller in his dissent below (R., Vol. 18, p. 5402).

Upon such action by the Fourth Circuit, Penn Water filed in its then-pending FPC rate case appeal in the District of Columbia Circuit its motion to annul the orders of the Commission sought to be reviewed in these proceedings. Denial

---

[11] Penn Water submitted to the Fourth Circuit 18 printed pages of testimony and 292 printed pages of untried and excluded proffers. This *summary* action by the Fourth Circuit on such a "truncated record" stands in stark contrast to the exhaustive factual investigation which preceded the FPC rate reduction order. Penn Water even here likewise contends that "All that is needed are the power contracts * * *." (PW Br., p. 3 f.n.).

[12] Thus, for example, at pp. 10-11 of FPC's Memorandum on the petition for certiorari herein, it is said:

"These physical limitations, plus the excessive capital investment required for producing the relatively small dependable output, would preclude Penn Water, if operated independently, from competing successfully with steam plants and substantial water would be wasted over the spillways at times of high flow."

of this motion by the District of Columbia Circuit is the primary issue in this case.[13] (Penn Water Br., p. 3).

Upon like action by the Fourth Circuit with respect to the Safe Harbor Contract, Penn Water submitted that fact to the Court below, as a ground for annulment of the FPC Penn Water rate reduction order. (*Consolidated Gas Elec. Lt. & Pr. Co., et al. v. Pennsylvania Water & Pr. Co., et al.*, Jan. 3, 1952, ... F. 2d ....., application for certiorari now pending, Nos. 611 & 612, this Term.)

2. COUNTER STATEMENT OF FACTS

It is to be regretted that at this stage of the litigation it is necessary to direct the Court's attention to many assertions in Penn Water's brief which have no basis in any testimony in this or in any other case before any court, or commission, or otherwise.

These assertions, iterated and reiterated, seek to portray a "large" and "oppressive" Consolidated which ruthlessly has "stifled" and "crippled" "small" and helpless Penn Water and Safe Harbor; which "has consistently exercised its powers in disregard of both Penn Water and the public" (Penn Water Br., p. 40 f.n.); and which is, even now, before

---

[13] Absolute annulment of the FPC orders was the sole issue submitted by Penn Water on such motion in the Court below. No modification of the FPC order was requested, argued, or passed upon by the Court. Penn Water's petition for certiorari in this case, at page 15, asks, as alternative relief, that the case be remanded to FPC with directions retroactively to determine new rates "from and after February 1, 1949 on the usual unit rate basis and on the basis of amount of capacity and energy actually supplied at a rate commensurate with the absence of any 'stabilized income' and with allocations of any reduction in rates based on cost of service actually rendered and not on fictitious 'entitlements.'" This was an entirely new form of relief proposed by Penn Water for the first time in this Court. Such alternative relief is not mentioned in Penn Water's brief here, and is apparently now abandoned by it.

this very Court, seeking to perpetuate this outlawry and assault on the public welfare.

Not only does the brief repeatedly make these unfounded charges against Consolidated, but it actually charges FPC itself with an "inexplicable insistence in this case upon arrogating to itself the power to override the antitrust laws in order to give Consolidated a strangle-hold over potential competitors * * *" (PW Br., p. 33); asserts that FPC here has chosen "which companies shall be given power to suppress competition and which one shall be the victim of that suppression" (PW Br., p. 43); and that FPC is "attempting to authorize violation of the antitrust laws by Consolidated * * * in its own private interest or at its own whim" (PW Br., pp. 39-40).

Consolidated cannot longer remain silent before these unsupported and unsupportable charges. The factual issues they raise have never been tried in any Court. The Record which Penn Water presented to the Fourth Circuit in the Baltimore Contract case contained 18 printed pages of testimony, none of which related to these charges, and 292 printed pages of untried and excluded proffers, devoted entirely to such accusations. The case was argued before the Fourth Circuit on the issues presented "on the face of the contract," but much of the material contained in the excluded proffers was incorporated by that Court in its Opinion in rendering summary judgment, and a lengthy footnote to the Court's decision cites, with obviously full acceptance, the untried accusations made in these very excluded proffers (184 F. 2d at pp. 560-61).

The undoubted influence which these unfounded and unsupported charges had upon the Fourth Circuit, and their repetition before this Court, make their refutation here unavoidable.

A. *The Interstate System*

Penn Water's own description (quoted at R., Vol. 16, p. 5183) sets forth in brief compass the necessity for *its own* creation of the interstate electric system as follows:

> "The System had its origin 32 years ago.
>
> "It arose from the necessity of finding a solution to the problem of providing, without large and expensive reservoirs, a uniform supply of power while utilizing the unharnessed energy of a drainage area subject to severe droughts and floods. The average daily flow at Holtwood has varied from as little as 1700 cubic feet per second up to 756,000 cubic feet per second since the Company began operations. Nevertheless, out of this difficult situation, an important and reliable power pool has been developed.
>
> "The answer to the problem was combined hydro and steam supply; not the substitution of hydro for steam, but from the outset the integration and coordination of hydro and steam in the planning for the capacity needed and in the operation and maintenance of the facilities."

The "difficult situation," above referred to, was Penn Water's, with its "unfirm" and highly fluctuating source of power, not Consolidated's with its "firm," around-the-clock steam generation. It was Penn Water which needed Consolidated.

Moreover, Penn Water has never had a franchise territory and has never served the public, which in that entire portion of the State of Pennsylvania is being adequately served under franchises and certificates of public necessity by Philadelphia Electric, Pennsylvania Power and Light, and Metropolitan Edison. (See map attached to Penn Water's Brief.)

Baltimore, being the nearest large city, became in 1910 Penn Water's first and principal market (R., Vol. 1, pp. 20-21, 25-27).[14]

Over the years, the physical system was planned and constructed in the light of that basic situation.

B. *The Baltimore Contract*

In the mid-1920's, Penn Water's management expressed concern over the possible loss of its control of Consolidated as a result of holding company purchases of Consolidated's stock in the open market (Safe Harbor Contract Case, Nos. 611, 612, Current Term, App. Jt. App., p. 118). As a hedge against such possibility, Penn Water prepared and had executed a long-term contract with Consolidated which (1) immediately increased Penn Water's earnings by 64%; (2) made possible Penn Water's increase of its dividend yield on cash paid in from 12.5% in 1926, to 18.8% in 1930, and 25% or above in all the years between 1936 and 1945, in two of which years it reached a rate of 28.2% (Staff Exh. No. 56, R., Vol. 9, p. 3592), and during which period it was able to transfer $10,000,000 in addition to surplus; (3) by later amendment, transferred to Consolidated the heavy burden of the severe fluctuations of Susquehanna River flow; (4) at the depths of the Great Depression, guaranteed to Penn Water the above return which, as an "operating expense" of Consolidated, actually came before Consolidated's own dividends; and (5) produced a net revenue which FPC, in the orders here assailed by Penn Water, found to be about 2½ times what it should have been.[15]

---

[14] It is significant that Consolidated's purchase of power from Penn Water at that time was coincident with the acquisition by Penn Water's management of control over Consolidated (R., Vol. 14, pp. 4497-98).

[15] See also statements of FPC in its Opinion No. 173-A of February 28, 1949, 8 F. P. C. 170, 179, f. n. 3 (R., Vol. 16, at p. 5190).

For 18 years (i.e., until FPC asserted jurisdiction and reduced its rates), Penn Water found no fault with this contract but praised it to regulatory authorities as being in the public interest. Moreover, its own officers, in this very case, testified at length as to its great merit (R., Vol. 1, pp. 25-26, 31-34, 69-77). The Penn Water Contract was filed by Penn Water with the Federal Power Commission January 13, 1936 (pursuant to Sec. 205(c) of the Federal Power Act, U. S. C. Title 16, Sec. 824d(c)), and designated by the Commission as Penn Water's Federal Power Commission Rate Schedule No. 1 (R., Vol. 1, p. 68).

C. The Safe Harbor Contract

Penn Water, having planned in the late 1920's for an additional hydro project at Safe Harbor, Pennsylvania, eight miles upstream from its own plant at Holtwood, found itself unable either to finance the new project or to provide a market for its output. After unsuccessfully negotiating with its Pennsylvania utility company customers to participate and assist in the proposed project, Penn Water turned to Consolidated for help. Consolidated provided over $9,000,000 in working capital on unsecured notes during the construction period, purchased two-thirds of Safe Harbor's equity for $6,000,000, unconditionally guaranteed Safe Harbor's $21,000,000 bond issue, and agreed to purchase two-thirds of the entire output of the present plant.

Construction of the entirely new Safe Harbor project was achieved by the cooperation of Consolidated with Penn Water, and was formalized by the contract of June 1, 1931 between Penn Water, Consolidated, and Safe Harbor (the Safe Harbor Contract), which alone made possible the construction of the Safe Harbor project.

In return for this heavy financial outlay, risk, and obligation to absorb this large block of power at the depths of the Depression, when industry was prostrate, Consolidated received only one-half of the voting stock in Safe Harbor. Penn Water, although contributing only half as much as Consolidated did to the company's equity, received the other half of the voting stock. Consolidated purchased all of the non-voting stock.

The Safe Harbor Contract was likewise filed on January 14, 1936, with the FPC as Safe Harbor's Federal Power Commission Rate Schedule No. 1. As noted above, it was prescribed in its entirety by order of FPC of November 4, 1946, as Safe Harbor's tariff, after amendment by a rate reduction of approximately $600,000 a year. This order was affirmed by the Third Circuit on December 30, 1949, 179 F. 2d 179, and cert. den. 339 U. S. 957 (1950).

The Safe Harbor Agreement provided (1) for the necessary financing of a wholly new project, to be wholly owned jointly by Penn Water and Consolidated in proportions of ⅓ and ⅔, respectively; (2) for the sale until 1980 of the entire output of Safe Harbor's initial plant (except such as might be required for the performance of any duty imposed upon Safe Harbor by its charter or otherwise by law) to its two owners equitably in the ratio of their respective stock ownership; (3) for the construction by Penn Water of transmission lines and for the transmission thereover to Penn Water and Consolidated of such output; (4) for the payment by Penn Water and Consolidated to Safe Harbor of amounts sufficient to yield a net return of 7% on its investment, subject to rate changes by regulatory authorities; (5) for coordination and joint use of facilities; and (6) for arbitration of disputes.

Safe Harbor's charter limits it to hydroelectric operation; it has no franchise territory or transmission lines; and at the time the Safe Harbor Agreement was executed, the Pennsylvania Commission had expressly forbidden Safe Harbor to sell its output to anyone except Penn Water and Consolidated. This was later amended, but the Pennsylvania Commission has never given Safe Harbor authority to sell to the public and has consistently forbidden Penn Water to resell Safe Harbor power to the public.[16]

The Safe Harbor Agreement was filed with the Pennsylvania Commission on September 17, 1933, in compliance with an order of that Commission.[17]

Throughout the years, the Pennsylvania Commission found no fault with either the Safe Harbor or Baltimore Contracts. In 1946 and 1947 it conducted rate proceedings jointly against these companies and ordered substantial rate reductions to Penn Water's Pennsylvania customers. Because, under the Safe Harbor and Penn Water FPC filed tariffs, Consolidated would have been required to increase its payments to those companies by the exact amount of such rate reduction, it became necessary for it to seek protection. A special three-judge United States District Court for the Middle District of Pennsylvania enjoined the Pennsylvania Commission from enforcing this order because of the supremacy of Federal jurisdiction. The Court also decided that the rate orders of the FPC had not been annulled by the asserted invalidation of the Baltimore and Safe

---

[16] *Pennsylvania Power & Light Co. v. P. S. C. of Penna.*, 112 Pa. Super. 500, 171 Atl. 412, 3 PUR (NS) 152 (1934).

[17] The Pennsylvania Commission's contention that it had not given its approval to the Safe Harbor Contract is disposed of by the Fourth Circuit's statement in the Safe Harbor Contract Opinion (pamphlet copy filed by Petitioners, pp. 4-5): "These two utilities [i.e., Consolidated and Penn Water] are its only customers under an arrangement approved by the Pennsylvania Commission."

Harbor Contracts (*Consolidated Gas Electric Light and Power Company of Baltimore v. John Siggins, et al., Constituting the Pennsylvania Public Utility Commission, Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company* (July 31, 1951), 99 F. Supp. 151). No appeal was taken from this judgment.

Penn Water's and Consolidated's status and rights with respect to Safe Harbor in the Safe Harbor Contract are identical with the sole exception of the ⅓-⅔ entitlement to output and correlative obligation to pay Safe Harbor's expenses and return in the same proportion. This important fact is not apparent from Penn Water's brief, which consistently seeks to convey the erroneous impression that the Safe Harbor Contract is an enslavement of Safe Harbor by Consolidated.

In affirming FPC's order prescribing the Safe Harbor Contract as FPC's tariff, the Third Circuit found the contract to be "exemplary."[18]

Penn Water asserts (Penn Water Br., p. 8 f.n.) that the Safe Harbor Contract is "substantially similar to the Baltimore Contract." It is, in fact, completely different in the following fundamental (as well as other) respects:

1. The Safe Harbor project would not have come into being without the Safe Harbor Contract.
2. It provides for the financing of that project.
3. It sells the entire output of a designated plant.
4. It sells that output to its two owners.
5. Articles IV and V of the Baltimore Contract do not appear in the Safe Harbor Contract.

---

[18] *Safe Harbor Water Power Corp. v. Federal Power Commission* (1949), 179 F. 2d 179, 199.

6. The Safe Harbor Contract is limited to the output of a designated plant; the Baltimore Contract was not.

7. The Safe Harbor Contract was not a "residual type" contract as was the Baltimore Contract.

8. Because of these differences, the alleged "restrictions" in the Safe Harbor Contract are clearly severable while those in the Baltimore Contract, *qua contract*, were held not to be.

D. *Consolidated's Alleged Use of "Oppressive Powers"*

At page 14 (and rephrased elsewhere throughout its brief), Penn Water says, "The oppressive contract powers had actually been used by Consolidated (R., Vol. 18, pp. 5330, 5334-5)." This Record reference is to the opinion of the Fourth Circuit in the Baltimore Contract case. But the Fourth Circuit had absolutely no evidence before it on this accusation — and this charge was not tried before it or elsewhere.[19] Yet that Court's acceptance of these unsupported charges on the basis of Penn Water's untried and excluded proffers is now cited as authority for them!

No testimony on any of the following factual issues was before the Fourth Circuit.

Penn Water contends (P. W. Br., p. 14) that Consolidated has actually exercised its "oppressive contract powers" as follows:

(1) By requiring Penn Water to purchase power from Consolidated.

[19] Consolidated had sought arbitration, to secure the impartial determination of disputes, as provided for by the contract. The District Court's exclusion of Penn Water's proffers in the main resulted from its proper conclusion that Penn Water was attempting to submit to the Court matters which it had contracted to arbitrate.

The system operation *set up by Penn Water*, whereby Consolidated was required to provide firm steam "back up" power to Penn Water to permit the latter to convert its interruptible run-of-river hydro into firm power for sale in Pennsylvania is one of the basic facts in this record, supported by Penn Water's as well as FPC's testimony. This means that firm power from Maryland must be available at all times to Pennsylvania when the hydro plant is completely shut down during large parts of each day in periods of low flow, so that Penn Water may discharge its contract obligation to supply firm power to its other customers (R., Vol. 16, pp. 4857 et seq.).

Consolidated, while it has fulfilled its obligation to be ready to supply such "back-up" energy, has never required Penn Water to receive energy from Maryland if at any particular time so-called interchange or unfirm economy energy could be purchased in Pennsylvania at a lower cost than Consolidated's incremental generating cost. In other words, Consolidated has collaborated with Penn Water in obtaining the required energy from the cheapest source. Penn Water's real complaint here is that this often requires obtaining energy from across the Maryland State Line.

Penn Water now calls this "oppression."

(2) By interfering with Penn Water's contracts with its Pennsylvania customers.

These contracts have never been changed from those prepared many years ago by Penn Water. Consolidated has, unsuccessfully, protested to Penn Water that its Pennsylvania customers should not be supplied, as they are, with large quantities of steam-generated power from Baltimore without an adjustment for huge increases in the cost of coal since the contracts were made in the 1930's. Penn Water refused. But FPC agreed with Consolidated as to

the reasonableness of such a change, and prescribed it (R., Vol. 17, p. 5273).

Consolidated also objected, unsuccessfully, to Penn Water's increasing and continued physical diversion of Consolidated's share of cheap Safe Harbor power to Penn Water's Pennsylvania customers. (*Safe Harbor Contract cases*, Nos. 611 & 612 Current Term, App. Jt. App., p. 147).

Penn Water now calls this "oppression."

(3) By "forbidding" Penn Water in 1947 "to expand its transmission system in Pennsylvania to meet the needs of the Pennsylvania customers".

There is likewise no testimony in any case relating to this charge. It refers to a suggestion made by Consolidated in 1947 which, after a study by Penn Water's and Safe Harbor's engineers and approval by their respective Presidents, made possible the provision of spare transformer capacity at Safe Harbor at an expense of only $30,000 instead of $300,000 as originally proposed by Penn Water. The facilities installed under this more economical plan have supplied power without curtailment or interruption during the five years since that time at a substantial saving to the public.

(4) By withholding "over $900,000 of payments due to Penn Water."

There is no testimony in any case relating to this contention.

As stated in Consolidated's brief below, Consolidated intervened in the FPC rate case (1) to protect its share of cheap Safe Harbor power; (2) to obtain whatever rate reduction might be ordered by FPC; and (3) to have FPC determine the reasonableness of Penn Water's mounting

rate case expenses which then and now are billed to Consolidated as an operating expense. Consolidated had reimbursed Penn Water to the extent of $194,000 of these expenses when, becoming alarmed at the profligacy of Penn Water's rate case outlays, it sought the protection of an authoritative determination by FPC as to their reasonableness, *vel non*. In its order of January 5, 1949, FPC declined to determine this issue, saying:

> "The Intervener, Baltimore Company, has petitioned the Commission to determine an allowable amount of rate case expense (with respect to these proceedings) that Respondent, Penn Water, may charge Baltimore Company under contract between them. * * * Intervener's liability, if any, for such an item relating to past transactions, is a contractual one, which is determinable either under the arbitration procedure provided by the contract, or by proceeding in the courts." (8 F. P. C. at pp. 81-2, R., Vol. 16, p. 4960).

On June 30, 1949, Penn Water sued Consolidated in the United States District Court for the District of Maryland (Civil No. 4610) for $1,204,300.41, which was the amount Consolidated up to that time had withheld for this reason from Penn Water's billings, representing Penn Water's rate case expenses up to that time in excess of the above-mentioned $194,000 which Consolidated had paid. Since that date, Penn Water has billed Consolidated well in excess of one million dollars for additional legal expenses, not only in its rate case proceedings, but in its several suits for the invalidation of the Penn Water and Safe Harbor Contracts. Consolidated has established contingent reserves for payment of such rate case expenses pending the ultimate authoritative determination of their reasonableness. It does not believe, as Penn Water contends, that Penn Water's expenses in breaking the Baltimore and Safe

Harbor Contracts are collectible by Penn Water as an "operating expense."

This bona fide effort by Consolidated to protect its customers against the imposition of extravagant charges by Penn Water is cited by Penn Water as an example of Consolidated's "oppressive powers."

Civil No. 4610 has never been tried.

(5) By "prohibiting" in 1948 its construction of a steam plant which could have used "free" river coal, and by insisting, instead, "not only on preventing this source of competition from Penn Water but also on building a new steam plant of its own in Baltimore, to be fueled with the more expensive bituminous coal bought in the market" (Penn Water Brief (P. W. Br.) pp. 14-15).

There is likewise no testimony in any record in any case regarding this contention, yet the Fourth Circuit completely accepted Penn Water's untried proffers in the Baltimore Contract case, and makes this entirely unfounded assertion in its opinion, which is cited by Penn Water as authority for its accusation and which was adopted by Judge Miller in his dissent below!

What are the facts?

In 1948, Penn Water proposed a $17,000,000 capital expenditure at Holtwood for the installation of 66,000 kw additional steam-electric capacity, including coal recovery and processing facilities. Based on the actual cost of a unit which it had just completed, Consolidated estimated that it could install a more efficient 75,000-kw unit at a cost of less than $11,000,000. Penn Water urged that the $6,000,000 *additional cost* for the 9,000 kw *less capacity* would be justified in savings in operating costs through the use of "river coal," i.e., fine particles of anthracite coal which accumu-

late with other sediment in the pools above the dams. Penn Water's proposal included the construction of a $6,000,000 plant for the cleaning and separation of this river coal. Consolidated accepted Penn Water's estimates for its proposed boilers and generators, but such a coal-treating plant has never been built and had not even been engineered when Penn Water asked Consolidated to underwrite the project and, by approving it, to assume the obligation until 1980 to pay all of its expenses and depreciation, and a return on the plant.

Penn Water's proffers regarding the economies of "free" river coal, which the Fourth Circuit accepted in full, without so much as a word of testimony or argument thereon, and which Judge Miller likewise adopts in the dissent below, completely ignores the very heavy costs of dredging, transporting, processing and, in general, making such river coal usable. This includes the cost of providing special river-dredging equipment, barges, provision for their winter storage and protection against ice, unloading piers and handling equipment, equipment for transporting coal-bearing silt to the separating and cleaning plant, the facilities in such plant for desliming classifiers, thickeners, clarifiers, silt-refuse and water pumps, vibrating screens, washing tables, flotation cells, dewatering screens and centrifuges, the provision for large storage areas for disposal of the separated silt and dikes to prevent its re-entry into the river, the transportation of the silt by pipe line to such area and transportation of the separated coal to a dewatering plant, loading equipment at the latter point, and the provision of extensive railroad coal-car storage and loading-yard siding facilities, the cost of railroad transportation from such point 8 miles to the Holtwood steam plant, its unloading and storage at that point, and its subsequent treatment and drying before actual consumption in the

boilers, together with the costs of operating and maintaining this extensive equipment.

River coal is anything but "free"!

For some years Consolidated has been required to add about one steam-electric generating unit a year to provide for its increasing load. When Penn Water made this proposal, Consolidated asked Penn Water for additional engineering data on the coal-treating plant, estimated coal accumulations in the river, railroad transportation costs, etc. This information was not forthcoming in such form as to provide a basis for any engineering recommendation or sound cost estimate. Penn Water has no obligation to provide any additional plant for the public service — Consolidated has. In response to that obligation, and in the absence of essential engineering data on such a huge pioneering venture, as well as in the absence of any commitment from Penn Water that it could have its plant installed in time for, or that its output would be available for, Consolidated's increased system load, Consolidated was forced to proceed with the ordering of its next unit and informed Penn Water that it could not approve and thereby underwrite to 1980 the $17,000,000 expenditure without more adequate engineering data. It again requested such data so that the studies could proceed in connection with the unit to be ordered the following year. Penn Water refused to discuss the project further.

None of this information was before the Fourth Circuit or before the Court below. Penn Water's unfounded charge colored the Fourth Circuit's opinion and the dissent below, and the effort is here made to have this accusation affect the conclusions of this Court. The only record reference which Penn Water makes in support of these accusations is to the opinion of the Fourth Circuit.

3. THE PENN WATER RATE ORDER OF FPC

Penn Water contends that by the Orders here assailed, FPC (a) compelled Penn Water to perform an illegal contract, and (b) based its rate order on Penn Water's continued performance of such contract.

The record does not support this contention. FPC avers that its Orders had no such purpose or effect, and in its Safe Harbor Contract opinion the Fourth Circuit fully concurs, saying, "It is obvious that the Commission did not prescribe the restrictive conditions of the contract as part of the rate order * * *."

When Penn Water in its petition for rehearing of the FPC rate reduction order for the first time raised the issue with that Commission of the invalidity of the Baltimore and Safe Harbor Contracts, FPC, in its Order denying rehearing (1) pointed out the great public benefits produced by the physical, integrated, and coordinated operations of hydro and steam, quoting Penn Water's own assertions to that effect,[20] (2) stated that such physical regional integra-

---

[20] FPC there states:

"Penn Water has consistently in its representations to its stockholders and to regulatory authorities explained and emphasized the results and importance of the pooling arrangements. Thus in its 1941 Report to Stockholders it said:

" 'Coordinated operation of this pool of power means that each member not only has available in emergency the combined resources of the interconnected systems, but also derives through daily and seasonal interchange arrangements the benefit which arises from the use of the most economic sources of generation for supplying the power requirements of the pool. A further benefit flows from the possibility of planning generating-capacity additions of the most economic type and size with consequent reduction in the amount of unused reserve capacity that would occur were the systems uncoordinated. Thus the regional transmission network of the Pennsylvania Water & Power Company has multiple purposes, and energy continually flows in, across, and out of it as the needs of the interconnected members develop from minute to minute and day to day.' "
(8 F. P. C. at p. 174, R., Vol. 16, p. 5182.)

tions of facilities is precisely what is sought to be fostered by the Federal Power Act;[21] (3) stated that the validity of its Order is not dependent on questions as to the validity of the contracts,[22] *because* (4) its orders related to rates and services applicable to the continuing *physical operation* of the interconnected physical *system*.[23]

When this issue was again presented to the Commission by Penn Water's Preliminary Statement to its filing of new rate schedules (R., Vol. 17, p. 5253), the Commission yet again emphasized the fact that (1) it was not ordering Penn Water to perform any unlawful provision, and (2) that its orders were limited to prescribing only those tariff provisions defining the physical services to be furnished. The Commission there said (R., Vol. 17, p. 5283):

> "The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classifica-

[21] "The regional integration and coordination of facilities, the resulting economies, and the utilization and conservation of natural resources thus achieved are precisely what was sought to be encouraged and fostered by the Federal Power Act and established as a part of the criterion of the public interest to be served by regulation thereunder (Cf. Section 202(a))." (8 F. P. C. at p. 175, R., Vol. 16, p. 5184).

[22] "If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions." (8 F. P. C. at p. 175, R., Vol. 16, p. 5184). This conclusion was accepted by the Court below, and by the three-judge District Court for the Middle District of Pennsylvania (99 F. Supp. 151).

[23] "In our opinion and order we took care to leave the continuation of the operation of the integrated and interconnected system in full effect, merely changing the rates. * * *." (8 F. P. C. at p. 175, R., Vol. 16, pp. 5184-5185).

tion, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force."

As will be seen, *infra*, pp. 31 *et seq.*, the Fourth Circuit (assuming its jurisdiction to do so) invalidated the Baltimore Contract solely because it contained Articles IV and V. Article IV placed restrictions on Penn Water's making new contracts which would commit Consolidated to "firming up" or other obligations. Article V placed restrictions on Penn Water's plant expansions on which Consolidated would have to make payments to Penn Water. Neither of these provisions define the "services to be furnished" by Penn Water under the tariff prescribed by FPC. Moreover, if these two provisions are illegal (which Consolidated submits they are not), they were specifically excluded from FPC's order, which prescribed only those service provisions "in and of themselves lawful."

The Court below fully appreciated that the order of FPC related to the physical operations of the system (which have continued to date without the slightest change, notwithstanding the Fourth Circuit's decisions). As to this, the Court below said:

> "In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligations under the Federal Power Act to continue the then-existing services and rates. It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order" (R., Vol. 18, p. 5375).

Penn Water insists, however, that FPC may not regulate even the continuing physical operations of the system because the "alleged single interstate system (the facilities of Consolidated, Penn Water and Safe Harbor) [was] cre-

ated by the two illegal contracts * * *" (PW Br., p. 16; see also p. 54). It is true that the physical system *resulted* from these contracts, but the physical system is still there, even though the Fourth Circuit has held (we submit, improperly) the contracts to be invalid. And, of sheer physical necessity, this vast system still continues to function and the loads it serves still exist and must be supplied. The river flow still varies widely and unpredictably, lights and motors go on and off, peak and off-peak loads are dispatched for over-all economy, and power flows back and forth in the system just as it always has. It is to this physical operation that the FPC order is directed. And until the physical operations of that system and the tariffs relating thereto are changed in accordance with the requirements of the Federal Power Act, such physical operations must and will continue. Articles IV and V of the Baltimore Contract have nothing to do with it.

In addition, Penn Water contends that the payment provisions prescribed by FPC constitute illegal "revenue pooling." Consolidated favors no special type of payment provision, but the one ordered by FPC is the one which was devised and promoted by Penn Water and which, in this very case — contrary to Penn Water's present contention — was described in the testimony by Penn Water's own officers as being the only method whereby the greatest benefit from the hydro operations could be achieved (R., Vol. 1, pp. 25-26, 69-78).

It is significant that, although Penn Water made this same contention as to "illegal revenue pooling" in both the Baltimore Contract case and the Safe Harbor case, the Fourth Circuit, in neither case, found such payment method to be either pooling or illegal. A guaranteed return for the entire output of a plant is not "revenue pooling."

4. THE BALTIMORE CONTRACT OPINION OF THE FOURTH CIRCUIT.

As noted above, page 10, the Fourth Circuit determined the case on the narrow issue of "validity of the contract on its face." It had substantially no factual record before it, but borrowed heavily from Penn Water's untried proffers. It made no effort to obtain any factual information or advice from FPC. Assuming its jurisdiction to do so, it made the following determinations:

a. The Fourth Circuit found that the Baltimore Contract was invalid solely by reason of Articles IV and V thereof. The District of Columbia Circuit points out this fact in its opinion. Penn Water takes strenuous exception to this statement of the D. C. Circuit (PW Br., pp. 24-5, f.n.), but the Fourth Circuit's own language is conclusive. In its decision of September 30, 1950, in the Baltimore Contract case, the Fourth Circuit said 184 F. 2d 552, 557, 566):

> "The restrictions which are imposed upon the activity of Penn Water by the agreement and give rise to the contention of invalidity are contained in Articles IV and V as follows:
>
> " 'Article IV. So far as possible consistently with the performance of any duty or obligation to serve imposed on Power by its charter or otherwise by law, Power shall obtain the approval of Electric before entering into any agreement or agreements with any other person or corporation for the sale and/or purchase and/or interchange of electrical and hydraulic power and energy, or before making any substantial modifications in the existing contracts now in force between Power and its customers other than Electric.
>
> " 'Article V. So far as possible consistently with the performance of any duty or obligation aforesaid, Power shall obtain the approval of Electric (1) before incurring any single commitment for investment (except for renewals or replacements) in excess of $50,000.00

on the basis of which Electric shall make payment under Article III(b) hereof, and (2) before alienating or disposing of in any one year any property, plant, or equipment, other than stores and construction equipment, having a total value in excess of $50,000.00 and included in the investments of Power and/or subsidiaries of Power in plant, property or power development devoted to the generation, transmission, or distribution of electrical power and energy.'

"* * *

"The District Judge found and it is not disputed that the effect of the quoted provisions of Articles IV and V of the contract is to confer upon Consolidated the power to control * * * [prices, plant extension, territory, and backfeed purchases]."

"* * *

"There can be no doubt that the freedom of action of Penn Water as a public utility of the state has been and is restricted by the provisions of Articles IV and V of the basic agreement * * *."

In its opinion of January 3, 1952, in the Safe Harbor case, the Court said of its above opinion:

"We there held that the contract between Consolidated and Penn Water then in suit, which for convenience may be called the Penn Water contract, was invalid, because Articles IV and V of the basic agreement of June 1, 1931 conferred upon Consolidated the power to control * * * [the abovementioned activities]."[24]

b. The Court then held the entire contract invalid because, *qua* contract, Articles IV and V were inseparable from the rest of the agreement. In its opinion of January

[24] It is of interest to note that "the effect of Articles IV and V" was the specific "illegality" mentioned in Penn Water's Petition to FPC for Rehearing (R., Vol. 16, p. 5012).

10, 1951, in the Baltimore Contract case, the Court said (186 F. 2d at p. 936):

> "* * * These restrictive conditions were included in order to safeguard Consolidated in the performance of its promises and it is conceded that without them the contract would have been impracticable and would not have been made. * * *"

In this regard it should be noted that the Baltimore contract was executed in 1931 before enactment of the Federal Power Act in 1935. Consolidated's protection against its heavy "open end" obligations to Penn Water was at that time solely a *contractual* protection. Such protection was therefore inseparable from the balance of the contract, *qua contract*. Since the enactment of the Federal Power Act, Consolidated has the protection of the broad regulatory power of FPC and consequently, *qua tariff*, Articles IV and V are not necessary.

c. The Court held that FPC had not prescribed the restrictive provisions of the Baltimore Contract.

In its Baltimore Contract opinion, the Court said (184 F. 2d 552, 565, 566):

> "* * * The restrictive provisions of the agreement were not mentioned and their legal validity was not discussed [i.e., by FPC].
>
> "* * *
>
> "* * * Nor do we undertake to gainsay the view of the Commission that even if the restrictive conditions of the basic contract are invalid, as to which the Commission expressed no opinion, it still has the duty and authority under the Federal Power Act to encourage and establish the interconnection of electrical facilities * * *"

In its opinion in the Safe Harbor Contract case, the Court said:

> "It is obvious that the Commission did not prescribe the restrictive conditions of the contract as part of the rate order in either [the Baltimore Rate Order case or the Safe Harbor Rate Order] case."

d. The Court summarily invalidated the contract despite numerous, genuine issues as to material facts.

The Court based its summary judgment primarily on its factual finding of potential competition. In doing so (there being no testimony in the Record), it accepted Penn Water's untried proffers, and the map which is attached to Penn Water's brief herein. This finding is opposed to FPC's position (based upon exhaustive testimony from all parties) on the same factual issue. The Court was oblivious as well to the fact that Consolidated has no charter, franchise, or certificate rights in Pennsylvania, as to the interruptible character of Penn Water's power. In fact, the Court went so far as to point out (R., Vol. 18, p. 5326) that "Penn Water and Consolidated would be potential competitors for the sale of power to Potomac Edison at Frederick, Maryland, whose lines at that point are only a short distance from the lines of Penn Water so that they could easily be connected." This is another instance of a statement made by the Court on the basis of Penn Water's untried proffer. The Court was entirely unaware of the fact that this possibility had been discussed by Penn Water's and Consolidated's engineers and abandoned as impracticable because the existing power resources of Potomac Edison to the west made it economically unfeasible to provide at heavy expense the interconnection facilities. No testimony on this point has been given in any case.

The Fourth Circuit overlooks entirely the non-competitive character of the field, and that for many years Potomac Edison, Potomac Electric Power Co., Metropolitan Edison, Philadelphia Electric, Pennsylvania Power & Light, and Consolidated have operated as State-regulated monopolies. There is no practical probability that Penn Water would be authorized by the Pennsylvania Commission, or by the Maryland Commission to enter any of the territories now adequately served by those companies. (Cf. *Panhandle Eastern Pipe Line Co. v. Michigan Public Service Comm'n.*, 341 U. S. 329 (1951).

e. The Court stated that its judgment directly affected the FPC rate-reduction Order.

In the Baltimore Contract case, the Court said (184 F. 2d 552, 568):

> "* * * It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electric energy between them may be continued by some method that would meet the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania. That question is not before us. * * *"

In the Safe Harbor Contract case, the Court said:

> "Further proceedings before the Federal Power Commission will doubtless be necessary if it is ultimately decided that the three party basic contract, as well as the two party basic contract, is invalid; but that course need not involve embarrassment. The problem of the Commission would then be to devise a plan which will effectuate the purposes of the Federal Power Act and at the same time conform to the anti-trust statutes."

The Court erred in summarily striking down the contract, in view of the exclusive primary jurisdiction of the Federal Power Commission to determine the disputed factual issues of potential competition, price fixing, devision of territories, actual approval by the Pennsylvania Commission, and other issues relevant to the validity of the contract, which were alleged by Penn Water and summarily determined by the Court without testimony thereon. The Court erred because of conflict between the Court's factual findings and findings of FPC in the instant case, and because of the Court's refusal to apply the legally applicable Rule of Reason. This error is discussed in the Argument *infra*, p. 72.

The denial by this Court of certiorari in that case "lends no support to the decision" of the Fourth Circuit in that case.[25]

5. THE SAFE HARBOR CONTRACT OPINION OF THE FOURTH CIRCUIT

It should be remembered that the Safe Harbor Contract, except as to rates, had, by Opinion No. 143 and order of November 4, 1946, been prescribed in its entirety by FPC as Safe Harbor's filed tariff (5 F. P. C. 221). This order was affirmed by the Third Circuit (which found the contract to be "exemplary") in 179 F. 2d 179 (1949), Cert. den. 339 U. S. 957 (1950).

The Safe Harbor Contract was, likewise by summary judgment (again assuming the Court's jurisdiction to do so), held to be "invalid on its face" despite the existence of material issues of fact.

Four minor provisions in the contract, not one of which had in over 20 years been of any significance or had any

[25] See Memo of Mr. Justice Frankfurter in denial of certiorari in *Agoston v. Commonwealth of Pennsylvania*, 340 U. S. 844 (1950).

practical effect, were found to make the entire agreement *per se* illegal.

The provisions so held illegal are these. Article IIIa required Safe Harbor to *expand* its plant when *both* of its owners reasonably request it to. Article IIIa also in effect gave its two owners an option on output from such plant expansion. Both of these provisions are academic because even Penn Water's officers agree that the present Safe Harbor Plant utilizes all of the river flow up to 65,000 cubic feet per second; that flow exceeds that amount on an average of only 54 days a year; and that the installation of additional generators would not be economically feasible. Article IV, properly read in its context, prevents only such separate agreements between Safe Harbor and either one of its two owners as would injure the over-all efficiency of the operation. Article XIV provides for an "Operating Committee" for "investigation, consultation and advice," but with no powers to *bind* Safe Harbor.

a. On the basis of these ancillary and academic provisions—which in 20 years had never been invoked, — the contract was *summarily* stricken down in its entirety (assuming the Court's jurisdiction to do so), even in the face of Consolidated's affidavit that the provisions were immaterial, separable, and the contract fully operable without them.

b. As in the Baltimore Contract case, the Court found that FPC had not prescribed the restrictive provisions, despite FPC's contention that in this, the Safe Harbor case, it actually had.

c. The Court also found that its judgment directly affected the FPC-prescribed Safe Harbor tariff, saying:

> "Further proceedings before the Federal Power Commission will doubtless be necessary if it is ultimately decided that the three party basic contract

> [Safe Harbor Contract], as well as the two party basic contract [Baltimore Contract] is invalid; but that course need not involve embarassment."

d. It expressed disagreement with the opinion of the Court below in the case at bar as to the relationship between the antitrust laws and the Federal Power Act.

The Court condemned the contract under the Pennsylvania Public Utility Law (apparently the section authorizing transfers of franchises, etc., only *with Commission approval*) although at the outset of its opinion the Court said:

> "These two utilities [Consolidated and Penn Water] are its [Safe Harbor's] only customers under an arrangement *approved by the Pennsylvania Commission.*" (Emphasis added.) (Pamphlet copy of Opinion, pp. 4-5.)

Consolidated submits that the Fourth Circuit was in error in invalidating this contract, which had been prescribed in its entirety by FPC as a tariff and affirmed by the Third Circuit. Even though that Court's decision in the Baltimore Contract case were admitted to be correct, which it is not, and that the Fourth Circuit had jurisdiction, which it did not, the Court was in error in striking down the Safe Harbor Contract because of the entirely different nature of provisions of the latter contract, e.g.: its creation of a new project; the physical limitations on the expansion of that project; the charter and franchise and certificate limitations on Safe Harbor; the approval of the Safe Harbor project by the Pennsylvania Commission, and its approval of the sale of Safe Harbor's output to its two owners (which latter approval is actually stated by the Fourth Circuit in its Safe Harbor Contract Opinion). The Court erred in summarily striking down this contract because

of the exclusive primary jurisdiction of the Federal Power Commission to determine the disputed factual issues of potential competition, price fixing, and other issues material to the validity of the contract, as well as issues as to the Safe Harbor Contract's separability from the Baltimore Contract, and the separability of its own immaterial and academic "restrictions" on the balance of the contract. This error is discussed in the Argument, *infra*, pp. 69-73.

Consolidated and the Maryland Commission have petitioned this Court for certiorari in the Safe Harbor Contract case, which are Cases 611 and 612 in the current term of this Court.

6. THE PRACTICAL RESULTS OF PENN WATER'S OBJECTIVES

Penn Water contends that the Baltimore and Safe Harbor Contracts have been destroyed and that the FPC rate reduction order has consequently been annulled. Nowhere does Penn Water suggest the obvious argument that if the FPC order, prescribing a *new* tariff which *excludes* Articles IV and V, is unlawful, then, *a fortiori*, Penn Water's *present* filed FPC tariff, which *includes* those Articles, is also unlawful. Penn Water has furnished services to Consolidated from 1931, and is now furnishing such service under the present filed tariff. Thus, Penn Water actually is asking this Court to create a complete regulatory "vacuum", as Judge Miller's dissent suggests. This vacuum presumably would continue until such uncertain time in the future as Penn Water might file and FPC might approve a new tariff or until a new tariff would be imposed on Penn Water by FPC.

Or does Penn Water's silence on this aspect of the case indicate that, if successful here, it would insist on the full effectiveness of its present filed tariffs despite its inclusion

of all of the alleged "restraints"); claim the right to retain the excess charges impounded by it since February 1, 1949 under the $1,954,261 rate reduction order; and continue collecting such excessive rates until the establishment of a new tariff? Penn Water states that final determination of any new schedules will only be achieved after "confusion and delay" and "probably after several appeals" (PW Br., p. 41).

7. CONSOLIDATED'S POSITION

Consolidated did not originate the present arrangement. Over the years it has cooperated with Penn Water, at the latter's solicitation, in making Penn Water's and Safe Harbor's fluctuating output 100% marketable and in building up a physical system, the efficient operation of which in the public interest has been acclaimed not only by Penn Water, but by Commissions and Courts alike.[26] Consolidated has planned its own facilities in coordination with that system, and has provided many millions of dollars of plant and equipment at Baltimore both to "firm up" the unfirm hydro and to receive delivery thereof.

It believes that the present operations of the system are highly beneficial to the public. FPC regards them as so beneficial as to have prescribed their continuance. The Fourth Circuit admits that they are "practicable and successful".[27] Consolidated has continued to "firm up" Penn Water's hydro and to operate its own facilities so there will be no interruption to or curtailment of the public service—notwithstanding the Fourth Circuit's decisions.

[26] R., Vol. 1, pp. 25-27, 31-32, 75-77; Opinion 173, 8 F. P. C. 1, 14; Opinion 173-A, 8 F. P. C. 170, 174-176; *Safe Harbor Water Power Corp. v. FPC* (CA 3, Dec. 30, 1949), 179 F. 2d 179, 199.

[27] *Consolidated Gas Electric Light & Pr. Co. et al. v. Penn Water & Pr. Co. et al.* (CA 4, Jan. 3, 1952). Pamphlet copy furnished by Petitioners, pp. 12-13.

It holds no brief for any special type of system arrangement, and assuredly will not (as Penn Water suggests it may — PW Br., p. 53) abruptly stop its receipts or deliveries of power.

Its primary concern remains what it was before FPC and the Court below — the protection of its share of cheap Safe Harbor power.

Having made possible the Safe Harbor project, borne the burden of that project during the many years when power was in excess supply, and having provided the expenditure of millions of dollars for the receipt at 220,000 volts, and transformation of Safe Harbor power, it has sought to retain what the Fourth Circuit itself in the Safe Harbor Contract case, has called its "rightful entitlement in Safe Harbor's production", "its ownership in the power purchased of Safe Harbor", its "share".

The Fourth Circuit's assurance to Consolidated of Penn Water's "desire to continue to supply electric energy to Consolidated" (R., Vol. 18, p. 40) was based on a similar assertion to that Court which Penn Water repeats at page 26 of its Brief in Opposition to Certiorari in the Safe Harbor Contract case Nos. 611 and 612 of the current term. Even were this offer a binding commitment, it is no more than an offer by Penn Water to retain all that part of Consolidated's ⅔ interest in Safe Harbor's output which Consolidated has, upon being compensated therefor, permitted Penn Water physically to divert into Pennsylvania. Penn Water's present "offer" is to continue the diversion, but to stop any compensation to Consolidated for it. This is what Penn Water calls "the same *services* Consolidated has been receiving". The Fourth Circuit could hardly have approved this offer had it understood it.

8. CHEAP SAFE HARBOR POWER

The Safe Harbor plant is modern, efficient, and was built very cheaply at the depth of the Depression in 1930-31. It has nearly twice the capacity of Penn Water's Holtwood hydro and steam plant with approximately the same investment.

Penn Water has attacked Consolidated's share in Safe Harbor's output for three reasons: (1) to avoid FPC jurisdiction over alleged "joint sales" by Penn Water and Safe Harbor (PW Br., p. 8). (This contention was found "wholly without substance" by the Commission, R., Vol. 16, pp. 4862-4863, Vol. 17, p. 5269, and by the Court below, 193 F. 2d Adv. Sh. at p. 245, R., Vol. 18, p. 5391, but is renewed here (PW Br., p. 56)); (2) to annul the entire FPC rate reduction order; and (3) to aid the physical diversion into Pennsylvania of cheap Safe Harbor power so that it may be combined with Penn Water's own more expensive power.

In its brief in the Court below, Consolidated's argument was directed primarily at the preservation of its ⅔ share of Safe Harbor output, pointing out the repeated confirmation of that right by Safe Harbor, by Penn Water, by Penn Water's Pennsylvania customers, by the FPC, by the United States Court of Appeals for the Third Circuit, and by all of the affirmative testimony in this case. The Court below fully sustained Consolidated's position.

Consolidated's basic concern in this entire litigation has been and remains the protection of its ⅔ share of the cheap Safe Harbor hydro.

In the Safe Harbor Contract case, Consolidated's affidavits in opposition to summary judgment showed that the incidental "restraints" in the Safe Harbor Contract had not come into operation in 20 years; were of no significance in

the operation of the Safe Harbor plant; that such plant cannot now be economically enlarged; that such academic "restraints" are of no importance to continued operations under the contract; that in this respect (and others) they have no resemblance to Articles IV and V of the Baltimore Contract, and that they are clearly severable. Penn Water, however, insisted on invalidation of the entire contract, which, of course, included the very material contractual division of Safe Harbor output ⅔ to Consolidated and ⅓ to Penn Water.

Nowhere does Penn Water attack the validity of a tariff which prescribes that Consolidated shall be entitled to ⅔ of Safe Harbor's output and Penn Water to ⅓. Nowhere has the Fourth Circuit found such a provision invalid, whether in a tariff or in a contract. On the contrary, in the Safe Harbor Contract case, the Fourth Circuit adopted the language of the District Court in referring to this "share" as Consolidated's "rightful entitlement".

SUMMARY OF ARGUMENT

I. *The Fourth Circuit Had No Jurisdiction To Annul Either the Prescribed and Affirmed Safe Harbor Tariff or the FPC Order Prescribing the Penn Water Filed Tariff as Amended.*

The Fourth Circuit had no jurisdiction summarily to strike down, directly or indirectly, in a collateral action to which the Federal Power Commission was not a party, a tariff prescribed by that Commission and affirmed by the Third Circuit with certiorari denied (the Safe Harbor tariff), or an order of that Commission which prescribed a filed tariff as amended (the Penn Water tariff). The Fourth Circuit had no jurisdiction summarily, and without preliminary resort to the primary jurisdiction of the Federal

Power Commission, to pass on the validity of service contracts the provisions of which, as amended, were prescribed in whole (the Safe Harbor Contract) or in part (the Baltimore Contract) as tariffs by FPC. *Far East Conference, et al. v. United States of America & Federal Maritime Board* (March 10, 1952), No. 15 Misc., Oct. Term, 1951.

Such FPC orders, after protracted investigations and hearings, and affirmance as to the Safe Harbor tariff, by the Third Circuit, should conclusively establish that the contract provisions are not unlawful *per se* on their face, as the Fourth Circuit purported to find, and are strongly persuasive as to their lawfulness under the Rule of Reason. Such issue, in any event, is subject to FPC's primary jurisdiction.

II. *The Federal Power Commission Had Authority to Prescribe the Tariff.*

The Federal Power Act empowers the FPC to order physical connections between utilities, the sale and exchange of energy between them, to prescribe the terms and conditions of the arrangements to be made between the persons affected by such order, including apportionment of costs, compensation, and reimbursement; to approve dispositions, consolidations, acquisitions or control consistent with the public interest; to determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force and to fix the same by its order; to determine the proper, adequate, or sufficient service to be furnished and fix the same by its order, and to bring actions to enjoin violations of the Act or orders of the Commission, or to compel compliance.

Under such powers of "comprehensive and detailed regulation", the Federal Power Commission had ample authority to prescribe the tariff here assailed by Petitioners.

Moreover, the Sherman Act does not apply to tariffs prescribed by the Federal Power Commission even assuming that such tariffs prescribe (which they do not) actions which would be unlawful under an independent contract between private parties. *Parker v. Brown*, 317 U. S. 341 (1943).

III. *The Federal Power Commission Has Primary Jurisdiction.*

Under its comprehensive authority, the Federal Power Commission has primary jurisdiction to ascertain and interpret the circumstances underlying legal issues, and to determine questions essential to the proper determination of the lawfulness of its own orders and of the tariffs which it prescribes. *United States Navigation Co., Inc. v. Cunard S.S. Co., Ltd.*, 284 U. S. 474 (1932); *Macauley v. Waterman S.S. Corpn.*, 327 U. S. 540 (1946).

The disputed but untried factual issues of "potential competition", alleged "restraints", separability, system operations, and similar questions within this field of government-regulated monopoly, all within the expert competence of the Federal Power Commission, should not have been summarily decided by the Fourth Circuit (as they were) without either evidence thereon or reference to the Federal Power Commission.

IV. *The Federal Power Commission Prescribed a Lawful Tariff.*

The Federal Power Commission orders here assailed by Petitioners prescribe a tariff, and do not, as contended, constitute a blanket authorization to private parties to enter into or continue independent contracts at their "whim". The cases cited by Penn Water with reference to laws which authorize private parties independently to negotiate con-

tracts, and which exempt from the Sherman Act the contracts so privately negotiated are thus not in point. The Federal Power Commission orders prescribed a tariff applicable to continuing physical operations which would not be, and were not, affected by any determination of the 11th-hour question raised by Petitioners, long after the record was closed, as to the lawfulness of service contract provisions. The Fourth Circuit's decision that Articles IV and V of the Baltimore Contract are unlawful (assuming the Fourth Circuit's jurisdiction so to find) does not annul the tariff prescribed by FPC which excluded those provisions.

Consolidated is required to pay for and is entitled to ⅔ of the output of the Safe Harbor plant under the Safe Harbor filed tariff which was prescribed in its entirety by the Federal Power Commission,[28] affirmed by the Third Circuit,[29] and cert. denied.[30] The prescribed apportionment based on this tariff entitlement was lawful and, under the doctrine of the "filed tariff", cannot be collaterally attacked. *Montana-Dakota Utility Company v. Northwestern Public Service Co.*, 341 U. S. 246 (1951); *Keogh v. C. & N. W. R. Co.*, 260 U. S. 156, 161-162 (1922). No Court or Commission has found such entitlement to be unlawful. The allocations under the Penn Water tariff are based on complicated, technical considerations involved in the integrated operations of the interstate electric system, and Consolidated's obligation (not shared by Penn Water's other customers) to provide steam-electric generating capacity with which to "firm up" Penn Water's unfirm, unreliable run-of-river hydro-power. The question of allocations is one of fact to be determined at the administrative level. *Colorado Interstate Gas Company v. FPC*, 324 U. S. 581, 589-591 (1945).

[28] 5 F. P. C. 221 (1946).
[29] 179 F. 2d 179 (1949).
[30] 339 U. S. 957 (1950).

Allocation of a rate reduction does not affect the total amount of the reduction, and Penn Water's other customers have not complained.

The prescribed payment provisions are lawful. No Commission or Court has found them otherwise. Consolidated did not originate them, and, in this case, Penn Water's officers urged them upon the Commission as the only practical means of effecting full economic utilization of Penn Water's hydro facilities.

The payment provisions are not revenue pooling. There is no division of gross or net earnings, nor formula for division or pooling of any kind. This same argument was made unsuccessfully before the Fourth Circuit and before the Court below.

V. *FPC Did Not Authorize An Unlawful Contract.*

The FPC orders prescribed a tariff; they did not authorize a private contract.

The cases cited by Penn Water in support of the proposition that *private parties* cannot generally be granted immunity from the anti-trust laws, and cannot be authorized to enter into *private contracts* in violation of such laws, have no application to a tariff prescribed by FPC. But even if this were not so, the Fourth Circuit clearly erred in summarily striking down on their faces the Safe Harbor and Baltimore Contracts. The Safe Harbor Contract was a means of creating the entirely new Safe Harbor project, and for the sale to its two owners of its output in proportion to their ownership. Its provisions were fully known to the Pennsylvania Commission, the Maryland Commission, and FPC. Even now, the Pennsylvania Commission forbids the resale of Safe Harbor power by Penn Water to the public. After 20 years, Penn Water, as part of its effort to

avoid the FPC rate reduction against it, assailed the Safe Harbor Contract because of minor and ancillary alleged "restraints" in that contract which had never been of any significance, and which Consolidated pointed out were readily severable.

Despite the fact that this contract constituted Safe Harbor's filed and prescribed FPC tariff which had been affirmed by the Third Circuit and as to which certiorari had been denied by this Court, the Fourth Circuit summarily and without any testimony or referral to FPC found it invalid, *per se*, under the Sherman Act, without any determination of its reasonableness under the Rule of Reason.

Entirely apart from Safe Harbor's charter, franchise, certificate, and physical limitations to the generation of unreliable "run-of-river" hydro and the sale of its entire output to its two owners, the Fourth Circuit determined that this newly-created source of power must compete with its two owners. No decisions of this Court support any such ruling. For many of the same reasons, the Fourth Circuit erred in summarily striking down the Baltimore Contract.

These contracts, moreover, enabled both Penn Water and Safe Harbor to make full utilization of their hydro facilities, assured them of substantial income throughout the Depression (during which they were executed), and afterwards made possible in the case of Penn Water, the payment of very large dividends as well as the amassing of a substantial surplus, with the full knowledge and approbation of its stockholders and of the Pennsylvania Commission. They provide no ground for their summary invalidation by the Fourth Circuit under the Laws of Pennsylvania.

ARGUMENT

I.

The Fourth Circuit Had No Jurisdiction to Annul Either the Prescribed and Affirmed Safe Harbor Tariff or the FPC Order Prescribing the Filed Penn Water Tariff as Amended.

This case presents for review Orders of the FPC prescribing a tariff.

The Petitioners attack the tariff so prescribed on the ground that it has been annulled by judgments of the Fourth Circuit in collateral actions to which FPC was not a party.

Under the recent decisions of this Court in *Far East Conference, et al. v. United States of America and Federal Maritime Board* (March 10, 1952),[31] the Fourth Circuit had no jurisdiction to strike down, directly or indirectly, in a collateral action to which FPC was not a party, any tariff either approved or prescribed by FPC. That case clearly decides that the Fourth Circuit lacked power even to rule on the validity of the service contracts, *qua contracts*, without "preliminary resort" to FPC because of that Commission's primary jurisdiction over and its specialized experience and knowledge in this entire field.

Assuredly, the Fourth Circuit had no jurisdiction to strike down the Safe Harbor tariff which FPC had prescribed (5 F. P. C. 221), which the Third Circuit had affirmed (179 F. 2d 179), as to which certiorari had been denied by this Court (339 U. S. 957), and under which services continue to be supplied. But the Fourth Circuit purported to do exactly that in the Safe Harbor Contract case, in which petitions for certiorari are now pending before

[31] No. 15 Misc., October Term 1951, 20 L. W. 4207.

this Court in Case Nos. 611 and 612 of the current term. And that is exactly what Petitioners here contend that the Fourth Circuit did do.

Assuredly, the Fourth Circuit had no jurisdiction to strike down the Penn Water tariff which had been on file with FPC since 1936; which, as amended, was prescribed by FPC by the orders here assailed; and under which services continue to be supplied. Yet that is exactly what the Fourth Circuit purported to do in the Penn Water Contract case. And that is exactly what Petitioners here contend the Fourth Circuit did.

If, as decided in the *Far East Conference* case, the administrative board or commission has primary jurisdiction with respect to the legality of tariffs which have *not* been filed, *a fortiori* in this case, it has primary jurisdiction with respect to a tariff which has not only been filed, but which has been prescribed in its entirety (with rate reduction), and affirmed on appeal (the Safe Harbor tariff), or which has been filed and prescribed as amended (the Penn Water tariff).

In both the Baltimore Contract case and the Safe Harbor Contract case, the Fourth Circuit purported summarily to strike down, as unlawful on its face, a tariff which FPC had prescribed after protracted investigations. Without so much as an inquiry to FPC as to the fundamental factual issue of the existence of "potential competition" (which FPC, the Maryland Commission, and Consolidated all deny), that Court accepted Penn Water's untried proffers and purported to strike down the tariffs because they "restricted" that non-existent "potential competition". The Fourth Circuit refused to consider the effect of FPC's orders in this field of Government-regulated monopoly even as *prima facie* evidence that the assailed provisions were not

unlawful, *per se*. It refused to consider the effect of FPC's orders as evidence that the assailed provisions are lawful under the Rule of Reason, and desirable in the public interest.

Judge Miller's dissent asserts that the Fourth Circuit's opinion actually struck down as unlawful the physical integrated, interstate electric system, saying:

> "Welding the facilities of the two companies into one integrated system — the Commission's objective — is not conducive to competition" (R., Vol. 18, p. 5412).

The Commission, on the contrary, found that such:

> "* * * regional integration and coordination of facilities, the resulting economies, and the utilization and conservation of natural resources thus achieved are precisely what was sought to be encouraged and fostered by the Federal Power Act and established as a part of the criteria of the public interest to be served by regulation thereunder" (8 F. P. C., at p. 175, R., Vol. 16, p. 5184).

It is submitted that under the well-established doctrine of primary jurisdiction, the Fourth Circuit was without jurisdiction to take any collateral action which would affect, directly or indirectly, the tariffs or orders promulgated by FPC, and that in so far as Petitioners' attack on the orders of FPC are based on their collateral actions in the Fourth Circuit, that attack must fail. The primary jurisdiction of FPC, under its sweeping statutory powers of regulation, prevents collateral nullification of its orders and tariffs. The decisions of the Fourth Circuit which Petitioners here seek to use to that end are completely ineffective for that purpose.

The primary jurisdiction of the FPC (considered more fully, *infra*, pp. 55 *et seq.*) disposes of the question which

Penn Water asserts is "the primary issue in this case" (PW Br., p. 3).

The entire balance of this Argument, which is in response to Penn Water's Argument, should therefore be considered in the light of, and subject to, this fundamental jurisdictional principle. Notwithstanding that the actions of the Fourth Circuit will hereinafter be discussed, *arguendo*, as though made by a Court of competent jurisdiction, the total invalidity of such actions should dispose of Petitioners' case on this main issue without further argument. What follows is submitted to demonstrate that the Petitioners' contentions are erroneous even assuming, *arguendo*, the jurisdiction of the Fourth Circuit in the premises.

II.

The Federal Power Commission Had Authority to Prescribe the Tariff.

Penn Water seeks to minimize the broad authority of the Federal Power Commission under the Federal Power Act[32] by repeatedly referring to the "mere general regulatory provisions" of that Act (PW Br., pp. 21, 25, 28, 32), and by asserting that it contains only "ordinary regulatory provisions" (p. 35). On the contrary, the Court below correctly points out (R., Vol. 18, pp. 5371, 5373) that Congress in the Federal Power Act "has substituted [for competition] a regulatory agency authorized to supervise almost every phase of the regulated company's business", and has provided "for comprehensive and detailed regulation * * *".[33]

---

[32] Title II, Public Utility Act of 1935, Secs. 202-209, 301-20, Chap. 687, 49 Stat. 803, 838; 16 U. S. C. Secs. 791-825.

[33] *First Iowa Hydro-Electric Coop. v. FPC*, 328 U. S. 152, 164 (1946); *FPC v. Arizona Edison Co., Inc.* (CA 9, Feb. 12, 1952), — F. 2d — (not yet reported).

As examples of the broad authority granted to FPC, it will suffice merely to refer to a few provisions of the Act.

Section 202(b) (16 U. S. C., sec. 824a(b)) of the Act empowers the Commission to order physical connections between utilities and the sale or exchange of energy between them and to "prescribe the terms and conditions of the arrangement to be made between the persons affected by any such order, including the apportionment of costs between them and the compensation or reimbursement reasonably due to any of them".

Section 203(a) (16 U. S. C., sec. 824b(a)) authorizes FPC to approve any "disposition, consolidation, acquisition, or control" which is "consistent with the public interest".

Section 206(a) (16 U. S. C., sec. 824e(a)) authorizes the Commission to "determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force" and to "fix the same by order".

Section 207 (16 U. S. C., sec. 824f) authorizes the Commission, subject to certain conditions, to "determine the proper, adequate, or sufficient service to be furnished", and to "fix the same by its order, rule or regulation".

Section 314(a) and (b) (16 U. S. C., secs. 825m(a) and (b)) empowers the Commission itself to bring an action to enjoin any violation of the Federal Power Act or of any rule, regulation, or order of the Commission thereunder, and to obtain writs of mandamus to compel compliance with the Federal Power Act or any rule, regulation or order of the Commission thereunder.

Under the extensive powers so conferred on FPC by the Federal Power Act, that Commission had ample authority to prescribe the tariff here assailed. Penn Water, how-

ever, eschews any reference to the fact that the order it assails prescribes a tariff. Instead, it asserts that such order was an attempted grant by FPC to private individuals of an immunity from the Sherman Act with respect to their private "contractual arrangements."

On the contrary, the specific operative order here assailed is FPC's Order of October 25, 1949, "Prescribing Rate Schedules" (R., Vol. 17, p. 5267). Consonant with the invalid premise of its argument, the cases cited by Penn Water, e.g., the *Borden*, *Georgia*, and *Alkali* cases[34] (PW Br., p. 20) all relate to the independent actions of private individuals, companies, or associations. None of them is applicable to a tariff prescribed by an administrative agency such as is here involved. In fact, in the Georgia case, this Court carefully limits the effect of its decision to the independent action of private parties and avoids any effect on a filed tariff (324 U. S., at pp. 460-61).

However, even if FPC in its tariff order had prescribed (which it had not) provisions which would be unlawful under the Sherman Act as a private contract between independent individuals, the tariff so prescribed would not be subject to the Sherman Act. This was the holding of *Keogh v. Chicago & N. W. R. Co.*, 260 U. S. 156 (1922), which was reaffirmed by both the majority and dissenting opinions of this Court in the *Georgia* case (324 U. S. at pp. 453, 482).

In *Parker v. Brown*, 317 U. S. 341 (1943), this Court determined that the Sherman Act was a prohibition of individual and not of State action, and that actions which would violate the Sherman Act if made effective solely by virtue of a contract by private persons were not unlawful under the

---

[34] *United States v. Borden Co.*, 308 U. S. 188 (1939); *Georgia v. Pennsylvania R. Co.*, 324 U. S. 439 (1945); *United States v. Alkali Export Assn.*, 325 U. S. 196 (1945).

Sherman Act if such actions derived their authority from legislative command of the State.

Penn Water seeks to distinguish that case (PW Br., p. 39) on the ground that the action there found lawful had been prescribed by a State but that prescription by FPC (which is not a State) would have no such efficacy. This argument is answered by *United States v. Cooper Corporation*, 312 U. S. 600 (1941), in which this Court held that the United States is not subject to the Sherman Act, saying (at p. 607):

> "* * * In §§1, 2, and 3 the phrase designating those liable criminally is 'every person who shall' etc. In each instance it is obvious that while the term 'person' may well include a corporation it cannot embrace the United States."

III.

The Federal Power Commission Has Primary Jurisdiction.

Under such sweeping statutory authority, FPC has, indeed, "comprehensive and detailed" control of this interstate power system, its operations, the parties to it and their relations with each other.

The Court below made the sound procedural determination, under established administrative law,[35] that Petitioners could not present to the Court of Appeals for the first time, as a basis for annulling the FPC's rate reduction orders, questions (a) which Petitioners had ignored during the course of the lengthy hearings before the Commission; (b) which they had subsequently made the basis of a collateral Court proceeding to which FPC was not a party;

---

[35] *Aircraft Diesel Equipment Corpn. v. Hirsch*, 331 U. S. 752 (1947); *Macauley v. Waterman S. S. Corpn.*, 327 U. S. 540 (1946); *FPC v. Metropolitan Edison Co.*, 304 U. S. 375 (1938); *Myers v. Bethlehem Shipbuilding Corpn.*, 303 U. S. 41 (1938).

(c) which the Fourth Circuit in that proceeding decided without regard to FPC's primary jurisdiction; and (d) as to which the Federal Power Act prescribes a proper procedure for presentation in the first instance to the Commission.

In the *Far East Conference* case, *supra*, this Court defines what it calls a "firmly established principle", as follows:

> "* * * in cases raising issues of fact not within the conventional experience of judges or cases requiring the exercise of administrative discretion, agencies created by Congress for regulating the subject matter should not be passed over. This is so even though the facts after they have been appraised by specialized competence serve as a premise for legal consequences to be judicially defined. Uniformity and consistency in the regulation of business entrusted to a particular agency are secured, and the limited functions of review by the judiciary are more rationally exercised, by preliminary resort for ascertaining and interpreting the circumstances underlying legal issues to agencies that are better equipped than courts by specialization, by insight gained through experience, and by more flexible procedure."

The instant case, like the *Far East* case, involves questions clearly within the "general scope" of the administrative commission's jurisdiction. Even the dissent in the *Far East* case stated that:

> "If the rates *were filed*, of course the Board would have exclusive jurisdiction to pass on them." (Emphasis added.)

Here it is not the United States (as it was in the *Far East* case) which contends that the tariff is unlawful, but the very utility which originally filed the tariff and which, by

its present contention of illegality, seeks to annul a rate reduction order as to it.

Assuredly, the factual questions of potential competition, alleged "restraints", separability, the public benefits to be derived from operations of the interstate power system and the relationship of the tariff to such operations, exemplify the very type of technical and complicated "circumstances underlying legal issues" which demand the "ascertaining and interpreting" by an expert body such as FPC. Such issues cannot be, and should not have been, summarily determined by a Court from the face of a contract and a map, as was done in the Baltimore Contract case by the Fourth Circuit (assuming jurisdiction), or on disputed but untried issues of fact and the same map, as was attempted by the Fourth Circuit in the Safe Harbor Contract case, in neither of which cases was FPC a party.

Moreover, this Court regards the doctrine of "primary jurisdiction" as not being confined to questions of fact, but as being applicable to mixed questions of law and fact, and to questions of law with which the administrative agency is peculiarly equipped to deal.[36]

In asking this Court to annul the FPC's orders because of the Fourth Circuit's collateral decisions, without consideration of FPC's views thereon, Petitioners ask this Court to determine an issue which lies within FPC's primary jurisdiction and thereby to contravene the rule laid down in the above cases.

Powell*, 314 U. S. 402, 412 (1941); *Myers v. Bethlehem Shipbuilding Corp., supra; Miles Laboratories, Inc. v. Federal Trade Commission*, 140 F. 2d 683, 685 (1944), cert. den. 322 U. S. 752 (1944).

IV.

The Federal Power Commission Prescribed a Lawful Tariff.

The orders of FPC which reduced Penn Water's rates nearly $2,000,000 a year, by their terms, prescribed a tariff or rate schedule. The attack which is here leveled against those orders carefully avoids any reference to them as tariffs and, instead, assails them as an authorization given to private parties to enter into or continue independent "contractual arrangements" at the "whim" of such private parties. The wide distinction between a prescribed tariff and a private contract is ignored. That the tariff so prescribed is lawful appears from the following facts.

A. The Tariff Was Restricted to Provisions "In and Of Themselves Lawful".

When Penn Water first attacked the rate reduction orders in its petition to FPC for rehearing; on the ground of the alleged unlawfulness of its service contracts, FPC carefully pointed out that it had prescribed a tariff which was limited to provisions relating to physical operations and "in and of themselves lawful", and that only such provisions should "be observed and be in force" (R., Vol. 17, p. 5283)

B. Articles IV and V Were the Only Provisions of the Baltimore Contract Purportedly Found by the Fourth Circuit to be Unlawful "In and Of Themselves".

The many statements in the Fourth Circuit's opinion, quoted *supra* at pages 31 *et seq.*, fully establish this fact (assuming its jurisdiction so to find). The following is but an example:

> "The restrictions which are imposed upon the activity of Penn Water by the agreement and *give rise to*

the contention of invalidity are contained in Articles IV and V * * *" (184 F. 2d at p. 557, R., Vol. 18, p. 5328). (Emphasis added.)

C. Articles IV and V Were Not Prescribed by FPC.

1. If assumed to be "unlawful".

Assuming, *arguendo*, the jurisdiction of the Fourth Circuit to determine this issue, and the correctness of its determination of the unlawfulness of Articles IV and V, they were specifically excluded from the tariff by the language of the FPC order limiting that order to provisions "in and of themselves lawful".

2. Because they do not relate to "any service to be furnished".

The order of FPC carefully pointed out that it had prescribed a tariff which related to services actually being rendered and had ordered only those provisions "prescribing or defining" the "service to be furnished" (R., Vol. 17, p. 5283). Articles IV and V neither prescribe nor define "any service to be rendered", and the FPC order thus, by its terms, excluded them.

3. Because FPC denies they were prescribed.

The FPC itself has denied that it prescribed Articles IV and V. See Memorandum of FPC on petition for certiorari in this case, pages 24, 25.

4. Because the Fourth Circuit (assuming its jurisdiction) so found.

The Fourth Circuit said: "It is obvious that the Commission did not prescribe the restrictive conditions of the contract as part of the rate order * * *."

5. Because service has continued.

The services supplied to Consolidated by Penn Water have continued without change. Neither Article IV nor V is essential to or affects Penn Water's physical operations, its deliveries of electricity, or its rates therefor, as ordered by FPC.

D. The Allocations Prescribed by the FPC Tariff Are Lawful.

Penn Water contends that the FPC allocations are unlawful because they are based on Consolidated's "entitlements" which allegedly succumbed with the contracts. No one contends that the entitlements, as such, are unlawful.

1. The entitlement to ⅔ of Safe Harbor power is established by tariff ordered by FPC.

The Safe Harbor tariff, prescribed by FPC by its order of November 4, 1946 (5 F. P. C. 221), provides that Safe Harbor sell its entire output to its two owners, ⅓ to Penn Water and ⅔ to Consolidated, and requires those two companies to pay all of Safe Harbor's expenses and return in the same proportions.

This tariff was sustained on appeal by the Third Circuit December 30, 1949 (179 F. 2d 179) and certiorari denied by this Court (339 U. S. 957).

2. The doctrine of the "filed Tariff" prevents collateral attack thereon.

This Court recently reaffirmed the well-established doctrine of the "filed tariff" by saying that a customer "can claim no rate as a legal right that is other than the filed rate, whether fixed or merely accepted by the Commission, and not even a court can authorize commerce in the commodity

on other terms". *Montana-Dakota Utility Company v. Northwestern Public Service Co.*, 341 U. S. 246 (1951).

The doctrine that the filed tariff constitutes the only lawful rate and *terms of service* between a utility and its customers, when the filing of such tariff is required by statute, was early established and uniformly recognized in cases involving regulation of carriers by the Interstate Commerce Commission.

Texas & Pacific Ry. v. Mugg, 202 U. S. 242 (1906);
Texas & Pacific Ry. v. Abilene Cotton Oil Co., 204 U. S. 426, 439-449 (1907);
Western Union Tel. Co. v. Esteve Bros. & Co., 256 U. S. 566, 573 (1921);
Davis v. Henderson, 266 U. S. 93 (1924).

And in *Keogh v. C. & N. W. R. Co.*, 260 U. S. 156, 163 (1922), this Court said:

> "* * * The legal rights of a shipper against a carrier in respect to a rate are to be measured by the published tariff. Unless and until suspended or set aside, this rate is made, for all purposes, the legal rate, as between shipper and carrier. The rights, as defined by the tariff, cannot be varied or enlarged by either contract or tort of the carrier. * * *"

Penn Water's footnote denial of this fundamental principle (PW Br., p. 55) is not, and cannot be, supported by any decision of this Court, and its collateral assault in this case on the Safe Harbor tariff by attack on the Safe Harbor Contract can therefore have no affect on that tariff.

Safe Harbor receives no revenue from any customer other than its two owners, Consolidated ⅔ and Penn Water ⅓ (R., Vol. 6, pp. 2526-2528; Vol. 10, p. 3778; Vol. 13, p. 4222; Vol. 14, p. 4492).

So long as Consolidated is required by that tariff, as it has been continuously since the FPC order of November 4, 1946, to pay ⅔ of Safe Harbor's expenses and return, Penn Water should not be permitted to divert to its own use any part of Consolidated's entitlement under that same tariff to the ⅔ of Safe Harbor's output for which Consolidated is required to pay.

The recent decision of this Court in the *Far East Conference* case, *supra*, in denying to the Government the right to seek court determination, prior to Commission determination, of a steamship company's dual rate system (which rates were not even on file as a rate schedule) assuredly preserves in all its vigor the principle that a filed schedule or prescribed tariff cannot be collaterally attacked.

3. There is nothing unlawful in such proportional sale of Safe Harbor's entire output.

The FPC (5 F. P. C. 221), the Third Circuit ((1949), 179 F. 2d 179, at pp. 184-185), the District of Columbia Circuit in the opinion below (R., Vol. 18, pp. 5391-5392), and the Fourth Circuit (Safe Harbor Contract Opinion) have all found that Safe Harbor sells (as it must under its tariff) its entire output to its two owners in proportion to their ownership, ⅔ to Consolidated and ⅓ to Penn Water. In the Fourth Circuit's Safe Harbor Contract Opinion, it said:

> "These two utilities are its only customers under an arrangement approved by the Pennsylvania Commission."

As previously shown herein, the Fourth Circuit, in the Safe Harbor contract opinion, described the sale of Safe Harbor's entire output to its two owners "to be divided between them in proportion of two-thirds to Consolidated and one-third to Penn Water" and calls this their "rightful entitlement in Safe Harbor's production".

Nowhere does that Court, nor for that matter do the Petitioners, claim that such a proportionate sale of an entire output is unlawful. On the contrary, the Court emphasized its lawfulness by clearly distinguishing these provisions from the alleged "restrictions" "which led to the condemnation of the agreement".

Moreover, Penn Water's present insistence (Br., p. 56) that "allocations of cost be on a delivered power basis (that is, on actual operations)" puts the cart before the horse. Present power deliveries are the *result* of the present tariffs. Penn Water now wants to reverse the process and make deliveries so established the basis of a change in the tariffs which established them. A simple statement will show the utter inequity of this proposal. Consolidated would, through the years, have insisted on physical delivery to it of its ⅔ of Safe Harbor power had it not been compensated under the tariff for its diversion to Penn Water. Penn Water now contends that that diversion should continue but that the compensation for it should stop!

4. Judge Miller's dissent.

At Penn Water's Brief, pp. 55-56, Judge Miller's dissent below is quoted to show the alleged impropriety of FPC's allocation of the rate reduction. Judge Miller there said that the FPC had concluded that "very substantial sales by Penn Water to others had really been for the account of Consolidated". In making this statement, Judge Miller was apparently oblivious to the following facts of Record:

(a) The fact that — quite contrary to the status of Penn Water's other customers—Consolidated provided all the "firming up" capacity during protracted periods of low river flow, which alone made it possible for Penn Water to sell firm power as it did to its other customers (R., Vol. 16, pp. 4857, 4859).

(b) The fact that, during the daily off peak periods throughout the low river flow seasons, Consolidated supplied most of the electricity that was sold by Penn Water under its firm contracts with its other customers (R., Vol. 16, p. 4860).

(c) The fact that in addition to this, Consolidated generated and supplied to Penn Water huge quantities of interchange energy which Penn Water in turn sold as interchange to its other customers (R., Vol. 12, p. 4156; Vol. 13, p. 4400).

(d) The fact that Penn Water collected from its Pennsylvania customers the payments for such huge quantities of electricity so supplied to it by Consolidated (R., Vol. 12, p. 4154).

(e) The fact that Penn Water also sold to its Pennsylvania customers and collected from them for huge quantities of Consolidated's ⅔ share of Safe Harbor's output (R., Vol. 13, p. 4400).

5. Allocation of the rate reduction does not change its total amount.

The allocation of the rate reduction among Penn Water's customers, is actually an academic one so far as Penn Water is concerned. Any change in the allocation of the reduction would not possibly affect the total amount of that reduction.

Penn Water contends that its customers in Pennsylvania were entitled to a larger part of the reduction than was allocated to them by FPC. Those customers have made no such claim either to FPC or to the Court below. Penn Water's argument ignores the vast difference between the "firm" power supplied to its Pennsylvania customers and its "what's left" power supplied to Consolidated.

6. Allocation is controlled by administrative finality.

The matter of allocations is one of fact to be determined at the administrative level.[37] The Court below determined that the Commission's findings in this respect were supported by substantial evidence (R., Vol. 18, p. 5392). Section 825-l of the Federal Power Act provides that "The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive." This should be determinative of this issue.

E. The Payment Provisions Prescribed by the FPC Tariff Are Lawful.

1. The Fourth Circuit did not find them to be unlawful.

Despite Penn Water's vigorous assault on the payment provisions in the Baltimore Contract case, the Fourth Circuit found no fault with them. It described those payment provisions in detail and clearly distinguished them from the allegedly illegal provisions in the Contract (186 F. 2d at p. 936; R., Vol. 18, p. 5358).

Even Judge Miller, in his dissent below, obviously regarded the payment provisions as lawful parts of the contract which the Fourth Circuit said must fall because of their close association with Articles IV and V. Judge Miller said (R., Vol. 18, p. 5412):

> "* * * This would leave in effect the contractual definition of Consolidated's residual entitlements and the *residual payment type of rate*. But the Fourth Circuit said those provisions were so closely associated with the *illegal restrictions* on the future activities of Penn Water that the whole contract was invalid. * * *" (Emphasis added.)

---

[37] *Colorado Interstate Gas Co. v. FPC*, 324 U. S. 581, 589-91 (1945).

Despite Penn Water's similar vigorous assault on the similar prescribed payment provisions in the Safe Harbor Contract case, the Fourth Circuit again refused to find those provisions invalid, saying:

> "This provides in effect that Consolidated should be entitled to all the electric capacity and energy available to Penn Water from its plant at Holtwood on the Susquehanna and from Safe Harbor, and in return Consolidated agreed to pay Penn Water an amount equal to its operating expenses and a specified rate of return on Penn Water's invested capital; *and then followed the illegal restrictions* upon the activities of Penn Water which have *already been described.*" (Emphasis added.)

2. Penn Water itself recommended them to the Commission in this case.

Although Consolidated has no special concern as to the type of payment prescribed by FPC and did not originate the present method, it submits that Penn Water should not be permitted collaterally to strike down the rate reduction orders of FPC, because that Commission prescribed the method of payment which in this very case was claimed by Penn Water's own officers to be the only practical means of assuring the full economic utilization of Penn Water's hydro facilities.

Mr. John A. Walls, then President of Penn Water, so testified (R., Vol. 1, p. 26), as did also Mr. George W. Spaulding, then Vice-President and now President of Penn Water (R., Vol. 1, pp. 71, 74-75).

3. In any event, this Court should not consider this objection.

Section 825-l of the Federal Power Act provides that on appeal "no objection to the order of the Commission shall

be considered by the Court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do".

A fortiori, this Court should not be asked to consider Penn Water's present objection which not only were not urged by Penn Water in its application to FPC for rehearing, but which are the exact opposite of what was urged upon the Commission in this case by Penn Water's own officers.

4. The payment provisions are not "revenue pooling".

By its very terms, the concept of "revenue pooling" contemplates a joint pooling or combining of revenues and a division or sharing of the total. Under neither the Baltimore Contract nor the FPC order is any pooling of revenues prescribed. This same attack was leveled at the Baltimore Contract before the Fourth Circuit. It was leveled at FPC's order before the Court below. It was also leveled at the Safe Harbor Contract before the Fourth Circuit. Petitioners, however, cannot point to a single statement in any of the opinions in these cases that the payment provisions ordered by FPC are invalid either as "revenue pooling" or otherwise.

The Penn Water tariff payment provisions do not fit any definition of revenue pooling. There is no division of gross or net earnings. There is no formula for any division or pooling of any kind. If this payment provision, which has been operative as a filed tariff since 1936, were as Penn Water contends, one "for the pooling and division of earnings" (PW Br., p. 63), Penn Water could not, through the years, have earned a return so disproportionately higher than Consolidated's.

Penn Water contends that the prescribed payments are "unrelated to services", and goes so far as to assert "the specified return provisions of the Baltimore contract provide for payment even if no power at all is delivered" (PW Br., p. 66)! On the contrary, they are directly related to the power and energy produced by the flow of the Susquehanna River averaged over a 40-year period (R., Vol. 15, p. 4608). The tariff provisions prescribed by FPC, which establish a cost-plus or definite return, while not promoted or espoused by Consolidated, are assuredly not unlawful, and the many cases cited by Penn Water, relating to actual pooling of revenue, are not in point.

If Penn Water desires to change the payment provisions of the tariff prescribed by FPC, it may do so only through the appropriate and requisite administrative process.

F. The Newly Alleged "Invalidities".

Section I-C-2-(a) of Penn Water's Brief (pp. 59-63) alleges a whole array of illegalities which, it is now contended, "permeate the entire arrangement". Several of these allegations will be recognized as repetitious, but the rest are propounded for the first time in this Court and, are therefore subject to the ban of Section 825-l of the Federal Power Act, above quoted.

V.

FPC Did Not Authorize an Unlawful Contract

A. Under The Sherman Act

Parts I and II of Penn Water's Argument are based in their entirety on the unsound premise that the FPC rate reduction orders here assailed did not prescribe a *tariff* relating to the continuing physical operations of a physical system but, it is argued, were a grant to "private parties" of an immunity or "exemption" from the anti-trust laws and

a license to such private parties to enter into or continue independent "contractual arrangements" at their "own whim".

That the sole effect of the orders of FPC was to prescribe a *tariff* regulating rates in relation to continuing services cannot be gainsaid. The only real issue in this case is whether FPC had the authority to prescribe the tariff provisions which it did prescribe, irrespective of the existence or non-existence of a contract between *private parties.* The many cases cited by Penn Water in support of the proposition that *private parties* cannot generally be granted immunity from the anti-trust laws, and cannot be authorized to enter into or continue *private contracts* in violation of such laws, have no application to an order of a Federal regulatory agency which prescribes a tariff. Most of the cases cited at page 25 of Penn Water's Brief do not even involve regulated public utilities or tariffs. None of them annulled a tariff either prescribed or approved by a regulatory agency. The same observation applies to Appendix A of Penn Water's Brief.

But even if it were assumed, *arguendo*, that (a) FPC had authorized the continuance of private contracts by private parties, (b) had not prescribed tariffs, and that (c) the Fourth Circuit had primary jurisdiction to determine contract validity, it is submitted that the Fourth Circuit was clearly in error in summarily finding the Safe Harbor and Baltimore contracts invalid on their face.

The Safe Harbor contract provided for the financing of a wholly new project, the sale of its entire output to its two owners — (this was at that time actually required by the Pennsylvania Commission) — in proportion to their ownership, the construction by one of its owners of transmission lines for the delivery of such output to both owners, the

payment for such power by its two owners in proportion to their ownership so as to provide a 7% return to Safe Harbor on actual investment, the cooperation of the parties to encourage economy, the establishment of a joint Operating Committee to "investigate, consult and advise", and for arbitration of disputes.

For 18 years this contract operated efficiently and in the public interest with the full knowledge and approbation of FPC, the Pennsylvania Commission, and the Maryland Commission, with each of which it had been filed.

Then, in an avowed effort to upset the FPC rate-reduction order against Penn Water and to destroy Consolidated's right to ⅔ of Safe Harbor's cheap power, Penn Water denounced the Safe Harbor Contract as invalid because of alleged "restrictions" which for 20 years had never been operative or of the slightest significance. These are as follows:

Article III required Safe Harbor to install *additional* machinery or equipment at the request and for the benefit of *one* of its owners, provided the other approved.

The same Article in effect gave an option to its two owners to purchase the output from any possible additions at Safe Harbor, stipulating that sales of such additional output (except any which might be required for the performance of any duty or obligation to serve imposed upon Safe Harbor by its charter or otherwise by law) could not be made to any other person without the consent of its two owners. (By its Safe Harbor rate order, FPC required the two owners to pay the expenses of and return on any additional plant at Safe Harbor, thereby effectively prescribing this provision.)

Article IV prevented Safe Harbor from making separate, independent deals on the side with either owner individually which would work against the over-all economy — an implicit obligation of any such joint venture.

The Operating Committee provision was also alleged by Penn Water as a restriction despite the fact that under the very terms of the contract (and in actual operation), that Committee was advisory only, and could not and did not bind Safe Harbor.

The Fourth Circuit purported summarily to find these provisions (a) in violation of the Sherman Act, *per se*, (b) in violation of a Pennsylvania statute forbidding transfers of franchises without approval of the Pennsylvania Commission, and (c) in violation of common law and public policy — all in the face of clear-cut fundamental issues of fact. This Court has said that such a summary procedure presents "a treacherous record for deciding issues of far-flung import, on which this Court should draw inferences with caution from complicated courses of legislation, contracting and practice". *Kennedy v. Silas Mason Co.*, 334 U. S. 249, 257 (1948).

Safe Harbor would not have been built without the Safe Harbor Contract. Safe Harbor is limited by charter to producing unfirm, unreliable hydro power from the Susquehanna River. Before the contract was executed, Safe Harbor had been forbidden by the Pennsylvania Commission to sell its output to the public or to any customer other than its two owners. Safe Harbor has always been subject to FPC jurisdiction. Expansion of its plant is not economically feasible because of the characteristics of the river.

The Court summarily decided the issue of competition on the sole basis of the *location* of Safe Harbor's plant.

Invalidation of the Safe Harbor agreement, as *per se* violation of the Sherman Act, without a determination of reasonableness under the Rule of Reason, conflicts with *Standard Oil Company v. United States*, 221 U. S. 1 (1911), *United States v. Bausch & Lomb Co.*, 321 U. S. 707, 728-29 (1944), *United States v. Yellow Cab Co.*, 332 U. S. 218 (1947), 338 U. S. 338 (1949), and *United States v. Columbia Steel Co.*, 334 U. S. 495 (1948). Prescription of the Safe Harbor Contract as a tariff by FPC and affirmance by the Third Circuit is a clear indication that the contract complies with the Rule of Reason. Such application of the Rule of Reason would fully accommodate the Sherman Act and the Federal Power Act.

Under FPC's Safe Harbor rate Order of November 4, 1946, its two owners must pay for any output of additional plant, hypothetical though that output might be. This administrative amendment of the tariff destroys any basis for the Court's findings of "restrictions" on such output. What Safe Harbor has sold to its owners, it cannot sell to others.

The Fourth Circuit held that a wholly new business which has been created by its two owners, and the entire output of which is sold to its two owners, must, under the Sherman Act, compete with those owners despite the complete absence of any preexisting competition (not to mention its physical, charter, franchise, and certificate inability to compete). The cases cited by the Fourth Circuit involved preexisting competition,[38] and were thus inapplicable.

[38] *Northern Securities Co. v. U. S.*, 193 U. S. 197 (1904); *U. S. v. Terminal Railroad Association of St. Louis*, 224 U. S. 383 (1912); *U. S. v. Reading Co.*, 253 U. S. 26 (1920); *U. S. v. Crescent Amusement Co.*, 323 U. S. 173 (1944); and *Timken Roller Bearing Co. v. U. S.*, 341 U. S. 593 (1951). See also *U. S. v. Yellow Cab Co.*, *supra*, and *U. S. v. Columbia Steel Co.*, *supra*.

Kiefer-Stewart v. Seagram & Sons, Inc., 340 U. S. 211 (1951), did not compel competition between parent and wholly-owned subsidiary but forbade them from eliminating competition from independent wholesalers.

In *U. S. v. Griffith*, 334 U. S. 100 (1948), and *Schine Chain Theatres, Inc. v. U. S.*, 334 U. S. 110 (1948), and *U. S. v. Paramount Pictures, Inc.*, 334 U. S. 131 (1948), a group of affiliated companies used conspiracy and group monopoly powers to defeat *competition offered the group from outside theatres.* No competition *between* parent and subsidiary corporations was required by these decisions.

With all these reasons for overruling the Fourth Circuit in the Safe Harbor case (now pending before this Court on applications for certiorari in Nos. 611 and 612), the invalidity of the Safe Harbor Contract cannot be assumed in this proceeding as has been done by Petitioners.

For many of the same reasons, the summary, *per se*-invalidation of the Baltimore Contract by the Fourth Circuit was erroneous, entirely aside from that Court's lack of jurisdiction. Our petition for certiorari having been denied in that case (No. 428, October term 1950), we shall not here repeat the arguments of that petition. However, the case at bar involves a different subject matter (FPC orders) and a different party (FPC), and the ruling of the *Fourth Circuit* should not be accepted as binding as to the invalidity of the Penn Water Contract for purposes of this proceeding. We repeat our belief that the Fourth Circuit's action was incorrect in the *Penn Water* case, and that the law of its decisions should herein be overruled.

B. UNDER PENNSYLVANIA LAW.

The Fourth Circuit erred in summarily invalidating the service contracts because of alleged violations of Pennsylvania Law.

1. The Pennsylvania statutes relied upon by the Fourth Circuit (184 F. 2d 552, 566 f.ns. 8, 9) provide that a Pennsylvania public utility must have the permission of that Commission in order lawfully to

> "sell, assign, transfer, lease, consolidate or merge its property, powers, franchises, or privileges, or any of them" and
>
> "to dissolve, or to abandon or surrender, in whole or in part, any service, right, power, franchise or privilege" or
>
> "to acquire from, or to transfer to any person * *'* by any method or device whatsoever, including a consolidation, merger, sale or lease, the title to or the possession or use of, any tangible or intangible property, used or useful in the public service."

In this regard, the jurisdiction claimed by the Pennsylvania Commission over theoretical plant expansions and alleged transfers of franchises must give way to the paramount Federal jurisdiction over these matters under Sec. 10(b) (16 U. S. C., sec. 803(b)) which requires FPC approval of plant expansions (in excess of a miniscule 100 horsepower), and Sec. 8 (16 U. S. C., sec. 801) which requires Commission approval of the transfer of a license or rights thereunder[39] without which a hydro company's corporate franchise is valueless.

---

[39] *H. P. Hood & Sons, Inc. v. Du-Mond*, 336 U. S. 525 (1949); *Mayor of Vidalia v. McNeely*, 274 U. S. 676 (1927); *Public Utilities Commission v. Attleboro Steam & Electric Co.*, 273 U. S. 83 (1927); *Colorado v. United States*, 271 U. S. 153 (1926); *Buck v. Kuykendall*, 267 U. S. 307 (1925); *Bush Co. v. Maloy*, 267 U. S. 317, (1925); *Missouri v. Kansas Gas Company*, 265 U. S. 298 (1924); *Sault Ste. Marie v. International Transit Co.*, 234 U. S. 333 (1914); *Adams Express Co. v. New York*, 232 U. S. 14 (1914).

Even if the Safe Harbor or the Penn Water Agreement were a transfer of franchise, a lease of entire properties of a utility, an abandonment of service, or a renunciation of initiative in the exercise of duties prescribed by law,[40] the Federal law (in the broad powers conferred on the Federal Power Commission by the Federal Power Act, particularly Sections 8, 10(b), 203, 204-207, 16 U. S. C., secs. 801, 803(b), 824b, 824c-824f) has preempted the field in all such matters relating to licensees and public utilities subject to its control. (N. 39, *supra*, p. 74, and see 99 F. Supp. 151, *infra*, p. 76).

It is submitted that neither contract constitutes an abandonment of service or renunciation of initiative in the exercise of legal duties or surrender of franchise, as charged by Petitioners. The Record in the instant proceeding makes it abundantly clear that the Federal agency empowered by law to establish policy in this field has had these contracts before it since 1936, and has found no such surrender of duties by either Penn Water or Safe Harbor, as it would have been obliged to do in the performance of its official duties had any such surrender existed.

2. The Pennsylvania Commission has approved the contracts.

Both contracts have been on file since 1933 with the Pennsylvania Commission and have been before it from time to time. When it amended Safe Harbor's Certificate of Convenience and Necessity, Jan. 10, 1933 (R., Vol. 10, p. 3790) and issued to Penn Water a companion authorization to serve the Pennsylvania Railroad in Manor Township (R., Vol. 14, pp. 4483, 4485), the contracts for service were necessarily considered.

In 1946, in attempting to assert its jurisdiction in contravention of the jurisdiction already asserted by FPC, the Pennsylvania Commission began a contemporaneous rate

[40] As contended by PW Br., pp. 68-72, and PUC Br., pp. 20-28.

case against Penn Water; it later made Safe Harbor a party thereto; and it issued a temporary rate order, purporting to reduce rates and charges to the Pennsylvania customers of Penn Water. The contracts were before the Commission and necessarily played a part in its deliberations preliminary to its decision. But there was no indication from the Commission that it considered them to be unlawful. Because this rate reduction to Pennsylvania customers was at the direct and sole expense of Consolidated, under the residual Baltimore Contract, it was necessary for Consolidated and the Maryland Commission to seek relief in the Federal Courts in Pennsylvania.

The three-judge District Court for the Middle District of Pennsylvania, in permanently enjoining the Pennsylvania Commission's action, adjudged that all of Safe Harbor's output is sold in interstate commerce; that FPC had complete jurisdiction over Safe Harbor's rates, charges and properties; and that Federal power is supreme. *Consolidated Gas Electric Light and Power Company of Baltimore v. Siggins*, 99 F. Supp. 151 (1951). This coincides with the Third Circuit's previous decision to the same effect in the Safe Harbor rate case appeal, 179 F. 2d 179, cert. den. 334 U. S. 957 (1950).

With this long history of action by the Pennsylvania Commission with respect to these contracts which had been filed with it as tariffs, it was clearly improper for the Fourth Circuit summarily to strike them down as lacking Pennsylvania Commission approval, and therefore as violating the several sections of the Pennsylvania Public Utility Law on which the Fourth Circuit relied. It is significant that the Pennsylvania Commission has never offered to show that it ever disapproved these contracts.

3. The contracts were not *ultra vires*. It is not *ultra vires* for a corporation to sell its entire output. Especially is this

true with respect to the Safe Harbor Contract, under which the corporation sold its output to its two owners. It was not *ultra vires* to enter into a contract which was essential to the full utilization of hydro power and which assured a substantial return regardless of economic depressions. For 20 years both hydro companies prospered as they could not have done in the absence of the contracts. It was not *ultra vires* for Safe Harbor to agree to expand its plant when its stockholders requested it to do so. The advisory services of an Operating Committee in no wise divested the corporate officers of their managerial powers, and during 20 years of operation those provisions never had such effect. Contracts for the sale of the entire output of a plant do not violate the public policy of Pennsylvania.[41]

The Safe Harbor Contract is specifically authorized by the Pennsylvania Act of July 2, 1895.[42] In so far as the Baltimore Contract is concerned, the alleged "restrictions" which the Fourth Circuit found invalid under the Laws of Pennsylvania were Articles IV and V, which both FPC and the Fourth Circuit declared were not prescribed in the Penn Water tariff.

4. Both Penn Water and the Pennsylvania Commission, under well established principles of Pennsylvania law, were estopped from asserting the invalidity of these Contracts under the Public Utility Law of Pennsylvania and public policy.

As for the Pennsylvania Commission, it is not contended that the contracts here in question are absolutely void under the Pennsylvania Public Utility Law but merely that they lacked the Commission's approval. This is clearly a

---

[41] *Walker v. Mason*, 272 Pa. 315, 116 A. 305 (1922); *Swift & Co. v. Hatleigh & Co.*, 66 Pa. Superior 504 (1917); *Greensboro Gas Co. v. Oil and Gas Co.*, 222 Pa. 4, 70 A. 940 (1908); *Salant v. Fox*, 271 Fed. 449 (CCA 3, 1921); and *Shipman v. Saltsburg Coal Co.*, 62 Fed. 146 (CCA 3, 1894).

[42] See Appendix, *infra*, pp. 81-82.

matter upon which the Pennsylvania Commission can and should be estopped in the light of its long history of dealing with the contracts. (See extracts from affidavit in the record of Nos. 611-612, this Term, pp. 164-171).

Commonwealth ex rel. Margiotti v. Union Traction Co., 327 Pa. 497 (1937);
Commonwealth ex rel. Attorney General v. Bala & Bryn Mawr Turnpike Co., 153 Pa. 47 (1893);
Central District and Printing Telegraph Co. v. Homer City Borough, 242 Pa. 597 (1914);
Pennsylvania Railroad v. Montgomery Co. Passenger Ry., 167 Pa. 62 (1895);
Valley Railways v. Harrisburg, 280 Pa. 385 (1924);
Breinig v. Allegheny City, 232 Pa. 474 (1938);
Ervin v. Pittsburgh, 339 Pa. 241 (1940).

The Pennsylvania Commission was thus estopped under the law of Pennsylvania from asserting its non-approval of these contracts, and the Fourth Circuit was in error in refusing to apply this Pennsylvania law. It had been properly pleaded and argued. (See consideration thereof in the District Court for Maryland in the Baltimore contract case, 89 F. Supp. 452, 459 (1950)).

The Pennsylvania Commission (Br. p. 20) asserts that the doctrines of *ultra vires* and public policy involved are "laid down in decisions of this court" citing *Gibbs v. Consolidated Gas Co. of Baltimore*, 130 U. S. 396 (1889); *Thomas v. Railroad Co.*, 101 U. S. 71 (1879); *Central Transp. Co. v. Pullman's Car Co.*, 139 U. S. 24 (1891).[43]

These are cases involving factual situations utterly different from the instant case and are clearly inapplicable under modern regulatory statutes such as the Pennsylvania

[43] Cf. PW Br., pp. 69 *et seq.*

Public Utility Law and the Federal Power Act (the controlling law here) which confer upon Commissions the authority to approve and foster what those cases condemned.

Penn Water was likewise clearly estopped from attacking these contracts on the ground of *ultra vires* and violation of public policy. In *Pittsburgh, Johnstown, Ebensburg, and Eastern Railroad Company v. Altoona and Beech Creek Railroad Company*, 196 Pa. 452 (1900), the Court, denying an attack on a 990-year lease by a railroad of its properties as being *ultra vires* and against public policy, said:

> "In the present case, the cry of ultra vires is made by a party to the contract — to the executed agreement from which it has already derived some benefit. If it is ultra vires now, it was ultra vires then, when the contract was solemnly entered into by this appellee, with the full knowledge that there was no connecting line, and equity will turn a deaf ear for relief from a compact intelligently and deliberately made when prayed for by a party to it, whose conscience has become quickened only when hopes are disappointed and expectations not realized. If we are asked to give equitable relief to extended hands, they must not only be clean, but unfettered by a contract of their own making. * * *"

(See also: *Wright v. The Pipe Line Co.*, 101 Pa. 204 (1882); *South Side Passenger Railway Co. v. Second Avenue Passenger Railway Co.*, 191 Pa. 492 (1899); *McBride v. W. Pa. Paper Co.*, 263 Pa. 345 (1919)).

5. The applicable public policy is that established by the Federal Power Act. The agreement left the hydro companies entirely free to take the initiative in proposing rates, and the protracted litigation of their respective rate cases before FPC and the Pennsylvania Commission in positions adversary to Consolidated since 1944 (during which time

Penn Water was supporting and praising those contracts), demonstrates the hollowness of this contention. There is no evidence that either company ever failed to take the initiative in proposing rates or in rendering adequate service. The Fourth Circuit erred in the invalidation of the contracts because of their alleged violation of the public policy of Pennsylvania.

CONCLUSION

It is respectfully submitted that if Penn Water desires to change its services and rates, it should proceed in the orderly manner prescribed by the Federal Power Act, as it was directed to do by FPC over three years ago in its Order No. 173-A; that the collateral actions in the Fourth Circuit cannot annul the filed and prescribed FPC tariffs; that FPC has primary jurisdiction in the premises and the Federal authority is paramount; that the orders of FPC here assailed are within the authority of that Commission and are lawful in their entirety; and that the judgment of the Court below should be affirmed.

Respectfully submitted,

ALFRED P. RAMSEY,

G. KENNETH REIBLICH,

Counsel for Intervenor-Respondent Consolidated Gas Electric Light and Power Company of Baltimore, 1707 Lexington Building, Baltimore 3, Md.

March 27, 1952.

APPENDIX

TEXT OF PERTINENT PENNSYLVANIA STATUTE

Act of July 2, 1895, P. L. 432, Sec. 1,
15 P. S. Section 1404

Being a further supplement to an Act, entitled "An Act to provide for the incorporation and regulation of certain corporations," approved the twenty-ninth day of April, one thousand eight hundred and seventy-four, to further provide for the incorporation and regulation of corporations heretofore or hereafter incorporated for the purpose of the supply, storage or transportation of water and water power for commercial and manufacturing purposes.

Section 1. Be it enacted, &c., That corporations heretofore or hereafter incorporated under the Act of Assembly, entitled "An Act to provide for the incorporation and regulation of certain corporations," approved April twenty-ninth, one thousand eight hundred and seventy-four, and the supplements thereto, for the supply, storage or transportation of water and water power for commercial and manufacturing purposes, be and the same are hereby authorized and empowered to determine the character, design and construction of the works and the use to be made of the water and water power of such companies, in order that the same may be supplied to the public to the best advantage, and by themselves, their agents, engineers and workmen, cause to be located, constructed, maintained, repaired and operated under the law and supplements to which this is a further supplement, the said works and all machinery, dams, buildings, cisterns, races, canals, waterways, reservoirs, pipes, conduits, lines, plants, apparatus, fixtures and appliances deemed necessary, requisite and proper for said purposes, and it shall and may be lawful for such corporations from time to time to contract with any individual or corporation of this or any other State for

the construction, operation, use and maintenance of their works or any part thereof as aforesaid, and to mortgage their said property, real, personal and mixed, and franchises to any person or corporation of this State or elsewhere, either directly or as trustee, to secure the payment of such indebtedness as may be incurred or created for the purpose of constructing and erecting the said works, or as a guaranty for the faithful performance of contracts and covenants on the part of such water and water power company to be performed, including the guaranty of the payment of the bonds and interest thereon of any other corporation, party to such contract, and the stock in any company incorporated for the purposes named in this Act may be owned and held by corporations of this or other States of the United States.

Approved — The 2d day of July, A. D. 1895.

COUNTER STATEMENT OF THE CASE	4
The Case Below	5
Historical Background of the Case	7
ISSUES PRESENTED BY PETITIONERS AND OUTLINE OF ARGUMENT IN RESPONSE	13
SUMMARY OF ARGUMENT	18
ARGUMENT:	
1. Petitioners' arguments that the FPC Orders should be annulled rest upon decisions of the Fourth Circuit, which lacked jurisdiction to make those decisions because of the broad doctrine of "primary jurisdiction", as confirmed by the recently decided *Far East Conference case*	21
2. The theory of the "filed tariff", as embodied in Section 205 of the Federal Power Act, precludes petitioners from asserting a collateral destruction of tariffs or rate orders of the FPC	31
3. The rate orders should not be annulled or remanded because of the Sherman Act	43
a. The rate orders are official acts of the United States Government, and as such, are not subject to the Sherman Act	43

PAGE

b. FPC has made it explicit that it has not ordered any illegal service arrangement ... 44

c. The Fourth Circuit Opinions cannot be accepted as conclusive here of the Sherman Act determinations made by that Court ... 47

4. The rate orders should not be annulled or remanded because of the Pennsylvania public utility law or public policy ... 52

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

BRIEF OF INTERVENOR-RESPONDENT PUBLIC SERVICE COMMISSION OF MARYLAND

PRELIMINARY STATEMENT

Replying to the preliminary statement in the brief (p. 1) of petitioner, Pennsylvania Water and Power Company (Penn Water), the Public Service Commission of Maryland (Maryland Commission) asserts that the rate orders of the

Federal Power Commission (FPC) here involved were "premised on" and directed "continuance of" services of Penn Water as rendered consistently in the same general manner since 1931. These orders control those services and prescribe rates therefor regardless of contract, and are issued in direct pursuance of authority conferred by the Federal Power Act (16 U. S. C. Sec. 791a-825r — pamphlet copy filed by FPC). They are fully supported by the record before FPC as found by the Court below.

The decisions of the United States Court of Appeals for the Fourth Circuit (P. W. brief, p. 2), upon which the petitioners rely,* were rendered without jurisdiction and are void under the recent ruling by this Court in the case of *Far East Conference, et al, v. United States of America and Federal Maritime Board*, decided March 10, 1952, 20 L. W. 4270.

Even assuming arguendo that the Fourth Circuit had jurisdiction to annul the contracts, its Opinions (correct or incorrect on their merits) cannot have the extended effect, asserted by the petitioners, of collaterally destroying FPC rate orders fully supported by the record in this case, relating to services rendered and as they must continue to be rendered until changed in the manner required by law (Federal Power Act, Sec. 205d).

Finally, the Fourth Circuit decisions were in clear error on each of their rulings, on the merits, as to the validity of the long term power contracts which they condemned. Be-

---

* *Pennsylvania Water and Power Co., et al. v. Consolidated Gas Electric Light and Power Co. of Baltimore, et al.*, 184 F. 2d 552, 186 F. 2d 934, cert. denied 340 U. S. 906 (1950), often referred to as the "Penn Water Contract Case"; and *Consolidated Gas Electric Light and Power Co. of Baltimore, et al. v. Pennsylvania Water and Power Co., et al.*, decided January 3, 1952, petitions for certiorari filed February 23, 1952, and often referred to as the "Safe Harbor Contract Case".

fore this Court considers any such brash attempt as is made by petitioners here to have the Fourth Circuit decisions (which were made without any factual record) collaterally destroy rate orders supported by careful findings, based on an extended record and many months of hearings, it should inquire into the merits of the asserted Sherman Act and Pennsylvania public utility law violations in relation to the facts established by the instant record, and in light of the controlling force of the Federal Power Act. Such inquiry will reveal clearly that the contracts, which have been on file since their inception with FPC, the Pennsylvania Commission, and the Maryland Commission, without any governmental agency (or any private party) ever finding any invalidity in them, have been unlawfully and inequitably condemned by the Fourth Circuit.

OPINIONS BELOW

The Opinion of the United States Court of Appeals for the District of Columbia is officially reported in 193 F. 2d 230 (advance sheets), and appears in the Record herein Vol. 18, p. 5367, the dissenting Opinion of Miller, J., appearing in Vol. 18, p. 5402.

The FPC Opinions and Orders affirmed by the Court of Appeals appear in the Record as follows: (1) Opinion No. 173 and Order of January 5, 1949 — Vol. 16, pp. 4845-4997; (2) Opinion No. 173A and Order of February 28, 1949, denying Petition for Rehearing on Opinion No. 173 and Order of January 5, 1949 — R. Vol. 16, pp. 5178-5194; (3) Order of March 17, 1949, denying Petition for Rehearing on Opinion No. 173A and Order of February 28, 1949 — R. Vol. 16, p. 5220; (4) Order of October 27, 1949, prescribing rate schedules — R. Vol. 17, pp. 5276-5292 and (5) Order of December 15, 1949, denying application for rehearing on Order of October 27, 1949 — R. Vol. 17, pp. 5315-5320.

JURISDICTION

Petitioners invoke the jurisdiction of this Court under U. S. C., Title 28, Section 1254 (1) and under U. S. C., Title 16, Section 825 (1). Petition for writ of certiorari was granted February 4, 1952.

COUNTER STATEMENT OF THE CASE

The Maryland Commission does not accept the Statement of the Case as made by either petitioner, because petitioners (1) misstate the only issue of substance which their petitions raise, in a patent effort to divert the attention of this Court from the fundamentally administrative-procedure determination of the Opinion below, and (2) make many misstatements of fact unsupported by this Record (or any other record) in order to support the factually unsupportable decisions of the Fourth Circuit.

By a studied use and frequent repetition of carefully chosen adjectives and other characterizations, petitioners' briefs seek to paint a picture in support of the Fourth Circuit decisions which has no supporting evidence. For a more detailed refutation of petitioners' unsupported charges beyond what appears hereinafter, we refer the Court to affidavits in the Record in Cases Nos. 611 and 612, current term (pp. 115, 123) and to the "Statement" and "Counter-Statement of Facts" in the brief of Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated), Intervenor-Respondent, which we hereby adopt.

It is incredible to our Commission that groundless charges, so glibly made by petitioners, could have been so extensively accepted and repeated by the Fourth Circuit (without record support) when we consider the following: (1) ever since their inception, the contracts have been on file with the Pennsylvania Commission, the Maryland Com-

mission, and FPC, and were necessarily reviewed from time to time by each Commission as related to proceedings before it (the Pennsylvania Commission originally issued, and later amended, certificates of convenience and necessity to serve under the contracts); (2) after four years of extended investigation FPC found no vice in the contracts, but on the contrary approved all of the service arrangements contained therein, and (3) the Department of Justice, charged with administering the anti-trust laws, urged denial of certiorari by this Court in the *Safe Harbor rate case*,* thus giving its stamp of approval to FPC's Safe Harbor rate order, which preserved the Safe Harbor contract as a tariff with only the rates changed.

The Case Below.

The proceedings below were statutory appeals from final orders in an extensive rate investigation of Penn Water's wholesale charges, for hydroelectric power and energy sold by it to Consolidated. These orders hold, in effect, that Consolidated is entitled on a 1946 basis to an annual rate reduction of approximately $1,700,000 on its power bill from Penn Water. The total annual rate reduction ordered by FPC in Penn Water's rates, on a 1946 basis, amounts to approximately $2,000,000 (FPC Opinion No. 173 and Order of January 5, 1949, R. Vol. 16, p. 4845), the remaining $300,000 of the rate reduction being allocated to Penn Water's Pennsylvania customers. This reduction was ordered to be carried out by rate schedules specified for Penn Water in the Order of October 27, 1949, which rejected schedules filed by Penn Water because they were not in compliance

* *Safe Harbor Water Power Corp. v. Federal Power Commission*, 179 F. 2d 179, cert. denied 339 U. S. 957 (1950), in which the U. S. Court of Appeals for the Third Circuit described the Safe Harbor contract as "exemplary".

with Opinion 173 and Order of Jan. 5, 1949, a petition for rehearing being denied by the Order of December 15, 1949 (R. Vol. 17, pp. 5267 and 5315, respectively).

The Opinion and Judgment below affirm in normal manner these FPC rate orders, which were based upon and fully supported by an extended record of hearings held during a long period of time. They also deny motions to annul or set aside these FPC orders, which motions were filed by petitioners at the eleventh hour and were predicated upon a decision by the Court of Appeals for the Fourth Circuit, rendered shortly in advance of oral argument below and purporting to annul Penn Water's long term power contract to supply power to Consolidated.* The Opinion below (in partial response to these motions to annul) pointed out that rate and service arrangements ordered by FPC might be valid even though they preserved service which, as resting solely on contract between the parties, might be unlawful (R. Vol. 18, p. 5372 n. 12). However, the Court based its result squarely upon the procedural determination that no change in service or rates (whether otherwise lawful or unlawful) could be properly sought by Penn Water without first petitioning FPC for such change in the manner required by law (R. Vol. 18, pp. 5375-5376).

---

* *Pennsylvania Water & Power Co., et al. v. Consolidated Gas Electric Light and Power Company, et al.*, 184 F. 2d 552, 186 F. 2d 934, cert. den. 340 U. S. 906 (1950), (the *Penn Water Contract Case*). Although the motions to annul rested on this decision alone, petitioners, in motion for reargument (and now in argument here) rest in part upon the Fourth Circuit's Opinion which purportedly also annulled the power contract between Penn Water, Safe Harbor, and Consolidated, *Consolidated Gas Electric Light and Power Company, et al. v. Pennsylvania Water & Power Co., et al.*, Jan. 3, 1952 (pamphlet copy filed herein by petitioners) currently before this Court on petitions for certiorari in Nos. 611 and 612 (the *Safe Harbor Contract Case*).

Historical Background of the Case.

The rate case before FPC was begun by order issued September 1, 1944, which instituted an investigation of the services, contracts, rates, and charges of Penn Water for any transmission or sale of electric energy subject to FPC jurisdiction under the Federal Power Act. A companion order issued on the same date (September 1, 1944) began a similar investigation of the rates and charges of Safe Harbor Water Power Corporation (Safe Harbor). Both orders were issued in response to the request of the Maryland Commission* (Petition of August 31, 1944 — R. Vol. 16, p. 4847), which then had pending before it a general investigation of the rates and charges of Consolidated to its Maryland consumers. The Maryland Commission found it desirable to have a prior determination by FPC of the wholesale rates paid by Consolidated for hydroelectric power and energy obtained from Penn Water and Safe Harbor, before passing upon the reasonableness of Consolidated's *retail* rates to its Maryland consumers.

The generating facilities of Penn Water, Safe Harbor, and Consolidated are coordinately operated as an integrated and interconnected electric system, the interconnection being provided primarily by an extensive network of transmission lines owned by Penn Water and its wholly owned subsidiary, Susquehanna Transmission Company of Maryland. These integrated operations, as currently performed, were begun under two long-term contracts executed in 1931, to continue until 1980. These contracts were filed with FPC in compliance with the provisions of the Federal Power Act

* Additional requests for investigation were filed by the governmental authorities of Baltimore City, Baltimore County, and other intervenors in the rate case before the Maryland Commission (R. Vol. 16, p. 4847), who as such intervenors had urged the Maryland Commission to request this FPC investigation.

(Sec. 205(c); 16 U. S. C. 824d (c)) and thus became service and rate tariffs, passing out of the realm of contract and into that of duty established by law.

Under one agreement (the "Safe Harbor Contract") entered into on June 1, 1931, and supplemented by amendments dated August 1, 1932, and November 22, 1939, Consolidated purchased two-thirds and Penn Water purchased one-third of the entire Safe Harbor hydro output, produced at Safe Harbor, Pennsylvania, until 1980. In return, Consolidated and Penn Water assured Safe Harbor of a combined annual payment, divided two-thirds and one-third between the two companies, sufficient to yield a specified annual return above operating expenses (the contract return of 7% was reduced to 5% by FPC in its Opinion 143, 5 F. P. C. Rep. 221). Under the other agreement (the "Penn Water Contract"), entered into between Consolidated and Penn Water on the same date, June 1, 1931, Consolidated purchased all the power and energy available to Penn Water from its hydroelectric and steam generating plants at Holtwood, Pennsylvania, and also Penn Water's one-third of Safe Harbor's power and energy not otherwise disposed of in performance of Penn Water's obligations to its other customers. Consolidated pays Penn Water annually a lump sum sufficient to cover all operating expenses and taxes (including Penn Water's payment to Safe Harbor), plus a specified return, reduced to 5¼% by FPC in its Orders here under appeal. These contracts constitute part of the record before FPC as Items E, F, G, H, and I (R. Vol. 15, pp. 4554-4621). The form of service and payment therefor as thus described has been prescribed by the Commission's Orders.*

* A survey of the Opinions of the Fourth Circuit in the *Penn Water* and *Safe Harbor* contract cases will show that no criticism is made of

The vast triangular power pool resulting from this coordinated arrangement for the interchange of energy and services has provided the Maryland consuming public with an economical, reliable, and necessary supply of hydro power since 1931. The overall plan has been consistently praised by all parties, including Penn Water's officers (R. Vol. 1, pp. 25-26; 68-71), until just before FPC ordered Penn Water to reduce its rates. Then, and only then, did Penn Water allege that the 1931 contracts were invalid. In its latest opinion (pamphlet copy in *Safe Harbor Contract Case*, Nos. 611 and 612, p. 13), the Fourth Circuit says as to "the plan" that "the experience of twenty years shows that it is practicable and successful."

The *Safe Harbor rate case* was tried first. It resulted in FPC's Opinion No. 143 and Order of November 4, 1946 (5 F. P. C. Rep. 221), reducing the rates of Safe Harbor to Penn Water and Consolidated by approximately $600,000 annually on a 1943 basis, saying in part:

> "The interconnected system is so operated as to obtain the lowest cost for system power and energy requirements. The output of each generating facility flows into the system at such times and in such amounts as will produce economy of operation and reliability of service. * * *

---

the economical, coordinated, and integrated operations of the system which result from the above-described provisions, or even of any of the provisions themselves. The Opinions in the *Penn Water Contract Case* (184 F. 2d 552, and 186 F. 2d 934) condemn as illegal *per se* only Articles IV and V of the Penn Water contract, which gave Consolidated control over Penn Water's contracts with others and over installation or disposition of generating facilities. This distinction was carefully observed by the Opinion below. It is also confirmed by the Fourth Circuit's Opinion in the recently decided *Safe Harbor Contract Case — Consolidated Gas Electric Light and Power Company of Baltimore, et al. v. Pennsylvania Water & Power Company, et al.*, decided January 3, 1952, now on petition for certiorari in Nos. 611 and 612 (pamphlet copy filed by petitioners, p. 3).

"Under a 1927 contract which, as amended, continues in effect until 1980, the Maryland Company is entitled to all the electric capacity and energy not otherwise disposed of under existing contracts or by any obligation to serve imposed upon the Pennsylvania Company (Penn Water) by its charter or by law, which is available from the Pennsylvania Company's hydro and steam plants, as well as that available to the Pennsylvania Company from Safe Harbor. The Pennsylvania Company may require the Maryland Company (Consolidated) to supply it with steam generated energy (backfeed), in excess of the Maryland Company's own requirements, up to the available capacity of the Maryland Company's generating stations then being operated. The Maryland Company agrees to reimburse the Pennsylvania Company for all of its operating expenses, including taxes, depreciation, and the cost of power from Safe Harbor, as well as a certain return, less a credit for the revenues which the Pennsylvania Company receives for local sales in Pennsylvania."

The Court of Appeals for the Third Circuit upheld FPC's decision in every respect, noting that "Safe Harbor's output is delivered to an integrated interstate electric system * * *", and held that "Safe Harbor's contracts for power and its backing by the Pennsylvania and Maryland companies *are exemplary*" (emphasis supplied). *Safe Harbor Water Power Corp. v. Federal Power Commission*, 179 F. (2d) 179, 199 (1949) cert. denied 339 U. S. 957 (1950).

In the *Penn Water rate case* (the present proceedings), hearings began on April 15, 1946, and concluded July 16, 1947, during which time 21,200 pages of Record and over 600 exhibits (R. Vols. 6-15) were received. Following submission of voluminous briefs, FPC issued Opinion No. 173 and its Order of January 5, 1949 (R. Vol. 16, pp. 4845-4997), ordering Penn Water to reduce its rates and charges, on a 1946 basis, in the total amount of approximately $2,000,000 annually. During the entire period of the proceedings be-

fore FPC, neither Penn Water nor the Pennsylvania Commission raised any question as to the validity of the long-term contracts under which the interconnected system had been established in 1931, and which as tariffs had been controlling the services of Penn Water and Safe Harbor since they were first filed in 1936 in response to FPC Order.

In its petition for rehearing filed on January 28, 1949, Penn Water asserted for the first time the fact that it considered its long-term power contracts to be null and void, and that it was making this assertion the basis of court proceedings recently instituted in the United States District Court for Maryland. Denying this petition, in its Opinion 173A and Order of February 28, 1949 (R. Vol. 16, p. 5178), FPC informed Penn Water that its rate order rested upon *services as they had been rendered since 1931*, as testified to by officers of Penn Water, and as they must continue to be rendered until changed in the manner required by the Commission's rules issued under the provisions of the Federal Power Act (Sec. 205d). FPC stated that any possible illegality of particular provisions of the contracts could not affect the rates established in relation to services actually rendered, and as they were continuing to be rendered (and have in fact continued to be rendered to the date of this brief).*

---

* The Commission makes it quite clear, in its Opinion No. 173A, that it considered it improper to further delay rate reductions which were long overdue, in relation to services which had been rendered in the same manner since 1931. The Commission emphasized the testimony of the officers of Penn Water that the integrated interconnected power system was "the outgrowth of twenty years of experience by the two companies in determining the best methods of promoting the coordination of the hydro and transmission facilities of Penn Water with the steam generating plants of Baltimore Company, to the end of maximum utilization of natural resources, minimumization of investment and the utmost in service availability to the ultimate customer", and that this should not be changed except by the procedures provided by the Act (R. Vol. 16, p. 5178 at 5181-88; Vol. 1, pp. 25-26, 69).

Penn Water, although it continued its collateral attack on its long-term hydro contracts in the United States District Court for Maryland, did not choose to exercise its right to petition for changes of its tariffs as filed with FPC, or of its services as rendered thereunder. Instead, it elected to stand on the record before the Commission and to pursue its appeal from FPC's orders to the U. S. Court of Appeals for the District of Columbia Circuit, filing a 238-page printed brief, supplemented by a 49-page brief filed by the Pennsylvania Commission. FPC replied with a printed brief of 178 pages, the Maryland Commission with 36 pages, and Consolidated with 50 pages. After these main briefs were filed, and the case ready to be set for argument on the merits, Penn Water and the Pennsylvania Commission filed motions to postpone the date of oral argument. Subsequently, they filed motions to annul or remand the orders of the Commission, asserting that they had been rendered void by the decision of the Fourth Circuit in the *Penn Water Contract Case*. The Court allowed time for extended briefing and argument of these motions, assigning the case for three days of oral argument, divided between the motions and the appeal on the merits.

Having failed, after these extended briefs and arguments below, to convince the Court of Appeals that there was any error in the rate orders based on that Record of over 21,200 pages (plus over 600 Exhibits)* as conducted from

* The printed record in the Court below consisted of 4805 pages, plus an additional 514 pages of Appendices to Penn Water's Briefs. As is indicated in the first footnote of page 2 of Penn Water's petition for certiorari and repeated in its brief p. 3, note "**", it sought to restrict the Record here. If this had been accomplished, the Court would not have before it the real nature of the case and the Record which shows the ample and complete support for the Commission's Orders, including the evidence of Penn Water's officers R. Vol. 1, pp. 20-28, 31-46, 69), showing their sworn support of the integrated interconnected power pool — quite contrary to their later collateral

September 1, 1944, to July 16, 1947, and culminating in the Order of January 5, 1949, petitioners now seek to have the entire effect of those proceedings destroyed and the purposes of the Federal Power Act frustrated, by insisting that the Court below erred in refusing to annul or remand the Orders because of the collateral determination subsequently obtained by Penn Water in the Fourth Circuit, in the *Penn Water Contract Case* — proceedings to which FPC was even not a party.

The Court below, in response to the motions to annul, indicated that what might be illegal as contract between the parties, as constituting a monopoly in violation of the Sherman Act, might nevertheless be valid as a rate and service order of FPC, acting in pursuance of the directive of Congress specified in the Federal Power Act (R. Vol. 18, pp. 5370-5375). The Court below, however, did not rest with this reconciliation of the Commission's orders with the Opinion of the Fourth Circuit in the *Penn Water Contract Case*. Regardless of such reconciliation, it based its decision squarely on its holding that, if Penn Water had any right to change its services or rates as a result of having had its contracts declared illegal in violation of the Sherman Act, it should pursue its legal remedies under the Federal Power Act, as it had first been directed to do by FPC when the petition for rehearing was denied (R. Vol. 18, pp. 5375-5376).

ISSUES PRESENTED BY PETITIONERS AND OUTLINE OF ARGUMENT IN RESPONSE

Petitioners, Penn Water (brief, p. 3) and Pennsylvania Commission (brief, p. 13) separately state three issues which they seek to have determined by this Court. Be-

efforts to destroy the benefits of that pool by attacking the contracts which put it in operation, and the rate orders which now continue it in effect.

cause of the duplication involved in Penn Water's issues I and II and the Pennsylvania Commission's issues II and III, all of which seek to present a single issue not properly reviewable by this Court on the instant Record, there are only three basic questions presented by petitioners:

I. *Did the Court below err in holding that "where electric energy is produced in Pennsylvania and thereafter sometimes commingled with electric energy flowing from another state and sold to Pennsylvania customers and where the proportions of such respective energy are ascertainable, such sales are in interstate commerce within the scope and intendment of the Federal Power Act and subject to the jurisdiction of FPC"?* (PUC brief, p. 13.)

This issue, presented by the Pennsylvania Commission alone, rests upon a conclusion of fact contrary to that determined by FPC upon substantial evidence (FPC found that Penn Water has no *separable* intrastate sales). The assertion that Penn Water's sales to its Pennsylvania customers can and should be treated as sales in intrastate commerce, subject to the jurisdiction of the Pennsylvania Commission (PUC brief, pp. 15-19), is contrary to the nature of such sales and the facts of combined hydro-steam operation of the integrated system, as found by FPC upon substantial evidence and confirmed by the Court below (R. Vol. 18, pp. 5382-5384). Petitioner thus asks this Court, contrary to long-established law, to substitute its judgment for that of FPC, upon just the kind of complicated engineering and economic facts which FPC is best qualified to determine.

Petitioner draws no support from the two principal cases upon which it relies, *Peoples Gas Company v. P. S. C.*, 270 U. S. 550 (1926) and *Lone Star Gas Co. v. Texas*, 304 U. S. 224 (1938), both of which were determinations of the ex-

tent of state power over commerce *in the absence of federal regulation.* Those cases confirmed determinations of the fact of separability of the intrastate commerce involved therein, as made by the Commission in the first instance. The latter case dealt solely with a problem of local distribution consistently recognized to be intrastate, a factor which is clearly not involved in the instant case.

No further argument will be submitted on this issue, for it is obviously correctly decided by the Court below upon the reasoning referred to in the record reference above (Vol. 18, pp. 5382-5384).

II. *Is a licensee subject to regulation under Part I of the Federal Power Act also subject to regulation as a public utility under Part II of the Act?* (P. W. brief, pp. 3, 19, 23, 76.)

This issue is presented by Penn Water alone. The Court below, in affirming FPC's decision that Part II applies to licensee-public utilities, correctly followed the determination of the Court of Appeals for the Third Circuit in the *Safe Harbor rate case — Safe Harbor Water Power Corporation v. FPC,* 179 F. 2d 179, 185 (1949) cert. den. 339 U. S. 957 (1950) — which is the only other opinion which has dealt squarely with this question.

No further argument thereon will be submitted herein, because the subject is adequately disposed of by the Opinions of the two Courts of Appeals, for the Third Circuit and the District of Columbia Circuit. What we would argue would of necessity be repetitious thereof, as well as what has been presented by FPC in its opinions and brief.

Petitioner, Penn Water, has resolved its issues I and II (and the Pennsylvania Commission's corresponding issues III and II) into one issue which is stated (P. W. pet., pp. 2-3; brief, p. 3):

III. *"The primary issue in this case is whether the FPC *.* * may compel electric utilities to perform, and may base its rate orders upon continued performance of, contracts which have been adjudged by the courts to violate Federal antitrust laws, public policy and the laws of the utilities' state of incorporation".*

This simplified statement, like the more complicated questions stated in the petitions and repeated characterizations in the briefs, is very carefully worded in a manner designed to create the impression that such an issue had been raised in the proceeding before FPC, had been ruled upon by FPC after evidence and argument, and was then confirmed by the Court below. Actually, the issue stated by petitioners here was *never presented to FPC,* and was not accepted as an issue by the Court below.

At best, only an approximation of it was suggested by Penn Water's petition for rehearing. In response thereto, FPC pointed out that if Penn Water desired to raise such questions (which it had ignored during the four years that the rate case was in progress, and which involved a disruption of the integrated power system as Penn Water had presented it to FPC), the provisions of the Commission's rules and the Federal Power Act relative to change or withdrawal of tariffs should be complied with (R. Vol. 16, pp. 5181-5188).

In confirming FPC's denial of Penn Water's petition for rehearing, the Court below makes the squarely procedural administrative law determination that Penn Water could not present to the Court of Appeals *for the first time,* as basis for setting aside or remanding FPC's Orders, matters which the petitioners had ignored during the course of hearings before the Commission, which they had subsequently made the basis of a collateral attack in Court pro-

ceedings to which FPC was not a party, and for which the Federal Power Act specifies a proper procedure of presentation in the first instance to FPC (R. Vol. 18, pp. 5375-5376). That was the basis of the decision below, which petitioners seek to avoid by misstating the issue to this Court, in Penn Water's issues I and II and the Pennsylvania Commission issues III and II, and the arguments related thereto.

Phrased succinctly as a legal proposition for review by this Court, the only proper issue related to and including all of these questions (as embodied within issue III), and properly stated in relation to the record in this proceeding, is:

Was the Court of Appeals, as the tribunal established by law to review decisions of the Federal Power Commission, correct in affirming a decision of the Commission that the Federal Power Act requires a regulated licensee and utility to charge the rates and to perform the services required by order of the Commission, supported by an extended record and issued after protracted hearings, until that utility has sought and obtained a change of its rates and service under procedures duly established by the Commission under the Act?

The Court below correctly answered that question in orthodox fashion, under well-established doctrines of administrative law consistently confirmed by this Court.

If petitioners wish a determination of what they erroneously claim to be "the primary issue" of this case, they should present that issue in *original* proceedings before FPC, where a complete record may be made with reference thereto. After such proper procedure has been followed and FPC has issued an order resting on such a record, the parties interested may, or may not, desire and petition

for judicial review thereof. In any event, only then will Penn Water's asserted "primary issue" be ripe for determination.

SUMMARY OF ARGUMENT

Because of the vigor of petitioners' procedurally unlawful attack as made herein upon the FPC Orders, and because of the vital importance to the Maryland public of the substantial rate reductions involved, we urge upon this Court (with detailed argument to follow) that the decision below should be affirmed for the following reasons:

1. *Petitioners' arguments that the FPC Orders should be annulled rest upon decisions of the Fourth Circuit, which lacked jurisdiction to make those decisions because of the broad doctrine of "primary jurisdiction", as confirmed by the recently decided Far East Conference case (Argument 1 hereinafter,* p. 21).

The Federal Power Act (16 U. S. C. 791a-825r, pamphlet copy filed by FPC) confers on FPC detailed and comprehensive powers to secure uniform and consistent regulation of licensees and public utilities such as Penn Water and Safe Harbor. The *Far East Conference* case (20 L. W. 4207, Mar. 10, 1952) confirms the doctrine of "primary jurisdiction" which runs back to *Texas & Pacific R. Co. v. Abilene Cotton Oil Co.*, 204 U. S. 426 (1907), and which establishes the fact that the Fourth Circuit had no power to render the decisions herein relied upon by petitioners.

The broad and properly applicable doctrine of administrative law is not to be avoided by petitioners' attempts to convert the argument into one of "repeal by implication" of the Sherman Act. As was stated clearly by the Court below (R. Vol. 18, pp. 5371-5372), the Sherman Act is of lim-

ited application in this field of government-regulated monopoly. The Fourth Circuit had no jurisdiction (and should have declined to exercise jurisdiction) to apply the Sherman Act in contravention of: (a) the facts, and (b) the purpose and policy of the Federal Power Act.

2. The theory of the "filed tariff", as embodied in Section 205 of the Federal Power Act, precludes petitioners from asserting a collateral destruction of the tariffs and the rate orders of the FPC (Argument 2 hereinafter, p. 31).

Assuming *arguendo* that the Fourth Circuit had jurisdiction to render the decisions on which petitioners here rely, the motions to annul or remand were nevertheless correctly denied. To grant them would give court decisions declaring Penn Water's power contracts invalid (on their face, without regard to the facts of operation, or the public necessity and benefits involved in the existing service and the continuance thereof) the collateral effect of annulling FPC Orders based upon voluminous record and argument *in which no question was ever raised as to the validity of such contracts*, although they constituted the filed tariffs controlling the service and rates to be regulated. When such tariffs have been confirmed (as here) by rate orders after formal hearings, they constitute the only lawful terms of service and may be changed only in the manner established by law (Federal Power Act, Sec. 205d) — namely, by proceedings beginning before FPC. To hold otherwise, would be a departure not only from the explicit statutory provisions of Section 205 embodying the doctrines of the filed tariff, but likewise would violate the sound administrative law doctrines of "primary jurisdiction" and "exhaustion of administrative relief".

3. *The Rate Orders Should Not Be Annulled or Remanded Because of the Sherman Act (Argument 3 hereinafter,* p. 43).

FPC orders establishing rate schedules relating to operations, fully supported by an extended record and hearings before the Commission, are acts of the Federal Government and are not dependent for their authority upon the contractual consent of the parties which began those operations. As acts of the government (even if they ordered what would be proscribed to private parties by the Sherman Act), they are not subject to the Sherman Act.

The rate orders here in question, however, were issued by FPC so as to apply only to service arrangements which would, in and of themselves, be lawful. FPC has construed the rate schedules of Penn Water to Consolidated as not to include Article IV and V of the Penn Water contract, which were the only provisions thereof found by the Fourth Circuit to be *per se* unlawful. Accordingly, there is no provision of Penn Water's prescribed rate schedules subject to the charges made herein by Penn Water.

Furthermore, even as contracts, and in their entirety, the Penn Water contract and the Safe Harbor contract do not violate the Sherman Act. They were proper business arrangements for developing a great natural resource and for securing the maximum benefits therefrom to the public. They are clearly valid under proper application of the rule of reason.

4. *The Rate Orders Should Not Be Annulled or Remanded Because of the Pennsylvania Public Utility Law or Public Policy (Argument 4 hereinafter,* p. 52).

The FPC Orders here involved relate to *service* of Penn Water which is entirely interstate in character (as is like-

wise true of Safe Harbor), and as such is not subject to any of the laws or policy of Pennsylvania as urged by petitioners.

ARGUMENT

1. Petitioners' arguments that the FPC Orders should be annulled rest upon decisions of the Fourth Circuit, which lacked jurisdiction to make those decisions because of the broad doctrine of "primary jurisdiction", as confirmed by the recently decided Far East Conference case.

In the recent case of *Far East Conference, United States Lines Company, States Marine Corporation et al. v. The United States of America and Federal Maritime Board*, 20 L. W. 4207 (March 10, 1952), this Court denied the right even of the United States to sue in the first instance in the District Court to enjoin a dual-rate system alleged to be in violation of the Sherman Act. In that opinion, this Court confirmed its earlier decision of *United States Navigation Co. v. Cunard Steamship Co.*, 284 U. S. 474 (1932), and stated the applicable principles which condemn the action of the Fourth Circuit in the *Penn Water Contract Case*, upon which Penn Water here relies:

> "* * * in cases raising issues of fact not within the conventional experience of judges or cases requiring the exercise of administrative discretion, agencies created by Congress for regulating the subject matter should not be passed over. This is so even though the facts after they have been appraised by specialized competence serve as a premise for legal consequences to be judicially defined. Uniformity and consistency in the regulation of business entrusted to a particular agency are secured, and the limited functions of review by the judiciary are more rationally exercised, by preliminary resort for ascertaining and interpreting the circumstances underlying legal issues to agen-

cies that are better equipped than courts by specialization, by insight gained through experience, and by more flexible procedure".

The exclusive primary jurisdiction of FPC, which deprives the Fourth Circuit of original jurisdiction and authority in the two contract cases, is founded upon the broad powers conferred by the Federal Power Act (16 U. S. C., Secs. 791a-825r; citations of sections which follow are to the pamphlet copy filed herein by FPC).

Section 207 empowers FPC, in case any interstate service of a public utility is inadequate, to determine the proper service to be rendered and to "fix the same by its order".

Section 206 empowers the FPC, if it finds that any rate, charge, or classification in any interstate sale or any *contract affecting* such rate, charge or classification is unjust, unreasonable, unduly discriminatory or preferential," to determine "the just and reasonable rate, charge * * * or *contract* to be thereafter observed and in force" and to "*fix the same by order*".

Section 205, providing for just, reasonable, and nondiscriminatory rates, requires "all *contracts which in any manner affect or relate* to such rates, charges, classification and service" (Sub-par. (c)), for interstate sales by public utilities of energy at wholesale, to be filed with the FPC under rules to be established by FPC and prohibits any changes in such contracts until after thirty days' notice to the FPC and the public (Sub-par. (d)).

Section 202(b) authorizes the FPC to require a public utility, if its generating facilities and output are sufficient for the purpose, to establish physical connections with, and make sales of energy to, other electric companies and to "*prescribe the terms and conditions of the arrangement*

to be made between the persons affected by any such order, including the apportionment of cost between them and the compensation or reimbursement reasonably due to any of them" (Emphasis added to the foregoing excerpts).

Section 10(b) prohibits a licensee from constructing any additions of capacity in excess of 100 horsepower to a licensed project "without the prior approval of the Commission".

Section 8 provides that "no voluntary transfer of any license or of the rights thereunder granted shall be made without the written approval of the Commission * * *".

Section 309 empowers the FPC by order, rules, and regulations to carry out and enforce the provisions of the Federal Power Act.

Section 313 provides the exclusive method by which such orders of the FPC may be reviewed by the Court of Appeals.

As the opinion below pointed out, certain underlying objectives of a regulatory statute, such as the Federal Power Act, are sometimes at variance with certain underlying objectives of the Sherman Act. Nevertheless, it is FPC's duty, in exercising its jurisdiction, to reconcile and accommodate these two Federal enactments to the specific problems before it. *The vehicle for this accommodation and reconciliation in a particular case is the rule of reason.* If, in appraising the validity of a tariff, FPC observes and stays within the rule of reason, the Sherman Act and the Federal Power Act can be read together, accommodated, reconciled, and applied to accomplish the underlying policies of the two enactments. The statutory standard of the Federal Power Act is reasonableness. Just and reasonable rates, services, and contracts of licensees and public utilities subject thereto are objectives of that Act. Such is

also the statutory standard of reasonableness which has been read into the Sherman Act. We submit that the District of Columbia Circuit had these considerations in mind when it said in its opinion below (R. Vol. 18, pp. 5371-5373):

> "In place of competition as a generalized and indirect regulator of prices and services in the field of interstate transmission of electric energy at wholesale, Congress has substituted a regulatory agency authorized to supervise almost every phase of the regulated company's business. Rates charged by such utilities, *as well as the services and contractual provisions affecting them,* must be 'just and reasonable.' And what is 'just and reasonable' is not determined by the pressures of competition but by the adequacy of the service to the public, the fairness of the return allowed upon the investment in the company, and the degree to which the congressional objective of efficient use of the nation's power resources is served. * * *
>
> "These contrasting objectives indicate that the antitrust laws can have *only limited application* to industries regulated by specific statutes. * * *
>
> "The net effect of what we have already said is that, though regulated industries are not *per se* exempt from the antitrust laws and appeals by implication are not favored, the antitrust laws are superseded by more specific regulatory statutes *to the extent* of the repugnancy between them. That is not to say that competitive considerations may not be components of the public interest sought to be served by a particular regulatory statute, and hence a guide to a commission's exercise of its authority *when the question is properly before it.* * * * But where a statute provides for comprehensive and detailed regulation of a particular industry, as do the Interstate Commerce Act and the Federal Power Act, there is, as we have indicated, only a limited area for application of antitrust considerations to Commission decisions." (Emphasis added.)

The question whether the Penn Water contract and the Safe Harbor contract are reasonable and in the public interest under the "just and reasonable" standards of the Federal Power Act, and the "rule of reason" standard of the Sherman Act, is peculiarly a question for FPC determination, with its expert technical and engineering resources. It is not a question to be decided collaterally in a summary proceeding in the District Court on the face of those tariffs alone; but only after all of the surrounding facts have been fully explored, intelligently appraised, and applied by an administrative body competent to do so. Otherwise, there may be conflict between the two enactments separately applied to the same tariffs by different tribunals. Variance in the application of the laws is bound to result.

We submit that these were the considerations which led this Court, in *U. S. Navigation Co. v. Cunard S. S. Co.*, 284 U. S. 474, 485, 487, to say:

> "Whether a given agreement among such carriers should be held to contravene the act may depend upon a consideration of economic relations, of facts peculiar to the business or its history, of competitive conditions in respect of the shipping of foreign countries, and of other relevant circumstances, *generally unfamiliar to a judicial tribunal, but well understood by an administrative body especially trained and experienced in the intricate and technical facts and usages of the shipping trade; and with which that body, consequently, is better able to deal.*
>
> "* * *
>
> "Moreover, having regard to the peculiar nature of ocean traffic, it is not impossible that, although an agreement be apparently bad on its face, it properly might, upon a full consideration of all the attending circumstances, be approved or allowed to stand with modifications."

Any consideration of the facts of the relations between Penn Water, Safe Harbor, and Consolidated, as shown by the record herein before FPC and as summarized in its Opinion 173A (R. Vol. 16, p. 5178) demonstrates vividly how the failure of the Fourth Circuit to observe these long-established principles, as confirmed by the *Far East Conference* case, resulted in its erroneous assertion of jurisdiction to apply the Sherman Act in condemnation of tariffs on file with FPC. Its action thus disrupts the "uniformity and consistency in the regulation of business entrusted to a particular agency" and threatens grave injury to the public interest by destroying the reasonable prices which both the Sherman Act and the Federal Power Act were designed to protect.

Petitioners seek to avoid the need for FPC to exercise its primary jurisdiction, by asserting that the Federal Power Act confers no specific authority to exempt utilities from the application of the Sherman Act. But FPC has asserted no such authority to exempt. It asserts that *its orders* are not affected by the Sherman Act; but, if they are subject to its provisions, they prescribe nothing that is contrary to the Act. Furthermore, no specific authority to exempt is required for the application of the normal rules of primary jurisdiction and exhaustion of administrative relief.

Petitioners' entire argument to annul the existing rate orders rests upon the Fourth Circuit Opinions in the *Penn Water Contract Case* (184 F. 2d 552, 186 F. 2d 934, cert. denied 340 U. S. 906) and in the *Safe Harbor Contract Case* (pamphlet opinion filed by petitioners — *Consolidated Gas Electric Light and Power Company, et al, v. Pennsylvania Water & Power Co., et al.*, January 3, 1952, cert. requested February 23, 1952 in Nos. 611 and 612, current term).

In the *Penn Water Contract Case*, the Fourth Circuit relied primarily upon the inapplicable decisions of *U. S. Alkali Ass'n. v. U. S.*, 325 U. S. 196 (1945), and *U. S. v. Borden Co.*, 308 U. S. 188 (1939). Neither of these cases involved a comprehensive and detailed plan for the uniform and consistent regulation of an entire business or industry on a national scale by an independent regulatory commission, such as is the purpose of the Interstate Commerce Act, the Shipping Act, or the Federal Power Act.* The Fourth Circuit brushed aside the clearly applicable decision of *U. S. Navigation Co. v. Cunard S.S. Co.*, 284 U. S. 474 (1932), and related decisions under the Interstate Commerce Act.**

Although the Fourth Circuit correctly stated that "the maintenance of uniformity of regulation and the control of the activities of an industry of national scope by a specialized body are as important in the field of electric power as in the field of transportation or water", (*Penn Water Contract Case*, 184 F. 2d 552, 564), it justified its frustration of that principle by stating that "the control of the Federal Power Commission over the power sites of

---

* It is further pointed out: (1) In each of these cases, relied on by the Fourth Circuit, there had been only inaction by the regulatory authority empowered to act (as distinguished from here, where FPC has acted in broad approval of the arrangements involved); (2) in the *Alkali* case, the agency lacked power to deal conclusively with the subject matter (325 U. S. 195, 205, 210); and (3) in the *Borden* case (308 U. S. 188, 204-205), the agency's power to deal at all with the subject matter was questioned. In the *Borden* case, the Court pointed out that while there was administrative power under the *Capper-Volstead* Act to control "*producers*" of agricultural products and their rights to combine with *each other*, the administrator's power did not cover "combination or conspiracy with *other persons* in restraint of trade". This was the situation in *Hinton v. Columbia River Packers Ass'n.*, 131 F. 2d 88 (1942), also cited by the Fourth Circuit to support its result.

** Particularly relevant here are *Terminal Warehouse Co. v. Penn. R.R. Co.*, 297 U. S. 500 (1936); and *Keogh v. C. & N. N. W. Ry. Co.*, 260 U. S. 156 (1922).

the country and over the interstate transmission of electric energy is not disturbed by the retention of the jurisdiction of the courts to enforce the anti-trust acts". The Fourth Circuit erroneously relied on *Georgia v. Pa. R. R. Co.*, 324 U. S. 439 (1945), despite the fact that this Court, in sustaining the right of the State of Georgia to bring an original proceeding in this Court to enjoin a conspiracy of carriers in violation of the Sherman Act (and then only with a strong dissent by four Justices), explicitly stated that its Opinion would not support "an injunction against the continuance of any tariff" or a proceeding "to have any tariff provision cancelled" (324 U. S. 439, 455). This Court, by the use of this language, sought to preclude the very result which the Fourth Circuit obtained in the *Penn Water Contract Case.*

This Court's denial of certiorari in the *Penn Water Contract Case,* as indicated in the citation above, does not confirm the action of the Fourth Circuit as being correct. It "imports no expression of opinion upon the merits of the case". *Agoston v. Commonwealth of Pennsylvania,* 340 U. S. 844 (1950); *Sunal v. Large,* 332 U. S. 174, 181 (1947); *House v. Mayo,* 324 U. S. 42, 48 (1945).

The petitioners now assert the *Penn Water* contract decision as basis for direct annulment of the tariff. Thus, it is incumbent upon this Court to declare the error of the Fourth Circuit's Opinion in asserting jurisdiction over matter subject to the primary jurisdiction of FPC.

The *Safe Harbor* contract opinion perpetuates and relies upon the above-described jurisdictional errors of the *Penn Water Contract Case.* It went further than the *Penn Water* contract opinion, however, in making explicit the Court's belief that it had collaterally destroyed FPC Orders, saying:

"Further proceedings before the Federal Power Commission will doubtless be necessary * * *. The problem of the Commission would then be to devise a plan which will effectuate the purposes of the Federal Power Act and at the same time conform to the anti-trust statutes." (pamphlet opinion of Jan. 3, 1952, filed by petitioners, p. 22.)

In the *Safe Harbor Contract Case*, the Fourth Circuit affirmed a *summary judgment*, in complete disregard of the facts as supported by answer and affidavits of Consolidated (and as sought to be presented in FPC's petition to intervene, which was denied), and in further disregard of FPC's assertion (in its brief filed with the Fourth Circuit) that it had ordered as a rate schedule the entire Safe Harbor contract. In the above-quoted statement, the Fourth Circuit flatly ignored the fact that FPC had thus already expressed its deliberate judgment, based upon an extended record, as to the relation between the policy of the Federal Power Act and the facts found by the Commission.

This action of the Fourth Circuit was in clear disregard of *Georgia v. Pennsylvania R. R.*, *supra*, and the policy expressed in the *Far East Conference* opinion quoted above. Certiorari has been requested and is now pending decision in Nos. 611 and 612. It should be granted and the decision of the Fourth Circuit reversed.

This Court has many times required exhaustion of administrative relief as to matters submitted to administrative control, before permitting Court action upon matters of law related thereto.

Myers v. Bethlehem Shipbuilding Corp., 303 U. S. 41 (1938);

FPC v. Metropolitan Edison Co., 304 U. S. 375 (1938);
Macauley v. Waterman S. S. Corp., 327 U. S. 540 (1946);
Aircraft & Diesel Equipment Co. v. Hirsch, 331 U. S. 752 (1947).

This Court has made it clear not only that exhaustion of administrative relief is required, but that the administrative determination takes on a high degree of finality as to the "coverage" of the statute under which an agency acts, because the agency is better qualified than the Courts to understand the facts and construe the basic statutes in relation thereto.*

Gray v. Powell, 314 U. S. 402 (1941);
Endicott Johnson Corp. v. Perkins, 317 U. S. 501 (1943);
Oklahoma Press Co. v. Walling, 327 U. S. 186 (1946);
National Labor Relations Board v. Hearst Publications, Inc., 322 U. S. 111 (1949).

The Fourth Circuit's decisions violate all the rules so carefully established by this Court for "the complementary roles of courts and administrative agencies in the enforcement of the law". Its decision should be respectively overruled in the *Penn Water Contract Case*, and reversed in the *Safe Harbor Contract Case*, now pending on certiorari, and the FPC Orders herein affirmed in their entirety.

---

* There could be no better illustration of a Court's inherent technical disadvantage than the Fourth Circuit's failure to understand the engineering and the economic aspects of the instant controversy. Even worse is its disavowal of any interest in any argument that the engineering and economic factors should be given weight in its deliberations (184 F. 2d 552, 559 Par. [6] "it is idle to consider", etc. — a clear repudiation of interest in the benefits of coordinated operation and economy which the contracts effected, and which it was the duty of FPC, under the Federal Power Act, to foster and achieve).

2. The theory of the "filed tariff", as embodied in Section 205 of the Federal Power Act, precludes petitioners from asserting a collateral destruction of tariffs or rate orders of the FPC.

Assuming *arguendo* that the Fourth Circuit was correct in determining that it had authority to strike down contracts (*qua* contract) despite their partial or total identity with tariffs on file with and approved by FPC, the Fourth Circuit decisions do not have the collateral effect of destroying the FPC orders, as is now asserted by petitioners. If they could have this effect, petitioners are completely sustained in their bold attempt to flout the doctrines of primary jurisdiction, exhaustion of administrative relief, and administrative supremacy as to matters committed to Commission control; furthermore, Section 205 of the Federal Power Act (which provides for the filing of rate schedules for service by utilities subject to FPC regulation and constitutes such filed tariffs the only lawful terms of service until changed after petition to and hearing by the Commission) might just as well have been omitted from the law. Section 205 provides in part as follows:

> "(c) Under such rules and regulations as the Commission may prescribe, every public utility shall file with the Commission, * * * schedules showing all rates and charges for any transmission or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with *all contracts* which in *any manner* affect or relate to such rates, charges, classifications and services.
>
> "(d) Unless the Commission otherwise orders, *no change* shall be made by any public utility in *any such* rate, charge, classification, or service, or in any rule, regulation, or *contract* relating thereto, except after thirty days' notice to the Commission and to the public." (Emphasis added.)

When Penn Water, in its petition for rehearing before FPC, suggested for the first time to FPC that the basic power contracts were invalid and had been placed in litigation in the Courts, the Commission informed Penn Water that the Commission's rate order did not rest upon the decision of "questions as to the legality of the foundation contracts which are in litigation", but rather was founded upon the *operations* of the combined system and the *services* as actually rendered by Penn Water (Opinion 173A, R. Vol. 16, pp. 5181-5188).

FPC pointed out that Penn Water's petition sought to present only certain new legal arguments, which could have been presented to the Commission and which had been withheld, concerning contractual provisions (Articles IV and V), the asserted illegality of which would not affect the findings of fact upon which the rate order was based. As to asserted changes in operations (which Penn Water was restrained from continuing because of the hazards to the system), FPC said that until such operations and services were changed with the approval of the Commission, under the rules and regulations issued in pursuance of Sec. 205 of the Federal Power Act, Penn Water was bound to continue such operations and service at the reduced rates prescribed by the Order of January 5, 1949.

FPC thus met Penn Water's eleventh hour maneuver — a collateral attack to avoid the long overdue rate reduction — by referring Penn Water to the orderly processes of the law as prescribed by the Federal Power Act, implemented by FPC rules. If there was no error in this denial of the petition for rehearing (and we submit there was none), there was likewise none in the affirmance thereof by the Court below.

The provisions of the Penn Water contract regarded by the Fourth Circuit to be invalid *per se* (Articles IV and V only)* have played no part in the rate orders of the Commission. The services, originally begun under the contracts in 1931, have continued in exactly the same manner from 1931 to the present date. Obviously there must be rates to pay for such services, regardless of contract. Under the law, they are the just and reasonable rates allowed by the Federal Power Act and prescribed by FPC in its Orders here under attack.

Petitioners insist that the rate orders, although prescribing reasonable rates for services based on operations as validly found by FPC,** must be destroyed because of the illegality of the contracts; and moreover, (by inference here and statement to the Court below) they still claim the right to keep the exorbitant rates prescribed by the very contracts which they claim to be illegal. In all equity and justice, there was never a clearer case for upholding the orderly processes of the law to defeat such unconscionable conduct.

What petitioners overlook is that when Penn Water filed its contract as a tariff in 1936 under the Federal Power Act, its former obligations to serve under the contract and at the rates therein prescribed passed out of the realm of contract and into the area of duty prescribed by law. The *tariffs* (not the contracts), from that date and until with-

* The Fourth Circuit's holding that the Penn Water contract was invalid only because of the provisions of Articles IV and V appears in at least three places in its first opinion (R. Vol. 18, pp. 5328, 5329, 5346), in its second opinion (R. Vol. 18, p. 5358), and also in its opinion in the *Safe Harbor Contract Case* (p. 3 of printed pamphlet copy supplied by Penn Water).

** Petitioners have abandoned any attempt to show any illegality in the order based on the record before FPC, except the two minor legal points in issues I and II above, pp. 14-15.

drawn or changed in the manner prescribed by the Federal Power Act (Sec. 205 as described by the Commission in its Opinion No. 173A, R. Vol. 16, pp. 5178, 5186-5188), constituted the only lawful terms of service for Penn Water.* Any departure by the parties thereto would itself be unlawful.

Texas & Pacific Ry. v. Mugg, 202 U. S. 242 (1906);
Texas & Pac. Ry. v. Abilene Cotton Oil Co., 204 U. S. 426, 439-449 (1907);
Western Union Tel. Co. v. Esteve Bros. & Co., 256 U. S. 566, 573 (1921);
Davis v. Henderson, 266 U. S. 92, 93 (1924);
Davis v. Cornwell, 264 U. S. 560 (1924);
Northwestern Pub. Serv. Co. v. Montana-Dakota Co., 181 F. 2d 19, 22-23 (1950); affirmed *Montana-Dakota Co. v. Northwestern Pub. Serv. Co.*, 341 U. S. 246 (1951).

The Eighth Circuit's opinion in the *Montana-Dakota* case states in part:

> "The plan or scheme of the Federal Power Act is analogous to that of the Interstate Commerce Act * * *, and decisions under the latter Act should be controlling here * * * The rates filed and approved by the Commission are the lawful rates until changed in the way approved by the Act * * *
>
> "Moreover, the transmission of electric energy being at wholesale and interstate, the seller must collect the charge named in the filed rate and the purchaser must

* It has long been established administrative and utility law that, however great a regulated utility's substantive right may be, it must comply with the procedures established by the law for perfecting it.
State ex rel. v. Kansas Postal Tel. Co., 96 Kan. 298 (1915), holding that a utility with a constitutional right to discontinue service, because it was operating at a loss, must nevertheless comply with the procedure of securing Commission approval to withdrawal.
State ex rel. R.R. Commissioners v. Bullock, 78 Fla. 321 (1919), affirmed 254 U. S. 513 (1921).

pay that rate. So long as the filed rate is not changed in the manner provided by the Act it is to be treated as though it were a statute, binding upon the seller and the purchaser alike."

This Court, in affirming on other grounds in the *Montana-Dakota* case, recognized the doctrine of the filed tariff, saying in part that the utility "* * * can claim no rate as a legal right that is other than the filed rate, whether fixed or merely accepted by the Commission, and not even a Court can authorize commerce in the commodity on other terms". Under the above-cited cases, and upon reason as well as authority, this doctrine applies not only to rates but of necessity to the services to which the rates relate and all applicable terms of service.

The Fourth Circuit, in deciding the *Penn Water Contract Case*, must have had this law well in mind when it rested its decision partly upon the case of *Georgia v. Pennsylvania R.R. Co.*, 324 U. S. 439, 452-460 (1945). That case held that utilities as regulated industries are not *per se* exempt from the Sherman Act, but also stated clearly that in condemning a Sherman Act violation, the Court could not and would not intrude on the primary jurisdiction of the Interstate Commerce Commission over its filed tariffs.

Referring to *Keogh v. Chicago & N. W. R. Co.*, 260 U. S. 156, 161-162 (1922), the Opinion in the *Georgia* case (p. 453) states:

"* * * The legal rights of a shipper against a carrier in respect to a rate are to be measured by the published tariff. That rate until suspended or set aside was for all purposes the legal rate as between shipper and carrier and may not be varied or enlarged either by the contract or tort of the carrier. And it added: 'This stringent rule prevails, because otherwise the paramount purpose of Congress — prevention of unjust discrimination — might be defeated. * * *' "

Referring to *North Dakota, ex rel. Lemke v. Chicago & N. W. R. Co.*, 257 U. S. 485 (1922) and *Texas v. I. C. C.*, 258 U. S. 158 (1922), the *Georgia* case (p. 454) further states:

> "It is clear that a suit could not be maintained here to review, annul, or set aside an order of the Interstate Commerce Commission. Congress has prescribed the method for obtaining that relief. It is exclusive of all other remedies, including a suit by a State in this Court. * * *"

And, after referring to and quoting *Central Transfer Co. v. Terminal R.R. Assn.*, 288 U. S. 469 (1933), which likewise involved application of the "primary jurisdiction" doctrine as explicitly embodied in the Clayton Act, the *Georgia* case (p. 455) in referring back to all of these cases said:

> "* * * *We adhere to these decisions.* But we do not believe they or the principles for which they stand are a barrier to the maintenance of this suit by Georgia.
>
> "The relief which Georgia seeks is *not a matter subject to the jurisdiction of the Commission. Georgia in this proceeding is not seeking an injunction against the continuance of any tariff; nor does she seek to have any tariff provision cancelled.* * * *" (Emphasis added.)

The Fourth Circuit was apparently mindful of these clearly established limitations upon its powers. This is evidenced by the extent to which its Opinions observe that it does not purport to interfere with the overall authority of FPC or its rate-making powers. After discussing the FPC rate opinion affirmed below, the Fourth Circuit said (184 F. 2d 552, 566) that it did not

> "undertake to gainsay the view of the Commission that *even if the restrictive conditions of the basic contract are invalid*, as to which the Commission expressed no opinion, it still has the duty and authority under the Federal Power Act to encourage and establish the interconnection of electrical facilities * * *."

At the conclusion of its Opinion in the recently decided *Safe Harbor Contract Case* (Opinion of Jan. 3, 1952, pamphlet copy filed with this Court, pp. 22, 23), the Fourth Circuit summarized its position as follows:

> *"There need be no interference with the rate making power or the overall control of the Federal Power Commission.* We repeat with respect to Safe Harbor what was said in regard to Penn Water in our prior opinions, 184 F. 2d 552, 568, and 186 F. 2d 934, 937:
>
> > *"'It is not our function in this case to decide how far the activities of Penn Water and Consolidated under the basic contract are subject to the regulations of the Federal Power Commission or the Pennsylvania Public Utility Commission, either or both.* * * * It may well be, although the present arrangement between the Maryland and Pennsylvania utilities is invalid for the reasons set forth, that an interconnection of facilities and an interchange of electrical energy between them may be continued by some method that would meet with the approval of the appropriate regulatory authority and will not offend either the anti-trust laws or the utility laws of Pennsylvania' (184 F. 2d 568)."* (Emphasis added.)

The existing FPC orders preserve just such "an interconnection of facilities and an interchange of electrical energy" in full compliance with all applicable laws, and no

---

* It must be observed, however, that in the *Safe Harbor Contract Case*, the Fourth Circuit indicated its belief that "further proceedings before the Federal Power Commission will doubtless be necessary if it is decided that the three party contract, as well as the two party contract, is invalid" (quoted in part and discussed above, p. 29). If this means that the Fourth Circuit felt it had by its action destroyed the rate orders (as is assumed by Miller, J., in dissent below) then the Fourth Circuit has accomplished collaterally a review and annulment of FPC Orders contrary to the exclusive review provisions of the Federal Power Act (Sec. 313). The essence of the matter is that the Fourth Circuit lacked any such power to collaterally destroy the rate orders.

further action by FPC is necessary to that end. Having found the operations of Penn Water as conducted from 1931 to date to be in the public interest, but at unjust and unreasonable rates, FPC has prescribed just and reasonable rates and the conditions of service to which they apply (the latter being the conditions of service as previously rendered). The schedules prescribed by the Commission replace the pre-existing "filed tariffs" as well as the contracts between the parties, as far as service and rates are concerned. Even assuming that the Fourth Circuit had jurisdiction to condemn the contracts between the parties because of certain provisions which the Court deemed to be illegal *per se*, its decision can have no direct effect upon the filed tariffs or services as rendered thereunder prior to the effective date of the FPC Orders, nor can it have any direct effect upon the schedules required by those Orders, which continue operations and services found to be in the public interest and establish reasonable rates therefor.

Petitioners asked the Court below and now ask this Court improperly to accept the Fourth Circuit decisions, without any inquiry into their merits, as the basis for annulling the FPC rate orders. The Court is asked to do so, without any record from FPC as to its views after hearing and argument before it, regarding the matters urged upon and accepted by the Fourth Circuit. Only if such hearing and argument is had before FPC *in advance of determination of such questions by the Courts* can there be a proper reconciliation of the policy of the Sherman Act and the Federal Power Act, and proper uniformity and consistency of regulation attained.*

---

* See argument and cases above, pp. 29-30, showing the need for exhaustion of administrative relief even as to questions of law, and the advantages attached to administrative determination of "coverage" of the statute.

Petitioners' arguments constitute a studied and carefully presented attempt: first, to divert this Court's attention from the purely procedural administrative law determination made by the Court below in denying petitioners' motions to annul; and second, to attract the Court's attention to an asserted conflict between the views of the Fourth Circuit and the Court below as to the interrelationship of the Sherman Act and the Federal Power Act, which had not been presented to FPC and hence could not have been covered by its Orders. They almost ignore the nature of the findings of the Court below that the Federal Power Commission, after 21,200 pages of record, has issued opinions and orders clearly within its jurisdiction under the Federal Power Act and amply supported by evidence in that record.

The Court below, faced with petitioners' motions to annul or remand (which made there the same studied presentation as is made here), painstakingly considered whether the Fourth Circuit's decision regarding the applicability of the Sherman Act, the Pennsylvania public utility laws, and public policy to the long-term power contract between Penn Water and Consolidated would apply equally to the FPC rate orders. It was claimed below, as here, that the Fourth Circuit decisions had the collateral effect of destroying the rate orders without further inquiry.

In answering the argument of petitioners, the Court below expressed its opinion that integrated electric power service arrangements which might be illegal as entered into by agreement of the parties (whether because of the Sherman Act or some other law) might, nevertheless, be lawful if compelled by Congress acting through a duly established regulatory agency (R. Vol. 18, pp. 5370-5374). This was correct. The Court was also correct in not basing

its decision upon its opinion as to this or any other matter which might be within FPC's primary jurisdiction to determine in the first instance. It clearly pointed out to petitioners that if a definitive decision as to such matter is to be had, it must occur only after petitioners (or others) have properly presented the matter to FPC, under its rules made in proper pursuance under the applicable provisions of the Federal Power Act. The Court below said (R. Vol. 18, pp. 5375-5376):

> "In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligation under the Federal Power Act to continue the then existing services and rates. *It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order.* 'A rate is not necessarily illegal because it is the result of a conspiracy in restraint of trade in violation of the Anti-Trust Act. What rates are legal is determined by the regulatory statute. *The validity of Commission action in this proceeding must be determined in light of the criteria furnished by the Federal Power Act, as applied to the operations and arrangements under scrutiny. If jurisdiction was properly assumed by the Commission, if its rate order is 'just and reasonable' within the meaning of the Federal Power Act, and if its findings are supported by substantial evidence, Penn Water can have no complaint and our review is at an end. If petitioners, as a result of the Fourth Circuit's decision, wish to make any changes in operations, contracts, arrangements, etc., within the jurisdiction of the Federal Power Commission, they must do so in accordance with the Federal Power Act.* Under §205(d) thereof, 'Unless the Commission otherwise orders, no change shall be made by any public utility in any such rate, charge, classification, or service, or in any rule, regulation, or contract relating thereto, except after thirty days' notice to the Commission and to the public.' Pursuant to that section, petitioners may submit new arrangements

and rates based thereon to the Commission. And the Commission 'either upon complaint or upon its own initiative without complaint' may 'enter upon a hearing concerning the lawfulness of such rate, charge, classification, or service * * *.' *If Penn Water feels itself aggrieved after such proposed changes have been acted upon by the Commission, it may at that time bring a new petition for review.* In short, a 'rate established in the mode prescribed should be deemed the legal rate and obligatory alike upon carrier and shipper until changed in the manner provided' by the statute." (Emphasis added.)

This portion of the Opinion shows the real procedural nature of the Court's decision below. It states sound basis for affirmance here.

The Court below determined, on the record as made before FPC, that those matters left for review by the Court under the review provisions of the Federal Power Act (Sec. 313), concerning the FPC's power to determine just and reasonable rates and terms of service, were properly decided by FPC. The decisions of the Fourth Circuit in both contract cases affect in no way the justness or reasonableness of the FPC rate orders in relation to the facts of operation. Penn Water does not (and cannot) deny that services have continued during the period subsequent to February 1, 1949, in the same manner as they have always been rendered since 1931 and as testified by Penn Water's officers before FPC. If the Fourth Circuit decisions can have any effect upon the future reasonableness of the rate orders, particularly with regard to any desire of Penn Water to offer services in different form, or at different rates, this issue remains to be raised and established by Penn Water in the orderly manner prescribed by Section 205(d) of the Federal Power Act, and upon a properly made new record with reference thereto. It presents no basis for condemning the orders in this proceeding.

The benefits to the public which will result from the final, but much delayed, affirmance of FPC's Orders should not be further delayed. Again, the opinion below succinctly summarizes the legal and practical reasons why the motions to annul or remand were denied, which reasons apply equally to support affirmance here (R. Vol. 18, pp. 5376-5377):

> "To grant petitioners' motions and set aside the order at this time would be to substitute antitrust criteria for those of the Federal Power Act, a substitution which would be at cross-purposes with the intent of Congress. It would result in the reopening of a rate proceeding begun in 1944 because of an issue raised for the first time on rehearing in 1949 and a decision handed down in a suit between private parties under a non-controlling statute in 1951. In view of this chronology, we think the Supreme Court's statement in *Interstate Commerce Commission v. Jersey City*, 322 U.S. 503, 514 (1944), is especially pertinent: 'If upon the coming down of the order litigants might demand rehearings as a matter of law because some new circumstance has arisen, some new trend has been observed, or some new fact discovered, there would be little hope that the administrative process could ever be consummated in an order that would not be subject to reopening.' *The effect of granting petitioners' motions would be to disrupt a pattern of regulation which was carefully drawn to meet the problems of a complex industry.*" (Emphasis added.)

Petitioners are not harmed by an affirmance of the decision below, which would leave to Penn Water its orderly remedy by way of petition to FPC to change its services and rates, provided it can show justification for such changes. In the meantime, service will be rendered, in the same manner it has been rendered since 1931, under tariffs which were found by FPC to be in the public interest as to the integrated coordinated power system created thereby.

The rates have been prescribed as just and reasonable upon a record which contains no reversible error.

Any result, other than affirmance of the result below, would perpetrate a gross injustice upon the Maryland rate-paying public, and would lead only to the chaos and confusion which the Federal Power Act sought to avoid by providing for the filing of new tariffs with the Commission when a change in service is sought, whatever the reason for change may be.

This Court should decline to issue judgment in this case upon the questions presented by Penn Water and the Pennsylvania Commission as to whether the rate orders of the Commission here involved are fraught with the illegalities attributed (and we believe erroneously attributed) to the contracts, as contracts. That question can be answered properly by a Court only after Penn Water has made a proper record with reference thereto before the Federal Power Commission, in conformity with the orderly processes prescribed for making a change in its services and rates. The following argument, however, briefly shows that the rate orders do not violate either the Sherman Act (and related federal laws), or the Pennsylvania law, or public policy.

3. The Rate Orders should not be Annulled or Remanded Because of the Sherman Act.

a. The Rate Orders are official acts of the United States Government, and as such, are not subject to the Sherman Act.

As held by the Court below (R. Vol. 18, pp. 5367-5376), the rate orders were issued in direct pursuance of authority conferred by the Federal Power Act. As such, they are acts of the United States Government which are not to be

stricken down by a statute of that Government passed many years earlier to control the acts of private individuals, not the Government. *Parker v. Brown*, 317 U. S. 341, 350-352 (1943). If a State, as in *Parker v. Brown*, may order action by individuals, which if taken on their own initiative would violate the Sherman Act, the same doctrine most certainly protects the act of the Federal Government in prescribing the existing FPC rate orders.

FPC has not ordered, as contended by petitioners, a violation of the Sherman Act, or approved action of private individuals taken in violation of the Sherman Act. It does not purport to free or authorize Penn Water, Consolidated, Safe Harbor, or any others, to contract or combine in violation of the Sherman Act or any other law. It has in fact issued rate orders in pursuance of authority of the Federal Power Act, which accomplish the very purpose of the Sherman Act by an assurance that the public be not overcharged as a result of private action by contract, combination, or conspiracy. Penn Water is engaged in an all out effort to avoid the FPC orders, retain the substantial amounts involved in the rate orders, and for the future secure a higher rate of return if, and to the extent, it can avoid FPC control. It is inconceivable that the Sherman Act can be perverted to accomplish a result so contrary to its original and continuing policy.

b. FPC HAS MADE IT EXPLICIT THAT IT HAS NOT ORDERED ANY ILLEGAL SERVICE ARRANGEMENT.

In the rate schedules which FPC prescribed in its Order of Oct. 27, 1949 (R. Vol. 17, pp. 5267, 5283), the final paragraph of the schedule for Penn Water reads:

> "The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water

and Transmission Company. All other provisions of the aforementioned contracts, in and of themselves lawful prescribing or defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force."

Having been faced, in the petition for rehearing, with Penn Water's assertion that it was attacking its power contract in the courts because Articles IV and V violated the Sherman Act and other laws, FPC incorporated into its order only the "*service*" provisions of the contract (not as *contract* — but as part of the order) and then only such provisions as would be "in and of themselves lawful". This established clearly for Penn Water that the rates had been and were to remain fixed in relation to service and operations, and not in relation to Articles IV and V (legal or illegal) or any other provisions of the contract as such. FPC purposely omitted all that did not constitute a "classification, practice, regulation, or rule affecting such service."

Although we believe that a prescription of the entire Penn Water contract as a rate and service schedule would not have constituted an illegal order, subject to be annulled without inquiry as to the merits by the Fourth Circuit decisions, FPC ordered a schedule for service to Consolidated which does not embody as service arrangements any provisions of the contracts which might properly be deemed to be unlawful *per se*. In the argument below, Commission counsel adopted a construction of the schedule as eliminating Articles IV and V of the Penn Water contract, because the Fourth Circuit had found them, and only them, to be illegal *per se* (see footnote, *supra*).

Accordingly, whatever may be the merits as to petitioners' arguments that the Penn Water contract violates

the Sherman Act and related laws, because of the provisions of Article IV (controlling contracts with others) and Article V (controlling expansion), FPC takes the position that these Articles are not necessary to the rate schedules and are not prescribed thereby.

Apparently recognizing the weakness of basing their position on the only Articles which the Fourth Circuit found to be *illegal per se*, petitioners have now shifted their attack to an assertion of illegality in the method of payment, which they refer to as "illegal revenue pooling" (PUC brief, p. 29; P. W. brief, p. 21, and many repetitions in each brief). Petitioners apparently hope, by the force of repetition of these words, to establish an illegality in the form of payment which the Fourth Circuit refused to find in any of its Opinions, although it was most vigorously pressed upon the Court by Penn Water.

The form of payment provided for is obviously not "illegal revenue pooling". The benefits thereof were explained at length to FPC by the officers of *Penn Water* (R. Vol. 1, pp. 26, 70-71), and have been fully approved and ordered by FPC. In their inception they were modeled upon the Conowingo contract which had been approved by FPC, the Pennsylvania Commission, and the Maryland Commission.

If payment provisions of the rate orders in any way restrict Penn Water's incentive or initiative to render safe, adequate, and non-discriminatory service to the public, it is only by way of affording an exact method whereby from year to year Penn Water is permitted, and guaranteed, to earn an exact return — namely, the just and reasonable return as established by FPC from substantial evidence in the record. In this respect, the rate orders clearly accomplish the purpose and policy of both the Federal Power Act and the Sherman Act.

C. The Fourth Circuit Opinions cannot be accepted as conclusive here of the Sherman Act determinations made by that Court.

The Penn Water Contract Case

Although certiorari has been denied by this Court in the *Penn Water Contract Case,* (184 F. 2d 552, cert. den. 340 U. S. 906 (1950)), the denial of certiorari does not amount to approval of the decision on its merits. *Agoston v. Commonwealth of Pennsylvania,* 340 U. S. 844 (1950).

Before this Court considers petitioners' arguments that the rate orders are invalid because they rest on illegal contracts, the Court must itself appraise the asserted grounds for illegality in the light of the record in the instant case. This record will show that many of the unfounded statements of Penn Water made in unaccepted proffers in the *Penn Water Contract Case,** and now repeated as fact in the briefs here, are contrary to fact and to the testimony of Penn Water's officers in this case (R. Vol. 1, pp. 14-28, 30-34, 68-78).** Their testimony herein shows that Penn Water in fact has no distribution territory in Maryland or Pennsylvania and has never sought to compete with its customers in Maryland or Pennsylvania, but has accepted its proper regulated business role as a generating utility selling at wholesale only;† that the 1931 contract was not entered into to "throttle" competition or to "stifle" Penn Water's incentive or initiative, but was a necessary arrange-

---

* Which, being excluded in the trial court, were not subjected to cross-examination or met by rebuttal testimony.

** See footnote, p. 11.

† R. Vol. 1, p. 32, Mr. G. W. Spaulding, now President of Penn Water, testified:

> "It has never attempted to develop local distribution systems nor to enter upon a retail distribution business, nor has it attempted to compete with its other utility customers for bulk power industrial customers."

ment to enable Penn Water's unfirm hydro power from a river of widely fluctuating flow to be more effectively used in connection with the necessary large steam resources of Consolidated. The testimony in this record shows no dominating Consolidated,* but rather the true story of how Penn Water's officers claimed full credit for developing the hydro resources of the Susquehanna River, obtaining their greatest accomplishment in the 1931 contracts which achieved the "most economical result attainable" (R. Vol. 1, p. 26) "to the end of maximum utilization of natural resources, minimumization of investment and the utmost in service availability to the ultimate consumer" (R. Vol. 1, p. 69).

Now, petitioners urge this Court to strike down not only the contracts, but government orders based upon 21,200 pages of record and 602 exhibits, by merely looking at the face of the contracts, the Opinions of the Fourth Circuit (based upon a map and the face of the contracts), and the same map in the back of Penn Water's brief here.**

This, we respectfully say, cannot be the case. If it is to be given serious consideration at all, the Court should review the arguments presented by Consolidated and the Maryland Commission in their petitions for certiorari in the *Penn Water Contract Case* (October Term 1950, No. 424) as related to the facts now available in the instant record, and arrive at the correct conclusion that there is no "*per se*" violation of the Sherman Act involved.

On the contrary, the contract was a proper and lawful business means of developing and expanding the benefits

---

* R. Vol. 1, p. 33, Mr. Spaulding testified:
"Penn Water is in the unique position of being the only *non-captive* wholesaling utility company in the United States."

** P. W. brief, p. 3 n. "**".

to be obtained from a valuable natural resource. Through it, Consolidated purchased and guaranteed the return upon the entire output of the Penn Water plant until 1980, subject to such existing contracts for sale to others as might be renewed or new contracts which might be made with Consolidated's consent (or required by law to be made) to others. Entire output contracts have never been illegal *per se*.

It is submitted that the Fourth Circuit misconstrued and misapplied this Court's decisions as to what constitutes a restraint of trade *per se*, in applying them in this area of government-regulated monopoly to such an arrangement. Of course, any concerted tampering with the *market price structure* cannot be justified. *United States v. Socony-Vacuum Oil Co., Inc.*, 310 U. S. 150 (1940); *United States v. Trenton Potteries Co.*, 273 U. S. 392 (1927). But obviously concerted action, whereby the producer of energy and the purchaser thereof agree upon a price (even a complicated price) for the energy sold, is not *market price fixing*. If it were, every contract for purchase and sale would be *ipso facto* illegal.

Furthermore, the price of Penn Water's sales to Consolidated and to each of its Pennsylvania customers were subject to the complete supervision and control of FPC, which had been exercised before the Fourth Circuit acted. The decisions of this Court which we believe required application of the rule of reason to such a transaction were ignored by the Fourth Circuit. They should have applied to sustain both the Penn Water and Safe Harbor contracts, if they were at all subject to the Sherman Act.

Standard Oil Co. v. U. S., 221 U. S. 1 (1911);
Board of Trade of Chicago v. U. S., 246 U. S. 231 (1918);

U. S. v. Bausch and Lomb Co., 321 U. S. 707, 728-9 (1944), (exclusive dealing arrangement);
U. S. v. Yellow Cab Co., 332 U. S. 218 (1947), 338 U. S. 338 (1949), (vertical and horizontal integration);
U. S. v. Columbia Steel Co., 334 U. S. 495 (1948), (horizontal integration);
U. S. v. Paramount Pictures Corp., 334 U. S. 131, 173-4 (1948), (vertical integration by stock control and ancillary contracts);
Standard Oil Co. of California v. U. S., 337 U. S. 293, 311-313 (1949).

The Safe Harbor Contract

The Fourth Circuit's decision in the *Safe Harbor Contract Case*, decided January 3, 1952, is pending certiorari before this Court in Nos. 611 and 612. There is no need to repeat here the reasons for granting certiorari that are fully stated in the petitions there. The Department of Justice (charged with the enforcement of the Sherman Act), representing FPC (charged with carrying out the policies of the Federal Power Act), has intervened and urges that certiorari be granted. We respectfully urge that the merits of the decision of the Fourth Circuit must be reviewed and independently judged by this Court before that decision be accepted, as urged by petitioners here, as forming any basis for questioning the rate orders here involved.*

It is with reference to the Safe Harbor power that petitioners urge that the rate orders rest for their allocation of the reduction upon "entitlements" under the Safe Harbor contract, and hence must fail (P. W. brief, p. 55; P. U. C. brief, p. 32). There are several answers to this argument.

---

* The actual facts behind the 1931 contracts and the relations of Penn, Water, Safe Harbor, and Consolidated are set forth in the affidavits of Robert T. Greer and R. L. Thomas in the Record of Nos. 611 and 612 (R. 115 and 123).

First, the Fourth Circuit found nothing illegal in Consolidated's purchase until 1980 of two-thirds of the entire Safe Harbor output. Petitioners can point to no place where the Fourth Circuit, or any other Court, has so held.

Secondly, although Penn Water sought in every way throughout the FPC hearings (except by attacking the legality of the contract) to prevent an allocation to Consolidated of its clearly equitable right to two-thirds of the entire output of Safe Harbor, FPC and the Court below found that the record presents nothing to support Penn Water's contentions. The Court below said:

> "The materials before the Commission were hardly consistent with the interpretation now sought by Penn Water. They pointed instead to the view, adopted by the Commission, that Baltimore Company (Consolidated) had a two-thirds entitlement from Safe Harbor which was diverted by Penn Water in order to satisfy its Pennsylvania commitments" (R. Vol. 18, p. 5391).

Thirdly, whatever may be the status of the Safe Harbor contract, the FPC Order in the *Safe Harbor rate case* (5 F. P. C. Rep. 221), affirmed by the Third Circuit (179 F. 2d 179, cert. den. 339 U. S. 957 (1950)), has required Consolidated to pay for two-thirds of the Safe Harbor output and to continue doing so until changed under the law. An allocation can hardly be held arbitrary or unlawful for crediting Consolidated with what it is obligated by law to buy.

The Safe Harbor contract decision by the Fourth Circuit, without inquiry into its merits, cannot be interpreted as supporting petitioners' arguments to strike down the allocation involved in the rate orders under appeal, because of artificial contractual entitlements.

4. The Rate Orders Should Not be Annulled or Remanded Because of the Pennsylvania Public Utility Law or Public Policy.

Earlier arguments, without further elaboration, establish here also that the rate orders, as orders prescribed by the Federal Government through FPC acting under authority conferred by the Federal Power Act, are removed from condemnation by statutes or common law policy which might apply to private contracts.

Also, to the extent that the rate orders omit Articles IV and V of the Penn Water contract from the prescribed rate schedules, they do not even conflict with the decision of the *Fourth Circuit* upon which Penn Water relies. The Fourth Circuit (184 F. 2d 552, 566), related that portion of its Opinion dealing with Pennsylvania law and policy solely to Articles IV and V,* saying:

> "There can be no doubt that the freedom of action of Penn Water as a public utility of the State has been and is restricted by the provisions of Articles IV and V of the basic agreement * * *."

However, the Fourth Circuit decisions, assuming *arguendo* that they may be related to the rate orders, were in clear error in applying to licensee-public utilities (Penn Water and Safe Harbor) the provisions of the Pennsylvania public utility law referred to by the Fourth Circuit, 184 F. 2d 552, 566 (1950). When it is considered that *every provision* of Penn Water's contracts constituted a term of an interstate sale of electric energy at wholesale within the meaning of the Federal Power Act, filed as a tariff with FPC and completely subject to the jurisdiction of FPC

* As did its entire reasoning concerning invalidity under the Sherman Act and other federal statutes.

under the Federal Power Act, there could be no proper application of Pennsylvania law thereto.

As the commerce clause of the Constitution removes the interstate sale of electricity at wholesale from the regulatory power of the States, even in the absence of Congressional control, *P. U. C. v. Attleboro Steam and Electric Co.*, 273 U. S. 83 (1927), there is clearly no jurisdiction in the States once the national control has been expressed under the comprehensive provisions of the Federal Power Act, and has been exercised by FPC acting thereunder. The sections of the Pennsylvania Public Utility Law cited in the Pennsylvania Commission's brief (pp. 45-49), only some of which were relied on by the Fourth Circuit (184 F. 2d 552, 566), are the normal provisions relating to adequacy of service, abandonment or termination of service, the maintenance of just and reasonable service, and the power to sell, assign, lease, consolidate, or merge its property, powers, franchises or privileges, etc. There are corresponding provisions of the Federal Power Act (Secs. 8, 20, 202, 203a, 205, 206, and 207) which completely remove from the application of Pennsylvania law the entirely interstate business of Penn Water and Safe Harbor. These companies have no intrastate sales subject to the jurisdiction of the Pennsylvania Commission or the Pennsylvania public utility law.

The Fourth Circuit (184 F. 2d 552, 568), in partial justification of its decision in the *Penn Water Contract Case*, said:

> "The evidence in this case shows that Penn Water is engaged in the *production and local distribution* of electrical energy to local utilities which distribute power to consumers in Pennsylvania, and in respect to this business, it seems clear that the state commission possesses regulatory power".

Earlier in its Opinion, the Fourth Circuit (184 F. 2d 552, 555) had correctly stated that "Penn Water sells its electric

energy and services in bulk to five customers". It continued with a correct description of the sales to Consolidated, ME, PP&L, and PE* (which are all interstate sales at wholesale, subject in their entirety to FPC jurisdiction, as found by FPC in the instant case upon substantial evidence in the record and confirmed by the Court below, R. Vol. 18, pp. 5382-5384) and to the Pennsylvania Railroad which is likewise an interstate sale in bulk.** Penn Water simply does not have any "local business" or "local activities" such as the Fourth Circuit stated, and there is no explanation or justification for the portion of its Opinion (184 F. 2d 568) which flatly contradicts the correct statement at the beginning of the Opinion (184 F. 2d 555). Obviously, whatever the Fourth Circuit said (and we have earlier indicated the complete lack of a factual record there), this Court must be governed by the instant record, and the FPC findings fully supported by evidence, that Penn Water has no intrastate business (R. Vol. 18, pp. 5382-5384).

The Fourth Circuit's decision to apply State utility law to Safe Harbor's operations was even more flagrant. There is no intrastate service for State utility law to control. FPC's *Safe Harbor rate case* Opinion (5 FPC Rep. 221 (1946)), asserting control over *all* of Safe Harbor's sales, had been affirmed by the Court of Appeals for the Third Circuit, 179 F. 2d 179 (1949), and certiorari had been denied by this Court, 339 U. S. 957 (1950). Beyond that, and resting thereon, a special statutory three-judge court for the Middle District of Pennsylvania has enjoined the

---

* Metropolitan Edison Company, Pennsylvania Power and Light Company, and Philadelphia Electric Company.

** FPC did not assert control over the sales to the Pennsylvania Railroad, but obviously that does not make it local business subject to State control. It is a sale in interstate commerce, out of the same interstate power pool as found by FPC, but was exempted from the instant Orders because it is not a sale at wholesale for resale.

Pennsylvania Commission from exercising rate control over Safe Harbor, finding that Safe Harbor makes no intrastate sales.* This aspect of the *Safe Harbor Contract Case* clearly disregards controlling federal law and the commerce clause of the Constitution, and calls for review and reversal by this Court.

CONCLUSION

We believe that we have fully supported the preliminary statement with which we began this brief, and which summarizes our position at its conclusion.

It is respectfully submitted that the judgments and orders of the Court of Appeals for the District of Columbia Circuit should be affirmed in all respects.

Respectfully submitted,

CHARLES D. HARRIS,
General Counsel,
Public Service Commission
of Maryland,
Intervenor-Respondent.

Baltimore, Maryland
March 27, 1952.

Opinions below	1
Jurisdiction	2
Questions presented	3
Statute involved	3
Statement	4
Penn Water	5
The contract with Consolidated	7
The power pool	11
The residual method of payment	15
The Power Commission's order of January 5, 1949	19
The Power Commission's order of October 27, 1949	25
The proceedings below	26
Summary of Argument	29
Argument	35
Introductory	35
I. The Power Commission's order was authorized by the Federal Power Act	39
II. The Commission's order is not invalid because of conflict with the antitrust laws or the antitrust provision of the Federal Power Act	49
A. The Commission's order prescribing arrangements between Penn Water and Consolidated is not subject to the antitrust laws	49
1. Arrangements validly prescribed by the Commission constitute governmental action exempt from the antitrust laws	49
2. The antitrust laws do not apply to rates fixed by the Federal Power Commission	56
B. The Commission's order does not violate Section 10 (h) of the Power Act	63
C. The Commission has not ordered the continuance of any contractual provision held unlawful by the Fourth Circuit or otherwise unlawful	65
1. The Fourth Circuit held only Articles IV and V of the Penn Water contract, not the pooling and residual payment provisions, to be unlawful	65
2. The Commission did not prescribe any unlawful provisions of the contract	70

Argument—Continued Page

II. The Commission's order—Continued
D. The Commission's order is not based on the continuance of the contract 73
1. Interstate commerce 75
2. Rate of return 77
3. Allocation of rate reduction 79
4. The order prescribed by the Commission is independent of the restrictive provisions of the contract 83

III. The Power Commission did not prescribe continuance of any contractual provision which might conceivably violate the laws of Pennsylvania, and if it did those laws would not invalidate its order 84
A. The Power Commission has not prescribed any contractual provisions which would violate the laws of Pennsylvania 85
B. A rate order valid under federal law cannot be invalidated by the law of Pennsylvania 86
C. Pennsylvania law does not prohibit anything which the Federal Power Commission has prescribed 90

IV. The Commission's orders were not based on illegal provisions of the Safe Harbor contract 94
A. In so far as energy purchased from Safe Harbor was involved in fixing Penn Water's rates, the Commission's orders are founded on the services rendered by Safe Harbor under its prior order fixing Safe Harbor's rates 95
B. Safe Harbor's rates duly prescribed by the Commission are not to be judicially invalidated in a collateral proceeding 99
C. The Commission's order in the *Safe Harbor* case does not violate the antitrust laws 101

V. Penn Water's sales for resale to its Pennsylvania electric utility customers are in interstate commerce 105

VI. The contention that a licensee subject to regulation under Part I of the Power Act may not also be regulated under Part II is irrelevant here, since Penn Water's rates were fixed under both Parts, and, in any event, is unsound 117
A. Licensees which qualify as "Public Utilities" are subject to regulation under Part II as well as under Part I 119

Argument—Continued Page

VI. The contention that a licensee, etc.—Continued

B. Sections 20 and 201 do not leave the regulation of a licensee's interstate wholesale rates to the States ... 124

C. Parts I and II do not impose inconsistent methods of computing the rate base ... 129

D. If Section 20 and Part II should be deemed in conflict, the latter should prevail ... 135

Conclusion ... 138

PENNSYLVANIA PUBLIC UTILITY COMMISSION, PETITIONER

v.

FEDERAL POWER COMMISSION

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

BRIEF FOR THE FEDERAL POWER COMMISSION

OPINIONS BELOW

The main opinion of the Federal Power Commission, issued on January 5, 1949, directing a rate reduction (R. XVI, 4845–4997)[1] is reported

[1] The record in these cases consists of eighteen printed volumes and several unprinted volumes of transcripts and ex-

at 8 F. P. C. 1, 82 PUR (NS) 193. Its opinion of February 28, 1949, denying rehearing (R. XVI, 5178–94) is reported at 8 F. P. C. 170, 82 PUR (NS) 286, and its opinion order, issued October 27, 1949, rejecting proposed tariffs and prescribing rate schedules (R. XVII, 5267–5292) is reported at 8 F. P. C. 1193, and its order denying rehearing thereon at 8 F. P. C. 1364. The opinions of the Court of Appeals for the District of Columbia Circuit (R. XVIII, 5367–5393, 5402–5419) are reported at 193 F. 2d 230.[2]

JURISDICTION

The judgment of the Court of Appeals in these cases was entered on July 3, 1951 (R. XVIII, 5394–5). Petitioners' applications for rehearing,

---

hibits. We will use roman numerals to refer to volumes and arabic numbers to refer to pages. Thus (Tr. VI, 73) and (R. XVI, 4991) will indicate page 73 in volume six of the unprinted transcript and page 4991 of volume sixteen of the printed record, respectively.

[2] Additional opinions here relevant are: (1) The opinions of the Court of Appeals for the Fourth Circuit in *Pennsylvania Water & P. Co.* v. *Consolidated G. E. L. & P. Co. of Baltimore*, 184 F. 2d 552 (C. A. 4), certiorari denied, 340 U. S. 906, 186 F. 2d 934 (C. A. 4) which appear at R. XVIII, 5322–49, 5356–61; (2) the opinion of the Court of Appeals for the Fourth Circuit in *Consolidated G. E. L. & P. Co. of Baltimore* v. *Pennsylvania Water & P. Co.*, decided January 3, 1952, pending on petitions for writs of certiorari, Nos. 611, 612, this Term. The first decision of the Fourth Circuit will be referred to below as "the first *Consolidated* case," or "the *Penn Water* antitrust case." The second decision will be referred to as "the second *Consolidated* case" or "the *Safe Harbor* antitrust case."

seasonably filed, were denied on September 6, 1951 (R. XVIII, 5399). The petitions for writs of certiorari were filed on November 16, 1951 and granted on February 4, 1952 (R. XVIII, 5419). The jurisdiction of this Court rests upon 28 U. S. C. 1254 (1) and Section 313 (b) of the Federal Power Act.

QUESTIONS PRESENTED

1. Whether the Federal Power Commission's orders reducing rates and prescribing rate schedules for Penn Water are invalidated by the antitrust laws.

2. Whether the Federal Power Commission orders are invalidated by the laws of Pennsylvania.

3. Whether Penn Water's wholesale sales to its electric utility customers in Pennsylvania are in interstate commerce.

4. Penn Water also presents the question as to whether its status as a "licensee" under Part I of the Federal Power Act exempts it from regulation as a "public utility" under Part II. Since the Commission's orders are based upon and are valid under both Parts, we do not think this question has any materiality in this case.

STATUTE INVOLVED

The pertinent provisions of the Federal Power Act (Title II of the Public Utility Act of 1935, c. 687, 49 Stat. 803, 838, 16 U. S. C. 791a, *et seq.*) appear in the pamphlet copy of the Act submitted with this brief.

STATEMENT

These cases were instituted by the filing under Section 313 (b) of the Federal Power Act of three petitions for review of two orders of the Federal Power Commission in the Court of Appeals for the District of Columbia Circuit. Two of the petitions, one filed jointly by Susquehanna Transmission Company of Maryland[3] and Pennsylvania Water and Power Company (Penn Water) on April 22, 1949, and the other filed by the Pennsylvania Public Utility Commission (Pennsylvania Commission) on April 25, sought review of the Power Commission order, issued January 5, 1949, requiring Penn Water to reduce, effective February 1, 1949, its interstate wholesale rates and charges for electric energy by approximately $2,000,000 and thereby to reduce its net return from about $3,300,000 to $1,300,000 annually. The third petition was filed by Penn Water on February 8, 1950, seeking review of the Power Commission's order, issued October 27, 1949, rejecting rate schedules proposed by Penn Water in alleged compliance with the January 5 order and prescribing rate schedules to effectuate

[3] Because of doubts as to Penn Water's right to own and operate facilities in Maryland, Susquehanna Transmission Company of Maryland was created as a wholly owned subsidiary of Penn Water to own part of Penn Water's transmission facilities located in that State (R. 1, 20). By virtue of its arrangements with Penn Water, Susquehanna has no separate rates and charges. The references to Penn Water in this brief generally include Susquehanna.

those rate reductions. While these petitions were pending before the court below, petitioners filed motions to annul the Power Commission's orders on the ground that the contract between Penn Water and Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated), on which these orders were allegedly based, had been invalidated as violative of the federal antitrust laws and the laws of Pennsylvania by the Court of Appeals for the Fourth Circuit in Penn Water's private antitrust suit against Consolidated (the first *Consolidated* case).[4] The court below (one judge dissenting) denied the motions to annul and affirmed the orders of the Power Commission. The facts pertinent to the issues here involved may be summarized as follows:

Penn Water: Penn Water, a corporation organized under the laws of Pennsylvania, owns at Holtwood, Pennsylvania, on the Susquehanna River some nine miles north of the Pennsylvania-Maryland State line, a small steam electric plant and a "run-of-river" hydroelectric project which it operates under a 50-year license issued in 1951 by the Power Commission under Part I of the Federal Power Act (R. XVI, 4847–48, Order of July 3, 1951 in Project 1881).[5] In addition,

[4] When the motions were filed, the Fourth Circuit had not yet ruled that the Safe Harbor contract was also invalid.

[5] The Power Commission ordered Penn Water to apply for a license in 1939 and its order was sustained in 1941. *Pennsylvania Water & P. Co.* v. *F. P. C.*, 123 F. 2d 155 (C.

Penn Water, in conjunction with Susquehanna, owns and operates transmission lines and associated equipment located in Pennsylvania and Maryland (R. XVI, 4847-48). These transmission lines interconnect with those of Consolidated (the Baltimore electric company) and of Safe Harbor Water Power Corporation (Safe Harbor).[6] They also interconnect with the facilities of Penn Water's Pennsylvania customers, including the Thorndale-Columbia section of the Pennsylvania Railroad (Railroad), and with the facilities of the Potomac Electric Power Company and of the Perryville (Md.)-Benning (D. C.) section of the Railroad (R. XVI, 4849).

A. D. C.), certiorari denied, 315 U. S. 806. Penn Water thereafter applied for a license, but it did not accept the terms of the tendered license until 1951. In these proceedings, however, Penn Water contended, and the Power Commission agreed, that Penn Water should be treated as a licensee for rate-making purposes (R. XVI, 4864).

[6] Safe Harbor is a Pennsylvania corporation which owns and operates under a 50-year license issued in 1930 by the Power Commission a large "run-of-river" hydroelectric project on the Susquehanna River several miles above Penn Water's project. All of its stock is owned by Penn Water and Consolidated: 100,000 shares of Class A nonvoting stock are owned by Consolidated and 200,000 shares of Class B voting stock are divided equally between Penn Water and Consolidated (R. XVI, 4850). Safe Harbor's rates and charges have been held subject to regulation by the Commission, both as a "licensee" under Part I of the Federal Power Act, and as a "public utility" under the Act's Part II. *Safe Harbor W. P. Corp.*, 5 F. P. C. 221, 231–243, 66 PUR (NS) 212, 222–223, affirmed, 179 F. 2d 179 (C. A. 3), certiorari denied, 339 U. S. 957.

Penn Water has no franchise service area and does not itself sell to the public. Ever since its incorporation in 1910, Penn Water has disposed of its power in bulk to other utilities. It has never attempted to develop local distribution systems, to enter upon a retail distribution business, to compete with its utility customers for bulk power industrial customers, or to secure substantial monopolized distribution territory (R. I, 32). In addition to its arrangements with Consolidated (see *infra*), Penn Water has contractual obligations to sell firm electric energy to three electric utilities in Pennsylvania,[7] and to the Railroad for electrified railroad use in Pennsylvania (R. XVI, 4851–54).

The Contract with Consolidated: Under a contract which was entered into in 1931 (R. XV, 4606 *et seq.*) and which was to remain in effect until April 22, 1980 (R. XV, 4607), Penn Water and Consolidated agreed so to operate their power generating facilities that they would obtain "the most effective utilization of output, and coordination in operation, of the two plants" (R. XV, 4606–7).[8] Under Article II Penn Water

[7] Metropolitan Edison Company for part of its requirements in York, Pennsylvania; Philadelphia Electric Company for its requirements in Coatesville, Pennsylvania; and Pennsylvania Power and Light Company for its obligations in Lancaster, Pennsylvania (R. XVI, 4853).

[8] Penn Water and Consolidated were also party to a fifty-year agreement, effective June 1, 1931, with Safe Harbor, the third member of the power pool. Under the Safe Harbor

agreed to deliver to Consolidated all of Penn Water's capacity and energy "not otherwise disposed of in performance of now existing contracts, new contracts entered into by [Penn Water] with Consolidated's approval or any duty or obligation to serve imposed on [Penn Water] by its charter or otherwise by law" (R. XV, 4607–4608; XVI 4851). Penn Water, in turn, was entitled to obtain from Consolidated steam-generated energy in excess of Consolidated's own requirements up to the limits of the latter's available generating capacity to enable Penn Water to meet its firm power obligations in Pennsylvania (R. XV, 4585; XVI, 4851).[9]

---

contract, Safe Harbor agreed with Consolidated and Penn Water (and the latter *inter sese*), that in return for a combined annual payment which would yield to Safe Harbor a specified rate of return after operating expenses (including taxes and depreciation) the latter companies should be entitled to *all* of the capacity and energy available from Safe Harbor's project in the ratio of two-thirds to Consolidated and one-third to Penn Water (R. XV, 4554–4576; XVI, 4851). Although under the arrangements the payment obligation is prorated between Penn Water and Consolidated in the ratio of their capacity and energy entitlements, the power generated by Safe Harbor is at the disposal of the power pool to permit the maximum utilization of the resources at lowest cost (R. I, 26; V, 2137–2138; XIII, 4369). This is the contract which, because of other provisions, the Fourth Circuit held to be invalid under the antitrust laws in the *Safe Harbor* antitrust case, in which petitions for certiorari are now pending in Nos. 611, 612, this Term.

[9] Consolidated's generating facilities, the principal steam-electric resources of the pool, consist now of four steam-electric plants of 385,000 kw. capacity. Safe Harbor's gener-

For the residue which it received from Penn Water, Consolidated paid in accordance with a formula contained in Article III whatever dollar amount was necessary, in addition to Penn Water's revenue from its customers, to cover all of Penn Water's cost of operation (including taxes and depreciation) and to provide Penn Water with a formula-determined rate of return on investment (R. XV, 4608–12; XVI, 4851) which amounted to from 9.9% to 12.4% per year between 1931 and 1945 on the rate base used by the Commission (R. IX, 3593). The formula for the computation of the amount Consolidated paid to Penn Water included credits to Consolidated for its deliveries to Penn Water and for Penn Water's diversion to its own use, with Consolidated's consent, of energy purchased by Consolidated under the contracts.

Article VIII provided for the appointment by each party of "one representative to act as its agent for investigation, consultation, and advice in all operating, engineering and accounting matters pertaining to the interconnected facilities herein contemplated, and to the supply and interchange of power and exchange herein provided for. * * * These representatives to be known as the Operat-

---

ating facilities are exclusively hydro, its plant having an effective capacity of 230,000 kw. Penn Water's generating facilities are principally hydro with an effective capacity of 104,000 kw.; its steam-electric plant has a capacity of only 20,000 kw. (R. XVI, 4848, 4974).

ing Committee shall confer upon request of either; in case of their inability to agree, the question in dispute shall be submitted to the Presidents of the respective companies for their decision" (R. XV, 4614). The purpose of these arrangements, as stated in Article VIII, was "to encourage the maximum utilization of the power and energy entitlements and resources and other facilities of the parties * * * to the end that the joint use of this property and equipment shall give the greatest practical benefit to the public" (R. XV, 4613–4614; XVI, 4859–4860).[10]

In addition, Article IV of the contract required Penn Water to "obtain the approval of [Consolidated] before entering into any agreement or agreements * * * for the sale and/or purchase and/or interchange of electrical and hydraulic power and energy, or before making any substantial modifications in the existing contracts now in force between [Penn Water] and its customers other than [Consolidated]" (R. XV, 4612). Article V similarly required the obtaining of Consolidated's approval before Penn Water incurred "any single commitment for investment (except for renewals or replacements) in excess of $50,000 on the basis of which [Con-

[10] Article VIII goes on to provide that the parties "* * * shall so conduct their operations that economic interchange of power and energy during the different hours of the day, the seasons of the year, and over more prolonged periods, shall be encouraged in every possible way" (R. XV, 4614; XVI, 4860).

solidated] shall make payment" under the payment provision (R. XV, 4612–3).

The Power Pool: As a result of the arrangements as to power pooling and residual method of payment, Penn Water has been able to operate in a manner not otherwise possible because of the unusual nature of its system. Since its hydro plant, which constitutes the bulk of its energy resources, is essentially, a "run-of-river" plant,[11] Penn Water's ability to provide dependable capacity from its own resources is limited by the amount of water available in the Susquehanna River, which "is one of the most variable flowstreams of large size in the country" (Tr. III, 1236).[12] Most of the time there is not enough river flow to permit the operation of Penn Water's hydro plant to the full electric capacity of the generators.[13] At times of low flow it does not have sufficient capacity to supply the demands of its customers. Consequently, if dependent solely upon its own generating facilities to supply the firm power loads of its customers, it could not do so (R. V, 2149; Tr. X, 3626). For the

[11] Penn Water's hydraulic storage capacity is sufficient only to provide for a weekly cycle of drawdown and refill (R. I, 438–439).

[12] The flow of the river fluctuates widely from a low of 2,100 cubic feet per second to a high of 860,000 c. f. s. (R. I, 39).

[13] The Penn Water hydro plant can utilize a maximum of 31,500 c. f. s. (Tr. LIX, 22536), with the river flow more often than not being substantially less (Tr. LVIII, 22371; LXVI, 24764).

periods of low and high flow of the river do not coincide with periodic low and high demands for electric energy, which characteristically occur in daily, weekly and yearly cycles, each with its own peak;[14] since electric energy cannot feasibly be stored, all demands must be satisfied by capacity sufficient to produce electric energy instantaneously as customers switch on their lights, motors, and other appliances.

Moreover, if operated independently, Penn Water could not have made the most effective utilization of the potential resources of the river nor could it have obtained the maximum economy of generation (R. I, 25, 74-75, 440-441). Penn Water's inability to impound water during high-flow months for use in subsequent low-flow months, and the frequent recurrence of low river flows, limits its dependable capacity (R. I, 41; V, 2212-2216; XVI, 4971-72). These physical limitations, plus the excessive capital investment required for producing the relatively small dependable output,[15] would preclude Penn Water, if

[14] Daily peaks are usually in midmorning or midafternoon when industrial activity is highest, or in the early evening hours when residential use overlaps commercial and industrial uses. Weekly peaks usually occur in the first five working days of the week; weekly lows on week ends (and holidays). Yearly peaks usually occur in winter when darkness falls before the close of the working day, and frequently during the pre-Christmas period, when unusually high commercial and residential uses coincide with high industrial use (R. I, 42; Tr. LXV, 24222).

[15] Since the continuous output of the Penn Water plant at

operated independently, from competing successfully with steam plants and substantial water would have to be wasted over the spillways at times of high flow (R. I, 25; Tr. III, 1236).

Under the power pool arrangements worked out by Penn Water and Consolidated, Penn Water's hydro facilities have been integrated into a system which has steam generating facilities and supplies a large utility load (R. I, 32–33, 439; R. XVI, 4849–4850, 4857, 4987); this results in the most effective and economic use of Penn Water's hydro resources. Penn Water has been able to take on firm obligations and to meet them through the availability of power from Consolidated's steam-generation plants (R. V, 2397), which normally are capable of producing up to their full capacity;[16] in times of severe water shortage, Consolidated carries the main burden of

low water (2,100 c. f. s.) is only about 8,500 kw., the investment per kw. would be $3,897, compared to an average investment of $316 per kw. for electric plant in service of companies whose electric operating revenues are more than $250,000 per year. R. XVI, 4992; Tr. III, 1236; *Statistics of Electric Utilities in the United States* (Federal Power Commission 1950), p. xxi.

[16] Steam plants, not shut down for emergency or for scheduled maintenance, are usually capable of producing up to their full capacity at all times, including peak-load periods (R. VI, 2455), and usually are used in the order of their efficiency—the newer, larger, more efficient units being used most continuously (base-load operations), the less efficient units being put into operation for shorter periods as the load increases (peak-load operation) (R. I, 23, 36–37; VI, 2455).

supplying Penn Water's customers (R. XIV, 4405; XVI, 4981).

In addition, during periods of low river flow, Penn Water's hydro plant is shut down during daily and weekly off-peak load hours to permit water to accumulate. The steam plants of the pool are utilized to carry the load during such periods. Then during peak-load hours, the hydro plant is operated at full capacity for a few hours using the water which has accumulated during the period of non-use (R. I, 37, 439; VI, 2455; XVI, 4988; Tr. LIII, 20137). Through such peaking operation, Penn Water's hydro plant is used to the best advantage by contributing its maximum generating capacity to the system during peak-load hours when maximum capacity is needed and by saving the costs of using the oldest and most inefficient steam plants which would otherwise be used (R. I, 38–42; VI, 2455; XVI, 4988).[17] On the other hand, when the river flow is high, the hydro plant is operated around the clock to carry the base load of the pool in substitution for steam-generated energy, thereby reducing the amount of fuel which would otherwise

[17] The availability of the hydro energy avoids the installation of additional steam capacity and the necessity of keeping existing boilers banked and ready for use (R. I, 24, 38), which would involve standby losses and the operation of turbo-generators below their most efficient loading. The hydro capacity is also instantly available, coming from standstill to full loads in a fraction of a minute (R. I, 42; XVI, 4849–4850).

have to be burned and minimizing the waste of water (R. I, 36–37, 40, 75; VI, 2455; Tr. III, 1236, 1246–1247; XVI, 4988). As a result, the flow of energy is generally south from Pennsylvania toward Maryland at all times during the spring months when the river is high (R. I, 341; XVI, 4860). During the rest of the year, the practice is to generate energy at Penn Water's hydro plants so as to assist Consolidated in carrying its peak loads during the day, but to stop hydro generation so as to allow the ponds to refill during off-peak periods (R. I, 45–46, 439; R. XVI, 4860). And, although at such times the flow of energy tends to be to the north, from Baltimore to Pennsylvania, the direction of flow on the lines crossing the State boundary may change frequently according to the needs of the consumers in Pennsylvania or Maryland (R. I, 341; II, 599–600; VI, 2455; XVI, 4860; Tr. LXVI, 24733).

The Residual Method of Payment.—The residual method of payment provided in the contract (*supra*, p. 9) is an essential element to the successful operation of the power pool, the purpose of which is to have energy provided by the source which is most economical at the particular time, regardless of whether owned by Consolidated or Penn Water. Rates based on units of service would, of course, have impelled each party to operate so as to derive the maximum advantage for itself under such rates. This would not bring about the maximum utilization of the power re-

sources of the Susquehanna and the lowest possible joint costs of production, for it had proved impossible to devise unit rates adequate to that purpose, as Penn Water's officials testified.

John A. Walls, then president of Penn Water, testified before the Commission that the unit basis rate which was used in the 1927 contract between the parties "militated against the correct principles of operating a combined hydro-steam generating and supply system" (R. I, 26), and that it was not until the method of payment was changed to "an annually computed lump sum, independent of the number of kilowatts and kilowatt hours, that * * * the most economical result obtainable from the combined power resources could be derived" (*ibid.*).

George W. Spaulding, then vice president and now president of Penn Water, similarly testified that maximum coordinated use of combined resources was not achieved under the unit basis rate used prior to the 1931 agreement with Consolidated, since the customers "were inclined to view their own power requirements as matters distinct from the requirements of other customers" (R. I, 72). Mr. Spaulding described some of the methods of payment which had been tried but had not worked out satisfactorily (R. I, 71):

> The evolution of Penn Water's power agreements with its customers in Baltimore

> included the early extreme of a stipulated capacity service always available and price on a kilowatt-year basis, combined with additional energy sales at a stated mill rate during specified hours of the day.
>
> Another form of sale was a stipulated capacity service combined with a limited amount of yearly energy at a stated mill rate to be taken at the customer's desires.
>
> Neither form of contractual arrangement recognized the possibility of energy purchases in large volume during the periods of ample flow, nor the coordinated scheduling of the available steam resources in the interest of operating economy.

See also n. 34, p. 47, *infra*.

The residual method of payment provided in the 1931 contract, on the other hand, Mr. Spaulding went on to state, had the advantages of removing "all artificial barriers which would interfere with the hour-to-hour, day-to-day and the long range coordination of the power resources of the companies involved. Such a goal had not been as fully achieved by Penn Water and [Consolidated] in two decades of preceding power relations" (R. I, 71). As a result, under that form of payment (R. I, 75),

> [a]ll of the objectives desired in 1931 have been attained. The Safe Harbor project was successfully constructed, financed and brought to a proper earning

> level. The most effective utilization of the system steam capacity and energy and that of our hydro plants has been fully achieved, with the resulting conservation of fuel, particularly during the critical days of fuel shortage in the recent national emergency, of benefit to the public.
>
> The ability to supply the Pennsylvania Railroad Company at several widely separated points, to the convenience and advantage of the customer, would not have been possible had it been sought separately by Penn Water or by Baltimore Company, operating under a contractual arrangement that was complicated with artificial barriers.

In brief, therefore, the effect of the residual payment was to eliminate the conflict of interests between Penn Water and Consolidated as to the use to which Penn Water's facilities should be put, and to make Penn Water's facilities fully available for pool purposes, with both Penn Water and Consolidated motivated by the common interest of deriving the maximum benefit from these facilities as part of the pool (R. XVI, 4860). As stated in its 1941 Report to Stockholders, the pooling of resources (of which the method of payment was an essential part) solved for Penn Water the problem

> of providing, without large and expensive reservoirs, a uniform supply of power while utilizing the unharnessed energy of a drainage area subject to severe droughts

> and floods. The average daily flow at Holtwood has varied from as little as 1,700 cubic feet per second up to 756,000 cubic feet per second since the Company began operations. Nevertheless, out of this difficult situation, an important and reliable power pool has been developed.
>
> The answer to the problem was combined hydro and steam supply; not the substitution of hydro for steam, but from the outset the integration and coordination of hydro and steam in the planning for the capacity needed and in the operation and maintenance of the facilities [R. XVI, 5183].

The residual method of payment thus enables Penn Water's hydro facilities to be integrated with the generating facilities of Consolidated as well as Safe Harbor. It permits the energy used to satisfy demands of customers of either to be determined on the basis of maximum utilization and economy (*i. e.*, river flow, relative costs of steam generation, and magnitude of loads) (R. I, 40; II, 599–600; XVI, 4987).

The Power Commission's order of January 5, 1949: On September 1, 1944, having received petitions from the Mayor and City Council of Baltimore, Maryland and from the Public Service Commission of Maryland (Maryland Commission) (R. XV, 4623, 4731–4733),[18] the Power

[18] The importance of the interstate rates to Consolidated's retail rates to consumers, which were at the time the subject of a Maryland Commission rate proceeding, is referred to

Commission instituted an investigation into the reasonableness of the rates and charges made by Penn Water for its interstate sales of electrical energy at wholesale, including its sales to Consolidated (R. XVI, 4837).[19] After extensive hearings, in which the Maryland and Pennsylvania Commissions actively participated as intervenors on opposite sides (R. I, 2; XVI, 4837–4843), the Power Commission on January 5, 1949, issued its opinion and order (R. XVI, 4845–4997).

After reviewing the operations of the power pool, the Commission found that since all of the resources of the pool are available to meet the combined load of its members, without reference

by that Commission in its opinions in its investigation. *Re Consolidated Gas Electric Light and Power Company of Baltimore*, 61 PUR (NS) 94, 102–103; *id.*, 67 PUR (NS) 144, 149–150.

[19] The Power Commission simultaneously and on the same petitions initiated a separate investigation of the rates charged by Safe Harbor to Consolidated. On November 4, 1946, after extensive hearings, the Commission, no question as to the antitrust laws having been raised, directed the continuance of the entire Safe Harbor contract with the exception of the rates which it ordered reduced by about $627,551 annually. The Commission there construed the contract as providing that Safe Harbor's total output (not the residual left after certain contracts were met, as suggested by Penn Water (Br. No. 428, p. 8 n.)), was to be divided between Penn Water and Consolidated on a ⅓–⅔ basis. *Safe Harbor W. P. Corp.*, 5 F. P. C. 221. Upon review, the Court of Appeals for the Third Circuit affirmed the order. *Safe Harbor W. P. Corp.* v. *Federal Power Commission*, 179 F. 2d 179 (C. A. 3), certiorari denied, 339 U. S. 957.

to state boundaries, the pool was an "integrated and coordinated interstate electric system" (R. XVI, 4857). The Commission further found that the wholesale sales of system energy, such as those by Penn Water to its Pennsylvania utility customers, made without reference to the state of origin of the energy, were pool sales, and hence, in light of the interstate nature of the pool, were sales for resale in interstate commerce (R. XVI, 4861). The Commission accordingly concluded that Penn Water is a "public utility" under Part II of the Federal Power Act by virtue of its ownership and operation of facilities for the transmission and sale at wholesale of electric energy in interstate commerce, and that its sales for resale to Consolidated and to its three Pennsylvania customers are subject to Commission jurisdiction under Section 206 (a) of the Act (R. XVI, 4862).[20]

In addition, the Commission found that it had jurisdiction to regulate Penn Water under Section 20 of Part I, which relates *inter alia* to the rates of licensees whose power enters interstate commerce, since, as it found, the States were "unable to agree" on these rates (R. XVI, 4864). The Commission further found that Penn Water's status as a "licensee" under Part I does not exempt it from regulation as a "public utility" under Part II and that no conflict resulted in the

[20] The Commission did not assert jurisdiction over Penn Water's sales to the Railroad (R. XVI, 4857, fn. 18).

pending case from regulation under both Parts (R. XVI, 4865).

In determining just and reasonable rates, the Power Commission found Penn Water entitled to a return of $1,300,672, computed on a "fair and reasonable rate of return" of 5¼% [21] on a proper rate base of $24,774,712 [22] (R. XVI, 4992). The Commission fixed the return at 5¼% since (1) under the arrangements with Consolidated which the Commission directed be continued as "the most practicable under the circumstances" (R. XVI, 4981), Penn Water was assured a stabilized income as in the past (R. XVI, 4953), and (2) cost of capital studies showed that such a return, based on Penn Water's actual cost of 3.17% for bond money and 5.21% for preferred stock, allowed about 8.64% for equity capital, which the Commission found to be adequate (R. XVI, 4954–57).

Since Penn Water's net operating income exceeded a fair return by $1,954,261, the Commission undertook to determine "a reasonable and

---

[21] Penn Water's statement (pp. 17, 52) that the Commission by subsequent order reduced the rate of return to 4¾% has no foundation. The item of $141,777 upon which this argument was based in the court below was taken into account in the Commission's original opinion reducing rates. (R. XVI, 4961, 4980–4981, 4993–4994). In any event, the contention was not accepted by the court below and has not been brought here for review.

[22] This rate base consists of gross investment of $33,126,585 plus working capital of $650,000 less accrued depreciation of $9,001,873 (R. XVI, 4992).

proper allocation, of the cost of service rendered by Penn Water" (R. XVI, 4981, 4992). On the basis of that allocation, which the Commission grounded on the representative costs of Penn Water's services, which it directed to be continued, to its Pennsylvania utility customers and to Consolidated, the Commission ordered Penn Water to lower its rates in a manner which, on the basis of 1946 operations, would result in a reduction to its Pennsylvania utility customers by the aggregate sum of $220,943 and to Consolidated of $1,733,318[23] in Consolidated's residual payments (R. XVI, 4980–81, 4993, 4995–96).[24] The Commission, accordingly, directed Penn

[23] While the revenue Penn Water received directly from Consolidated exceeded a reasonable return by about $700,000, the Commission directed that Consolidated receive a credit for the revenues received by Penn Water from its Pennsylvania utility customers for economy interchange energy belonging to Consolidated. This credit of $1,127,699 and other adjustments resulted in increasing Penn Water's excess revenues from Consolidated to $1,733,318. See *infra*, pp. 81–83.

[24] The Commission prescribed formula differed from that provided for in the contract in the following particulars, among others: The rate of return was reduced to 5¼%; the rate base to which the 5¼% was to be applied was changed from an undepreciated rate base to a rate base computed by deducting accrued depreciation from gross investment and including working capital; the method of computing the annual allowance for depreciation was changed from a sinking-fund depreciation method to the straight line method, thereby increasing the annual allowance (R. XVI, 4992–93; R. XVII, 5279–5283; Tr. III, 1136–8, 1159–60; R. XV, 4608–12, 4617–21).

Water to file a "new schedule of rates and charges for (or) and in connection with its transmission and sale of electric energy in interstate commerce for resale" to its Pensylvania utility customers and Consolidated to effectuate the prescribed reductions as of February 1, 1949, reserving the right to reject the schedules and in lieu thereof t prescribe appropriate schedules by its own further order (R. XVI, 4995).

Petitioners sought rehearing of this rate reduction order of January 5, 1949. In its petition for rehearing Penn Water urged for the first time that the 1931 agreement, and particularly Articles IV and V thereof (see *supra,* p. 10), violated the Federal antitrust laws and the laws of Pennsylvania (R. XVI, 5012), and consequently that the Commission's findings as to jurisdiction, rate of return and allocation, were invalid (R. XVI, 5012, 5014, 5042, 5054, 5055, 5136–37, 5138). In so urging, Penn Water referred to its complaint filed in December 1948 against Consolidated in the United States District Court for the District of Maryland in which it sought a declaratory judgment that the Consolidated contract was invalid under the antitrust laws and the laws of Pennsylvania (R. XVI, 5013). The Power Commission denied the petitions for rehearing (R. XVI, 5178–5194) with the comment (R. XVI, 5184):

> If there are questions as to the legality of the foundation contracts which are in liti-

> gation, as [petitioners'] application for rehearing indicates, the validity of our order is not dependent upon the decision of those questions. In our opinion and order we took care to leave the continuation of the operation of the integrated and interconnected system in full effect, merely changing the rates, * * *.

Following the denial of their second petitions for rehearing, Penn Water, on April 22, 1949, and the Pennsylvania Commission, on April 25, petitioned the court below for review of the Power Commission's January 5 order.[25]

The Power Commission's order of October 27, 1949: Thereafter, on May 31, 1949 Penn Water filed with the Commission rate schedules purportedly in compliance with the January 5 order (R. XVII, 5248–5266). On October 27, the Power Commission rejected these schedules after finding that they did not comply with the January 5 order in several respects. The Commission prescribed its own schedules which it found would effectuate the requirements of its order

[25] By order dated April 29, 1949, the court below had stayed the January 5 order of the Commission insofar as it provided that the new rate schedules should be effective February 1, 1949, but had refused to suspend the requirement that rate schedules be filed and the Commission's reservation of the right to reject the schedules and in lieu thereof to prescribe appropriate schedules by its own further order. The court stayed the effective date of the required schedules on the condition that Penn Water segregate the amount of the prescribed rate reduction in a special reserve.

and would allow Penn Water the 5¼% return prescribed (R. XVII, 5277–5278). The Schedule pertaining to Consolidated, after detailing the means by which the new rate was to be determined (R. XVII, 5279–5283), contains the following final paragraph, which is of significance in this case:

> The foregoing provisions supersede only the *rates* and charges heretofore made, demanded, collected or assessed against Baltimore Company by Penn Water and Transmission Company. All *other* provisions of the aforementioned contracts, *in and of themselves lawful* prescribing or *defining the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services,* which several provisions are incorporated herein by reference, shall be observed and be in force. [Italics supplied.]

After denial of its application for rehearing of this order, Penn Water filed in the court below an additional petition seeking review of this order (R. XVII, 5222–5231).

The proceedings below: While these cases were pending in the court below and after briefs on the merits had been filed by all parties, petitioners moved the court to annul the Power Commission's orders on the ground that they had been deprived of essential factual and legal support by the decision rendered by the Court of Appeals for the Fourth Circuit in Penn Water's first private

antitrust action against Consolidated (R. XVIII, 5322–49).[26] The court below, however, denied the motions to annul. It construed the Fourth Circuit decision—

> as having done no more than declare illegal under the antitrust laws certain restraints exercised by [Consolidated] upon Penn Water—such as requiring its approval before it could take on new customers or expand generating facilities. Those restraints had been privately agreed upon by the parties and submitted to the Commission as an accomplished fact. The court was careful to avoid using language which might be interpreted in such fashion as to affect any rate proceeding * * * [R. XVIII, 5374–75].

Accordingly, the court stated (R. XVIII, 5375):

> In our view, the Fourth Circuit's opinion neither purported to nor did relieve Penn Water from its obligation under the Federal Power Act to continue the then-existing services and rates. It is those services and rates, reflecting underlying operations, which were the subject of the Commission's order. "A rate is not necessarily illegal because it is the result of a conspiracy in

[26] The Fourth Circuit's decision reversed the ruling of the District Court for the District of Maryland holding that the contract was valid and dismissing Penn Water's complaint. *Pennsylvania Water & P. Co.* v. *Consolidated G. E. L. & P. Co. of Baltimore*, 89 F. Supp. 452.

> restraint of trade in violation of the Anti-Trust Act. What rates are legal is determined by" the regulatory statute [citing *Keogh* v. *Chicago & N. W. Ry. Co.*; 260 U. S. 156, 162]. The validity of Commission action in this proceeding must be determined in light of the criteria furnished by the Federal Power Act, as applied to the operations and arrangements under scrutiny.

As to petitioners' attacks on the jurisdictional basis of the Commission's orders, the court held that Penn Water was part of an "integrated and coordinated interstate electric system," that its sales to its Pennsylvania utility customers were in interstate commerce, and that, consequently since these sales are for resale, Penn Water was a "public utility" under Part II of the Federal Power Act, with the rates for those sales subject to regulation under that Part (R. XVIII, 5382–85). The court also ruled *inter alia* that the fact that Penn Water is a licensee under Part I, does not prevent it from also being regulated as a public utility under Part II (R. XVIII, 5378–81), and further that since there was substantial evidence to support the finding that the Maryland and Pennsylvania Commissions were "unable to agree," the Commission was also authorized to regulate Penn Water's wholesale interstate rates as a licensee under Section 20 of Part I (R. XVIII, 5381–82).

On the merits, the court ruled that the Power Commission's findings were supported by substantial evidence (R. XVIII, 5385–5393) and, accordingly, it affirmed (R. XVIII, 5393).

SUMMARY OF ARGUMENT

I

The Power Commission's order was a valid exercise of its power to prescribe just and reasonable rates. An important stated purpose of the Power Act was to procure the most efficient use of the nation's power resources. It was proper for the Commission to take this factor into account in prescribing a rate schedule based upon the continued integration of the hydro facilities of Penn Water with Consolidated's steam plants. This consideration fully justifies the use of the residual payment formula, in order to assure the most economic use of the combined resources of the two companies. Indeed, petitioners no longer seem to question that the Commission's order conforms to the standards of the Power Act.

II

A. 1. The Commission's order prescribing the rate schedule is not subject to the antitrust laws. Although an express statutory exemption may be necessary to permit an administrative agency to authorize private conduct which would otherwise violate the antitrust laws, here we are concerned with a governmental order binding of its

own force. Such governmental action and conduct taken pursuant thereto to avoid statutory penalties has never been deemed subject to the antitrust laws. For the Sherman Act only applies to private combinations and monopolies, not to the acts of governmental agencies within the scope of their authority. *Parker* v. *Brown*, 317 U. S. 341.

2. Furthermore, in this case we are dealing with a rate order. Such statutes as the Federal Power Act govern industries in which the processes of competition cannot be counted on adequately to protect the public. It has long been recognized that rates are to be regulated in accordance with the standards of the controlling statute. An agency administering such a statute may weigh many factors in addition to antitrust criteria, and is not precluded from prescribing arrangements which might be unlawful under the Sherman Act if contained only in private agreements. As long as a rate order is authorized by the pertinent regulatory statute, the Sherman Act is inapplicable. This principle is sufficient to dispose of this case, since the Power Commission has authority, in fixing rates, to include provisions prescribing both the service to be rendered in return for the rate fixed and the formula by which the rate is to be computed. The provisions prescribing the residual method of disposing of Penn Water's power to Consolidated and of determining the amount

Consolidated was to pay were thus entirely appropriate in the rate order. The remaining provisions of the order, including those provisions incorporated by reference from the contract, were merely ancillary to these provisions.

B. The foregoing considerations also make it plain that the Commission's order does not violate the antitrust provision of the Power Act, Sec. 10 (h). That section, like the Sherman Act, does not apply to governmental action in the field of rate regulation.

C. The Commission has not ordered the continuance of any contractual provision held unlawful by the Fourth Circuit or otherwise in violation of the antitrust laws. In the first *Consolidated* antitrust case, the Fourth Circuit held only that Articles IV and V of the Penn Water-Consolidated agreement violated the antitrust laws. It did not suggest that the power-pooling and residual method of payment were unlawful, but the contrary. The Power Commission, on the other hand, only prescribed as a part of its order portions of the contract "in and of themselves lawful," a reservation properly construed as excluding the specific provisions which the Fourth Circuit held to be unlawful. The Fourth Circuit and the court below both agree on this.

D. Petitioners' argument that the Commission's order must fall because based upon continuance of the private contract which the Fourth Circuit

held invalid ignores the fact that the order supplants the contract and stands on its own feet. The fact that the order in general follows the plan of the contract, though with important changes in the basic provisions governing rates, and adopts by reference certain of the contract's provisions, does not mean that the order continues the contract *qua* contract.

In any event, since the antitrust laws do not apply to the Commission's order, it is immaterial whether any provisions of the order might violate the antitrust laws if viewed as private contractual arrangements.

II

The Commission's order is not invalid because in conflict with the laws of Pennsylvania. The only provisions held by the Fourth Circuit to violate the Pennsylvania laws were Articles IV and V, and they were not prescribed by the Commission. Furthermore, analysis of the Pennsylvania laws referred to, which are merely the general utility and corporation laws which preclude a corporate management from abdicating its functions, indicates that they would not bar a reasonable business arrangement necessary to permit efficient operation of the corporation's resources. No Pennsylvania authority holds otherwise. In any event, if the Commission's action is authorized by the Power Act, Pennsylvania law cannot stand in the way. The fact that Con-

gress was not seeking to regulate rates formerly subject to state control does not mean that the federal regulation of interstate wholesale rates was to be restricted by state law. *Public Utilities Commission* v. *United Fuel Gas Co.*, 317 U. S. 456, 466–467; *Illinois Natural Gas Company* v. *Central Illinois Public Service Company*, 314 U. S. 498.

IV

Petitioners assert that the Commission's order is based upon provisions of the Safe Harbor contract held unlawful by the Fourth Circuit in the second antitrust case. But the Commission relied upon its own order prescribing the contract (as modified so as to reduce the rates) as the rate schedule in that case, not upon the contract as such. That order, sustained by the Third Circuit (*Safe Harbor W. P. Co.* v. *Federal Power Commission*, 179 F. 2d 179, certiorari denied, 339 U. S. 957) cannot be attacked in any other court collaterally in a private suit to which the Commission is not a party. The doctrine of primary jurisdiction clearly requires resort to the Commission initially in any proceeding to invalidate or modify its order. Furthermore, the Safe Harbor rate order, as governmental action in the field of rates, cannot violate the antitrust laws. See Point II A *supra*. The Fourth Circuit's decision in the *Safe Harbor* case disregards these fundamental principles and was clearly erroneous.

V

Penn Water's sales to its Pennsylvania customers were sales in interstate commerce, as both the court below and the Third Circuit in the *Safe Harbor* cases have held. The Pennsylvania customers received power which, depending on the flow of the Susquehanna, came from Penn Water's plant in Pennsylvania or Consolidated's plants in Maryland. Interstate and intrastate energy, often commingled, could not have been purchased as a source of firm power except as a unit. The entire sale is thus properly treated as interstate. Interstate commerce is a practical conception. Obviously, the sale of the energy of an integrated system cannot be divided into interstate and intrastate segments so as to enable a State commission to regulate the energy sold in a period of high-water flow and the federal commission in other periods when the power moves interstate. The rates for such an inseparable transaction must be controlled by the single agency which can have jurisdiction over all of them—which means the federal commission.

VI

The contention that a licensee subject to regulation under Part I of the Power Act may not also be regulated under Part II is irrelevant here since Penn Water's rates were lawfully fixed under both Parts. In any event, the language

as well as express and authoritative statements in the legislative history demonstrate that companies which were both licensees under Part I and public utilities under Part II were to be subject to regulation under both. The Parts do not impose inconsistent regulations; indeed, in so far as rates are concerned, the statutory language is substantially identical.

ARGUMENT

INTRODUCTORY

The Commission's investigation into the reasonableness of Penn Water's rates for wholesale sales in interstate commerce was instituted on September 1, 1944. As a result of extensive hearings held for over a year, in which a record of 21,279 pages of testimony and of 605 exhibits was compiled, the Commission found in 1949 that Penn Water's net return was about two and a half times what it should be and ordered a rate reduction of approximately $2,000,000 a year,[27] to be allocated among Penn Water's wholesale customers in accordance with the arrangements which it prescribed. In reaching this conclusion, the Commission found that the plan for the pooling of power resources previously agreed to by Penn Water and Consolidated in 1931, including the residual method of payment, was the "most

[27] The Commission found Penn Water entitled to a return of $1,300,672 (*supra*, p. 22).

practicable" means of overcoming the problems presented by the extremely variable flow of the Susquehanna River, and of achieving the maximum utilization and economies from their combined hydro and steam generating facilities. The Commission, accordingly, directed that these arrangements should be continued in the public interest.

As the cases come before this Court, petitioners no longer attack the merits of the Commission's rate reduction; they do not claim that the orders are not supported by substantial evidence or that the rate reduction was excessive.[28] Their primary argument—apart from the Pennsylvania's Commission's challenge to the finding of interstate commerce—is that in private litigation the 1931 contract had been held to violate the antitrust laws and that the Commission's order reducing rates was based upon this contract and therefore must fall. Thus, petitioners are invoking the antitrust laws to frustrate the public interest in an already long delayed rate reduction, the propriety of which in and of itself is no longer challenged.

The Government—which in this case includes both the Federal Power Commission and the De-

[28] Nor do they attack the allocation of the rate reduction except collaterally, in support of the contention that the Commission relied on the allegedly illegal contracts in determining how the allocation should be made. Brief in No. 428, pp. 55–58; Brief in No. 429, pp. 32–42. Neither petition for certiorari raised a question as to the validity of the allocations as such.

partment of Justice (which is charged with primary responsibility for enforcing the antitrust laws)—does not regard these cases as presenting any clash between antitrust enforcement and a regulatory agency. For the Power Commission has not ordered the continuance of any contractual provision held unlawful by the Fourth Circuit or otherwise in violation of the antitrust laws. And the Fourth Circuit, which has held that the Commission is without power to prescribe conduct otherwise illegal, agrees that the Commission has not undertaken to do so in this case.

The Commission's order prescribing the entire contract in the *Safe Harbor* case, which was upheld by the Third Circuit [29]—but which is nevertheless attacked by petitioners in this case on the ground that the order here involved is based in part on the Safe Harbor contract—does not represent any different attitude or approach. No antitrust objection was raised before the Commission or the court in that case. What the Commission would do if the problem were presented to it in connection with the Safe Harbor order cannot be foretold. But certainly the Commission itself, not the District Court in Maryland, is the proper forum for either a new challenge to the validity of its order or an attempt to have the order narrowed or otherwise modified.

[29] *Safe Harbor W. P. Corp.* v. *Federal Power Commission*, 179 F. 2d 179, certiorari denied, 339 U. S. 957.

For the above reasons we think it plain that the Commission has in no way sought to curtail the scope of operation of the antitrust laws with respect to the contracts involved in these cases. It is true that the Commission did prescribe the rates in accordance with a formula which, though not claimed to be unauthorized under the Federal Power Act, petitioners assert to be in violation of the antitrust laws and laws of Pennsylvania. But a long line of cases establishes that the Interstate Commerce Commission and those agencies, including the Federal Power Commission, whose statutes are modeled in large part on the Interstate Commerce Act, are supreme when it comes to rates, and that rates which comply with the standards of the regulatory statutes are lawful and must be observed even though the utilities involved may be subject to the antitrust laws for acting in combination in fixing the rates or in other respects. See particularly *Georgia* v. *Pennsylvania Railroad*, 324 U. S. 439. Here all that the Commission has prescribed is a rate schedule. The residual payment plan is the method by which the rates are to be computed, not an independent restrictive contractual provision. Indeed, the Commission's final order of October 27, 1949 fully defines the method of payment (R. XVII, 5279–5283) and thus completely supplants the Article of the contract dealing with that subject.

Clearly, this rate provision contained in the Federal Power Commission's order, superseding that in the private contract, is valid if authorized by the Federal Power Act. Petitioners' briefs do not seem to challenge the validity of the Commission's order in that aspect. Nevertheless, since the authority of the Commission to prescribe the order which it actually entered is vital to almost every feature of this case, we shall show in Point I (*infra*, pp. 39–48), that the Federal Power Act clearly authorizes the Commission to enter the order here involved. We shall then show, in Point II (*infra*, pp. 49–84), in more detail than we have in this introduction, that this case presents no problem as to possible conflict between the Power Commission order and the Sherman Act, and that if it did, the Sherman Act does not apply to conduct prescribed by the Federal Power Commission.

I

THE POWER COMMISSION'S ORDER WAS AUTHORIZED BY THE FEDERAL POWER ACT

The provisions of the Federal Power Act applicable to Penn Water as both a "public utility" and a "licensee" (see *infra*, pp. 117–137), clearly empower the Commission to prescribe for Penn Water the power pooling and rate formula appropriate thereto here involved. Section 205 (a) of the Act's Part II relating to public utilities declares that "all rates and charges made, de-

manded, or received by any public utility" for sales which are subject to the Commission's jurisdiction [29] and "all rules and regulations affecting or pertaining to" them "shall be just and reasonable," and any of them that are not just and reasonable are "unlawful." Section 205 (b) forbids public utilities to "grant any undue preference * * * or [to] maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect."

Section 206 (a) empowers the Commission to enforce these provisions by expressly providing that if, after hearing, the Commission finds that "any rate, charge, or classification * * * or * * * rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory or preferential," it shall "determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and fix the same by order." [31]

---

[29] Penn Water's sales to Consolidated are concededly subject to the Commission's jurisdiction as sales for resale in interstate commerce (Penn Water's main brief below, p. 62). And as we show *infra*, pp. 105–117, Penn Water's sales for resale to its Pennsylvania utility customers are likewise in interstate commerce.

[31] The Act also provides in Section 207 that whenever the Commission, upon complaint of a State Commission—after notice and opportunity for hearing—shall find that "any interstate service of any public utility is inadequate or insufficient, the Commission shall determine the proper, adequate, or sufficient service to be furnished, and shall fix the same by its order, rule, or regulation: * * *."

Not only was the Commission empowered to prescribe just and reasonable rates and services, but Congress made clear its intent that the Commission in so doing was also to bend its efforts to achieve "the most efficient use of the nation's resources consistent with the public interest in cheap power and in conservation" (R. XVIII, 5378). Section 202 (a) provides that the Commission shall have the duty "to promote and encourage" the "voluntary interconnection and coordination of facilities for the generation, transmission, and sale of electric energy" so as to assure "an abundant supply of electric energy throughout the United States with the greatest possible economy and with regard to the proper utilization and conservation of natural resources." And for this purpose, the Commission is "empowered and directed to divide the country into regional districts" (Section 202 (a)). In addition, the Commission is authorized by Section 202 (b), on application, to direct a public utility "to establish physical connection of its transmission facilities with the facilities of one or more other persons engaged in the transmission or sale of electric energy, to sell energy to or exchange energy with such persons," and to "prescribe the terms and conditions of the arrangement to be made between the persons affected by any such order, including the apportionment of cost between them and the compensation or reimburse-

ment reasonably due to any of them." Although in this case the Commission was not proceeding under Section 202 it properly took into account the congressional policy therein expressed in determining what rates and services should be prescribed (R. XVI, 5184).[32]

[32] The legislative history of Section 202 makes clear that, at least as far as the draftsmen were concerned, the objective of encouraging the coordinated use of power facilities sought to be achieved by that Section was one of the primary purposes of Part II. Cf. *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U. S. 515, 525. Dozier A. DeVane, then Solicitor of the Commission, testified before the Senate Committee upon behalf of the bill of which he was the draftsman (Hearing before the Senate Committee on Interstate Commerce on S. 1725, 74th Cong., 1st Sess., p. 273):

"To my mind, that is one of the most important provisions of this bill. When you visualize what you are going to do by title I, that you are going to tear down the fences, which are the holding companies, and you are going to turn the operating utilities loose insofar as their prior control and ownership is concerned, that section takes on an added significance. It should be considered along with section 205 [now 203], which requires Commission approval for the purchase and sale of operating properties—to say where these properties shall go in the public interest. Under this bill, and without tremendous force of regulation on the part of the Commission, these companies will integrate into strong regional systems, as directed by Congress.

"What is the other great advantage to be gained by that? The advantage through proper interconnection of these properties of a substantial reduction in stand-by facilities. Where you have a system that has to depend upon its own generating facilities for its power you will find that in a great many instances the cost of stand-by facilities runs above 40 percent of the total cost, and you will find in a majority of instances that it will run between 30 and 40 percent. Studies have

Broad authority over rates and services is similarly vested in the Commission under Part I relating to licensees. Section 20 of that Part requires that "the rates charged and the service rendered by any * * * licensee [whose power enters interstate commerce] * * * shall be reasonable, nondiscriminatory, and just to the customer and all unreasonable discriminatory and unjust rates or services are hereby prohibited and declared to be unlawful; * * *." Section 20 goes on to provide that when the states directly concerned have failed to provide a com-

---

been made that convince a great many engineers and a great many other qualified people whose views are entitled to respect that with proper integration that investment can be reduced to approximately 15 percent. If the average is between 30 and 40 percent today, and if by integration we can reduce it to 15 percent, think of the benefit that will accrue to the consumers of this energy as the result of the establishment of regional districts and the proper interconnection of all facilities in each district."

And Frank R. McNinch, then Chairman of the Commission, stated in hearings before the House and Senate Committees considering the legislation, that Part II was

"* * * directed primarily toward the coordination of the power generated and transmission facilities in the United States, intended as we believe, effectively, to serve the interests of the consumer in bringing to the consumers electricity upon more economical terms and at less cost than under the present lack of coordinating arrangements and likewise being equally to the interest of the companies. [Hearings before the House Committee on Interstate and Foreign Commerce, 74th Cong., 1st Sess., on H. R. 5423, p. 383.]"

See also: *id.*, pp. 384, 517, 531, 535, 2165–2168; Hearings before the Senate Committee on Interstate Commerce, 74th Cong., 1st Sess., on S. 1725, pp. 257–258.

mission or the states are unable to agree,[38] "jurisdiction is hereby conferred upon the commission * * * to enforce the provisions of this section, to regulate and control so much of the services rendered, and of the rates and charges of payment therefor as constitute interstate or foreign commerce. * * *."

The Commission is further authorized to "issue such order as it may find appropriate, expedient, and in the public interest to conserve and utilize the * * * water-power resources of the region" (Section 4 (g)). Its power to issue licenses for the "development, transmission, and utilization of power * * * from * * * any of the streams * * * over which Congress has jurisdiction" (Section 4 (e)) is conditioned on the requirement that "the project * * * shall be such as in the judgment of the Commission will be best adapted to a comprehensive plan * * * for the improvement and utilization of water-power development" (Section 10 (a)).

The Commission's requirements as to power pooling and the residual method of payment are plainly within these broad grants of authority to prescribe and fix just and reasonable rates, charges and services. As we have shown *supra*,

[38] We show *infra*, p. 118, that the Commission's finding that the states here involved are unable to agree is conclusive here. It is not only supported by substantial evidence as ruled by the court below, but petitioners do not attack it.

pp. 11–15, because of the variable nature of the flow of the Susquehanna River and the limited storage capacity of its dam, Penn Water would be uneconomic as an independent unit. It would be unable to assume any substantial firm obligations. It would be unable to compete successfully with steam generating plants and, in periods of high flow, it would have to waste substantial amounts of water over the spillways.

On the other hand, by their integration with Consolidated's steam power generating facilities and large utility load, the most effective and economic use of Penn Water's hydro facilities can be—and has been—made. For example, Penn Water has been able to assume substantial firm obligations. When the flow is low, its facilities are used for peaking, thereby contributing maximum generating capacity when most needed and saving costs of using the oldest and most inefficient steam plants of the pool. And when the flow is high they are used to carry the system's base load, thereby reducing fuel costs and minimizing water waste.

By virtue of these arrangements, the "operations of Penn Water, Safe Harbor and [Consolidated] are closely integrated and coordinated as a matter of economy, efficiency, flexibility, and maximum utilization of hydro capabilities" (R. XVI, 4849), and the energy used to satisfy the demands of the customers of either Penn Water

or Consolidated is determined on the basis of maximum utilization and economy. These considerations more than justified the Commission's conclusion that (R. XVI, 5184):

> The regional integration and coordination of facilities, the resulting economies, and the utilization and conservation of natural resources thus achieved are precisely what was sought to be encouraged and fostered by the Federal Power Act and established as a part of the criterion of the public interest to be served by regulation thereunder (Cf. Section 202 (a)).

The residual method of payment, including the system of entitlements, was likewise within the Commission's authority. Section 206 authorizes the Commission to fix "the just and reasonable rate * * * practice, or contract to be thereafter observed." And Section 20 requires only that the rate shall be "reasonable, nondiscriminatory, and just." Far from limiting the Commission's authority to prescribing rates on what Penn Water describes as the "usual unit rate basis" *i. e.* on the basis of a fixed amount for a specified unit of service (Pet. in No. 428, pp. 15–16), these Sections permit the Commission to prescribe the rate in any form which in the circumstances of the particular case will be just and reasonable.

Because of the nature of the pooling arrangements whereby the supplying of energy is deter-

mined with the view of achieving maximum economies and optimum utilization of the available facilities, it would be difficult, if not impossible, to fix a rate on the unit basis which could be said with any assurance, to result in a specified over-all return. For there are too many uncontrollable variables to be considered in forecasting the units of service Penn Water would furnish Consolidated over a given period of time, and that figure is basic to the fixing of a rate which will yield a given return.[34] In contrast to the difficulties of formulating a unit rate, the residual method payment prescribed by the Commission assures Penn Water that it will receive the 5¼% return which the Commission found just and reasonable here—an end result which plainly satisfied the requirements of Sections 20 and 206. *F. P. C.* v. *Hope Natural Gas Co.*, 320 U. S. 591.

Not only does the method of payment prescribed meet the requirements of these Sections but the record before the Commission reveals that it is the only method of payment by which

[34] There would be, in addition, technical difficulties to fixing rates on a unit basis. As stated by George W. Spaulding, then Penn Water's vice-president and now its president (R. I, 75):

"Not only would the problem of segregation and classification of capacity and energy services be difficult, if not impossible, on the basis of metered quantities, but arbitrary assumptions in that respect would not always conform either with facts or the equities of the situation."

the full benefits of the power pool can be obtained As shown, *supra*, pp. 15–19, Penn Water's several efforts to use the unit rate in various forms in each instance prevented the achieving of the pool's full benefits, for under this type of rate, it was to the interest of each of the parties to foster the use of its own facilities or energy entitlements irrespective of whether it resulted in over-all economies. Under the unit type of rate, therefore, the self interest of the individual parties stands as a strong deterrent to maximum economy in the use of their combined facilities. The Power Commission's formula rate, by providing for payment independently of whose power is used, eliminates the barrier to such economy created by conflicting self-interests. The Commission's formula fosters maximum utilization of Penn Water's hydro power. It also permits Penn Water to enter into firm commitments for delivery of power, which Penn Water, standing by itself, could not do because of variations in its power output resulting from the extreme variations in river flow.

The Commission's requirements that the power pooling and the residual method of payment by which these results were achieved, be continued are, therefore, clearly within the authority vested in it by Congress under the Federal Power Act.

II

THE COMMISSION'S ORDER IS NOT INVALID BECAUSE OF CONFLICT WITH THE ANTITRUST LAWS OR THE ANTITRUST PROVISION OF THE FEDERAL POWER ACT

A. THE COMMISSION'S ORDER PRESCRIBING ARRANGEMENTS BETWEEN PENN WATER AND CONSOLIDATED IS NOT SUBJECT TO THE ANTITRUST LAWS

1. *Arrangements validly prescribed by the Commission constitute governmental action exempt from the antitrust laws*

The complete answer to petitioner's contention on this aspect of the case—an answer which would be dispositive of Nos. 611, 612 as well—is that the Commission's order is not subject to the antitrust laws. The Commission is not here approving or permitting private combinations, consolidations, or contracts which might otherwise contravene the Sherman Act. As to such matters the Government has consistently maintained that express statutory authority and an exercise of that authority are needed to establish an exemption from the antitrust laws. E. g., *United States* v. *Borden Co.*, 308 U. S. 188. The statutes authorizing agencies to exempt conduct from the antitrust laws[35] cited in the Appendix to Penn Water's brief are principally of this character; they authorize the granting of permission to private parties to do what might otherwise be illegal.

[35] Such as the amendment to Section 7 of the Clayton Act (15 U. S. C. (Supp. IV) 18), which exempts acquisition of assets authorized by the Power Commission.

But we are here concerned not with a private contract, combination or conspiracy, but with a governmental order binding of its own force apart from any contract. Absent any contract, the order would still stand. Violation of the order would be subject to the penalties of the Federal Power Act. Sec. 316. Conduct so ordered by a governmental agency acting within the scope of authority granted by Congress has *never* been held to violate the antitrust laws. Nor has the order itself—and it is the Commission's order which petitioners are attacking here. Since the Sherman Act does not apply to governmental action, we are not here confronted with any problem of implied repeal of the Sherman Act or as to whether the Federal Power Act is consistent with or repugnant to it. The words "restraint of trade" in that statute do not reach orders of government officials, or, of course, conduct taken in compliance therewith to avoid penalties imposed by the Government. So long as the Federal Power Commission was acting within the bounds[36] of the power granted to it by the Federal Power Act, as we have shown it was (pp. 39–48, *supra*), the antitrust laws cannot affect this case.

The reasoning and principles of *Parker* v. *Brown*, 317 U. S. 341, which involved a situa-

[36] We need not consider here whether the antitrust laws would apply to a governmental agency acting outside of its statutory authority.

tion closely analogous to the instant case require, we submit, the holding here that the Commission's order pursuant to the authority delegated to it is governmental action not subject to the antitrust laws.

Parker v. *Brown* concerned the validity under the Sherman Act of a marketing program for raisins established under the California Agricultural Prorate Act, which authorized the establishment, through action of state officials, of programs for the marketing of agricultural commodities so as to restrict competition among the growers and maintain prices in the distribution of their commodities to packers. The Prorate Act provided for an Agricultural Prorate Advisory Commission, which was to undertake the establishment of a pro rata marketing plan after holding public hearings upon a petition filed by ten producers and after making certain required economic findings.[37] A program committee of producers selected by the State Director of Agriculture then formulated a program which the Commission after holding further hearings could modify and approve. If, thereafter, the requisite percentage of producers consented, the program was put into operation by the program

[37] That the institution of a program for the proposed zone will prevent agricultural waste and conserve the agricultural wealth of the state without permitting unreasonable profits to producers.

committee with violations thereof being subject to civil and criminal penalties.

Despite the very restrictive impact of the raisin program upon competition in interstate commerce—an effect which was undoubtedly intended and which would certainly have violated the Sherman Act if not governmental—this Court in *Parker* v. *Brown* unanimously ruled that the Sherman Act did not apply to the Prorate Act. The Court held that, although the producers had a voice in the program, its promulgation and operation constituted action by the State, and that since the Sherman Act was directed at outlawing private action, rather than regulatory action by a governmental body, the Act was inapplicable.[38]

---

[38] A similar decision in *Olsen* v. *Smith*, 195 U. S. 332, in which this Court rejected the contention that a Texas law making the piloting of boats into the ports of Texas a State monopoly violated the Sherman Act, stated (195 U. S. at 344–345):

"The contention that because the commissioned pilots have a monopoly of the business, and by combination, among themselves exclude all others from rendering pilotage services, is also but a denial of the authority of the State to regulate, since if the State has the power to regulate, and in so doing to appoint and commission, those who are to perform pilotage services, it must follow that no monopoly or combination in a legal sense can arise from the fact that the duly authorized agents of the State are alone allowed to perform the duties devolving upon them by law."

For State cases holding that the concept of monopoly is inapplicable to a state exercising its governmental functions, see *State* v. *Aiken*, 42 S. C. 222; *Utah Manufacturers' Association* v. *Stewart*, 82 Utah 198; *Guy* v. *Commissioners of Cumberland County*, 122 N. C. 471, and cases collected in Annotation 121 ALR 303.

This was not because the Prorate Act had superseded or impliedly repealed the Sherman Act, for California's law obviously could not have such effect, but because the restraint imposed by governmental order was not the kind of restraint which the Sherman Act reached.

Parker v. *Brown*, we submit, governs the instant case, for here, as in the *Parker* case, the action involved is that of a governmental regulatory body. Here, the Power Commission, acting pursuant to and within the delegation of authority by Congress, has prescribed certain relationships between Penn Water and Consolidated. The Commission has prescribed the rate schedule and has directed the continuance of the pooling arrangement and the residual method of payment. The companies are required to observe the prescribed order not because they have contracted to do so, but because the Commission has ordered it, irrespective of their contract. The charging of any rate or rendering of any service other than those prescribed by the Commission would constitute a violation of the Federal Power Act and would subject at least Penn Water to criminal penalties (Sec. 316 of the Power Act).

Plainly, therefore, the arrangements prescribed by the Commission "derived * * * [their] authority and * * * efficacy from the legislative command of the * * * [Commission acting under the authority delegated to it by Congress] and * * * [were] not intended to

operate or become effective without that command" (317 U. S. at 350). "It is the state, acting through the Commission which adopts [the requirements imposed by the Commission] and which enforces [them] with penal sanctions in the execution of a governmental policy" (317 U. S. at 352). "The state * * * made no contract or agreement and entered into no conspiracy in restraint of trade or to establish monopoly but, as sovereign, imposed the restraint as an act of government which the Sherman Act did not undertake to prohibit" (*ibid.*).

Indeed, the Commission's orders here are even more clearly governmental action than the raisin proration program in *Parker* v. *Brown;* for in *Parker* v. *Brown,* the producers had a voice in the program—they not only had to consent to its going in effect but a committee of producers administered it; here, on the other hand, the Commission's action is operative, irrespective of whether the consent of Penn Water or Consolidated is forthcoming.

The fact that we have federal, rather than state, action, far from making *Parker* v. *Brown* inapplicable here, as Penn Water suggests (Br. in. No. 428, pp. 39–40), makes the instant case even plainer. For it was, at least, arguable—and in fact argued in that case—that the congressional policy expressed in the Sherman Act should bar a State from eliminating competition and con-

trolling the price and supply for a product marketed throughout the Nation.[39] But this could not be said of a regulatory statute passed by Congress itself.[40] The Sherman Act's purpose and legislative history no more suggest a purpose to restrain Federal action than State action, and the Court's summary of the legislative history to the effect that the Act's "purpose was to suppress combinations to restrain competition and attempts to monopolize by individuals and corporations" (317 U. S. at 351) equally indicates its inapplicability to action by the Federal government.[41]

As *Parker* v. *Brown* points out (p. 351), this does not mean that a state can authorize private persons to enter into voluntary agreements to do what the Sherman Act prohibits. And the same is true of Federal agencies unless the statute makes such authority clear. That is all that the cases cited by petitioner (Br. in No. 428, pp. 29–32) hold. But since the Sherman Act reaches

[39] The Government's brief conceded that the Sherman Act would not, however, affect state regulation of utility rates. Brief for the United States as amicus curiae in No. 46, October Term, 1942, p. 64.

[40] Obviously, the United States itself cannot be a defendant in a Sherman Act case; it cannot even be a plaintiff in a treble damage suit, though a state may (*United States* v. *Cooper Corp.*, 312 U. S. 600; *Georgia* v. *Evans*, 316 U. S. 159).

[41] For more elaborate reviews of the Sherman Act's legislative history and the common law principles on which it is based, see, e. g., *Apex Hosiery Co.* v. *Leader*, 310 U. S. 461, 492–8 and n 15; *Standard Oil Co.* v. *United States*, 221 U. S. 1, 51–59; *United States* v. *Addyston Pipe & Steel Co.*, 85 Fed. 271 (C. A. 6), affirmed, 175 U. S. 211.

only private contracts, it does not extend either to governmental orders or to private conduct undertaken in compliance with such orders.[42]

2. *The antitrust laws do not apply to rates fixed by the Federal Power Commission*

It should not be forgotten that in this case we are dealing with a rate order. The Commission's initial order in this case merely required a reduction in rates. Its final order, prescribing the rates schedule, was likewise concerned only with rates, the method of computing rates and the services to be performed in return for payments to be paid (see pp. 70–72, *infra*). The last two items are clearly essential parts of a rate schedule, and must be considered in the rate-fixing process since the definition of a rate necessarily includes how it is to be computed and the services in return for which it must be paid.

Although private agreements with respect to rates in regulated industries are subject to the antitrust laws, it has been uniformly accepted for many years that the rates themselves are subject to the control of the regulatory agencies

[42] We do not mean to suggest that a state may by mandatory statute provide that private interests shall not compete or shall agree voluntarily about prices or follow a parallel price policy (*Schwegmann Bros.* v. *Calvert Distillers Corp.*, 341 U. S. 384, 389), although Congress could if it so desired. But a state can fix prices itself; that is what we have here, and the kind of situation which we are considering in this brief.

under the applicable statute.[43] As stated in *Keogh* v. *Chicago & N. W. Ry. Co.*, 260 U. S. 156, 162:

> What rates are legal is determined by the Act to Regulate Commerce.

See also *Georgia* v. *Penn R. Co.*, 324 U. S. 439, 453–455, and cases cited. And the same is obviously true as to the Federal Power Act. *Montana-Dakota Utilities Co.* v. *Northwestern Public Service Co.*, 341 U. S. 246, 251.

Citation is not necessary to show that in determining "just and reasonable" rates, the standard under almost every statute, the agency may weigh many factors in addition to antitrust criteria. Even though the general policy in favor of competition is one factor which must be considered (*McLean Trucking Co.* v. *United States*, 321 U. S. 67, 86, 87), in general, as the court below stated, with respect to rates the determination of "just and reasonable" is governed not "by the pressures of competition [or the lack of it] but by the adequacy of the service to the

[43] *Keogh* v. *Chicago & Northwestern Ry. Co.*, 260 U. S. 156; *United States Navigation Co.* v. *Cunard Steamship Co.*, 284 U. S. 474, 485; *Central Transfer Co.* v. *Terminal R. Assn.*, 288 U. S. 469; *Terminal Warehouse* v. *Pennsylvania R. Co.*, 297 U. S. 500, 514; *McLean Trucking Co.* v. *United States*, 321 U. S. 67, 83; *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439; *Far Eastern Conference* v. *United States*, decided March 10, 1952. See also, *S. S. W., Inc.* v. *Air Transport Association*, 191 F. 2d 658, 661 (CADC) pending on petition for writ of certiorari, No. 568, this Term.

public, the fairness of the return allowed upon the investment in the company and the degree to which the congressional objective of efficient use of the nation's power resources is served" (R. XVIII, 5372). Cf. *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 603.

The need for regulation of the rates of public utilities arises in large part because experience has demonstrated that such industries cannot be fully competitive and that competition will not adequately protect the public. Because of economic and technological facts electric utilities are in large measure natural monopolies. Prior to the enactment of the Federal Power Act in 1935, various evils had developed in the electric utility industry which could not be effectively dealt with under the laws as they then existed—which, of course included the antitrust laws—and the Power Act, together with the Public Utility Holding Company Act, was directed at these evils. See *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 609. Thus, "in place of competition as a generalized and indirect regulator of prices and services", for the "field of interstate transmission of electric energy at wholesale" (R. XVIII, 5371), Congress has provided for regulation by the Federal Power Commission of certain phases of utility activities, including the fixing of rates and services, to protect the public-interest against, *inter alia*, the

very evils attending monopolistic control at which the Sherman Act is directed.

In this field of rate regulation the Commission is not precluded from prescribing arrangements which might be unlawful under the Sherman Act, if contained only in private agreements. This can be demonstrated by a simple example. Two utilities cannot legally agree upon the rates they will charge customers. But a regulatory commission can *prescribe* the same rates for each—and neither the agency nor the companies which obey this order will be in violation of the antitrust laws. So long as the order is authorized by the regulatory statute, it is valid—and there is no need for any express statutory provision stating that the antitrust laws are not an implied limitation upon the agency's statutory rate-making authority. This would seem to be the theory and philosophy underlying such cases as *Keogh, Terminal Warehouse, Georgia* and *Far Eastern Conference.*

It is true that in the cases cited the rates were sought to be challenged collaterally, whereas this case (as distinct from Nos. 611 and 612) is a direct review of the order of the regulatory agency. But the governing principle is still the same—rates which conform to the standard of the regulatory statute are not governed by the antitrust laws.

This principle is sufficient to dispose of the instant case. For, as we have shown, the Commission's order is a rate order. Inclusion within it of provisions as to the continued pooling of power resources relates to the service to be rendered in return for the rates to be fixed, is obviously necessary if the power of the Susquehanna is to be effectively utilized, and in any event is not challenged here as unlawful. This means that it was entirely proper for the Commission to require Penn Water to continue to dispose of its power by selling Consolidated the residue, as part of an arrangement whereby Consolidated transmits steam generated energy to Penn Water when the water power is insufficient to supply the firm demands of the latter's Pennsylvania customers. Once this method of providing service is accepted, it is apparent that the residual method of determining the amount Consolidated must pay Penn Water is merely a rate formula adapted to the service for which the rate is being fixed, and thus within the Commission's power to prescribe just and reasonable rates.

There can be no doubt as to the reasonableness of the residual payment formula in the present circumstances.[44] The joint operation of Penn

[44] We do not doubt that in ordinary industry an agreement between competitors whereby one both guarantees and limits the other's profits, thus depriving the latter of its incentive to compete, would violate the antitrust laws where the effect would be substantially to lessen competition in the industry

Water's hydro facilities and Consolidated's steam plants enables Penn Water to provide a substantial portion of the power needed in a large and populous territory in Maryland and Pennsylvania, whereas unless Penn Water's resources were supplemented by large steam power capacity, it could not serve as a source of firm power supply to any area of more than minuscule size. Such joint operation of the plants, as a single system in which power could flow from one to the other as required by the amount of water in the Susquehanna, would best serve the public interest in cheap power if the *sole* consideration on the part of the operators of the system were the economical production of electric energy. But if each company were required to pay for each unit of power supplied by the other, each would have an incentive to sell as much of its own power and to receive as little of the other company's as possible. The experience of these two companies prior to 1931, under just such a plan, revealed its deficiencies, and resulted in the adoption of the residual method of payment. See pp. 15–19, 47–48, *supra*.

If Penn Water were required to stand alone as an independent competitor, most of the value of

---

concerned. In the particular circumstances of this case, however, where the method of payment is tied into a pooling of the product, electric energy, which is required by the physical nature of the source of the energy, the available flow of the Susquehanna River, a different result might be reached.

the water power would be lost. The public's interest in the most efficient and economical utilization of the water power of the Susquehanna would inevitably suffer if the hydro company were required to compete for revenue with the very steam plants with which its facilities were physically and economically joined.

When the reasonableness of the method of payment from the standpoint of the public interest in low power rates (pp. 11–19, *supra*) is considered in connection with the statutory authority of the Federal Power Commission over rates and charges, which includes, of course, the method of computing them (pp. 39–48, *supra*), it is clear that the payment provisions of the order fall within the area of the Commission's discretionary authority over rates, and that there is no occasion to consider whether a private arrangement of the same sort would violate the antitrust laws. The provisions of the Commission's order prescribing the service to be rendered and the method of paying for them are thus a proper exercise of the power to regulate rates and are not violative of the antitrust laws. The other provisions of the order, including those incorporated by reference from the prior contract, are merely ancillary to the regulation of rates and services. As we shall see in Point II C, *infra*, pp. 65–73, these ancillary provisions do not include the two articles of the

prior contract found by the Fourth Circuit to be unlawful under the antitrust laws.

B. THE COMMISSION'S ORDER DOES NOT VIOLATE SECTION 10 (H) OF THE POWER ACT

Petitioners also assert that the Commission's order and the contracts upon which they allege it is based are in violation of the antitrust provision contained in Section 10 (h) of the Federal Power Act. Section 10 provides that:

> All licenses issued under this Part shall be on the following conditions:
>
> * * * * *
>
> (h) That combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited.

The court below rejected petitioners' contention on the ground that since Section 10 (h) was contained in Part I of the Power Act, it did not apply to utilities also covered by Part II, and that, if necessary, Part II should be construed as having superseded Section 10 (h) for utilities subject to that Part (R. XVIII, 5377–5379).

We do not believe that Section 10 (h) has been repealed or superseded by Part II, or that it is necessary so to hold to determine this case. Section 10 (h) is one of the conditions attached to the license of a company which operates a project

on a navigable stream or on public land, pursuant to the permission granted by Part I. For violation of any of the conditions, including that contained in paragraph (h), the license is subject to revocation through a suit instituted by the Attorney General. Section 26. The condition imposed by Section 10 (h) would seem to be binding on companies subject to Part I even if they are also subject to regulation under Part II.

But on its face Section 10 (h) has the same scope as the Sherman Act itself. When it refers to "combinations, agreements, arrangements, or understandings," it is obviously concerned only with private combinations, etc., just as is the Sherman Act (pp. 49–56, *supra*). Section 10 (h) thus clearly does not interfere with or diminish the authority of the Commission to issue rate orders, and does not make it unlawful for licensees to comply with orders which the Commission has validly prescribed. The argument in Point II A, pages 49–63, *supra*, which demonstrates that such orders and conduct taken in compliance therewith do not violate the Sherman Act, is equally applicable to Section 10 (h).

Accordingly, if it be assumed that Penn Water, as a licensee subject to regulation under Part I and a wholesaler in interstate commerce subject to regulation under Part II, is still bound by Section 10 (h), its position in this case will not

be advanced. For Section 10 (h) does not invalidate the Power Commission's order prescribing the rates and services to be performed. Since the Power Commission has not authorized the continuance of any private agreement, in restraint of trade or otherwise, but has prescribed rates of its own, it is obvious that a statutory provision prohibiting only certain types of private agreements or combinations has no application.

C. THE COMMISSION HAS NOT ORDERED THE CONTINUANCE OF ANY CONTRACTUAL PROVISION HELD UNLAWFUL BY THE FOURTH CIRCUIT OR OTHERWISE UNLAWFUL

1. *The Fourth Circuit held only Articles IV and V of the Penn Water contract, not the pooling and residual payment provisions, to be unlawful*

A basic premise in the petitioners' argument is that the Commission's order is in conflict with the decision of the Fourth Circuit because the Commission prescribed contractual provisions held by the Fourth Circuit to be unlawful. This Court is, of course, not bound by the Fourth Circuit's ruling—as petitioners themselves recognize in attributing antitrust violations to provisions of the contract which the Fourth Circuit clearly did not hold to be unlawful. See pp. 74–75, *infra*. In view of the petitioners' strong reliance upon the Fourth Circuit's decision, however, it is important to ascertain precisely what provisions of the contract that court held to be un-

lawful.[45] Such an inquiry, followed by a reference to the terms of the Commission's order, will reveal that the Commission has not prescribed anything held unlawful by the Fourth Circuit, as that court itself agrees.

The Fourth Circuit's opinions demonstrate plainly that only Articles IV and V of the agreement were held to be "illegal restrictions" in violation of the antitrust laws. These are the articles which prevent Penn Water from entering into contracts of sale or purchase and from expanding or contracting its plant without Consolidated's consent. (See p. 10, *supra;* R. XV, 4612–4613, R. XVIII, 5328.) These provisions the Fourth Circuit characterized throughout its opinions as the "illegal restrictions."

The court discusses these provisions and their effect in detail, and concludes that they violated the antitrust laws (R. XVIII, 5330–5331). But there is no suggestion in any of the Fourth Circuit's opinions that the provisions of the contract relating to power pooling and method of payment were unlawful, and this despite the fact that Penn Water urged (see Br. in first *Consolidated* case in the Fourth Circuit, p. 27), as it does here

[45] We do not mean to suggest or concede that the Fourth Circuit possessed jurisdiction to invalidate any provisions of a Commission rate order, including any which may have been effectuated by reference to a contract filed as a rate schedule. The Commission rather than the court would seem to have primary jurisdiction over attacks upon the validity of anything which the Commission has prescribed.

(Br. in No. 428, pp. 63–67), that the payment provisions also violated the antitrust laws. On the contrary, the court repeatedly described the contract in terms which demonstrate that it regarded the provisions relating to power pooling and payment, but not Articles IV and V, as entirely lawful. Thus in the Fourth Circuit's second opinion (R. XVIII, 5358) it described the Penn Water-Consolidated contract as providing that:

> Consolidated should be entitled to all of the electric capacity and energy available to Penn Water and not otherwise disposed of in the performance of existing contracts, and in consideration thereof, Consolidated agreed to pay Penn Water an amount equal to its operating expenses, a specified rate of return on existing facilities, and on the cost of new facilities less depreciation, * * * *Closely associated with these provisions were the illegal restrictions on the future activities of Penn Water which resulted in the invalidation of the whole contract.* [Italics supplied.]

Substantially the same language was employed in the court's prior reference to the Third Circuit's *Safe Harbor* decision, when after referring to the provisions for disposal of the supply of electric energy and the method of payment therefor, the court said (R. XVIII, 5343):

> The restrictive provisions of the agreement were not mentioned and their legal validity was not discussed.

That the Fourth Circuit so construed its decision in the case involving the Penn Water-Consolidated contract is confirmed by the opinion in the second *Consolidated* case, which states flatly that the contract had been held "invalid [in the first case] because Articles IV and V * * * conferred upon Consolidated the power to control" Penn Water's activities (No. 611, R. 233, slip op., pp. 3–4). The court went on to describe the contract in the instant case as providing in effect that Consolidated should be entitled to Penn Water's power in return for paying its operating costs and a specified greater rate; "and then", said the court, "followed the illegal restrictions upon the activities of Penn Water" (No. 611, R. 234–235, slip op., p. 5).[46]

These repeated statements by the Fourth Cir-

[46] Petitioners' argument (Br. No. 428, p. 63 fn.) that the Fourth Circuit held unlawful the payment provisions of the contract here involved is contrary to the entire tenor of the opinions in the first *Consolidated* case there, as well as to the passage from the second case quoted in the text. Petitioners advert, however, to the fact that at one point in its opinion in the second *Consolidated* case the Fourth Circuit seems to have included the pooling and payment provisions of the contract there involved among those which it classified as "restrictions" (No. 611, R. 235–236, slip op., pp. 6–7). But this seems inconsistent with the passage quoted in the text from the same opinion, and the opinion as a whole also indicates clearly that the court is only holding particular restrictive articles of the contract there involved to be unlawful. In any event, in the passage to which petitioners refer, the Fourth Circuit was not referring to the payment provisions in the contract in the instant case.

cuit which contrast the pooling and payment provisions with the "illegal restrictions" leave no possible doubt that the only provisions of the Penn Water-Consolidated contract which it held violative of the antitrust laws were the restrictions contained in Articles IV and V. The court went on to invalidate the entire contract, including the provisions relating to the power pooling and the method of payment, but not because it regarded the latter provisions as illegal in and of themselves; this was never suggested. The reason was that the court deemed Articles IV and V to be so inseparable from the remainder of the contract that without these Articles the latter could not be said to reflect the intention of the parties and hence could not function as an agreement between them (R. XVIII, 5358–5359). Despite this invalidation of the entire contract, there is no suggestion in the Fourth Circuit's opinion of any legal obstacle which would have prevented the parties from entering into another agreement in effect reaffirming the earlier contract minus, of course, the illegal articles. By the same token, nothing suggests that if the Commission were to prescribe the continuance of such arrangements minus the restrictive provisions there would be any violation of the antitrust laws. That is what the Commission did.

2. The Commission did not prescribe any unlawful provisions of the contract

Although, as Penn Water points out in its brief (No. 428, p. 49), the Commission referred to Articles IV and V in its opinion on rehearing (R. XVI, 5184), nothing in that opinion or the other opinions or orders entered in this case directs the continuance of those provisions.

In its original order of January 5, 1949, before Penn Water had raised the antitrust objection, the Commission did not order compliance with the terms of the contract generally, or refer to Articles IV and V at all. The Commission at that time merely ordered that the formula payment arrangement "whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures" Penn Water of the "recovery of all proper operating expenses * * * and a fair return" be continued at greatly lowered rates (R. XVI, 4981, 4994). It did not prescribe the provisions of any contract or rate schedule, but ordered Penn Water to file "a new schedule of rates and charges" which would effectuate the rate reduction (R. XVI, 4995). When confronted for the first time, on petitioners' first petition for rehearing, with Penn Water's claim that Articles IV and V were illegal, the Commission referred to the above quoted portion of its prior opinion, and commented (R. XVI, 5184–5185) that:

> If there are questions as to the legality of the foundation contracts which are in litigation, as Respondents' application for rehearing indicates the validity of our order is not dependent upon the decision of those questions. In our opinion and order, we took care to leave the continuation of the operation of the integrated and interconnected system in full effect, merely changing the rates * * *.

Thus, the Commission made it clear that it did not regard its own order as prescribing anything except a reduction in rates computed in substantially the same manner as provided in the contract."

Only when it concluded that Penn Water would not file a satisfactory schedule of rates and charges did the Commission itself prescribe its own rate schedule (R. XVII, 5277–5283), and also order that (R. XVII, 5283)—

> All other provisions of the aforementioned contracts, *in and of themselves lawful*

---

47 The assertion that the Consolidated contract is inseparable and "is not a rational business arrangement" without Articles IV and V (No. 428, Br., p. 59, fn.) obviously has no bearing on whether the Commission prescribed such an arrangement. For the Commission's duty is to require arrangements which further the public interest without regard to whether private business concerns, acting pursuant to their individual interests, would voluntarily assume similar obligations. The "inseparability" found by the Fourth Circuit in the contract *qua contract* depended on the intention of the parties, and clearly would not extend to the Commission's order which is not dependent upon private intent.

> prescribing or defining in the power, energy and transmission services to be furnished, or any classification, practice, regulation or rule affecting such services, which several provisions are incorporated herein by reference, shall be observed and be in force.

The Commission was, at the time fully aware of the claimed illegality of these provisions (see pp. 24–25, *supra*); accordingly, it limited its prescription to provisions "in and of themselves lawful" in order to insure that its order would not be construed as having prescribed any provision which might be held unlawful in the course of Penn Water's antitrust litigation against Consolidated. In addition, and significantly, the provision in question is limited to the portions of the contract "prescribing or defining the power * * * services to be furnished," or any rule "affecting such services"; it does not order compliance with the contract as such.

Both the Fourth Circuit and the court below have so understood the Commission's opinions. In the second *Consolidated* case, the Fourth Circuit rejected the Commission's assertion that in that case, unlike the first *Consolidated* case, it had prescribed the entire contract, including the restraints, largely because it agreed that the Commission had not done so in the first case, saying (No. 611, R. 243, Slip op., p. 15):

> * * * It is obvious that the Commission did not prescribe the restrictive conditions of the contract as part of the rate order in either case * * *.

Similarly the court below has not said that the Commission has prescribed the restrictive conditions; on the contrary, it has sharply differentiated between these restrictive provisions and the arrangements prescribed by the Commission pursuant to its authority under the Federal Power Act to prescribe reasonable rates and services. Thus, on the one hand, the court described the restraints in Articles IV and V as having "been privately agreed upon by the parties and submitted to the Commission as an accomplished fact" (R. XVIII, 5375). Cf. *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439, 461–462. On the other hand, the court below points out that the Fourth Circuit, following the lead of this Court in the *Georgia* case, properly avoided affecting any pending rate proceeding; comments that the Commission's order relates only to "services and rates, reflecting underlying operations"; and rules that as such, its validity is governed by the Federal Power Act (R. XVIII, 5375).

D. THE COMMISSION'S ORDER IS NOT BASED ON THE CONTINUANCE OF THE CONTRACT

Petitioners argue that the Commission's order is based upon continuance of the contract, that the Fourth Circuit held the entire contract in-

valid,[48] and that therefore the order must fall unless the Commission can override the Fourth Circuit's decision as to the validity of the contract under the antitrust laws. But the Commission's order did not rest on the contract as such, but on the preexisting method of operation. In ordering the continuance of that method so far as lawful, the Commission was not ordering continuance of the contract *qua* voluntary contract. The Commission's order prescribing rates, charges and services to be performed stands or falls irrespective of the contract or its validity as private arrangement—even though the order incorporated parts of the contract by reference.

Particularly insofar as the method of payment is concerned the Commission has superseded private contract provisions. In the rate schedule which it "prescribed" (R. XVII, 5277, 5279–5283) the Commission spelled out in full detail the manner in which the payments by Consolidated to Penn Water were to be computed. The Commission-prescribed order—four record pages in length (R. XVII, 5279–5283)—thus completely supplants the four-and-a-third pages of Article III of the original contract, which covers the same ground (R. XV, 4608–4612).[49] The fact that the

[48] As has been pointed out, the contract was held invalid because the court held the remainder inseparable from the restrictive provisions in Article IV and V.

[49] The original Article III was modified and slightly lengthened by the supplemental agreement of September 29, 1939 (R. XV, 4619–4621).

Commission's order followed in general the residual method for computing the payments employed in the prior contract does not mean that that portion of the contract was left in effect. The last paragraph of the Commission's "prescribed rate schedule" which incorporated by reference only "all *other* provisions of the aforementioned contracts, in and of themselves lawful" (R. XVII, 5283), makes this plain. For the preceding sentence states that:

> The foregoing provisions supersede only the rates and charges heretofore made, demanded, collected or assessed against the Baltimore Company [Consolidated] by Penn Water * * *.

"The foregoing provisions" of the Commission order were those to which we have referred, which defined the method of computing the amount to be paid, and are obviously rate-making provisions. The fact that the method prescribed is more complex than usual does not make the prescribed schedule any less one concerned entirely with the fixing of rates.

Although we think that the point requires no further reply, it seems advisable to deal separately with each of the "critical features" of the order which petitioners assert to be based upon the assumed existence and continuance of the contract.

(1) *Interstate Commerce.*—Petitioners object that the Commission's finding that the sales to

Pennsylvania utility customers were in interstate commerce ~~were~~ based on the provisions as to pooling contained in the invalidated contracts and must fall with the contracts. The Commission's jurisdiction over interstate sales, however, necessarily rests on the method of operation prior to the entry of the Commission's order and not on the contractual arrangements therefor. What else can the Commission look to as the basis for its jurisdictional finding? If the record before the Commission reveals that a power company's sales have been interstate up to that time[50]—whether by reason of private contract or not, and irrespective of whether lawful or not—the Commission is authorized to regulate them. The possibility that by reason of the lapse of a private contract or otherwise the company may wish to change its method of doing business in the future so as to affect the interstate nature of a portion of its operations does not deprive the Commission of jurisdiction to regulate what has been interstate up to that time.

For at least 20 years Penn Water's facilities have been operated in conjunction with those of Consolidated, with the result that the power has flowed from Maryland to Pennsylvania cities, as well as from the dam in Pennsylvania to Baltimore. Despite the Fourth Circuit decision, this flow is still continuing. To alter it would doubtless require some rearrangement of physical plant,

[50] That Penn Water sales were interstate is shown in Point V, *infra*, pp. 105–118.

as well as the consent of the proper regulatory authority.[51] At least until that occurs, if it ever does, the Power Commission's authority continues irrespective of the contracts.

(2) *Rate of Return.*—Penn Water bases its claim that the 5¼% return fixed by the Commission was premised on the security afforded it by its contract with Consolidated (Br. in No. 428, p. 52–3), on references by the Commission to the fact that the contract assured it of a "stabilized income" (R. XVI, 4953) and by the court below to the evidence before the Commission that Penn Water was "insulated" from any "substantial risk" by the contract (R. XVIII, 5386).

The substitution of a Commission-prescribed arrangement for a contractual one of the same sort will provide the same stability of income for as long as the Commission-prescribed rates remain in effect. Only if one of the parties seeks and obtains permission to escape from the ar-

[51] In discussing Penn Water's threat in its petition for rehearing to terminate its present services and undertake new services, the Commission has pointed out that any such change would require 30-day notice to be given by filing with the Commission new schedules of rates and charges which would afford Consolidated and the Maryland Commission an opportunity—

"to make application under Section 202 (b) for an order 'to sell * * * or exchange energy' from and after the time of the proposed change or termination of service, or a complaint under Section 207 as to the adequacy of the service to be rendered." (R. XVI, 5188; see also R. XVI, 5180–1, 5185–8.)

rangement might there be any prejudicial change, which would then be taken into account in fixing a new rate. Nothing that has occurred to date suggests that any party but Penn Water itself is seeking such escape. Even the possibility that the arrangement might be terminated before the expiration date of the contract, 1980, would not impair the stability of income which Penn Water will receive under the method of payment prescribed by the Commission. Throughout whatever period the Commission-prescribed rates are operative, be it a month, a year, or a decade, they will for that period provide the same stability of income previously afforded by the contract-provided rates.

A reading of the Commission's order will disclose that the company's financial experience under the contract was only one of a number of factors which the Commission considered in fixing the rate of return. Equally emphasized was the ready market available for Penn Water's power, and the Baltimore company's sound financial position, all of which are equally beneficial to Penn Water so long as the present arrangement continues pursuant to the Commission's order, contract or no contract (R. XVI, 4953–4). Of principal importance, of course, was the Commission's view that a 5¼% return applied to the rate base and designed to provide 3.17% for bonds, 5.21% for preferred stock (Penn Water's actual pres-

ent costs) and 8.64% for common stock and surplus was "fair" (R. XVI, 4954–6). The court below has held that there was substantial evidence to support this conclusion (R. XVIII, 5387) and we do not understand petitioners any longer to urge the contrary.

(3) *Allocation of Rate Reduction.*—(a) Petitioners attack the Commission's allocation of the excess revenues as being improperly based on Consolidated's "entitlements" under the invalidated Consolidated and Safe Harbor contracts rather than on the power actually delivered (Br. in No. 428, pp. 55–58; Br. in No. 429, pp. 32–34). But this contention ignores the distinction pointed out *supra*, pp. 73–75, between the provisions of the invalidated contracts and the Commission's order, which superimposed upon Penn Water relationships with Consolidated which have existence independent of the contract. Since the Commission's order prescribing the payments to be made by Consolidated involved a formula for computing charges similar to that provided under the contracts,[52] the Commission appropriately referred to the operation of the formula method under the contracts. The Commission, accordingly, included Consolidated's entitlements, which were to be continued under the terms of the order fixing the amount of the rate reduction to be

[52] The Commission's formula, although following the general lines of the contract formula, differed therefrom in several important respects. See *supra*, p. 23, fn. 24.

allocated to Consolidated. And inasmuch as the credits for these entitlements were common to both the Commission's formula and that of the contract, the Commission computed the actual amount of the entitlements on the basis of the companies' experience in the test year of 1946. This does not, however, mean that the credits to which the Commission ruled Consolidated entitled resulted from the contracts or because the Commission felt bound by the terms of the contracts to allow these credits. On the contrary, Consolidated received the credits because they were due it under the formula prescribed by the Commission as the "most practicable under the circumstances" to achieve the maximum over-all economy and coordination of resources and facilities. (R. XVI, 4981.)

(b) Petitioners further argue that the Commission erroneously construed the Consolidated's entitlements under the contracts. This claim was expressly overruled by the court below (R. XVIII, 5392–5393) and has not been specified as error. The argument, which in effect is that the Commission could only prescribe those entitlements provided in the contracts, with any departure therefrom being invalid, is patently inconsistent with the contention just discussed. Here, again, it is important to remember that the Commission was not prescribing the continuance of the contract provisions as such, but rather imposing its own requirements. And with this distinction in

mind, it becomes clear that it is immaterial whether the Commission in fact misconstrued the entitlements under the contract. The Commission was not bound to follow the contract formula method precisely or even generally in prescribing the method of payment, and all it intended to do was to prescribe entitlements as it understood them to exist, but as in any event it ordered they should continue.

In any case, it is demonstrable that the Commission's allocation actually did follow that provided by the contracts. Petitioners attack principally the $1,127,000 credit allowed Consolidated for the so-called economy interchange (Br. in No. 428, p. 57; Br. in No. 429, pp. 32–34). This credit arose from the fact that at those times when Consolidated's additional cost of steam generation is lower than that of a Pennsylvania utility, energy was furnished from the pool to Penn Water's Pennsylvania utility customers over and above its firm obligations to them. This energy, which was delivered by Penn Water, was obtained by diverting from Consolidated (1) the residual energy generated by Penn Water (i. e., the energy remaining after all of Penn Water's firm obligations are satisfied) to which Consolidated was entitled [53] and (2) part of Consolidated's entitle-

[53] Despite petitioners' present contention (Br. No. 428, p. 59 fn.; Br. in No. 429, p. 34), Penn Water has consistently recognized that Consolidated is entitled to all its energy remaining after its firm obligations had been met. See R. I. 50, 64, 65, 82, 489–490; II, 652; XV 4654.

ment to two-thirds of Safe Harbor total output;[54] in addition, Consolidated itself generated some of the energy used for this economy interchange. Thus, of the 191,664,000 Kwh furnished to Penn Water's customers on this basis in 1946, 65,863,000 Kwh was furnished directly by Consolidated and the remainder (125,801,000 Kwh) came out of Consolidated's residual and Safe Harbor entitlements. For the energy so furnished, Penn Water was paid a total of $1,127,699, computed at a price based on sharing the savings involved (i. e., a price halfway between Consolidated's additional cost of generating[55] and the higher cost to the

---

[54] Penn Water's claim (Br. No. 428, p. 56), that the ⅓–⅔ division of Safe Harbor's output should have been applied after energy was furnished under contracts to which Safe Harbor was a party, is contrary to the construction given that contract, in the proceeding in which it was directly involved (*Safe Harbor W. P. Corp.* v. *F. P. C.*, 179 F. 2d 179, 184–185, fn. 9 (C. A. 3) certiorari denied, 339 U. S. 957). It is also contrary to the evidence in this proceeding, which shows that Safe Harbor was only a nominal party to these contracts for certain tax purposes (R. V, 2382, 2401–2) and that all the parties concerned regarded Safe Harbor's joinder in these contracts as not affecting Consolidated's right to ⅔'s of Safe Harbor's *entire* output. (See *e. g.*, R. XV, 4645–6, 4648–9, 4682–87; II, 608–10; X, 3715, 3720).

[55] To have computed the price on the basis of Safe Harbor's cost of hydro generation rather than Consolidated's cost of steam generation as suggested by Penn Water (Pet. Br. No. 428, p. 57, fn.), would have been unfair. Consolidated has to incur steam generating costs not only to furnish the economy interchange energy but to make up for the energy diverted from it. In these circumstances it is only equitable to compute the allowance on the basis of actual costs incurred, as the court below held (R. XVIII, 5392).

Pennsylvania utility if it had not generated). Inasmuch as the energy so sold belonged to Consolidated and in effect was for its account, Consolidated was clearly entitled to a credit therefor.[56] It is largely by virtue of this credit that Penn Water's excess revenues from Consolidated were increased from the $700,000 actually received from Consolidated to about $1,700,000.[57]

(4) *The order prescribed by the Commission is independent of the restrictive provisions of the contract.*—Penn Water argues that the Commission's order prescribing contractual provisions is void because the "illegalities" contained in Article IV and V permeate the entire arrangement. We do not agree, for the order stands independently of the contract, and of Articles IV and V.[58] In so far as the order is concerned,

[56] The Commission included in Penn Water's cost of serving Consolidated, the costs Penn Water incurred in furnishing the economy interchange energy to the Pennsylvania utilities.

[57] The facts, that the Commission has prescribed the entire Safe Harbor contract and that the entitlements thus prescribed are involved in determining the rate reduction allocation, do not provide any basis for attacking the present order. See Point IV, *infra*, pp. 94–105.

[58] The phrase "with Electric's [Consolidated's] approval" contained in Article II (R. XV, 4607–4608) is the only other portion of the contract which would seem to be dependent upon the restrictive articles. The Commission no more prescribed this clause than it did Articles IV and V. This provision was plainly not prescribed by the Commission because it was fixing rates for Penn Water's services "as heretofore rendered," not for altered service to Consolidated in the event Penn Water entered into new contracts with other customers in the future (R. XVII, 5279; XVI, 4981, 5185).

Penn Water need not obtain Consolidated's consent before expanding or taking on new customers. If the new arrangements should affect the service rendered by Penn Water to Consolidated, Penn Water must file a new rate schedule for the changed service. If a new contract should render the arrangement presently prescribed by the Commission unfair to either party, it may apply to the Commission for a modification of the present order.

In any event, since the antitrust laws do not apply to the Commission's order (*supra*, pp. 49–63), it is immaterial whether any provisions of the order might violate the antitrust laws if viewed as private contractual arrangements. Even more clearly, therefore, the Commission's order is not invalidated because the contract as such may have been permeated with "illegalities".

III

THE POWER COMMISSION DID NOT PRESCRIBE CONTINUANCE OF ANY CONTRACTUAL PROVISION WHICH MIGHT CONCEIVABLY VIOLATE THE LAWS OF PENNSYLVANIA, AND IF IT DID THOSE LAWS WOULD NOT INVALIDATE ITS ORDER

Petitioners contend that the Commission's order violates not only the antitrust laws but the laws of Pennsylvania. The Fourth Circuit so held with respect to the restrictive conditions in the contracts in both of the antitrust cases.

A. THE POWER COMMISSION HAS NOT PRESCRIBED ANY CONTRACTUAL PROVISIONS WHICH WOULD VIOLATE THE LAWS OF PENNSYLVANIA

Petitioners assert that Pennsylvania law is violated because the contract destroyed both Penn Water's "independent corporate character" by divesting "the board of directors of powers of management" (Br. in No. 429, pp. 20–21) and depriving it of the powers to initiate "reasonable rates and adequate services" (Br. in No. 429, p. 21; cf. Br. in No. 428, pp. 68–72).

Obviously, only the restrictive conditions in Articles IV and V can have any such effect, and these were the only provisions which the Fourth Circuit held unlawful, as we have shown (pp. 65–69, *supra*). Since, as we have also demonstrated (pp. 70–73, *supra*), the Power Commission has not prescribed the continuance of those provisions, the order does not conflict with any of the Pennsylvania statutes cited. Those statutes, which insofar as the present issue is concerned, do no more than forbid directors to abdicate their authority, do not outlaw reasonable arrangements for the coordination of hydro and steam power facilities in the public interest or a cost-plus method of payment which would lead to more efficient and economical production of electric energy. We shall point out in subsection (C) of this Point, *infra*, pp. 90–93, how far the Pennsylvania statutes are from having any bearing on the instant case.

B. A RATE ORDER VALID UNDER FEDERAL LAW CANNOT BE INVALIDATED BY THE LAW OF PENNSYLVANIA

Even if it be assumed that Pennsylvania statutes are inconsistent with the Power Commission's order, that order would stand as long as it was authorized by the Federal Power Act. In view of the Supremacy Clause of the Constitution, it is difficult to understand the argument that in case of conflict the State law controls. In this case we are concerned with the validity of a federal order. If that order requires conduct in violation of State law, which we doubt, there would be a direct conflict between federal and state law, and the former would, of course, prevail. If there is no conflict, petitioners' contention based upon Pennsylvania law disappears.

The principle of federal supremacy has been applied to the statutes administered by the Federal Power Commission. *Illinois Natural Gas Co.* v. *Central Illinois Pub. Serv. Co.*, 314 U. S. 498; *First Iowa Coop.* v. *Federal Power Commission*, 328 U. S. 152.[59]

Nor can the federal regulation be frustrated by provisions inserted by the state in its corporation law any more than by other forms of state

[59] In the *First Iowa* case, this Court rejected the contention that Section 9 (b), referred to here by Penn Water (Br. No. 428, p. 71), left in effect the requirements of Iowa law relating to the development of navigable waters which were in conflict with those of Part I of the Federal Power Act.

regulation. In *Northern Securities Co.* v. *United States*, 193 U. S. 197, where defendants urged that the stock acquisitions, which were claimed to result in an illegal combination under the Sherman Act, were permitted by the law of the state of incorporation and therefore that the Sherman Act as applied to defendants unconstitutionally trenched upon rights conferred by state law, this Court rejected this contention, saying (193 U. S. at 345–346):

> Such a view cannot be maintained without destroying the just authority of the United States. It is inconsistent with all the decisions of this court as to the powers of the National Government over matters committed to it. No State can, by merely creating a corporation, or in any other mode, project its authority into other States, and across the continent, so as to prevent Congress from exerting the power it possesses under the Constitution over interstate and international commerce, or so as to exempt its corporation engaged in interstate commerce from obedience to any rule lawfully established by Congress for such commerce. It cannot be said that any State may give a corporation, created under its laws, authority to restrain interstate or international commerce against the will of the Nation as lawfully expressed by Congress. Every corporation created by a

> State is necessarily subject to the supreme law of the land.[60]

Indeed, any other conclusion would virtually destroy any possibility of effective uniform regulation of interstate commerce on a national scale.

Petitioners argue that the Federal Power Act does not "give the Federal Power Commission authority to order or condone contractual arrangements violative of such State law" (Br. No. 428, p. 70); that congressional intent to preclude a State from exercising its traditional power must be clear and manifest (*id.* p. 73), and that here Congress intended the federal regulation to be supplementary to State regulation and not to supersede it. Petitioners rely on the purpose of the statute to fill the gap in State power left by the *Attleboro* case, and upon the provision in Section 201 (a) of the Power Act that—

> such federal regulation however, to extend only to those matters which are not subject to regulation by the States.

But neither that provision nor the general purpose of the Act meant that the power of the federal agency to establish reasonable wholesale interstate electric rates was to be subject to State

---

[60] See also *Otis & Co.* v. *Securities and Exchange Commission*, 323 U. S. 624, 638; *Securities and Exchange Commission* v. *Central-Illinois Corp.*, 338 U. S. 96, 131. *Commonwealth & South, Corp.* v. *Securities and Exchange Commission*, 134 F. 2d 747, 752–753 (C. A. 3); Securities *and Exchange Commission* v. *Trans America Corp.*, 163 F. 2d 511, 518 (C. A. 3), certiorari denied, 332 U. S. 847.

control, exercised through State corporation laws or otherwise. Rather, the jurisdictional line drawn was that the Power Commission was to "exercise jurisdiction over matters in interstate and foreign commerce to the extent defined in the Act [*e. g.*, transmission or sale at wholesale in interstate commerce] and local matters would be left to the state regulatory bodies" (*Public Utilities Commission* v. *United Fuel Gas Co.*, 317 U. S. 456, 467). This Court has already held in regard to the parallel Natural Gas Act, that "as to rates to be effective in the future * * * Congress by that Act * * * preempted the regulatory powers over the transportation and sale of natural gas in interstate commerce" (*Public Utilities Commission* v. *United Fuel Gas Co.*, 317 U. S. 456, 466), with the Power Commission's jurisdiction being "exclusive". *Id.*, at 467; see also *Illinois Natural Gas Co.* v. *Central Illinois Public Serv. Co.*, *supra*; *First Iowa Coop.* v. *Federal Power Commission*, 328 U. S. 152; *Jersey Central Power & Light Co.* v. *Federal Power Commission*, 319 U. S. 61; *United States* v. *Appalachian Electric Power Co.*, 311 U. S. 377; *Northwestern Electric Co.* v. *Federal Power Commission*, 321 U. S. 119.

Certainly, in regulating interstate sales at wholesale, the Federal Power Commission would not be bound by a State corporation law or utility charter providing that a company must earn an 8% return on the reproduction cost new of its prop-

erties. The same principle applies here if it be assumed that the order of the Federal Power Commission, valid under the federal statute, is inconsistent with state law.

C. PENNSYLVANIA LAW DOES NOT PROHIBIT ANYTHING WHICH THE FEDERAL POWER COMMISSION HAS PRESCRIBED

Even if there were merit in petitioners' theories as to the supremacy of State laws *vis-a-vis* the Federal Power Act, it would avail petitioners nothing in this case. This will appear from a brief analysis of the State laws upon which petitioners rely.

None of the laws referred to contain specific provisions dealing with the present problem. The Pennsylvania utility law (Pet. Br. No. 429, App., pp. 47–49) is merely the customary statute providing that rates shall be "just and reasonable", service "adequate, efficient, safe and reasonable", and that utilities may not abandon or surrender services or rights or transfer their property without a certificate of public convenience. The provision of the State corporation law cited (*id.*, pp. 49–50) is the general section to the effect that a corporation shall be managed by its officers and directors.

If, as the Federal Power Commission found, the arrangements here involved were a reasonable means of taking full advantage, both in the public interest and in the corporation's own interest, of the water power of the Susquehanna River,

it is hard to see how a contract so providing could be characterized as an abandonment of the right of managerial control. On the contrary, the contract would seem to be a reasonable exercise of managerial discretion, since Penn Water's resources could not be efficiently developed, without some such arrangement, as its own officers testified (see pp. 16–18, *supra*). Nothing in any of the laws cited would seem to prohibit a board of directors from entering into comprehensive business arrangements, such as the Consolidated contract here involved, which foster the corporate purposes. Cf. *San Diego Water Co.* v. *San Diego Flume Co.*, 108 Cal. 549; *Venner* v. *Chicago City Ry. Co.*, 236 Ill. 349;[61] see, also, *Green Bay R.R.*

[61] In the *San Diego Water* case, the companies entered a contract whereby the Flume Company made the Water Company its sole agent for the sale of water in San Diego, with the combined properties of the companies to be controlled by certain officers as trustees. Subsequently, it was contended that the contract was *ultra vires* because the management of affairs of the corporations was transferred from the directors to the trustees. The California court, however, held that the contract "relates to the sale and distribution of water and to that extent, at least, it relates to the very purpose of the organization of each of these corporations, and is therefore presumably within their power" (108 Cal. at 558).

The *Venner* case involved a bill to set aside a municipal ordinance accepted by the street railway's Board of Directors on the ground that it involved delegating control to a board of supervisory engineers and was therefore *ultra vires*. The Illinois Supreme Court, however, held that the Board might make any contract that was necessary or proper to enable the corporation to accomplish the purposes of its creation and upheld the contract, including the delegation provision.

Co. v. *Union Steamboat Co.*, 107 U. S. 98, 100; *Hand* v. *Clearfield Coal Co.*, 143 Pa. 408. Petitioners have cited no Pennsylvania cases to the contrary.[62]

In any event abandonment of control here could be attributed only to Articles IV and V, which, as we have shown, are not prescribed by the Federal Commission. Insofar as deprivation of initiative with respect to rates and services is concerned, nothing in the Power Commission's order has that effect. Whatever may have been true under the contract prior to the Commission's order, Penn Water undoubtedly retains the right to petition the Commission to modify any of the provisions of its order, including both the provisions specifying the method of payment and Articles IV and V, if they are thought to have been prescribed by the Commission.

It is contended that the assured return provision of the contract and rate order, deprives

[62] The cases relied on by petitioners (Br. in No. 428, p. 69, first footnote) are not in point. For example, of the two Pennsylvania cases cited, one, *Dubbs* v. *Kramer*, 302 Pa. 455, involved the invalidity of a contract entered into by a director binding himself to vote a certain way at the directors' meeting. The other, *Severance* v. *Heyl & Patterson*, 123 Pa. Super. 553, involved the question whether a corporate officer has authority, without express delegation from the Board of Directors, to change a contract entered into by the Board. The other cases typically involved contracts not made by the Board of Directors which attempted to bind in advance the judgment which the Board is supposed to exercise in furthering the interests of the corporation.

Penn Water of incentive to exercise such initiative. The same could be said of any cost-plus contract, and yet such contracts are obviously not *ultra vires* for all corporations, as petitioners' arguments would imply.

Petitioners also refer to common law decisions of this and other courts[63] holding that utility companies cannot abandon their obligations under their franchises to competitors, or enter into a division of profits with competitors. None of these cases deals with circumstances such as are presented here, or remotely suggests that a corporation may not comply with the valid order of a regulatory agency prescribing utility rates. And none holds that such an order, when authorized by regulatory statute, would be invalid because of conflict with the common law.

In general, it is fair to say that the cases cited by petitioners reflect the same public policy manifested in the antitrust laws. Accordingly, they do not advance petitioners' position beyond the argument based upon the specific statutes expressing federal antitrust policy.

In short, Pennsylvania law does not prohibit anything which the Federal Power Commission has prescribed, and if it did the federal statute would prevail.

IV

THE COMMISSION'S ORDERS WERE NOT BASED ON ILLEGAL PROVISIONS OF THE SAFE HARBOR CONTRACT

Petitioners' attack on the Commission's orders under the federal anti-trust laws and under state corporation and public utility laws, involves, as we have indicated, not only the Fourth Circuit's decision, already discussed, invalidating the Penn Water-Consolidated contract, but also the decision invalidating the Safe Harbor contract in the case now pending on petitions for certiorari in Nos. 611, 612.[61] Thus Penn Water argues that the rate reduction "orders in numerous respects (most notably in connection with the FPC's asserted jurisdiction over Penn Water's Pennsylvania business * * *, determinations of cost of services to and determinations of revenues received from the various customers and the cost allocation under which the major share of the rate reduction is given to Consolidated * * * were predicated upon the fictitious 'entitlements' * * * provided for in the Safe Harbor contract rather than upon actual operations and power actually supplied," that contract having "been adjudged illegal *per se* (Br. No. 428, pp. 67–68; see also pp. 54–58, 68–76, and Br. No. 429, pp. 20, *et seq.*). But, as will readily appear, petitioners' contentions with respect to the *Safe Har-*

[61] No. 428, Pet., pp. 1, 3, 4, 9, 14, 15, 17, Br., pp. 1–2, 3, 4, 8–10, 11–12, 13–14, 17–18, 19, 67–68, 68–76; No. 529, Pet. pp. 29, 38, Br., pp. 2, 6, 8–9, 10–12, 13, 20–32.

bor antitrust decision are answered by some of the considerations already discussed in connection with the *Penn Water* antitrust case, and the Fourth Circuit's decision in the *Safe Harbor* antitrust case is plainly an insupportable collateral attack on a Commission-prescribed rate order.

A. INSOFAR AS ENERGY PURCHASED FROM SAFE HARBOR WAS INVOLVED IN FIXING PENN WATER'S RATES, THE COMMISSION'S ORDERS ARE FOUNDED ON THE SERVICES RENDERED BY SAFE HARBOR UNDER ITS PRIOR ORDER FIXING SAFE HARBOR'S RATES.

The Commission, in reducing Safe Harbor's rates to its two owner-customers, Penn Water and Consolidated, on November 4, 1946, prescribed a rate of the same sort as the one it later prescribed in the instant case for Penn Water's sale to Consolidated. The prescribed payment consisted of an annual amount, to be paid by the respective customers in the same 1/3-2/3 ratio in which Safe Harbor's energy was being sold to them,[65] the total amount to be com-

[65] Penn Water's contention that the service being rendered should be determined "on the basis of the power actually delivered to Consolidated" (Br. No. 428, p. 55) would mean that Safe Harbor sells none of its output to Consolidated because it is all physically delivered onto the lines of Penn Water. If Penn Water is to be understood as meaning power which it receives from Safe Harbor and delivers to Consolidated, then its reliance on physical deliveries is no more than an assertion that none of the rest of Safe Harbor's output is received by it for Consolidated's account—an assertion which is without support in the history of the development of the Safe Harbor project and the pool, in the contract terms, or in the physical operations, and is contrary to the

puted by a formula for determining the cost (including cost of invested capital) actually incurred in rendering the services. *Safe Harbor W. P. Corp.*, 5 F. P. C. 221, 266–269, 66 PUR (NS) 212, 255–256.

Except for changes in the provisions of the June 1, 1931, contract, and supplements, relating to the rate of return, the computation of the rate base to which the rate of return was to be applied, and a related change in the computation of the annual depreciation expense allowance, the Commission's order prescribed the June 1, 1931, contract, as supplemented, including the terms which the Fourth Circuit viewed as in restraint of trade.

In compliance with the Commission's order, but expressly reserving "the right to contest the validity of the Commission's order" in the United States Court of Appeals for the Third Circuit, Safe Harbor filed revisions to its Rate Schedule F. P. C. No. 1 (6 F. P. C., at p. 570). The revisions were approved and accepted by the Commission, and the rate schedule previously filed,[66] as thereby revised, was permitted to be-

---

order of the Commission fixing the sale to Consolidated as ⅔ of the total output. Penn Water seeks to deny Consolidated ⅔ of Safe Harbor's output although Consolidated pays ⅔ of Safe Harbor's costs of service.

[66] The Safe Harbor contract of 1931 was first filed informally with the Commission on July 15, 1931, and again filed on December 28, 1932, in response to a letter from Chairman McNinch and the Commission's Order No. 31 requiring li-

come effective as the rate schedule prescribed by the order of November 4, 1946, being designated as Supplement No. 3 to Rate Schedule F. P. C. No. 1. 6 F. P. C. 570–571. The Commission's order was challenged on many grounds in a statu-

---

censees to file their rate schedules and contracts. It was subsequently filed under Sections 205 (c) and (d) of the Federal Power Act on January 14, 1936.

The contract has been brought before the Commission repeatedly in formal proceedings, as affiliated company profits have been eliminated, interlocking directorates have been broken up, and rates reduced by the Commission, without interfering with the pool operation under that contract. It was incorporated in the record and was discussed in connection with the pool operation in the *Safe Harbor* original cost case in 1935 (1 F. P. C. 230) and in the first *Safe Harbor* rate case (2 F. P. C. 182, 34 PUR (NS) 236, reversed on other grounds, 124 F. 2d 800, certiorari denied, 316 U. S. 663). In the latter case, as in the present case (p. 94, *supra*), the testimony of Penn Water's President contrasted the benefits of the Safe Harbor contract, embodying a fixed return, with the difficulties inherent in a contract with a unit rate for demand and energy.

The pool operations came before the Commission again when it ended the system of interlocking directors and officers among Penn Water, Safe Harbor and Consolidated. *John Edward Aldred, et al.*, 2 F. P. C. 247, 35 PUR (NS) 361.

The contract came before the Commission yet again when, at the request of the Maryland Commission and others, the Commission initiated its investigation in the second *Safe Harbor* rate case (4 F. P. C. 696–697), in which it undertook to determine whether it should "fix by appropriate order or orders, just and reasonable rates, charges * * * practices or contracts" for Safe Harbor (4 F. P. C. at p. 697). In the course of the hearing Penn Water's President and Vice President both testified to the difficulties of pricing the output of the Safe Harbor project on a unit of service basis and to the virtues of the method finally developed and embodied in the Safe Harbor contract.

tory review proceeding in the Third Circuit, and sustained in all respects. *Safe Harbor W. P. Co.* v. *Federal Power Commission,* 179 F. 2d 179, certiorari denied 339 U. S. 957.

When, therefore, in the Commission's 1949 opinion-order in the Penn Water rate proceeding which is here under review (on a record closed July 16, 1947, more than seven months after the effective date of the *Safe Harbor* order) the Commission referred to receipts of Safe Harbor energy (R. XVI, 4857–4858), to the Safe Harbor power contract (R. XVI, 4859), and, in its discussion of allocation of costs of service, to "entitlements" to Safe Harbor's output (R. XVI, 4970, 4976, 4978), it necessarily was referring to the energy flows and entitlements under the contract revision prescribed by the Commission as Safe Harbor's rate schedule. For the rate provisions of the contract had by then been superseded by those which had been fixed by the Commission.

That the Commission did rely on its own previously prescribed Safe Harbor rate in fixing Penn Water's rates, is made clear in the Commission's opinion (R. XVI, 4960):

> The adjustment of the cost of power purchased from Safe Harbor, an increase of $37,063, has been made to give effect to the rate order of this Commission in the *Safe Harbor,* case, *supra.* * * *

B. SAFE HARBOR'S RATES DULY PRESCRIBED BY THE COMMISSION ARE NOT TO BE JUDICIALLY INVALIDATED IN A COLLATERAL PROCEEDING

In view of the fact that the Commission relied, as we have just shown, on its own orders in the *Safe Harbor* case and not on the Safe Harbor contract, petitioners' contention that the Commission based its orders herein in part on provisions of a contract declared illegal by the Fourth Circuit amounts in effect to the contention that the Fourth Circuit could invalidate the Commission's rate order in the *Safe Harbor* case, which had previously been upheld on direct review by the Third Circuit.

But the Fourth Circuit obviously has no such power. Under the Power Act orders of the Commission are reviewable only by way of a petition, filed within sixty days of the Commission's order, for direct review in a court of appeals. Sec. 313 (b); *Federal Power Commission* v. *Pacific F. & L. Co.*, 307 U. S. 156, 159. There can be no direct review in a district court and, even more clearly, no review by way of collateral attack in a proceeding to which the Commission is not even a party. And yet, it is upon such a proceeding, filed in the District Court for Maryland, that petitioners rely for their assertion that the Commission's order in the *Safe Harbor* case has been nullified. The fact that the Commission's order was upheld by the Third Circuit only serves to make this argument more astounding.

As long as the statute contains an adequate procedure for review of the Commission's order, that procedure must be followed, even as against the Commission itself. *Myers* v. *Bethlehem Shipbuilding Corp.*, 303 U. S. 41. And an order which is not set aside on such a direct review—and even more clearly when its legality has been judicially affirmed—cannot be challenged collaterally and must be accepted by other courts and parties as binding. With respect to rates fixed by the Federal Power Commission, this Court has recently said (*Montana-Dakota Utilities Co.* v. *Northwestern Pub. Serv. Co.*, 341 U. S. 246, 251):

> It can claim no rate as a legal right that is other than the filed rate, whether fixed or merely accepted by the Commission, and not even a court can authorize commerce in the commodity on other terms.

This does not mean that a party may not move the Commission to modify a rate schedule already entered if grounds for such a proceeding appear.[67]

[67] An application which is in substance only a petition for rehearing must be filed within 30 days. Sec. 313 (a). Moreover, under Sec. 205 (d) of the Act and Part 35 of the Commission's Rules (18 C. F. R. §§ 35.1, et seq.) such a rate could be terminated or changed only by complying with the 30 days' advance notice and the filing requirements of Sections 205 and 206, and would then be subject to complaint and investigation of the new rate under those sections, as well as subject to the right of customer companies or state commissions to seek Commission action with respect to compelling sale or interchange of energy or adequate service under Sections 202 (b) or 207 of the Act (*supra*, pp. 39–42, 77 n.).

The Commission is always open. Such a proceeding before the Commission itself is the only way in which an order already sustained may be attacked.

This principle applies to objections to a Commission order based on antitrust grounds as much as to other objections. Certainly as to private parties that has long been the law. *United States Navigation Co.* v. *Cunard S. S. Co.*, 284 U. S. 474. *Far Eastern Conference* v. *United States*, No. 15, Misc. decided March 10, 1952, reaffirms, the principle and even extends it to antitrust proceedings brought by the government. Those cases hold that even where a regulatory agency has not entered an order, resort must first be to the agency when it has jurisdiction over a problem containing both antitrust aspects and calling for the exercise of administrative discretion. *A fortiori,* must there be resort to the statutory procedure when the object is to attack an order of the agency itself.

C. THE COMMISSION'S ORDER IN THE SAFE HARBOR CASE DOES NOT VIOLATE THE ANTITRUST LAWS

As has been pointed out, the Commission's order in the *Safe Harbor* case prescribes the prior contractual arrangement as the new rate schedule. That order was governmental action, not a private

---

And "until changed in the manner provided" by the Act, the provisions of the rate schedule are "obligatory alike upon carrier and shipper." *Robinson* v. *B. & O. R. R.*, 222 U. S. 506, 510.

contract or arrangement. For all of the reasons set forth in Point II–A (1) (pp. 49–56, *supra*), the antitrust laws are not applicable either to the order itself or to conduct pursuant thereto to avoid statutory penalties. In addition, the order in the *Safe Harbor* case, like the order in this case, was a *rate* order. Such orders in particular, for reasons stated in Point II–A (2) (pp. 56–63, *supra*), are subject to control by the rate-making agency and not through the antitrust laws. The Fourth Circuit decision in the *Safe Harbor* case seems to contravene both of these established principles, as well as the doctrine of primary jurisdiction.

The Fourth Circuit concluded that the Commission did not prescribe restrictive conditions in the contract as part of its rate order in the *Safe Harbor* case. But this interpretation is contrary to the words of the order itself[68] as well as to the Commission's interpretation of its own order. What the Fourth Circuit seems to have had in mind was that the Commission's action in attaching the "in and of themselves lawful" clause

[68] The order provides (5 F. P. C. 221, 269), "The Commission orders that: * * * (B) Safe Harbor shall file revised rate schedule F. P. C. 1, dated June 1, 1931, and supplements thereto, providing for a 5 percent return on a rate base computed in accordance with findings (12) to (17) above, inclusive, said revised schedule to be effective on and after January 1, 1947 * * *." "F. P. C. 1" was the Safe Harbor contract.

The subsequent paragraphs of the order detail the method whereby Safe Harbor was to compute its rate base.

to the order in the instant case shows that it would not have approved the conditions found to be unlawful by the Fourth Circuit in the *Safe Harbor* antitrust case if the antitrust contention had been presented to it. We do not know whether this assumption is valid, and whether the Commission, had the issue been raised, would have attached similar conditions in the *Safe Harbor* proceeding. The questioned portions of the *Safe Harbor* contract do not seem to have the same effect as those in the *Penn Water* case, as the petitions for certiorari in Nos. 611 and 612 point out. The Commission might also reasonably have concluded that the allegedly restrictive conditions were separable from the remainder of the contract, as the petitions for certiorari vigorously, and it seems to us reasonably, contend. If so, the Commission might have prescribed all of the contract except those conditions, or some of them, instead of throwing out the entire arrangement as did the Fourth Circuit. All of these possibilities demonstrate the wisdom, indeed the legal necessity, of requiring application to the Commission for a construction or modification of its own order instead of permitting collateral attack on a ground not raised before the Commission in a private suit to which the Commission is not even a party.

For the above reasons we do not think it necessary, or even proper, for this Court to determine for itself the validity under the antitrust

laws, or otherwise, of the particular contract provisions held unlawful by the Fourth Circuit in the *Safe Harbor* case. For the Commission itself, which has made the provisions a part of its order, is the agency to which the matter should be submitted—if the matter is not already foreclosed by the prior review proceeding in the Third Circuit. It should be noted, however, that there is an important difference between the provisions requiring one company's consent to the other's action when a part of a Commission order and not merely a private contract. For consent provisions in filed rates do not restrain the interested parties from filing an amendment to a rate schedule at any time, or from asking the Commission to amend a rate schedule, even one to eliminate the consent requirement itself. To illustrate: If any party is dissatisfied with having to obtain a consent now required by the Commission's rate order, it may file a proposed rate schedule or complaint seeking elimination of the consent requirement. The proposed change will be considered by the Commission on the basis of the current relevant facts, and acted on in the light of the governing legal principles, subject to judicial review under Section 313 (b) of the Act. A "restrictive provision" in a filed rate has thus an entirely different effect from a similar provision in an agreement not subject to statutory filing requirements and Commission regulation. A filed rate is subject to Commission alteration

in the public interest. An unregulated agreement restraining the parties from economic activity in which they would otherwise be free to engage, may be unalterable unless declared illegal by the courts under the antitrust laws.

For all of the above reasons we submit that the Safe Harbor order of the Commission was, and must be accepted as, binding and in force, and that it was entirely correct for the Commission so to assume in coming to its decision in the instant case. This leads to the conclusion that there is no basis for petitioners' contention that the order in this case should be set aside because of the "invalidity" of the Safe Harbor order. Also, it leads to the conclusion that the Fourth Circuit decision in the *Safe Harbor* antitrust case, now before this Court on petitions for certiorari in Nos. 611 and 612, was clearly erroneous.

V

PENN WATER'S SALES FOR RESALE TO ITS PENNSYLVANIA ELECTRIC UTILITY CUSTOMERS ARE IN INTERSTATE COMMERCE

The Pennsylvania Commission (but not Penn Water) contends that Penn Water's sales to its Pennsylvania electric utility customers are not in interstate commerce and hence that, although these sales are for resale, they are beyond the jurisdiction of the Power Commission to regulate. Even if it were assumed that this contention were well founded, it would not affect the rate reduction ordered in Penn Water's rates to Consoli-

dated in Maryland, which appear in a separately prescribed tariff which applies only to the interstate transmission of electric energy.[69]

In any event, the sales regulated by the Power Commission were all in interstate commerce, as both the court below in this case and the Court of Appeals for the Third Circuit in the *Safe Harbor* cases have held.[70]

---

[69] The Pennsylvania Commission would not seem to be in a position to complain of this (if it is correct in its contention that the Federal Power Commission's authority does not extend to the Pennsylvania sales), even though it believes that a greater share of the reduction should be assigned to Pennsylvania. Although the Pennsylvania Commission's brief indicates dissatisfaction with the allocation (pp. 32–42), neither petitioner has brought that question here. Each refers to the allocation only as showing that the Power Commission relied on the private contract in determining the new rates.

[70] In its second *Safe Harbor* opinion (*Safe Harbor W. P. Co.* v. *F. P. C.*, 179 F. 2d 179, 184–185, certiorari denied, 339 U. S. 957, the Third Circuit stated as to Safe Harbor's sales:

"As we pointed out in our earlier opinion, 124 F. 2d at page 802, Safe Harbor's output is delivered to an integrated interstate electric system under the terms of the so-called '1931 contract,' two-thirds of the energy being sold to the Maryland Company and the remaining one-third going to the Pennsylvania Company. The Commission has correctly stated, 'The sales are sales for resale,' 5 F. P. C. at p. 235. They constitute in fact wholesale sales in interstate commerce."

Safe Harbor's energy moved into commerce through Penn Water's transmission lines and pursuant to precisely the same arrangement as power generated at Penn Water's own project.

The Federal Power Commission is authorized to regulate "the sale of electric energy at wholesale in interstate commerce." Section 201 (b). As we have seen (pp. 11–15), the pooling of hydro and steam power necessitated by the variable flow of the Susquehanna has resulted in the operation of the hydro and steam plants of Penn Water and Consolidated as an integrated system, and of the sale of their product as a single unit. When the river flow is high, the power runs from Penn Water's plant in Pennsylvania to Baltimore and to the Pennsylvania customers. In other parts of the year, power is transmitted from Penn Water's plant during the peak periods of the day or week, but from Baltimore the remainder of the time, during which the river water is impounded and reserved for the peak periods. The amount which will move to the Pennsylvania customers from either the Baltimore or Pennsylvania plants on any particular day must be determined, day by day, as affected by the flow of the river. It is true that after the event the approximate amount of power transmitted to all of Penn Water's Pennsylvania customers from each source can be determined, and that on an annual basis in 1946 83% of the energy used by those customers was generated in Pennsylvania.[n] This

[n] The 83% is nothing more than the relationship of Pennsylvania-generated energy to total energy from both states in 1946. It does not represent the percentage of Pennsylvania energy involved in the sales to any individual Penn Water customer. Such data are not available from meter

figure reflects the fact that in months of high river flow none of the power used in Pennsylvania is obtained from Consolidated's steam plants in Baltimore. But in certain parts of the day or week during the long low water periods, all or most of the power used in Pennsylvania comes from the Baltimore plants. And at some times both Maryland and Pennsylvania power will be mingled in the transmission lines.

By careful coordination which supplies power from the most economical source irrespective of

---

readings, for the meters registering the amount of energy sold to the Pennsylvania customers do not identify the source of the energy involved in the sales. It is doubtful whether metering could be developed which would provide such data. To secure such data of that nature as are contained in the Record required elaborate engineering studies of the movement of electric energy on the integrated system, based on reasonable assumptions with respect to the behaviour of electric energy flows. The nature of the complex hourly computations which would be required to identify the percentages of out-of-state energy involved in the sales to the Pennsylvania customers if, for purposes of regulation and billing, segregations between out-of-State and in-State energy were necessary, is illustrated by the studies of flows of electric energy made by staff engineers for 20 days of the year 1944 (Tr. LVIII, 22350–22370) and 30 days of the year 1946 (R. XIV, 4405–4435). Those studies involved elaborate calculations consuming many months (RI. 351–375; RV. 2279–2285). They were made for the purpose of establishing the approximate magnitude of out-of-State energy involved in the sales to the Pennsylvania customers under certain river conditions. Such studies showed that individual Pennsylvania utility customers received 100% Maryland generated energy for substantial periods of time and lesser percentages for longer periods of time (RI. 362, 370, 371, 374, 375; RV. 2282–85).

State lines, the integrated system has been able to supply a much larger utility load than would result from the mere addition of the capacities of the several plants if operated independently, and has been able to do so at much less than the average of the costs of such independent operation.

The sale which the Power Commission was regulating was the sale of the product of this integrated interstate system, some generated in Maryland and some in Pennsylvania. The Pennsylvania customers who obtained the firm power necessary for such communities as York, Lancaster and Coatesville would not have purchased the power generated by Penn Water alone at its Pennsylvania facilities. If they had, the cities would have been without power, or without enough power, many times during the year. The product sold, consisting of energy and capacity assuring reliable year-around service to the Pennsylvania communities, is not a mere composite of the products of the individual plants but an interstate product whose nature and very existence are wholly dependent on the continued operation of the integrated interstate system. The product Penn Water sells to the Pennsylvania customers is a product whose availability and low cost has been made possible by the interstate pool which places Penn Water in a position to draw upon Consolidated's out-of-

state steam generators when needed. As the court below held (R. XVIII, 5384):

> * * * Because such an energy pool, drawing upon the extensive steam and hydro capacities of Penn Water, Safe Harbor and Baltimore Company now exists, both Penn Water and Baltimore Company have been able to satisfy commitments which would otherwise be outside their individual capacities, as they are now constituted. Given such interconnected and integrated interstate wholesale operations, there can be no such thing as assigning a particular sale solely to operations within Pennsylvania. Each sale is in effect a pool sale drawn from the integrated interstate system and hence interstate in nature.

The sales here regulated by the Power Commission are thus interstate sales. They included an inseparable and essential quantity of power crossing the State line. The fact that some intrastate energy is also included does not make the sale an intrastate one.

Interstate commerce, both generally and as reflected in the Federal Power Act, is not an artificial or abstract or "technical legal conception, but a practical one, drawn from the course of business" *Swift and Company* v. *United States*, 196 U. S. 375, 398. Here we are concerned with a law designed to regulate interstate rates. If some of the energy sold as a part of a

single, inseparable transaction is interstate, it is obvious that the entire sale must be treated as interstate for purposes of rate regulation. No company could operate under a system whereby a state commission would fix the rates for the energy sold in the spring months of high water and in other parts of the year from 4:00 to 7:00 p. m. on week days, and a federal commission the remainder of the time. And here the problem is not nearly that simple, inasmuch as the periods and the quantity of power coming from one source or the other vary from day to day and from hour to hour.

Since the source of the power used depends ultimately upon the quantity of rainfall in the Susquehanna watershed, it can only very roughly be estimated in advance whose energy will be used. Rates, however, must be determined in advance, for a period of some duration in the future. They cannot be fixed after the fact, when it has been determined that a certain percentage during the preceding year—or week—came from one source rather than the other.

It is thus obvious that the rates for a single integrated transaction of sale must be prescribed by a single agency. Since the arrangement whereby the river flow is used most economically requires a unitary operation including sales to Maryland and to and within Pennsylvania, that agency cannot as a practical matter be the organ of a single state. Furthermore, when the Power

Act was passed in 1935, the states lacked constitutional power over interstate wholesale rates and thus could not have regulated the interstate portion of the integrated enterprise.

The purpose of Congress was to fill the gap in which the states could not act. The Power Commission's authority to regulate rates for interstate sales thus undoubtedly was intended to cover this type of inseparable interstate and intrastate operation. As this Court said in dealing with a similar statutory problem in *United States* v. *New York Central R. Co.*, 272 U. S. 457, 464:

> Where, as here, interstate and intrastate transactions are interwoven, the regulation of the latter is so incidental to and inseparable from the regulation of the former as properly to be deemed included in the authority over interstate commerce conferred by statute. * * * An interpretation of the statute which would in practice require the segregation of all shipments in interstate commerce would make compliance with the commission's orders impossible and defeat the purpose of the Act.

The considerations underlying the familiar cases of interstate and intrastate commingling in the constitutional field (*e. g.,, Southern Railway Co.* v. *United States,* 222 U. S. 20; *Colorado* v. *United States,* 271 U. S. 153, 164; *Currin* v. *Wallace,* 306 U. S. 1) also provide a helpful analogy.

Missouri v. *Kansas Gas Co.,* 265 U. S. 298, and

Public Utilities Commission v. *Landon*, 249 U. S. 236, support this conclusion. In both cases, Kansas Natural Gas Company transported gas from Oklahoma into Kansas, mingled it with gas produced in Kansas, and sold it for resale to local distributing companies in both Kansas and Missouri. At the time of the *Landon* case, 6% of the gas sold in Kansas was produced in Kansas (249 U. S. at p. 242), while at the time of the *Missouri* case the Kansas gas comprised 34% of the mixture.[72] It was assumed without question that this did not affect the interstate nature of the wholesale sales of the entire system, including the sales in Kansas made partially from Kansas gas.

The same problem was considered explicitly in *Kentucky Natural Gas Corp.* v. *Public Service Commission*, 28 F. Supp. 509 (E. D. Ky.), affirmed, 119 F. 2d 417 (C. A. 6), the facts of which are closely analogous to those of the present case. In the *Kentucky Natural Gas* case, the company owned and operated a pipe line system located partly in Kentucky and partly in Indiana. Some of the gas transported in the system was obtained in the State of Kentucky and mixed with some obtained in Indiana. The mixed gas moved from one state to the other depending upon the needs of the system, and was

[72] *Kansas Gas Co.* v. *Kansas*, 265 U. S. 298, No. 133, Oct. Term, 1923, Tr. of R., p. 13.

used by Kentucky Natural in making wholesale sales to local distributing companies at points in both states. At times, Kentucky Natural obtained about half of the gas sold in Kentucky from that state, but this proportion varied greatly from time to time. The Kentucky Commission sought to regulate the company's sales in Kentucky, but the court of appeals held that appellee "is engaged solely in interstate commerce," and that exclusive jurisdiction had been conferred on the Federal Power Commission under the Natural Gas Act.[73]

Peoples Gas Co. v. *Public Service Commission,* 270 U. S. 550, and *Lone Star Gas Company* v.

---

[73] The opinion of the district court, which the court of appeals adopted, had stated (28 F. Supp. at 512, 513):

"The record shows that the business of the complainant is a closely integrated transportation system which is fundamentally and predominantly interstate in character from beginning to end. In structure and operation, such continuity exists throughout the system that regulation at one point or control of a single activity would necessarily affect the whole structure. The sale and delivery of gas at wholesale from the interstate pipe line to local distributing companies is an integral part of the major enterprise, commerce between the states. Under such circumstances, regulation in the public interest is national rather than local, demanding a standard of uniformity unattainable except through a single paramount authority. * * *

* * * * *

"The established course of business being predominantly interstate, the mere fact that some gas from the interstate stream is sold and delivered in the state of its origin affords that state no superior power to regulate or control the transaction."

Texas, 304 U. S. 224, relied upon by the Pennsylvania Commission do not conflict with the conclusion that all Penn Water sales are interstate. In the *Peoples Gas* case, the Court held that Pennsylvania could require the company to supply the needs of the City of Johnstown, Pennsylvania, with Pennsylvania gas commingled in a pipeline with West Virginia gas but in known quantities sufficient for that purpose. The Court ruled that the Pennsylvania gas, even though physically commingled, was separable from the West Virginia gas and was in intrastate commerce. Here we have no such relatively simple and stable situation. The demands of the Pennsylvania customers of Penn Water cannot be supplied from sources within Pennsylvania for substantial periods of the year. When water is being impounded, most of their power comes directly from Maryland. The constantly shifting demands of the power pool for Maryland and Pennsylvania power in varying quantities makes it impossible for purposes of rate regulation to separate the power which is both generated and consumed in Pennsylvania. It is also to be noted that at the time of the *Peoples Gas* case, there was no federal regulation, and that the alternative to control by Pennsylvania was no regulation at all. In every significant respect, therefore, the *Peoples Gas* case is distinguishable.

The *Lone Star* case is even less in point. The Court there held that for the ultimate purpose

of regulating retail rates charged by local distributing companies, Texas could determine the reasonable charge for gas delivered by affiliates to the distributing companies, even though some of the gas came from Oklahoma. Since the rate to be paid by one affiliate to another is primarily a bookkeeping transaction the substance of the case was Texas' right to determine costs as a basis for fixing the retail rates for the subsidiaries. Cf. *Western Distributing Co.* v. *Public Service Commission,* 285 U. S. 119, 124; *Dayton Power & Light Co.* v. *Public Utilities Commission,* 292 U. S. 290, 295; *American Telephone & Telegraph Co.* v. *United States,* 299 U. S. 232, 239. In view of these circumstances, which of course differ materially from those at bar, the Court found that Texas was not regulating sales and deliveries in interstate commerce. 304 U. S. 236–237. The Court did not hold that a sale of an interstate and intrastate product as a unit would in other circumstances or generally not be an interstate sale.

It follows, therefore, that the Commission has jurisdiction over these sales by virtue of the Federal Power Act. The Pennsylvania Commission's claim that these sales are nevertheless matters of local concern is meaningless in this case. Not only has this Court held to the contrary by ruling that sales for resale in interstate commerce are of national concern beyond the power of the states to regulate (*Public Utilities Commission* v. *Attle-*

boro Steam & Electric Co., 273 U. S. 83, 90), but Congress has occupied the field by vesting control over sales for resale in interstate commerce in the Power Commission. Cf. *Illinois Gas Co.* v. *Public Service Co.*, 314 U. S. 498, 506.

VI

THE CONTENTION THAT A LICENSEE SUBJECT TO REGULATION UNDER PART I OF THE POWER ACT MAY NOT ALSO BE REGULATED UNDER PART II IS IRRELEVANT HERE, SINCE PENN WATER'S RATES WERE FIXED UNDER BOTH PARTS, AND, IN ANY EVENT, IS UNSOUND

Penn Water argues that it may not be regulated under Part II of the Power Act because it is a licensee subject to regulation under Part I. Inasmuch as the Commission's order in this case was based upon Part I and Part II, it is difficult to see what difference this would make, even if true, so far as this case is concerned. Neither of petitioners is asserting that any of the jurisdictional or other requisites necessary to make the order valid under Part I are absent (apart from Pennsylvania's contention as to interstate commerce considered in the preceding point).

Part I of the Federal Power Act applies to licensees authorized to construct hydroelectric projects in navigable streams or on public lands. Section 20 provides that when the "power or any" part thereof shall enter into interstate or foreign commerce," the rates charged and the service furnished by the licensee "shall be reasonable, nondiscriminatory, and just"; and that when the

states concerned are unable to agree, the Power Commission may enforce the section with respect to rates and services which constitute interstate commerce.

The Commission's finding that the states of Maryland and Pennsylvania are unable to agree is not, and cannot well be, challenged in this case.[74] And the standard of rate regulation—reasonable, nondiscriminatory and just—is precisely the same as that contained in Part II, Sections 205 and 206.[75]

As we read Penn Water's brief, which is, of course, addressed to the opinion below, the prime relevance of the argument as to Parts I and II is that if the Commission can act only under Part I it is bound by the antitrust provision in Section 10 (h) of that Part. This, it is said, would invalidate the argument advanced by the court below (but not by the Government here) that Section 10 (h) is inapplicable here because repealed by Part II insofar as licensees subject to that Part are concerned.

We have shown in Point II B (supra, pp. 63–65) that Section 10 (h), like the Sherman Act, applies only to private business combinations, not to conduct ordered by the Government and that, accordingly, assuming its applicability to licensees

[74] See the contrary positions taken in their briefs filed in this Court.

[75] We discuss below (pp. 129–135) Penn Water's argument that a different rate base is required under Part I.

regulable under both Parts I and II, it does not advance Penn Water's position in this case. Although Penn Water's brief attempts to point out other differences between Parts I and II, at no point does it raise any question (other than with respect to Section 10 (h)) as to the possible irregularity of the Commission's order if viewed solely as authorized by Part I. In these circumstances, we think the question as to whether companies subject to Part I are also subject to Part II is academic insofar as this case is concerned.

Although further discussion of the point may be unnecessary, we do not wish to leave Penn Water's argument unanswered, for it is basically unsound. We point out preliminarily that the precise contention advanced here was discussed at length and rejected in the very thorough and well-reasoned opinion of Judge Biggs of the Third Circuit in the *Safe Harbor* case. 179 F. 2d 179, 182–189, certiorari denied, 339 U. S. 957. That court not only held that a licensee may be subject to both Parts I and II, but also that a rate order based upon both parts was valid under both.

A. LICENSEES WHICH QUALIFY AS "PUBLIC UTILITIES" ARE SUBJECT TO REGULATION UNDER PART II AS WELL AS UNDER PART I

The basic fallacy in Penn Water's position is its failure to recognize that a company may be both a licensee under Part I and a public utility under Part II and as such be subject to regulation under both Parts. The qualifications for a licensee under Part I, the ownership, operation or

maintenance of a power project on public lands or on or affecting navigable streams, are quite independent of those for a public utility under Part II, the transmission or sale at wholesale of electric energy in interstate commerce. For this reason, many electric companies that are "public utilities" under Part II are not "licensees" under Part I, and conversely many Part I "licensees" do not come within Part II's definition of "public utility."

But where a company transmits or sells at wholesale in interstate commerce electric energy which it has generated at a licensed project, it satisfies the requirements for both a licensee and a public utility, and the fact of the coincidence does not operate to exempt such a company from regulation under Part II, or for that matter, from under Part I. Although the Parts deal with different problems, and contain different provisions,[76] they are not inconsistent. There thus is no reason why a company which satisfies the definition of a "public utility" as well as a

[76] Part II provides several kinds of regulation with respect to public utilities which Part I does not provide for licensees: compulsory interconnection on application of another electric company or a state commission (Section 202 (b)); compulsory interconnection or operation in war or emergencies (Section 202 (c)); Commission regulation of sale, lease, and merger or consolidation of facilities, or acquisition of securities of another public utility (Section 203); and Commission regulation of assumption of liability (Section 204). Part III provides, with respect to "public utilities" only, a prohibition of insiders' profits and the pay-

"licensee" should not be subject to regulation under each part simultaneously.

Far from precluding regulation of a company as both a licensee and a public utility, the pertinent language of the Power Act appears to contemplate such dual regulation. Section 201 (e) provides that—

> The term "public utility" means *any* person who owns or operates facilities subject to the jurisdiction of the Commission under this Part. [Italics supplied.]

The only exemption from this sweeping language appears in Section 201 (f), which excepts governments and their instrumentalities. As the court below pointed out (R. XVIII, 5379):

> That section conspicuously makes no reference to Part I licensees. It seems unlikely that Congress would not have included so important a group as federal water-power licensees among the specific exceptions to Part II if it had actually intended to except them.

To read a new exception for a large and well-known class of utilities into the Act would not

---

ment of dividends from capital (Section 305 (a)); and Commission regulation of interlocking managements (Section 305 (b)).

Likewise, Part I, in addition to regulation pertaining to the licensed project itself, provides some regulation which has no counterpart in Part II, such as Commission regulation of intrastate rates in certain instances, including customers' rates (Section 19), and interstate retail rates in some instances (Section 20).

only be contrary to the words Congress employed but also to the legislative history of Part II, which plainly reveals that Congress recognized that its definition of public utility embraced some licensees and that it intended such licensees to be regulated as public utilities as well. The House Committee on Interstate and Foreign Commerce dealt with this specific matter in recommending amendments to the prohibition in Section 305 (a) against personal profit by company officials. As Section 305 (a) passed the Senate, its prohibition was directed at officials of licensees *and* public utilities. S. 1725, 74th Cong., 1st Sess. The House Committee recommended that "licensee" be deleted from the Section and that its prohibition be directed solely against public utilities, because it understood that licensees owning or operating Part II jurisdictional facilities would be regulated as public utilities. The Committee commented:

> The Senate bill includes *licensees* within the provisions of this section, but inasmuch as *such licensees when interstate operating public-utility companies will be subject to the provisions of the section in any event, licensees have been omitted* from the bill as reported, because of the lack of public interest in those companies which are not public utilities. [Italics supplied.] [77]

[77] H. Rep. No. 1318, 74th Cong., 1st sess., p. 31. The conference report on the bill and the Act as passed incorporated the House Committee's change. H. Rep. No. 1903, 74th Cong., 1st sess., pp. 56, 75; Section 305 (a).

This definite statement by the Committee that licensees will be subject to regulation when "interstate operating public-utility companies" is flatly inconsistent with Penn Water's contention.

Dozier A. DeVane, the Solicitor of the Federal Power Commission and one of the draftsmen of Part II evidenced the same understanding. He stated at the hearings on the proposed legislation that "title II (Parts II and III of the Act) deals with operating companies" and that "among the operating companies are those companies that now have licenses from the Federal Power Commission under the Federal Water Power Act." Hearings before the Senate Committee on Interstate Commerce, 74th Cong., 1st sess., on S. 1725, pp. 233–234.[78]

In contrast to the remarks just referred to, the excerpts from the Committee Report and Hearings quoted in Penn Water's brief (pp. 86–89) do not express any view with respect to whether

[78] Mr. DeVane's statement occurred in his explanation of why there were proposals at that time to amend the Federal Water Power Act of 1920 (which as amended in 1935 became Part I of the Federal Power Act) and why these proposed amendments were contained in Title II of the Public Utility Act of 1935 (Title I being what is now the Public Utility Holding Company Act of 1935). Referring to what is now Part II of the Federal Power Act as a "second Title II" (although Part II and the amendments of the 1920 Act were included in a single Title II), he said that it was appropriate to amend the old law dealing with licensees at the same time that new legislation (*i. e.*, Part II) was enacted which affected operating companies, including licensees.

licensees are also subject to Part II. Some of them merely assert in various ways that Part II was meant to fill the gap left by the *Attleboro* case, not to encroach upon matters subject to state regulation. The statement of Commissioner Seavey that Title III contains the provisions applicable both to licensees and interstate operating companies can be accorded full meaning in relation to those companies which are only one or the other. It does not imply—and certainly does not say—that a single company, which is both a licensee and an interstate utility, cannot be regulated under both Parts.

B. SECTIONS 20 AND 201 DO NOT LEAVE THE REGULATION OF A LICENSEE'S INTERSTATE WHOLESALE RATES TO THE STATES

Penn Water contends, however, that Section 20 itself authorizes the states, at least when acting jointly, to regulate the interstate rates of licensees, that Section 201 (a) provides that the federal authority under Part II may "extend only to those matters which are not subject to regulation by the States," and that therefore Part II does not permit regulation of the interstate rates of licensees.

Penn Water is incorrect in the meaning it ascribes to both Section 20 and Section 201 (a). As the Court knows, at the time Title II of the Act was passed the states possessed constitutional power, under this Court's decisions, to regulate only retail interstate electric and gas rates, but

not wholesale rates,[79] and Title II of the Federal Power Act was passed in order to fill this gap. See H. Rep. No. 1318, 74th Cong., 1st Sess., pp. 7–8; S. Rep. No. 621, 74th Cong., 1st Sess., pp. 17, 48; *Federal Power Commission* v. *East Ohio Gas Co.*, 338 U. S. 464, 472; *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U. S. 515, 525–527; *Jersey Central Power & Light Co.* v. *Federal Power Commission*, 219 U. S. 61. Since the gap thus revealed did not, however, affect the recognized power of the states to regulate interstate retail transactions (e. g., *Pennsylvania Gas Co.* v. *Public Serv. Comm.*, 252 U. S. 23), Section 201's exclusion of matters "subject to regulation by the states" from its grant of jurisdiction was aimed at exempting state regulation in the retail area, in which single states had power to act. There is no suggestion in any of the history of the Act of 1935 that the matters subject to state regulation included the interstate wholesale rates of licensees under Section 20. There was no thought, so far as appears, that the gap to be filled by the proposed legislation was anything less than the full scope of the constitutional impotence of the States, or that the gap had already been partially filled by Congress' previous enactment of Section 20.

---

[79] *Public Utilities Comm'n.* v. *Landon*, 249 U. S. 236, 243; *Missouri* v. *Kansas Gas Co.*, 265 U. S. 298, 310; *Public Utilities Comm'n.* v. *Attleboro Co.*, 273 U. S. 83, 89; *East Ohio Gas Co.* v. *Tax Comm'n.*, 283 U. S. 465, 470–472.

Congress had good reason for not suspecting that Section 20 contained a grant to the States of power which was otherwise forbidden by the Constitution. For Section 20 itself contains no affirmative grant of power to the States. The language relating to state regulation is contained in a condition upon the exercise of federal authority. The pertinent portion of Section 20 provides merely—

> whenever any of the States directly concerned has not provided a commission or other authority to enforce the requirements of this section within such State * * * or such States are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor, * * * jurisdiction is hereby conferred upon the [Federal] commission * * * to regulate and control so much of the services rendered, and of the rates and charges of payment therefor as constitute interstate or foreign commerce * * *.

The absence of any grant of power to the states is to be contrasted with the immediately following grant of regulatory authority to the Federal Commission.

When Congress has intended to permit states to regulate interstate transactions from which they would otherwise be barred it has spoken

much more explicitly.[80] Congress has also been much more specific when exercising its power to approve interstate compacts.[81]

It seems clear that under Section 20 Congress was merely leaving with the States whatever power they possessed to regulate interstate transactions—either individually or in combination—apart from the Federal Power Act. Various statements made in the course of the legislative debate so indicated.[82] There is no suggestion of an intention to expand such power.

It is probably true that in 1920, immediately after *Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U. S. 23, and *Public Utilities Commission* v. *Landon*, 249 U. S. 236, and before the *Kansas Gas*[83] and *Attleboro*[84] cases in 1924 and 1927, the sponsors of the Act believed that the power of the States was not limited to interstate retail rates. But that assumption is not suf-

[80] In this connection, see *In re Rahrer*, 140 U. S. 545, 549, 562; *Clark Distilling Co.* v. *Western Maryland Ry. Co.*, 242 U. S. 311, 321, 332; *Whitfield* v. *Ohio*, 297 U. S. 431, 434, 440; *Kentucky Whip & Collar Co.* v. *I. C. R. Co.*, 299 U. S. 334, 343, 351; *Prudential Life Insurance Co.* v. *Benjamin*, 328 U. S. 408, 429–431.

[81] See, e. g., *Olin* v. *Kitzmiller*, 259 U. S. 260, 262; *Arizona* v. *California*, 283 U. S. 423, 449; cf. *United States* v. *Arizona*, 295 U. S. 174, 183; see also Section 11, Natural Gas Act, 52 Stat. 821, 827, 15 U. S. C. 717, 717j.

[82] Hearings, House Committee on Water Power, 65th Cong., 2d Sess., pp. 66, 99, 101; 58 Cong. Rec. 2239; 59 id. 6537.

[83] *Missouri* v. *Kansas Gas Co.*, 265 U. S. 298 (1924).

[84] *Public Utilities Commission* v. *Attleboro Steam and Electric Co.*, 273 U. S. 83 (1927).

ficient to convert the condition imposed upon action by the Federal Commission into an enlargement of State authority. And in 1935, when Congress in reconsidering the entire subject, made the 1920 Act as amended Part I of the new Federal Power Act, it clearly understood that the States could not regulate interstate wholesale rates.

As we have seen, it seemingly occurred to no one in 1935 that Congress had conferred any affirmative power upon the States to regulate interstate wholesale rates when it enacted Section 20 in 1920. Likewise, no indication appears that Congress deemed the States to have had any previously existing power over any interstate wholesale rate or that it intended thereby to vest such authority in the States. Although it had the opportunity to do so in the course of its extensive revision of Part I in 1935, Congress made no change in Section 20 nor indicated any intention of extending Section 20 to permit either individual or joint state regulation of wholesale rates. On the contrary, the legislative history of the 1935 Act is replete with showings that a primary purpose of Part II was to confer jurisdiction upon the Power Commission over all interstate wholesale rates which the *Attleboro* case has "placed * * * entirely beyond the reach of the States" (S. Rep. No. 621, 74th Cong., 1st Sess., p. 17).

For the above reasons Sections 20 and 201, whether read jointly or separately, do not grant

the States authority over the interstate wholesale rates of licensee. There can therefore be no doubt that such power is vested in the Federal Commission by Section 201 of Part II, and that the Commission may fix rates for interstate wholesale licensees under that Part.

C. PARTS I AND II DO NOT IMPOSE INCONSISTENT METHODS OF COMPUTING THE RATE BASE

Penn Water also contends that a licensee's rates cannot be prescribed under both Parts I and II because they impose inconsistent methods of computing the rate base. There is no such inconsistency. On the contrary, the statutory provisions are virtually identical. The rate standard prescribed in Section 20 provides:

> * * * the rates charged and the service rendered * * * shall be *reasonable, nondiscriminatory,* and *just* to the customer and all *unreasonable discriminatory and unjust* rates or services are hereby prohibited and declared to be unlawful * * *. [Italics supplied.]

Section 206 (a), which, together with Section 205 constitutes the rate fixing provisions of Part II, provides:

> Whenever the Commission * * * shall find that any rate, charge, * * * is *unjust, unreasonable, unduly discriminatory* or preferential, the Commission shall determine the *just* and *reasonable* rate, charge * * *. [Italics supplied.]

Thus, in almost identical words, both Parts prescribe the customary standard: "reasonable, nondiscriminatory and just," the very standard which this Court has construed to free regulatory commissions from adherence to any particular formula. *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591. The rate standards of both Parts, therefore, clearly permit the use of the same formula for determining the rate base.

The basis of petitioners' claim is Section 20's incorporation by reference of the formula for recapture contained in Section 14. The latter Section refers to "net investment" which is defined in Section 3 (13),[85] and which Penn Water construes as meaning "an undepreciated rate base except where depreciation and other reserves

---

[85] The claim for "net investment" as the Section 20 formula for rate regulation is arrived at *via* the limitation on the rate base in that Section to an amount not "*in excess* of the value or values prescribed in Section 14 hereof for the purposes of purchase by the United States, * * *." Section 14 (dealing with "recapture" by the United States upon expiration of the license) provides that before taking possession, the United States "shall pay the net investment of the licensee in the project or projects taken, not to exceed the fair value of the property taken * * *."

In so far as here pertinent, Section 3 (13) defines "net investment" to mean "the actual legitimate original cost thereof * * * minus the sum of the following items properly allocated thereto, if and to the extent that such items have been accumulated during the period of the license from earnings in excess of a fair return on such investment: * * * (b) aggregate credit balances of current depreciation accounts, * * *."

are accumulated from earnings in excess of a fair return" (Br. No. 428, pp. 79–80).

It is not necessary for purposes of this case to delve into the intricacies of the meaning of net investment or the depreciation clause in Section 3 (13). For Section 20 does not refer to the "net investment" provision of Section 14 as the rate base to be used, but as a maximum not to be exceeded. The critical clause provides that "no value shall be * * * allowed by the commission * * * *in excess of* the value * * * prescribed in Section 14." Thus, under Section 20, whatever rate base is used cannot exceed net investment. The sole difference as to rate base between the two Parts, therefore, is that Part I restricts the rate base to one not in excess of net investment.

This difference obviously does not prevent the Commission from prescribing rates under the two Parts simultaneously and with entire consistency. A problem could arise only if the Commission sought to apply a formula which would produce a rate base under Part II *higher* than that permissible under Part I. The petitioner is not asserting that the formula which the Commission employed here was too high.

As a matter of fact since its first annual report after the passage of the 1920 Act, the Commission has interpreted the Section 3 (13) formula as identical with the tests it now employs under

Part II. First Annual Report to Congress (1921), (H. Doc. 242, 67th Cong., 2d Sess., p. 57).

Moreover, even if net investment as defined in Section 3 (13) were considered as a formula for rate regulation under Part I, there would be no conflict of rate formulas. Under both the net investment formula and that used by the Commission under Part II, the deduction of depreciation reserve from the gross rate base is proper. There is no merit to Penn Water's claim that under Section 3 (13) its reserve for depreciation can be deducted from its rate base only to the extent, if at all, that its income remaining after deduction of operating expenses including normal depreciation expense has been in excess of a fair return. Since only depreciation charges in the operating section of the income statement are reflected in the reserve for depreciation, Penn Water's contention in effect is that it is not this normal depreciation reserve but only a special kind of a depreciation reserve accumulated out of excessive profits which is to be deducted. Under this construction a licensee could, over the entire period of its license, be entitled to rates sufficient both to recover 100% of its capital investment and to earn a return on the full investment, including the part already recovered by virtue of the deduction of depreciation as an ordinary expense.

By this contention, Penn Water seeks to take advantage of the changed point of view toward

depreciation accounting since the enactment of Section 3 (13) in 1920. While it is customary today to consider depreciation expense as part of operating expenses and to deduct it before computing net return, it was still not unusual in 1920, when the Federal Water Power Act was enacted, to determine profits without deduction for depreciation and to consider normal depreciation as coming out of "profits" instead of constituting a cost of service to be charged to operating expense. See *First Annual Report to Congress,* H. Doc. No. 242, 67th Cong., 2d Sess., p. 58; Hatfield, *Modern Accounting* (1915), pp. 290–291; May, *Twenty-Five Years of Accounting Responsibility* (1936), p. 164; Mason, *Principles of Public-Utility Depreciation* (1937), p. 104. It was in light of this practice of considering depreciation expense as coming out of profits instead of operating expenses that Section 3 (13) referred to the depreciation reserve as accumulated from "earnings in excess of a fair return." The testimony of Mr. O. C. Merrill (an engineer, not an accountant),[86] who assisted in the preparation of the bill which eventually became the Federal Water Power Act, makes it clear that, notwithstand-

[86] At the hearings Mr. Merrill represented the Secretaries of War, Agriculture, and Interior, who comprised the Commission under the Act as originally enacted (41 Stat. 1063). Hearings, House Committee on Water Power, 65th Cong., 2d Sess., pp. 4, 5. He afterwards became the Commission's first Executive Secretary. H. Doc. 242, 67th Cong., 2d Sess., pp. 10–11.

ing the language used, (1) Section 3 (13) refers to the usual, not special, depreciation charges, and (2) the provision regarding net investment was intended to assure to licensees the return of 100%, but not more, of its investment. Hearings before the House Committee on Water Power, 65th Cong., 2d Sess., pp. 34–35, 41, 42–43.

In these circumstances, both the Commission's reading of Section 3 (13) to provide for the deduction of depreciation reserve from the rate base to the extent that the company had fully earned a fair return in addition to normal depreciation expense, and its deduction of such amount of depreciation reserve here are clearly sound. There could, therefore, be no conflict in the present case between a Section 3 (13) "net investment" rate base and the rate base used by the Commission in fixing rates under Part II.[87]

[87] Neither *Alabama Power Co.* v. *Federal Power Commission*, 128 F. 2d 280, 293 (C. A. D. C.) nor *Niagara Falls Power Co.* v. *Federal Power Commission*, 137 F. 2d 787 (C. A. 2), certiorari denied, 320 U. S. 792, supports Penn Water's claim of conflict between Parts I and II in regard to rate formulas. Neither case was a rate case, involved Part II, or suggested the possibility of a conflict. Moreover, when the court in the *Alabama* case suggested that different formulas apply to licensees and nonlicensees, it was referring to Section 20 which limits licensees to rates fixed on no more than a net investment rate base, whereas at that time, "fair value" under *Smyth* v. *Ames*, 169 U. S. 466, was still applicable to nonlicensees. Not only did the court in the *Alabama* case plainly regard the Part I formula as lower, rather than higher, than Part II's (128 F. 2d at 293) but the removal of the "fair value" requirement for nonlicensees by *Federal*

This conclusion that the rate base provisions of Parts I and II were "substantially identical" was reached by the Third Circuit in the *Safe Harbor* case after a thorough consideration of the problem. 179 F. 2d at 187–188, 193–199. Clearly, there is no basis for Penn Water's argument that Part I cannot be applicable to licensees because of a difference in the statutory rate making formulas.

D. IF SECTION 20 AND PART II SHOULD BE DEEMED IN CONFLICT, THE LATTER SHOULD PREVAIL

Rejection of the foregoing reconciliation of Section 20 and Part II would not mean that because of the potential conflict between these provisions, licensees which qualify as "public utilities" should nevertheless not be regulated as such under Part II. The question then would be how to choose between repeal of Section 20 *pro*

Power Commission v. *Hope Natural Gas Co.*, 320 U. S. 591, wiped out even this difference. And in the *Niagara* case, the court in discussing the rate base under Part I, used "net investment" and legitimate cost interchangeably, with its reference to Section 20 presumably indicating that it was speaking of them in terms of a maximum (137 F. 2d at 792–793). In addition, the court in the *Niagara* case made it clear that it did not regard any differences between Parts I and II as exempting licensees from Part II; the court explicitly recognized that licensees which qualify as "public utilities" are not exempt from regulation under Part II, by speaking of "nonlicensed public utilities" and by referring to Part II as relating "*principally* to rates of public utilities engaged in interstate commerce other than licensees under Part I" (italics supplied) (137 F. 2d at 795).

tanto by implication, unfavored though that be, and an even more extensive nullification of Part II by implied exception, which is no more favored. Even express exceptions from a general policy which a law embodies should be strictly construed. *Interstate Natural Gas Co.* v. *Federal Power Commission,* 331 U. S. 682, 690–691; *Spokane & Inland R. R.* v. *United States,* 241 U. S. 344, 348, 350; cf. *Piedmont & Northern Ry.* v. *Interstate Commerce Commission,* 286 U. S. 299, 311, 312; *United States* v. *McElvain,* 272 U. S. 633, 639.

Implied repeal of Section 20, *pro tanto,* would require only that to the extent that that Section confers jurisdiction on states to regulate by agreement interstate *wholesale* rates of licensees that are also "public utilities" (which we have shown it doesn't), it shall be deemed repealed by Part II. This is in striking contrast to the breadth of effect the exemption of licensees would have in nullifying a number of important provisions of Part II as far as these licensee-public utilities are concerned. Among the provisions so nullified would be the compulsory interconnection and service provisions of Sections 202 (b) and 207; the war and other emergency compulsory interconnection and service provisions of Section 202 (c); the regulation of sales, leases, dispositions, and mergers of facilities, and acquisition of securities of other public utilities, of Section 203;

the rate schedule filing provisions for suspension of changes in rates of Section 205; the prohibition of "insiders' profits" and payment of dividends out of capital of Section 305 (a); and the regulation of interlocking directors and officers of Section 305 (b). No justification for striking down all these provisions is offered by Penn Water, and it is hardly possible that Congress intended such a result without a word in the statute or in the legislative history manifesting that intention. As the Third Circuit said in the second *Safe Harbor* case (179 F. 2d 179, at p. 186, note 10):

> * * * If the provisions of the respective [Parts] cannot be reconciled then [Part I] must be deemed to be repealed by [Part II] * * *.

Penn Water contends that Part II may not be applied to it because its license gives it contractual rights which may not be modified by subsequent changes in the statute. See Section 28. Penn Water admits that its license was issued in 1951, long after the enactment of Part II. Nor does it point to any provision of its license which is contravened by Part II. Part I spells out the conditions on which licenses are granted, and the provisions of Part I may thus be deemed to be terms of the license; but we have shown that none of these provisions is in conflict with Part II.

CONCLUSION

For the foregoing reasons, it is respectfully submitted that the judgment below be affirmed.

ON CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

MOTION TO POSTPONE ARGUMENT

Consolidated Gas Electric Light and Power Company of Baltimore, Intervenor-Respondent, respectfully moves the Court to postpone the date for argument of these cases,

now set for the week of March 31, 1952, for a period of time sufficient: (1) to enable the Court to pass upon pending Petitions for Certiorari to the United States Court of Appeals for the Fourth Circuit to review a judgment of that court entered January 3, 1952, which petitions were served and filed in this Court on February 23, 1952 and are docketed as Case No. 611, *Consolidated Gas Electric Light and Power Company of Baltimore v. Pennsylvania Water & Power Company and Pennsylvania Public Utility Commission,* and Case No. 612, *Public Service Commission of Maryland v. Pennsylvania Water & Power Company* and *Pennsylvania Public Utility Commission;* and (2), in the event said petitions for certiorari are granted, to enable those cases to be argued at the same time with the related instant case.

The basic grounds for this Motion are: (1) that certiorari has been granted in the instant case presumably for the reason, among others, that a conflict exists between the decision of the District of Columbia Circuit to be reviewed in the instant case and the decision of the Fourth Circuit in cases Nos. 611 and 612 upon the questions, (a) of the validity of a certain "Safe Harbor Agreement" under the Sherman Act and (b) of the *primary* jurisdiction of the Federal Power Commission to prescribe the Safe Harbor Agreement as a valid rate schedule of a "licensee" and "public utility" subject to its jurisdiction; and (2) that adequate review of the judgment in the instant case requires contemporaneous consideration of a basic element of that decision, namely, the validity of the Safe Harbor Agreement and the soundness of the decision of the Fourth Circuit purporting to invalidate it summarily.

Intervenor-Respondent further alleges:

1. After a plenary investigation begun in 1944 and concluded November 4, 1946, the Federal Power Commission, by formal order, modified the Safe Harbor Agreement as to the rates charged thereunder, and, as modified, approved and ordered it to be filed and observed, *in its entirety,* as

the interstate wholesale rate schedule of Safe Harbor Water Power Corporation. On review, this order of the Commission was affirmed by the Third Circuit on December 30, 1949, in *Safe Harbor Water Power Corporation v. Federal Power Commission,* 179 F. 2d 179, cert. den. 339 U. S. 957, the Third Circuit stating that the Safe Harbor Agreement was "exemplary".

2. The second of the two contracts involved in the instant case constitutes the filed interstate tariff of Pennsylvania Water & Power Company and is referred to as the "Penn Water Contract". As the result of a lengthy investigation begun in 1944 and concluded by orders of the Federal Power Commission dated January 5, 1949, February 28, 1949 and October 27, 1949, this Penn Water Contract was also modified by the Federal Power Commission as to the rates charged thereunder and, excepting any provisions thereof not "in and of themselves lawful", was approved and ordered to be filed and observed as the rate schedule of Penn Water. On review, these orders of the Commission were affirmed in the instant case by the District of Columbia Circuit on July 3, 1951 in *Pennsylvania Water & Power Company, et al. v. Federal Power Commission,* 193 F. 2d 230, cert. granted Feb. 4, 1952.

3. Nevertheless, in collateral attack proceedings instituted by Penn Water against Consolidated in the Maryland District Court (to which the Federal Power Commission was not a party), the Fourth Circuit on September 30, 1950, reversed the District Court and held that the Penn Water Contract was invalid on its face as *per se* in violation of the Sherman Act and certain laws of Pennsylvania, solely by reason of certain provisions contained in that contract (Arts. IV and V thereof). This decision of the Fourth Circuit was rendered in the case of *Pennsylvania Water & Power Company v. Consolidated Gas Electric Light and Power Company,* 184 F. 2d 552, cert. den. 340 U. S. 906 (1950).

4. In later collateral attack proceedings instituted by Penn Water against Consolidated and Safe Harbor in the Maryland District Court, the Fourth Circuit, on appeal, (refusing to permit the Federal Power Commission to intervene as a party in support of the validity of the Safe Harbor Agreement, which it had prescribed) affirmed a *summary* declaratory judgment of the District Court holding the Safe Harbor Agreement invalid on its face as *per se* in violation of the Sherman Act and certain laws of Pennsylvania, because the Safe Harbor Agreement contained certain provisions totally different in character and effect from Arts. IV and V of the Penn Water Contract criticized in the earlier case (which provisions of the Safe Harbor Agreement, we submit, were clearly separable and which have not had any practical effect), and because of the supposed "connection" (not founded in fact) between the Safe Harbor Agreement and the separate and distinct Penn Water Contract.

5. Penn Water and the Pennsylvania Public Utility Commission in their petitions for certiorari in the instant case repeatedly refer to the Safe Harbor case (Nos. 611 and 612) as a "related decision" and a "related case" (Penn Water's petition pp. 1 and 4); assert that the Safe Harbor contract was "the basis for important features of the order" of the Federal Power Commission herein assailed (P.U.C.'s. petition, p. 7) and that the determination by this Court of the validity of the Safe Harbor contract as well as of the Penn Water contract "is of vital importance to your petitioners" (P.U.C.'s. petition p. 8). In fact Penn Water, in its petition, refers some fifty times to the Safe Harbor contract and the Safe Harbor case, and both petitioners regarded that case as being so closely related to, and conflicting with, cases Nos. 428 and 429 as to have necessitated the filing with this Court of a copy of the Fourth Circuit's opinion in the Safe Harbor case with a letter of transmittal emphasizing such close relationship and conflict. A copy of

such letter of transmittal is attached as an Appendix to this Motion.

In view of these facts, Penn Water and the Pennsylvania Public Utility Commission can have no proper objection to the present Motion, which seeks to have this Court consider the situation with regard to the validity of the Safe Harbor Agreement not in piecemeal fashion but fully, comprehensively and definitively, by simultaneously reviewing the decision of the Fourth Circuit invalidating the Safe Harbor Agreement along with its review of the instant case.

6. There are important procedural questions in the instant case relating to the timeliness of Penn Water in presenting its contention to the Federal Power Commission that the Safe Harbor Agreement and the Penn Water Contract were in violation of the Sherman Act and to Penn Water's failure properly to exhaust its administrative remedies with regard to those questions. For this reason, the issues as to which conflict exists between the District of Columbia Circuit and the Fourth Circuit, namely, the legal validity of the Safe Harbor Agreement and the primary jurisdiction of the Federal Power Commission to prescribe the Safe Harbor Agreement as the rate schedule of Safe Harbor, may not be reached in the instant case. These basic and important issues, as to which clear conflict exists, are, however, directly involved in cases Nos. 611 and 612 and must be resolved if certiorari is granted.

7. Under the Rules of this Court, Respondents Penn Water and Pennsylvania Public Utility Commission must file any briefs in opposition to the Petitions for Certiorari pending in cases Nos. 611 and 612 on or before March 24, 1952. In order to avoid any undue delay in the disposition of the instant case, Consolidated represents that, if this Motion is granted, it will serve upon the Respondents, a draft of its brief in Case No. 611 within one week after

certiorari is granted therein, and it has been assured by counsel for the Public Service Commission of Maryland that a draft of that Commission's brief in Case No. 612 will be similarly served within the same period. If this is done, ample time will be provided the Respondents in those cases to prepare and file their briefs without unduly delaying the hearing and argument in these cases and in Cases Nos. 428 and 429 in which certiorari has already been granted.

For the above reasons, it its respectfully prayed that this Motion be granted.

ALFRED P. RAMSEY,

G. KENNETH REIBLICH,

Attorneys for Consolidated Gas Electric Light and Power Company of Baltimore.

APPENDIX

January 14, 1952.

Honorable Charles Elmore Cropley, Clerk,
Supreme Court of the United States,
Washington, D. C.

Re: No. 428, Pennsylvania Water & Power Company, et al. v. Federal Power Commission, et al
Re. No. 429, Pennsylvania Public Utility Commission v. Federal Power Commission.

Dear Sir:

In petitions for a writ of certiorari filed November 16, 1951, petitioners referred to a decision of the District Court for Maryland, Bryan, J., and the holding by that Court that the Safe Harbor contract is illegal under the Federal antitrust laws, Pennsylvania statutes, common law and public policy and that the Federal Power Commission does not have authority to validate that illegal contract.

On appeal, this decision has just been affirmed by the Court of Appeals for the Fourth Circuit in its opinion of January 3, 1952, attached hereto. The Court of Appeals for the Fourth Circuit in this opinion followed in all respects its prior decision with respect to the Penn Water contract, as to which decision certiorari was denied by this Court, 340 U. S. 906 (1950).

The Court of Appeals for the Fourth Circuit, in this current opinion, also confirms the conflict between (a) its prior decision holding that the Penn Water contract is illegal under the Federal antitrust laws, Pennsylvania statutes, common law and public policy and that the Federal Power Commission does not have authority to validate that illegal contract, as to which decision certiorari was denied by this Court as set forth above, and (b) the majority decision of the Court of Appeals for the District of Columbia Circuit, as to which certiorari is being sought by petitioners and which involves the illegal Penn Water contract and the illegal Safe Harbor contract and holds that the Federal Power Commission can perpetuate such illegal arrangements.

The Court of Appeals for the Fourth Circuit in the attached opinion expressly confirms such conflict by stating at pages 17 to 19 its disagreement with the majority decision of the District of Columbia Circuit Court and its agreement with the opinion of the dissenting minority of that Court.

Since the attached Court of Appeals opinion will not be officially reported for some time, it is submitted herewith for the convenience of the Court.

Respectfully submitted,

WILKIE BUSHBY,
RANDALL J. LEBOEUF, JR.,

v.

PENNSYLVANIA WATER AND POWER COMPANY AND PENNSYLVANIA PUBLIC UTILITY COMMISSION

MOTION OF THE FEDERAL POWER COMMISSION TO POSTPONE ARGUMENT IN NOS. 428 AND 429 FOR THREE WEEKS AND MEMORANDUM AS AMICUS CURIAE IN SUPPORT OF PETITIONS FOR CERTIORARI IN NOS. 611 AND 612

The Federal Power Commission moves that this Court postpone the argument in Nos. 428 and 429

three weeks from the week of March 31 to the week of April 21, so as to enable the Court to decide whether to grant certiorari in Nos. 611 and 612, and if certiorari is granted, to set the cases down for argument together during the week of April 21. The Government also submits that the petitions for certiorari in Nos. 611 and 612 should be granted.[1]

The conflict between the decision of the Court of Appeals for the District of Columbia in the cases presently before the Court (Nos. 428 and 429) with the decision of the District Court, now affirmed by the Fourth Circuit, in Nos. 611 and 612, was emphasized by Penn Water (Pet., No. 428, pp. 1, 3, 4, 9, 14, 15, 17; see also Pet., No. 429, pp. 29, 38) as a principal reason for granting certiorari in No. 428.[2] The Fourth Circuit's decision on affirmance was the first in the group of related cases which, by so stating explicitly, acknowledged that the two circuits were in disagreement. In addition, the issue upon which the two courts have disagreed is more likely to be reached in Nos. 611 and 612 than in Nos. 428 and 429. In

[1] The Federal Power Commission is, of course, a party in Nos. 428 and 429. It unsuccessfully sought to intervene in the Fourth Circuit in Nos. 611 and 612, but was allowed to file a brief and argue orally. It is appearing in this Court in the latter cases as amicus curiae.

[2] Penn Water's petition also relied of course, upon the conflict which the earlier decision of the Fourth Circuit in *Penn Water and Power Company* v. *Consolidated Gas, E. L. & P. Co.*, 184 F. 2d 552, certiorari denied, 340 U. S. 906, 186 F. 2d 934, which preceded the decision in the District of Columbia Court of Appeals.

the order reducing rates in Nos. 428 and 429, the Federal Power Commission prescribed certain rate schedules to supersede the previous rate and charges and ordered that all "other provisions of the * * * contracts *in and of themselves lawful* prescribing or defining the * * * services to be furnished * * * shall be observed and be in force" (No. 428, R. XVII 62, italics supplied), thereby excluding provisions which as private contracts might be authoritatively determined to be in violation of the antitrust law. The order involved in Nos. 611 and 612 (which has been upheld by the Third Circuit in *Safe Harbor W. P. Corp.* v. *Federal Power Commission,* 179 F. 2d 179, certiorari denied, 339 U. S. 957) contains no such qualification, and thus clearly requires compliance with the contract on file with the Federal Power Commission, allegedly restrictive clauses and all, unless and until the Commission modifies its own order. These factors make the controversy in Nos. 611 and 612 a more appropriate vehicle than Nos. 428 and 429 for determination of the important issue upon which the two circuits have disagreed, *i.e.*, whether the Federal Power Commission may order a power company to carry out an arrangement which, as an agreement between the parties, would otherwise violate the Sherman Act. The denial of certiorari in the first *Penn-Water* case (340 U. S. 906), in which the Federal Power Commission had only ordered compliance with arrangements "in and of themselves

lawful" and before the existence of the conflict with the District of Columbia Circuit would not, of course, justify a denial in Nos. 611 and 612 after the two Circuits had openly disagreed, and in a case in which the Commission had prescribed the arrangement found unlawful by the Fourth Circuit.

The desirability of hearing the cases together does not depend merely on the fact that they are in conflict. The companies and the State Commissions involved are the same. Penn Water and Consolidated each possess half of the voting rights in Safe Harbor, although Consolidated invested two-thirds of the capital and is entitled to two-thirds of the power. The contracts have been found by the Fourth Circuit to be indistinguishable both with respect to separability and antitrust violation. And more importantly, Penn Water and the Pennsylvania Public Utility Commission, petitioners in Nos. 428 and 429, are insisting that the contracts are interdependent, that the Penn Water Contract "was linked to a companion contract (the Safe Harbor contract)." (Pet. No. 428, pp. 3, 14-15; Pet. No. 429, pp. 37-38). Both petitions urge that the Federal Power Commission "based the critical features of the orders * * * upon the assumed existence and continuance of the illegal Baltimore and *Safe Harbor* contracts." (Pet. No. 428, p. 3; Pet. No. 429, p. 37; italics supplied).[3] The petitions also argue that the existence of the interstate power pool "depends upon the illegal contracts * * *

and upon the illegal revenue pooling provisions thereof" (Pet. No. 428, p. 14; Pet. No. 429, pp. 37-38). It is also contended (Pet. No. 428, p. 15) that the allocation of the reduction in rates as between the Baltimore company and the Pennsylvania utility customers of Penn Water rested on the basis of the alleged "'entitlements' of Consolidated under the Baltimore and Safe Harbor contracts" and that "without the illegal contracts such 'entitlements' would be nonexistent." It is thus clearly petitioners' position in Nos. 428 and 429 that the decision of the Fourth Circuit in Nos. 611 and 612 as to the validity of the contracts supersedes the orders of the Federal Power Commission and destroys a portion of the premises upon which those orders rest.

The alleged interrelationship[4] between the contracts and the Federal Power Commission orders with respect thereto makes it highly desirable that the cases be heard and decided together if this can be accomplished without undue delay. We are advised that counsel for Consolidated requested counsel for Penn Water to cooperate in Nos. 611 and 612 so as to enable all of the cases to be heard together this Term. This request, which seems

---

[3] The Statements in both petitions repeatedly refer to the Safe Harbor contract as well as to the Penn Water contract (Pet. No. 428, pp. 3, 4, 6, 7, 9, 10; No. 429, pp. 12, 13).

[4] The statement herein of the contentions of the petitioners in No. 428 and 429 and respondents in Nos. 611 and 612 is not to be taken as an admission of the validity of those contentions, but merely as showing the questions which will necessarily be argued in the cases.

to us to have been entirely reasonable, was refused on the ground that the cases were not sufficiently related, a position which hardly seems consistent with Penn Water's petition for certiorari in No. 428 and its emphasis on the conflict between them. By not consenting to certiorari in the case which establishes the conflict upon which it relied, Penn Water will prevent this Court from passing on the petition until March 31, which would normally be too late for the case to be heard this Term if certiorari is granted.

The circumstances set forth above, however, in our opinion, would justify the Court in granting certiorari in Nos. 611 and 612 and in setting them down for argument during the week of April 21. What we believe to be the critical issues involved will have been briefed in Nos. 428 and 429. As to the others, we are advised that if this motion to postpone the argument of the latter cases for three weeks is granted (thus indicating a possibility that the cases might be heard together), Consolidated and the Maryland Commission will immediately commence the preparation of their briefs in Nos. 611 and 612, and drafts will be served on respondents in these cases far enough in advance of argument to enable respondents to have the two weeks allowed by the Rules to reply thereto.

The Government does not wish to delay final decision in the already prolonged litigation involved in Nos. 428 and 429, but postponing the argument for three weeks would not unduly delay

the ultimate determination. And the advantages of hearing Nos. 611 and 612 at the same time and thus speedily disposing of all aspects of an interrelated controversy lead to the conclusion that both the public interest and the orderly management of this Court's business would be better served if the cases could be heard together this Term, notwithstanding the opposition of Penn Water to that procedure.

Accordingly, it is respectfully submitted that this Court should (1) postpone the argument in Nos. 428 and 429 until the week of April 21, (2) grant certiorari in Nos. 611 and 612, and (3) order the latter cases argued during the week of April 21, immediately following Nos. 428 and 429.

PHILIP B. PERLMAN,
Solicitor General.

BRADFORD ROSS,
General Counsel,
Federal Power Commission.

I join in this motion to postpone the argument in Nos. 428 and 429.

CHARLES D. HARRIS,
General Counsel,
Public Service Commission of Maryland.
